IDENTIFICATION OF AIR FORCE EMERGING TECHNOLOGIES AND MILITARILY SIGNIFICANT EMERGING TECHNOLOGIES Final Report, 1 Sep. 1984 - 31 Aug. 1985
Patrick P. McDermott 31 Aug. 1985 136 p
(Contract F49620-84-C-0099)
(AD-A167088; BKD-TR-5-763; AFOSR-86-0230TR) Avail: NTIS HC A07/MF A01 CSCL 05/1

The objective of this effort was to review Air Force research and existing emerging technologies lists, to conduct interviews and analyze data in order to identify likely candidates for a Military Emerging Technologies Awareness List (METAL). A METAL was constructed, in consultation with AFOSR, based on original research and interview data. The contract effort consisted of 3 stages: 1) Preparation of a Preliminary Militarily Significant Emerging Technologies List (MSET) from 3 existing Air Force emerging technologies lists. 2) In-depth interviews at 6 Air Force Laboratories covering 70 topical areas. Technologies were identified, based on criteria outlined in Stage 1, as Mature Technologies, Emerging Technologies, or MSETs. If technologies could be correlated to those in the Militarily Critical Technologies List (MCTL), they were designated as Militarily Critical Technologies (MCTs). Interviews provided discussion of a technology's military significance and sensitivity to public release, and 3) Assessment of Interview Results identified the preliminary METAL, and identified the importance of the interview process in ultimately determining the MSETs. Further efforts are to continue to identify, review, and finalize the Air Force METAL. GRA

NUCLIDE PRODUCTION IN (VERY) SMALL METEORITES c90
James R. Arnold and Kunihiko Nishiizumi *In* Lunar and Planetary Inst. Workshop on Cosmogenic Nuclides 1986 1 p (For primary document see N86-32348 23-88)
Avail: NTIS HC A05/MF A01 CSCL 03B

One of the most interesting open questions in the study of cosmic-ray effects in meteorites is the expected behavior of objects which are very small compared to the mean interaction length of primary galactic cosmic ray (GCR) particles. A reasonable limit might be a pre-atmospheric radius of 5 gram/cm(2), or 1.5 cm for chondrites. These are interesting for at least three reasons: (1) this is a limiting case for large objects, and can help us make better models; (2) this size is intermediate between usual meteorites and irradiated grams (spherules); and (3) these are the most likely objects to show solar cosmic ray (SCR) effects. Reedy (1984) has recently proposed a model for production by GCR of radioactive and stable nuclides in spherical meteorites. Very small objects are expected to deviate from this model in the direction of fewer secondary particles (larger spectral shape parameter), at all depths. The net effect will be significantly lower production of such low-energy products as Mn-53 and Al-26. The SCR production of these and other nuclides will be lower, too, because meteorite orbits extend typically out into the asteroid belt, and the mean SCR flux must fall off approximately as r(-2) with distance from the Sun. Kepler's laws insure that for such orbits most of the exposure time is spent near aphelion. None the less the equivalent mean exposure distance, R(exp), is slightly less than the semimajor axis A because of the weighting by R(-2). For the three meteorite orbits we have, R(exp) has a narrow range, from about 1.6 to 2.1 a.u. This is probably true for the great majority of meteorites. M.G.

SIMULATION EXPERIMENTS FOR GAMMA-RAY MAPPING OF PLANETARY SURFACES: SCATTERING OF HIGH-ENERGY NEUTRONS c91
J. Brueckner, P. Englert (Cologne Univ. (West Germany).), R. C. Reedy (Los Alamos National Lab., N. Mex.), and H. Waenke *In* Lunar and Planetary Inst. Workshop on Cosmogenic Nuclides 1986 3 p (For primary document see N86-32348 23-88)
Avail: NTIS HC A05/MF A01 CSCL 03B

The concentration and distribution of certain elements in surface layers of planetary objects specify constraints on models of their origin and evolution. This information can be obtained by means of remote sensing gamma-ray spectroscopy, as planned for a number of future space missions, i.e., Mars, Moon, asteroids, and comets. To investigate the gamma-rays made by interactions of neutrons with matter, thin targets of different composition were placed between a neutron-source and a high-resolution germanium spectrometer. Gamma-rays in the range of 0.1 to 8 MeV were accumulated. In one set of experiments a 14-MeV neutron generator using the T(d,n) reaction as neutron-source was placed in a small room. Scattering in surrounding walls produced a spectrum of neutron energies from 14 MeV down to thermal. This complex neutron-source induced mainly neutron-capture lines and only a few scattering lines. As a result of the set-up, there was a considerable background of discrete lines from surrounding materials. A similar situation exists under planetary exploration conditions: gamma-rays are induced in the planetary surface as well as in the spacecraft. To investigate the contribution of neutrons with higher energies, an experiment for the measurement of prompt gamma radiation was set up at the end of a beam-line of an isochronous cyclotron. M.G.

PRECOMPACTION IRRADIATION EFFECTS: PARTICLES FROM AN EARLY ACTIVE SUN? c92
M. W. Caffee, J. N. Goswami (Physical Research Lab., Ahmedabad (India).), C. M. Hohenberg, and T. D. Swindle *In* Lunar and Planetary Inst. Workshop on Cosmogenic Nuclides 1986 2 p (For primary document see N86-32348 23-88)
Avail: NTIS HC A05/MF A01 CSCL 03B

Two recent studies have shown that solar flare irradiated grains from Murchison and Kapoeta have excess spallogenic Ne-21 compared to unirradiated grains, indicating large precompaction particle irradiation effects. The quantity of cosmogenic neon in these grains presents serious difficulties for either galactic cosmic ray or normal solar flare sources. In the first study it was suggested that the effect might be the result of exposure to an early active sun. The more recent experiment both confirms the earlier results and provides constraints on the characteristic energy spectrum on the irradiation. The first results were obtained from Murchison olivines and Kapoeta pyroxenes by mass spectrometric analysis of sets of grains selected on the basis of the presence or absence of solar flare particle tracks. In the second work plagioclase feldspar grains from Kapoeta were studied. M.G.

DETERMINATION OF CA-41, I-129 AND OS-187 IN THE ROCHESTER TANDEM ACCELERATOR AND SOME APPLICATIONS OF THESE ISOTOPES c72
U. Fehn, D. Elmore, H. E. Gove, P. Kubik, R. Teng, and L. Tubbs *In* Lunar and Planetary Inst. Workshop on Cosmogenic Nuclides 1986 3 p (For primary document see N86-32348 23-88)
Avail: NTIS HC A05/MF A01 CSCL 20H

The measurement of Ca-41 and I-129 utilizing the Rochester Tanden Accelerator Mass Spectrometer (TAMS) is discussed. Ca-41, having a half-life of 100,000 yrs., is of potential use for the dating of ground water as well as of bones in the age range between 50,000 and 1 million yrs. A major problem for the measurement of Ca-41 with TAMS is the fact that calcium does not readily form negative atomic ions. It does, however, form negative molecular ions. The production of CaO ions from compounds such as CaO and CaCO3 and from free Ca molecules sprayed with oxygen gas was studied. A project to utilize I-129 as a tracer for hydrothermal convection in sediment-covered oceanic crust is also briefly described. Finally, plans to use the Os-187/Os-186 ratio for the determination of extraterrestrial material in the Ries crater in Germany are summarized. M.G.

SOLAR MODULATION OF GALACTIC COSMIC RAYS: CONTEMPORARY OBSERVATIONS AND THEORIES c92
M. A. Forman *In* Lunar and Planetary Inst. Workshop on Cosmogenic Nuclides 1986 2 p (For primary document see N86-32348 23-88)
Avail: NTIS HC A05/MF A01 CSCL 03B

The flux of galactic cosmic rays inside the solar system is modulated by the action of the complex magnetic fields carried from the Sun by the solar wind. This is apparent from the recurrent decrease of about 20% in the intensity of relativistic cosmic rays during sunspot maximum compared to sunspot minimum, from transient decreases due to solar flares and many other more subtle effects observed by ground stations for the last 50 years. Spacecraft observations of the spatial and temporal variations of cosmic ray flux during the last ten years have shown that the solar wind and cosmic-ray modulation extend to at least 30 astronomical units in the ecliptic plane. Present best guesses are that it goes out to 100 or 200 AU, perhaps less over the poles. Theories describing the mechanism of solar modulation are outlined

and the importance of having a firm understanding of this mechanism to the study of other astrophysical phenomena is discussed. M.G.

N86-32354*# Physical Research Lab., Ahmedabad (India).
EVOLUTION OF GAS-RICH METEORITES: CLUES FROM COSMOGENIC NUCLIDES c90
J. N. Goswami *In* Lunar and Planetary Inst. Workshop on Cosmogenic Nuclides 1986 2 p (For primary document see N86-32348 23-88)
Avail: NTIS HC A05/MF A01 CSCL 03B

The evolution of gas-rich meteorites in general, and the setting in which the observed solar-wind, solar-flare irradiation records were imprinted in individual components of these meteorites are understood only in qualitative terms, although contrary viewpoints do exist. The regolith irradiation hypothesis, bolstered by the observations of irradiation features in lunar regolith materials, similar to those observed in gas-rich meteorites, is accepted by many workers in this field. However, a close analysis of the problem suggests that the regolith irradiation may not be the dominant mode in producing the observed precompaction irradiation features in the gas-rich meteorites. THE EXPOSURE HISTORY OF JILIN AND PRODUCTION RATES OF COSMOGENIC NUCLIDES c90
G. Heusser *In* Lunar and Planetary Inst. Workshop on cosmogenic Nuclides 1986 3 p (For primary document see N86-32348 23-88)
Avail: NTIS HC A05/MF A01 CSCL 03B

Jilin, the largest known story meteorite, is a very suitable object for studying the systematics of cosmic ray produced nuclides in stony meteorites. Its well established two stage exposure history even permits to gain information about two different irradiation geometries (2pi and 4pi). All stable and long-lived cosmogenic nuclides measured in Jilin so far correlate well with each other. An example is shown where the Al-26 activities are plotted vs. the spallogenic Ne-21 concentration. These records of cosmic-ray interaction in Jilin can be used both to determine the history of the target and to study the nature of production rate profiles. This is unavoidably a bootstrap process, involving studying one with assumption about the other. Production rate equations are presented and discussed. M.G.

RADIONUCLIDE MEASUREMENTS BY ACCELERATOR MASS SPECTROMETRY AT ARIZONA c90
A. J. T. Jull, D. J. Donahue, and T. H. Zabel *In* Lunar and Planetary Inst. Workshop on Cosmogenic Nuclides 1986 2 p (For primary document see N86-32348 23-88)
Avail: NTIS HC A05/MF A01 CSCL 03B

Over the past years, Tandem Accelerator Mass Spectrometry (TAMS) has become established as an important method for radionuclide analysis. In the Arizona system the accelerator is operated at a thermal voltage of 1.8MV for C-14 analysis, and 1.6 to 2MV for Be-10. Samples are inserted into a cesium sputter ion source in solid form. Negative ions sputtered from the target are accelerated to about 25kV, and the injection magnet selects ions of a particular mass. Ions of the 3+ charge state, having an energy of about 9MeV are selected by an electrostatic deflector, surviving ions pass through two magnets, where only ions of the desired mass-energy product are selected. The final detector is a combination ionization chamber to measure energy loss (and hence, Z), and a silicon surface-barrier detector which measures residual energy. After counting the trace isotope for a fixed time, the injected ions are switched to the major isotope used for normalization. These ions are deflected into a Faraday cup after the first high-energy magnet. Repeated measurements of the isotope ratio of both sample and standards results in a measurement of the concentration of the radionuclide. Recent improvements in sample preparation for C-14 make preparation of high-beam current graphite targets directly from CO2 feasible. Except for some measurements of standards and backgrounds for Be-10 measurements to date have been on C-14. Although most results have been in archaeology and quaternary geology, studies have been expanded to include cosmogenic C-14 in meteorites. The data obtained so far tend to confirm the antiquity of Antarctic meteorites from the Allan Hills site. Data on three samples of Yamato meteorites gave terrestrial ages of between about 3 and 22 thousand years. M.G.

COSMIC RAY INTERACTIONS IN THE GROUND: TEMPORAL VARIATIONS IN COSMIC RAY INTENSITIES AND GEOPHYSICAL STUDIES c93
D. Lal *In* Lunar and Planetary Inst. Workshop on Cosmogenic Nuclides 1986 3 p (For primary document see N86-32348 23-88)
Avail: NTIS HC A05/MF A01 CSCL 03B

Temporal variations in cosmic ray intensity have been deduced from observations of products of interactions of cosmic ray particles in the Moon, meteorites, and the Earth. Of particular interest is a comparison between the information based on Earth and that based on other samples. Differences are expected at least due to: (1) differences in the extent of cosmic ray modulation, and (2) changes in the geomagnetic dipole field. Any information on the global changes in the terrestrial cosmic ray intensity is therefore of importance. In this paper a possible technique for detecting changes in cosmic ray intensity is presented. The method involves human intervention and is applicable for the past 10,000 yrs. Studies of changes over longer periods of time are possible if supplementary data on age and history of the sample are available using other methods. Also discussed are the possibilities of studying certain geophysical processes, e.g., erosion, weathering, tectonic events based on studies of certain cosmic ray-produced isotopes for the past several million years. M.G.

PRODUCTION RATES OF NEON XENON ISOTOPES BY ENERGETIC NEUTRONS c25
D. A. Leich, R. J. Borg, and V. B. Lanier *In* Lunar and Planetary Inst. Workshop on Cosmogenic Nuclides 1986 3 p (For primary document see N86-32348 23-88)
Avail: NTIS HC A05/MF A01 CSCL 07D

As a first step in an experimental program to study the behavior of noble gases produced in situ in minerals, a suite of minerals and pure chemicals were irradiated with 14.5 MeV neutrons at LLNL's Rotating Target Neutron Source (RTNS-II) and production rates for noble gases were determined. While neutron effects in meteorites and lunar samples are dominated by low-energy neutron capture, more energetic cosmic-ray secondary neutrons can provide significant depth-dependent contributions to production of cosmogenic nuclides through endothermic reactions such as (n,2n), (n,np), (n,d) and (n,alpha). Production rates for nuclides produced by cosmic-ray secondary neutrons are therefore useful in interpreting shielding histories from the relative abundances of cosmogenic nuclides. Absolute production cross sections were calculated from isotope dilution analyses of NaCl, Mg, CsCl, and Ba(NO3)2 samples, assuming purity, stoichiometry, and quantitative noble gas retention and extraction. Relative production cross sections determined from neon isotopic ratios in the mineral samples were also considered in evaluating the neon production cross sections. Results are presented. M.G.

PRODUCTION OF RADIONUCLIDES IN ARTIFICIAL METEORITES IRRADIATED ISOTROPICALLY WITH 600 MeV PROTONS **c90**
R. Michel, P. Dragovitsch, P. Englert, and U. Herpers *In* Lunar and Planetary Inst. Workshop on Cosmogenic Nuclides 1986 4 p (For primary document see N86-32348 23-88)
Avail: NTIS HC A05/MF A01 CSCL 03B

The understanding of the production of cosmogenic nuclides in small meteorites (R is less than 40 cm) still is not satisfactory. The existing models for the calculation of depth dependent production rates do not distinguish between the different types of nucleons reacting in a meteorite. They rather use general depth dependent particle fluxes to which cross sections have to be adjusted to fit the measured radionuclide concentrations. Some of these models can not even be extended to zero meteorite sizes without logical contradictions. Therefore, a series of three thick target irradiations was started at the 600 MeV proton beam of the CERN isochronuous cyclotron in order to study the interactions of small stony meteorites with galactic protons. The homogeneous 4 pi irradiation technique used provides a realistic meteorite model which allows a direct comparison of the measured depth profiles with those in real meteorites. Moreover, by the simultaneous measurement of thin target production cross sections one can differentiate between the contributions of primary and secondary nucleons over the entire volume of the artificial meteorite. M.G.

RESONANCE IONIZATION MASS SPECTROMETRY FOR ISOTOPIC ABUNDANCE MEASUREMENTS **c25**
C. M. Miller *In* Lunar and Planetary Inst. Workshop on Cosmogenic Nuclides 1986 2 p (For primary document see N86-32348 23-88)
Avail: NTIS HC A05/MF A01 CSCL 07D

Resonance ionization mass spectrometry (RIMS) is a relatively new laser-based technique for the determination of isotopic abundances. The resonance ionization process depends upon the stepwise absorption of photons from the laser, promoting atoms of the element of interest through progressively higher electronic states until an ion is formed. Sensitivity arises from the efficiency of the resonant absorption process when coupled with the power available from commercial laser sources. Selectivity derives naturally from the distinct electronic structure of different elements. This isobaric discrimination has provided the major impetus for development of the technique. Resonance ionization mass spectrometry was used for analysis of the isotopic abundances of the rare earth lutetium. Isobaric interferences from ytterbium severely effect the ability to measure small amounts of the neutron-deficient Lu isotopes by conventional mass spectrometric techniques. Resonance ionization for lutetium is performed using a continuous-wave laser operating at 452 nm, through a sequential two-photon process, with one photon exciting the intermediate resonance and the second photon causing ionization. Ion yields for microgram-sized quantities of lutetium lie between 10(6) and 10(7) ions per second, at overall ionization efficiencies approaching 10(-4). Discrimination factors against ytterbium greater than 10(6) have been measured. Resonance ionization for technetium is also being explored, again in response to an isobaric interference, molybdenum. Because of the relatively high ionization potential for Tc, three-photon, two-color RIMS processes are being developed. M.G.

N86-32362*# California Univ., San Diego. Dept. of Chemistry.
COMPILATION OF COSMOGENIC RADIONUCLIDES IN METEORITES **c90**
Kunihiko Nishiizumi *In* Lunar and Planetary Inst. Workshop on Cosmogenic Nuclides 1986 1 p (For primary document see N86-32348 23-88)
Avail: NTIS HC A05/MF A01 CSCL 03B

All available data for the concentration of cosmogenic nuclides Mn-53(t(1/2) = 3.7 x 10(6) years), Al-26 (7.05 x 10(5) years), Be-10 (1.6 x 10(6) years), Cl-36 (3.0 x 10(5) years) and Ne-21, and Ne-22/Ne-21 ratios in stony, iron, and stony-iron meteorites were compiled. For iron meteorites, the He-4/Ne-21 ratio was adopted instead of Ne-22/Ne-21 ratio, because the He-4/Ne-21 ratio in iron meteorites indicates the shielding condition of the sample. The compilation contains over 2000 different analyses for four cosmogenic radionuclides. Author

REDETERMINATION OF PARAMETERS FOR SEMI-EMPIRICAL MODEL FOR SPALLOGENIC He AND Ne IN CHONDRITES **c90**
L. E. Nyquist and A. F. McDowell (Lunar and Planetary Inst., Houston, Tex.) *In* Lunar and Planetary Inst. Workshop on Cosmogenic Nuclides 1986 1 p (For primary document see N86-32348 23-88)
Avail: NTIS HC A05/MF A01 CSCL 03B

A semi-empirical model described previously satisfactorily reproduced a number of shielding-dependent variations in the relative production rates of spallogenic He and Ne in chondrites. However, data for cores of the Keyes and St. Severin meteorites showed a subsurface build-up in He-3 which was not predicted with the original model parameters and the model was not pursued. Renewed interest in the preatmospheric size of meteorites, spurred in part by the desirability of understanding the exposure history of the SNC meteorites, justifies redetermination of model parameters. M.G.

CALCULATIONS OF COSMOGENIC NUCLIDE PRODUCTION RATES IN THE EARTH'S ATMOSPHERE AND THEIR INVENTORIES **c46**
Keran OBrien *In* Lunar and Planetary Inst. Workshop on Cosmogenic Nuclides 1986 2 p (For primary document see N86-32348 23-88)
Avail: NTIS HC A05/MF A01 CSCL 04A

The production rates of cosmogenic isotopes in the Earth's atmosphere and their resulting terrestrial abundances have been calculated, taking into account both geomagnetic and solar-modulatory effects. The local interstellar flux was assumed to be that of Garcia-Munoz, et al. Solar modulation was accounted for using the heliocentric potential model and expressed in terms of the Deep River neutron monitor count rates. The geomagnetic field was presented by vertical cutoffs calculated by Shea and Smart and the non-vertical cutoffs calculated using ANGRI. The local interstellar particle flux was first modulated using the heliocentric potential field. The modulated cosmic-ray fluxes reaching the earth's orbit then interacted with the geomagnetic field as though it were a high-pass filter. The interaction of the cosmic radiation with the Earth's atmosphere was calculated utilizing the Bolztmann transport equation. Spallation cross sections for isotope production were calculated using the formalism of Silberberg and Tsao and other cross sections were taken from standard sources. Inventories were calculated by accounting from the variation in solar modulation and geomagnetic field strength with time. Results for many isotope, including C-14, Be-7 and Be-10 are in generally good agreement with existing data. The C-14 inventory, for instance, amounts to 1.75/sq cm(e)/s, in excellent agreement with direct estimates. M.G.

THE 10Be CONTENTS OF SNC METEORITES **c90**
D. K. Pal, C. Tuniz (Istituto Nazionale di Fisica Nucleare, Trieste (Italy).), R. K. Moniot (Fordham Univ., New York, N.Y.), W. Savin (New Jersey Inst. of Tech., Newark.), S. Vajda, T. Kruse, and G. F. Herzog *In* Lunar and Planetary Inst. Workshop on Cosmogenic Nuclides 1986 2 p (For primary document see N86-32348 23-88)
Avail: NTIS HC A05/MF A01 CSCL 03B

Several authors have explored the possibility that the Shergot-

tites, Nakhlites, and Chassigny (SNC) came from Mars. The spallogenic gas contents of the SNC meteorites have been used to: constrain the sizes of the SNC's during the last few million years; to establish groupings independent of the geochemical ones; and to estimate the likelihood of certain entries in the catalog of all conceivable passages from Mars to Earth. The particular shielding dependence of Be-10 makes the isotope a good probe of the irradiation conditions experienced by the SNC meteorites. The Be-10 contents of nine members of the group were measured using the technique of accelerator mass spectrometry. The Be-10 contents of Nakhla, Governador Valadares, Chassigny, and probably Lafayette, about 20 dpm/kg, exceed the values expected from irradiation of the surface of a large body. The Be-10 data therfore do not support scenario III of Bogard et al., one in which most of the Be-10 in the SNC meteorites would have formed on the Martian surface; they resemble rather the Be-10 contents found in many ordinary chondrites subjected to 4 Pi exposures. The uncertainties of the Be-10 contents lead to appreciable errors in the Be-10 ages, t(1) = -1/lambda ln(1 Be-10/Be-10). Nonetheless, the Be-10 ages are consistent with the Ne-21 ages calculated assuming conventional, small-body production rates and short terrestrial ages for the finds. It is believed that this concordance strengthens the case for at least 3 different irradiation ages for the SNC meteorites. Given the similar half-thicknesses of the Be-10 and Ne-21 production rates, the ratios of the Be-10 and Ne-21 contents do not appear consistent with common ages for any of the groups. In view of the general agreement between the Be-10 and Ne-21 ages it does not seem useful at this time to construct multiple-stage irradiation histories for the SNC meteorites. M.G.

STUDIES ON COSMOGENIC NUCLIDES IN METEORITES WITH REGARD TO AN APPLICATION AS POTENTIAL DEPTH INDICATORS c90

R. Sarafin, U. Herpers, P. Englert, R. Wieler (Eidgenoessische Technische Hochschule, Zurich (Switzerland).), P. Signer, G. Bonani, H. J. Hofmann, E. Morenzoni, M. Nessi, M. Suter et al *In* Lunar and Planetary Inst. Workshop on Cosmogenic Nuclides 1986 3 p (For primary document see N86-32348 23-88)

Avail: NTIS HC A05/MF A01 CSCL 03B

Measurements of stable and radioactive spallation products in meteorites allow to investigate their histories, especially with respect to the exposure to galactic cosmic ray particles and the pre-atmospheric size of the object. While the concentrations of spallation products lead to the determination of exposure and terrestrial ages, production rate ratios are characteristic for the location of the sample in the meteorite. So, one of the aims of this investigation on meteorites is to obtain depth indicators from suitable pairs of cosmogenic nuclides. Because of the different depth profiles for nuclide productions it is necessary to determine the concentrations of a larger number of spallation products in aliquots of a single small sample. Such same sample measurements of Be-10 and light noble gases were performed on 15 ordinary chondrites (7 H- and 8 L-chondrites. Be-10 was determined by accelerator mass spectrometry and the noble gases were measured by static mass spectrometry. The results are summarized and discussed. Author

THE PRODUCTION RATE OF COSMOGENIC 21-Ne IN CHONDRITES DEDUCED FROM 81-Kr MEASUREMENTS c90

L. Schultz and M. Freundel *In* Lunar and Planetary Inst. Workshop on Cosmogenic Nuclides 1986 2 p (For primary document see N86-32348 23-88)

Avail: NTIS HC A05/MF A01 CSCL 03B

Cosmogenic Ne-21 is used widely to calculate exposure ages of stone meteorites. In order to do so, the production rate P(21) must be known. This rate, however, is dependent on the chemical composition of the meteorite as well as the mass of, and position within, the meteoroid during its exposure to the cosmic radiation. Even for a mean shielding the production rates determined from measurments of different radionuclides vary by a factor of two. A method that can be used to determine exposure ages of meteorites that avoids shielding and chemical composition corrections is the -81-Kr-Kr-method. However, for chondrites, in many cases, the direct determination of production rates for the Kr isotopes is prevented by the trapped gases and the neutron effects on bromine. Therefore, this method was applied to four eucrite falls and then their 81-Kr-83-Kr-ages were compared to their cosmogenic Ne-21 and Ar-38 concentrations. The eucrites Bouvante-le-Haut, Juvinas, Sioux County, and Stannern were chosen for these measurements because of their similar chemical composition regarding the major elements. Author

For many years it has been widely assumed that the variations in the level of atmospheric carbon-14 were due to statistical fluctuations arising from experimental error. This is understandable since the signal/noise ratio is very low and the time sequences representing the variations are strongly stochastic. Interlaboratory comparisons show that baseline variations in the absolute value of the carbon-14 concentration do exist. However, assuming linearity, the delta 14C values are independent of these. The importance of assessing the quantitive reality of the delta 14C values is based upon their expression of the interplanetary cosmic ray source function, because in the range of 100 to 1000 year periods, there appears to be no evidence that the Earth's magnetic field is the source modulating function. Therefore the modulation is either due to changes in the solar atmosphere propagated out into the solar wind, or extra-heliospheric pressure effects, but these appear to be unlikely for the periods noted here. The recent availability of the new high quality Belfast time sequence of delta 14C now permits a simple mutual assessment of the several sequences which are available. Since the La Jolla record has been a standard for many years , these two were chosen for a simple comparison. Although differences exist, the close agreement between these two sequences, one carried out on White mountain Bristlecone pines, and the other done using Irish peat bog wood, is striking. This correlation between the two strongly reinforces the statistical view that the delta 14C record is that of real interplanetary modulation of the cosmic ray source leading to the generation of atmospheric 14C. M.G.

NEUTRON CAPTURE PRODUCTION RATES OF COSMOGENIC 60Co, 59NI AND 36CI IN STONY METEORITES c90

M. S. Spergel, R. C. Reedy (Los Alamos National Lab., N. Mex.), O. W. Lazareth (Brookhaven National Lab., Upton, N. Y.), and P. W. Levy *In* Lunar and Planetary Inst. Workshop on Cosmogenic Nuclides 1986 3 p (For primary document see N86-32348 23-88)

Avail: NTIS HC A05/MF A01 CSCL 03B

Results for neutron flux calculations in stony meteoroids (of various radii and compositions) and production rates for Cl-36, Ni-59, and Co-60 are reported. The Ni-59/Co-60 ratio is nearly constant with depth in most meteorites: this effect is consistent with the neutron flux and capture cross section properties. The shape of the neutron flux energy spectrum, varies little with depth in a meteorite. The size of the parent meteorite can be determined from one of its fragments, using the Ni-59/Co-60 ratios, if the parent meteorite was less than 75 g/cm(2) in radius. If the parent meteorite was larger, a lower limit on the size of the parent meteorite can be determined from a fragment. In C3 chondrites this is not possible. In stony meteorites with R less than 50 g/cm(2) the calculated Co-60 production rates (mass less than 4 kg), are below 1 atom/min g-Co. The highest Co-60 production rates occur in stony meteorites with radius about 250 g/cm(2) (1.4 m across). In meteorites with radii greater than 400 g/cm(2), the maximum

Co-60 production rate occurs at a depth of about 175 g/cm(2) in L-chondrite, 125 g/cm(2) in C3 chrondrite, and 190 g/cm(2) in aubrites. M.G.

SIMULATION OF COSMIC IRRADIATION CONDITIONS IN THICK TARGET ARRANGEMENTS **c93**
S. Theis, P. Englert, R. C. Reedy (Los Alamos National Lab., N. Mex.), and J. R. Arnold (California Univ., San Diego.) *In* Lunar and Planetary Inst. Workshop on Cosmogenic Nuclides 1986 3 p (For primary document see N86-32348 23-88)
Avail: NTIS HC A05/MF A01 CSCL 03B

One approach to simulate 2-pi irradiation conditions of planetary surfaces which has been widely applied in the past are bombardments of so called thick targets. A very large thick target was exposed recently to 2.1 GeV protons at the Bevatron-Bevalac in Berkeley. In a 100x100x160 cm steel-surrounded granodiorite target radioactive medium and high energy spallation products of the incident primary and of secondary particles were analyzed along the beam axis down to depths of 140 g/cm(2) in targets such as Cu, Ni, Co, Fe, T, Si, SiO2 and Al. Activities of these nuclides were exclusively determined via instrumental gamma-ray spectroscopy. Relative yields of neutron capture and spallation products induced in Co and Cu targets during the thick target bombardment are shown as a function of depth. The majority of the medium energy products such as Co-58 from Co targets exhibit a maximum at shallow depths of 40-60 g/cm(2) and then decrease exponentially. In a comparable 600 MeV proton bombarded thick target such a slight maximum for medium energy products was not observed. Rather, Co-58 activities in Co decreased steadily with the highest activity at the surface. The activities of the n-capture product Co-60 increase steadily starting at the surface. This indicates the rapidly growing flux of low energy neutrons within the target. M.G.

COSMOGENIC RARE GASES AND 10-Be IN A CROSS SECTION OF KNYAHINYA **c90**
R. Wieler, P. Signer, U. Herpers (Cologne Univ. (West Germany).), R. Sarafin, G. Bonani, H. J. Hofmann, E. Morenzoni, M. Nessi, M. Suter, and W. Woelfli *In* Lunar and Planetary Inst. Workshop on Cosmogenic Nuclides 1986 1 p (For primary document see N86-32348 23-88)
Avail: NTIS HC A05/MF A01 CSCL 03B

The concentrations of cosmogenic nuclides were studied as a function of shielding on samples from a cross section of the 293 kg main fragment of the L5 chondrite Knyahinya. The stone broke into two nearly symmetrical parts upon its fall in 1866. The planar cross section has diameters between 40 and 55 cm. He, Ne, and Ar were measured on about 20 samples by mass spectrometry and the 10-Be activities on aliquots of 10 selected samples were determined by AMS. The 10-Be data are presented and the abundances of spallogenic nuclides are compared with the model calculations reported by Reedy for spherical L chondrites. The 10-Be production rates in Knyahinya are shown versus the shielding parameter 22-Ne/21-Ne. M.G.

A DIGITAL IMAGING PHOTOMETRY SYSTEM FOR COMETARY DATA ACQUISITION Center Director's Discretionary Fund Final Report
K. S. Clifton, C. M. Benson, and G. A. Gary Jul. 1986 28 p
(NASA-TM-86554; NAS 1.15:86554) Avail: NTIS HC A03/MF A01 CSCL 03A

This report describes a digital imaging photometry system developed in the Space Science Laboratory at the Marshall Space Flight center. The photometric system used for cometary data acquisition is based on an intensified secondary electron conduction (ISEC) vidicon coupled to a versatile data acquisition system which allows real-time interactive operation. Field tests on the Orion and Rosette nebulas indicate a limiting magnitude of approximately m sub v = 14 over the 40 arcmin field-of-view. Observations were conducted of Comet Giacobini-Zinner in August 1985. The resulting data are discussed in relation to the capabilities of the digital analysis system. The development program concluded on August 31, 1985. Author

The first interstellar hydrocarbon ring, cyclopropenylidene (C3H2) is being studied. Both a survey of galactic sources in several C3H2 transitions and a more detailed study of a subset of these sources are under way. In the latter category is a study of the nearby cold dark cloud TMC-1, which is a potential formation site for solar type stars. A spectra is shown of seven rotational transitions which have been observed at the Five College Radio Astronomy Observatory. Three of these were detected for the first time in any astronomical source: the 3 sub 30 to 2 sub 21 transition at 216 GHz, the 2 sub 21 to 1 sub 10 transition at 122 GHz, and the 1 sub 11 to 0 sub 00 transition at 52 GHz. From the data it is apparent that C3H2 is quite spacially extended in typical interstellar molecular clouds, and that at least in TMC-1 it is one of the most abundant organic molecules. E.R.

Thirty, 50, 100, and 200 microns solar limb intensity profiles determined with arcsecond resolution from airborne observations of the occultation of the solar limb during the total eclipse of 1981 July 31 are presented. Two points of particular importance emerge: (1) the longer-wavelength (100 and 200 micron) limbs are significantly brighter than disk center. At 200 microns the

extreme limb is about 1.22 times the brightness of disk center. This is consistent with the 6000 K temperature-plateau structure of the model chromospheres of Vernazza, Avrett, and Loeser (1973, Ap. J., 184, 605; 1981; Ap. J. Suppl., 45, 635;) and (2) the longer wavelength limbs are extended significantly further above the visible limb than Vernazza, Avrett, and Loeser predict. These results provide a strong basis for modeling of the solar chromosphere free from the assumption of gravitational-hydrostatic equilibrium.

Major advances in our understanding of non-radiative heating and other activity in stars cooler than T sub eff = 10,000K has occured in the last few years. This observational evidence is reviewed and the trends that are now becoming apparent are discussed. The evidence for non-radiatively heated outer atmospheric layers (chromospheres, transition regions, and coronae) in dwarf stars cooler than spectral type A7, in F and G giants, pre-main sequence stars, and close bindary systems is unambiguous, as is the evidence for chromospheres in the K and M giants and supergiants. The existence of non-radiative heating in the outer layers of the A stars remains undetermined despite repeated searches at all wavelengths. Two important trends in the data are the decrease in plasma emission measure with age on the main sequence and decreasing rotational velocity. Variability and atmospheric inhomogeneity are commonly seen, and there is considerable evidence that magnetic fields define the geometry and control the energy balance in the outer atmospheric layers. In addition, the microwave observations imply that non-thermal electrons are confined in coronal magnetic flux tubes in at least the cool dwarfs and RS CVn systems. The chromospheres in the K and M giants and supergiants are geometrically extended, as are the coronae in the RS CVn systems and probably also in other stars.

McDonald Observatory of the University of Texas at Austin reports on its activities during the period 1 Jan. 1986 to 30 June 1986. Extensive observations of Halley's Comet were obtained. The comet exhibited large variability; moreover, its variability was much more rapid than can be accounted for by water vaporization as the sole controller of activity. Jupiter satellite Io's atmosphere was found to be distended by more than the equilibrium scale height but less than for unimpeded streaming into space. The atmosphere is at least temporarily bound to IO. Uranus' (3-0) H2 quadrupole line shapes require a modification of Baines and Bergstralh's standard model which incorporates at high altitude absorbing haze in addition to the lower haze layer. A fraction of normal H2 equal to 0.25 + or 0.10 is derived, in good agreement with the standard model. This result is unchanged when the preliminary temperature structure derived by the Voyager Radio Occultation Experiment is used instead of Appleby's model c. Out of the six Pluto-Charon mutual events observed this year, data were obtained on four. Preliminary analysis is yielding improved estimates for the diameters, masses, densities, and albedos of these objects.

A ratchet was developed for photopolarimeter filters, apertures, and polarizers for operation at cryogenic temperatures. It allows accurate discrete positioning in space applications. Hall probes used for position recognition were studied as regards sensitivity, reproducibility, and reliability. Point contacts for filter and aperture wheel, and cooling in liquid helium were tested, to achieve high sensitivity and photometric accuracy of the photopolarimeter and to protect it against thermal interference radiation. Capacitors, displacement transducers, photodetectors, and light emitting diodes were tested for application at low temperatures. These mechanical and electrical components can be integrated in the GIRL photopolarimeter consisting of 2 identical photometers covering the 3 to 30 and 30 to 200 micron ranges to be applied in cryovacuum.

Segal's chronometric cosmology provides an adequate fit to the radio source counts only for an unrealistic choice of spectral index. Since the typical observed spectral index of 0.75 gives a completely unacceptable X squared = 136 with 24 (or fewer) degrees of freedom, it is concluded that the actual Universe does not fit the chronometric model. Counts of ultraviolet excess quasistellar objects also show a steep N(S) curve that the chronometric cosmology cannot explain. Claims to the contrary by Segal, Loncaric, and Segal (1980) and Segal and Nicoll (1986) depend on a seemingly innocuous assumption that in fact destroys the power of the N(S) test. Even though the chronometric model gives a better fit that other non-evolving models it must be ruled out along with all non-evolving cosmologies. Author

The interplanetary resonance radiation of neutral hydrogen and helium at 121.6 nm and 58.4 nm was observed to analyze the temperature and the density of the interstellar medium in the vicinity of the Sun. The interstellar wind theory and solar line emissions are presented. The thermal effects on H density and He density are analyzed. The profile of the 58.4 nm line is calculated to determine the radiation distribution. The complete frequency redistribution is a good approximation of the resonance scattering process. The total intensity of the 58.4 nm line is calculated by a fourfold integration of a function including velocity distribution, frequency redistribution, and line shape. Results show differences < 10% between calculations and the approximate method. The method is sufficient to evaluate the 58.4 nm background measurements. ESA

91 LUNAR AND PLANETARY EXPLORATION

Includes planetology; and manned and unmanned flights. For spacecraft design see *18 Spacecraft Design Testing, and Performance*. For space stations see *15 Launch Vehicles and Space Vehicles*.

N86-32386*# Arizona Univ., Tucson. Lunar and Planetary Lab.
INTERIORS OF THE GIANT PLANETS Semiannual Report, 1 Oct. 1985 - 1 Apr. 1986
W. B. Hubbard 18 Sep. 1986 7 p
(Grant NsG-7045)
(NASA-CR-177154; NAS 1.26:177154; SAR-24) Avail: NTIS HC A02/MF A01 CSCL 03B

The Neptune central flash data obtained from the August 20, 1985 occultation was analyzed. The three main objectives of the analysis, which combined the study of the CTIO data with the ESO data obtained by the Meudon groups were: deduce the oblateness, equatorial radius, and pole positon angle of Neptune from a combined analysis of the limb-occultation and central-flash data; determine the temperature/absorption profile in Neptune's atmosphere in the region probed by the occultation data (from 1 microbar to about 0.2 mbar), as well as atmospheric distortions produced by waves or turbulence; and search for additional Neptune ring arcs. Results were discussed in terms of the three main objectives. B.G.

N86-32387# Michigan Univ., Ann Arbor. Dept. of Physics.
A SENSITIVE RADAR SEARCH FOR SMALL NATURAL SATELLITES OF THE EARTH Final Report, 15 May 1983 - 14 Jul. 1985
Michael J. Longo 30 Sep. 1985 17 p
(Grant AF-AFOSR-0128-83)
(AD-A167777; AFOSR-86-0238TR) Avail: NTIS HC A02/MF A01 CSCL 03/3

We have used radar tracking data from NORAD to perform a sensitive search for small natural satellites of the Earth. This search would be sensitive to satellites ranging from 5 cm in diameter with perigee heights 400 km to about 40 cm with perigees 10000 km. While a few unidentified objects were found, these were all near transfer orbits likely to contain debris from satellite launches. No objects that are unlikely to be manmade were seen. GRA

N86-32388# Centro Brasileiro de Pesquisas Fisicas, Rio de Janeiro.
SOLID STATE TRANSFORMATIONS IN Fe-NI ALLOYS FROM METEORITES IN POWDER FORM
R. B. Scorzelli, J. Danon, and E. G. da Silva 1985 14 p Prepared in cooperation with Minas Gerais Univ., Belo Horizonte, Brazil
(DE86-701936; CBPF-NF-066/85) Avail: NTIS (US Sales Only) HC A02/MF A01

Moessbauer studies by transmission and back-scattering techniques with Cape York and Santa Catharina meteorites in powder form are reported. Martensitic transformation from gamma-phase to alpha-phase is induced by mechanical treatment and long-range order is affected. DOE

N86-32350*# Max-Planck-Inst. fuer Chemie, Mainz (West Germany).
SIMULATION EXPERIMENTS FOR GAMMA-RAY MAPPING OF PLANETARY SURFACES: SCATTERING OF HIGH-ENERGY NEUTRONS
J. Brueckner, P. Englert (Cologne Univ. (West Germany).), R. C. Reedy (Los Alamos National Lab., N. Mex.), and H. Waenke *In* Lunar and Planetary Inst. Workshop on Cosmogenic Nuclides 1986 3 p (For primary document see N86-32348 23-88)
Avail: NTIS HC A05/MF A01 CSCL 03B

92 SOLAR PHYSICS

Includes solar activity, solar flares, solar radiation and sunspots.

N86-32351*# Washington Univ., St. Louis, Mo. Center for the Space Sciences.
PRECOMPACTION IRRADIATION EFFECTS: PARTICLES FROM AN EARLY ACTIVE SUN?
M. W. Caffee, J. N. Goswami (Physical Research Lab., Ahmedabad (India).), C. M. Hohenberg, and T. D. Swindle *In* Lunar and Planetary Inst. Workshop on Cosmogenic Nuclides 1986 2 p (For primary document see N86-32348 23-88)
Avail: NTIS HC A05/MF A01 CSCL 03B

Avail: NTIS HC A05/MF A01 CSCL 03B

99 GENERAL

No abstracts in this category.

SUBJECT INDEX

Typical Subject Index Listing

The subject heading is the key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension has been added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The NASA accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus* (NASA SP-7053).

A

A-320 AIRCRAFT
Anemobarometry in flight control. A-320 aerodynamics. The turboreactors air inlet
[SNIAS-861-111-114] N86-31565
The A-320 aerodynamics. The turboreactor air inlet
[NOTE-427.021/86] N86-31567

ABRASION RESISTANCE
Wear improvement in titanium alloys by ion implantation
[AD-D012203] N86-31704
Improvement of the corrosion resistance of turbine engine bearings
[AD-A167355] N86-31893

ABSORPTION CROSS SECTIONS
Integral-data test of JEF-1 fission-product cross sections
[ECN-176] N86-32263

ABSORPTION SPECTRA
Experimental investigations of the role of laser field fluctuations in non-linear optical absorption processes
[DE86-006919] N86-31883
Radiation in boundary layer clouds N86-32028

ABSORPTIVITY
Remote gas analysis with lasers. Analytic laboratory investigations in the 3.4 to 4.2 microns range
[BMFT-FB-W-85-020] N86-31694

ABSTRACTS
Bibliography of Lewis Research Center technical publications announced in 1985
[NASA-TM-87263] N86-32336

ABUNDANCE
Resonance ionization mass spectrometry for isotopic abundance measurements N86-32361
Calculations of cosmogenic nuclide production rates in the Earth's atmosphere and their inventories N86-32364

ACCELERATED LIFE TESTS
Evaluation of high temperature accelerated aging tests used on integrated circuits
[DE86-009615] N86-31801

ACCELERATION (PHYSICS)
Acceleration of ions and electrons by wave-particle interactions
[AD-A167631] N86-32258

ACCIDENT PREVENTION
Study of test bench dangers in Vulcan engine turbopump tests. (A component of Ariane 5 launcher)
[ESA-86-97632] N86-31866

ACCIDENTS
Full-scale crash test (T-41) of the YAH-63 attack helicopter
[AD-A167813] N86-31550

ACCURACY
Development of a receiver concept for geodetic application of the NAVSTAR Global Positioning System (GPS) satellite navigation system
[BMFT-FB-W-85-036] N86-31557
Measures of measurement adequacy N86-32008
Effects of storm-related parameters on the accuracy of the nested tropical cyclone model
[AD-A167809] N86-32058

ACID RAIN
Application of a geographic information system in the study of acidic deposition
[DE86-008220] N86-32000

ACOUSTIC DUCTS
Hydrodynamic instabilities and surface waves in a flow over an impedance wall
[NLR-MP-85053-U] N86-31848
Acoustic description of south Atlantic Ocean warm core eddy
[AD-A166323] N86-32074

ACOUSTIC EMISSION
Damage assessment by acousto-ultrasonic techniques in composites
[AD-A168097] N86-31672

ACOUSTIC EXCITATION
Prediction of the high frequency response of satellites to diffuse acoustic environments
[SNIAS-861-422-122] N86-31638

ACOUSTIC IMPEDANCE
Hydrodynamic instabilities and surface waves in a flow over an impedance wall
[NLR-MP-85053-U] N86-31848

ACOUSTIC INSTABILITY
Hydrodynamic instabilities and surface waves in a flow over an impedance wall
[NLR-MP-85053-U] N86-31848

ACOUSTIC MEASUREMENT
Airborne intruder detection considerations
[DE86-006462] N86-31576
Measurement and extraction of recurring waveforms: For applications to active transmissions, flow-noise, and helicopter-radiated noise problems
[AD-A167400] N86-32249
Compendium of methods for applying measured data to vibration and acoustic problems
[AD-A168174] N86-32251
Fiber optic sensors
[FOA-C-30416-E1] N86-32286

ACOUSTIC MICROSCOPES
Factors that affect reliability of nondestructive detection of flaws in structural ceramics
[NASA-TM-87348] N86-31912
Quantitative void characterization in structural ceramics using scanning laser acoustic microscopy
[NASA-TM-88797] N86-31913

ACOUSTICS
Vertical directionality of ambient noise: 150-300 Hz
[AD-A167421] N86-32250
Compendium of methods for applying measured data to vibration and acoustic problems
[AD-A168174] N86-32251
European Science Notes, volume 40, number 6
[AD-A167501] N86-32346

ACRYLIC RESINS
Measurement of the glass transition temperature (Tg) of the Z-14.203 material (parasol C-212)
[I-111/85] N86-31742

ACTIVE CONTROL
Numerical simulation of the active control of laminar-turbulent transition in the flat-plate boundary layer
[DFVLR-FB-86-05] N86-31852

ACTUATORS
On control concept for in-flight simulation including actuator nonlinearities and time delays
[ESA-TT-940] N86-31593

ADA (PROGRAMMING LANGUAGE)
Ada (trade name) compiler validation summary report: Verdix Corporation Verdix Ada Development System, version 5.2 for the Tektronix 6130 under UTek, release 2.1.1
[AD-A166872] N86-32113
Ada (trade name) compiler validation summary report: TeleSoft, Inc. TeleSoft Ada, version 2.39 Gould PS3000 host, Gould CONCEPT/32 (trade name) model 6750 target
[AD-A167470] N86-32114

ADAPTIVE CONTROL
Adaptive control of the ALOHA protocol in a mobile radio cellular system
[ENST-85E013] N86-31785

ADAPTIVE FILTERS
Linear filter theory
[ESA-86-97391] N86-31811

ADDITIVES
Slip casting and extruding shapes of rhenium with metal oxide additives. 1: Feasibility demonstration
[NASA-CR-174970] N86-31648

ADHESIVE BONDING
Design of adhesive bonded structures for spacecraft
[SNIAS-861-430-114] N86-31741

ADHESIVES
High temperature adhesives
[SNIAS-861-422-118] N86-31739

ADRIATIC SEA
The results of hydrological measurements in the southern Adriatic, the west coast of Sicily and the Vatican Cape, preliminary report
[PREPRINT-502] N86-31975

AERIAL PHOTOGRAPHY
Activities report in aerospace survey and space sciences
[ESA-86-98042] N86-31976
Introduction to the interpretation of remote sensing data
[ESA-86-98067] N86-31977

AERIAL RECONNAISSANCE
Rome Air Development Center Air Force technical objective document fiscal year 1987

Airport noise control strategies
[AD-A167977] N86-31602
Measurement and extraction of recurring waveforms: For applications to active transmissions, flow-noise, and helicopter-radiated noise problems
[AD-A167400] N86-32249

AIRCRAFT PERFORMANCE
Development of a takeoff performance monitoring system
[NASA-TM-89001] N86-31591

AIRCRAFT RELIABILITY
An analytical methodology for predicting repair time distributions of advanced technology aircraft
[AD-A167149] N86-31529

AIRCRAFT SAFETY
Advisory Circular: Design considerations to protect fuel systems during a wheels-up landing
[FAA-AC/25.994-1] N86-31564
Flight data recorders (FDR) and/or cockpit Voice Recorders (CVR) in the Lockheed Orion P-3C Update 2
[ESA-86-97395] N86-31581

AIRCRAFT STRUCTURES
Development of a data acquisition system to aid in the aerodynamic study of various helicopter configurations
[AD-A167717] N86-31539
Dynamic analysis: Correlation of theory with experiment — MSC/NASTRAN analysis of Westland 30 G-BGHF
[RP661] N86-31917

AIRFOIL PROFILES
Design of a basic profile for a slightly swept wing. Part 2: Experimental investigation on the airfoil DFVLR-W1 in the Brunswick Transonic Wind Tunnel (TWB)
[ESA-TT-916-PT-2] N86-31542
Application of an inviscid multivortex model to the calculation of the vortex flow behind an airfoil profile with spoiler
[ISL-R-133/84] N86-31545

AIRFOILS
Effect of aspect ratio on sidewall boundary-layer influence in two-dimensional airfoil testing
[NASA-CR-4008] N86-31534
Airfoil flutter model suspension system
[NASA-CASE-LAR-13522-1] N86-31594

AIRLINE OPERATIONS
Tendencies for liberalization in European air transport
[ESA-TT-947] N86-31559

AIRPORT BEACONS
Portable glide slope indicator
[AD-D012240] N86-31552

AIRPORTS
Field performance of fiber-reinforced concrete airfield pavements
[FAA/PM-86/26] N86-31596
Airport noise control strategies
[AD-A167977] N86-31602

AIRSPACE
Airborne intruder detection considerations
[DE86-006462] N86-31576

ALASKA
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Cape Newenham, Alaska
[AD-A167652] N86-32049

ALERTNESS
Altitude acclimatization (ventilation and chemoresponsiveness) during wakefulness and sleep
[AD-A167738] N86-32091

ALGEBRA
Comparison of Clifford and Grassmann algebras in applications to electromagnetics, revision 1
[DE86-009716] N86-31775
Zero and negative masses in finite element vibration and transient analysis
[AD-A167489] N86-31922
Programming algebra in a data type variance — artificial intelligence
[ESA-86-97300] N86-32149
REDUCE: A computer algebra system
[CNES-CT/DTI/MS/MN/201] N86-32165
MUMATH computer algebra system for microcomputers
[CNES-CT/DTI/MS/MN/311] N86-32166
Ready trace semantics for process algebra with priority operator
[FVI-85-15] N86-32218

ALGORITHMS
Development of a takeoff performance monitoring system
[NASA-TM-89001] N86-31591
Study of a homotopy continuation method for early orbit determination with the Tracking and Data Relay Satellite System (TDRSS)
[NASA-TM-86230] N86-31610
Study on algorithms for prediction of solid propellant rocket motor performance
[AD-A167842] N86-31657
A conservative rating procedure for cyclically loaded, buried cables
[S/T-REPT-VOL-3-NO-9] N86-31821
High speed viscous flow calculations about complex configurations
[NASA-TM-88237] N86-31827
Development of a variational SEASAT data analysis technique
[NASA-CR-177175] N86-31942
Multiple grid problems on concurrent-processing computers
[NASA-TM-86675] N86-32112
CWI Newsletter, no. 8
[CWI-NEWSLETTER-ISSUE-8] N86-32121
The new linear programming method of Karmarkar
N86-32122
A recent algorithm for the factorization of polynomials
N86-32123
Computing narrow inclusions for definite integrals
[AD-A167491] N86-32135
Rate distortion characteristics of two adaptive data compression algorithms
[NLR-MP-85024-U] N86-32150
Algorithms for on-the-fly garbage collection revisted
[CS-8507] N86-32157
Quality control of filed subroutines. Least squares method. Development and validation of some algorithms
[CNES-CT/DTI/MS/MN/132] N86-32163
Physics codes on parallel computers
[DE86-006712] N86-32170
Sparse Cholesky factorization on a local-memory multiprocessor
[DE86-010082] N86-32173
Performance analysis of a microcomputer-based single-loop digital control system
[AD-A167914] N86-32177
Two algorithms for the construction of greatest right divisors of a polynomial matrix
[ESA-86-97302] N86-32186
Optimal implementation of differentiation arithmetic
[AD-A167494] N86-32193
Truncated cardinal spline functions
[ESA-86-97284] N86-32205
Spline functions with form conditions
[ESA-86-97286] N86-32207
Elementary functions computing methodology
[ESA-86-97298] N86-32209
An algorithm for the evaluation of performance measures in a CP-terminal system
[MEMO-COSOR-84-07] N86-32212
Upper bounds on Poisson tail probabilities
[AD-A167531] N86-32224

ALIGNMENT
Apparatus and method for aligning a mask and wafer in the fabrication of integrated circuits
[AD-D012208] N86-31795

ALLOYS
Degradation of materials in combustion environments
[DE86-011771] N86-31691
Mechanical property development in Hot Isostatic Pressed (HIP) low alloy steel powder
[AD-A166666] N86-31703
Semiconductor alloy theory
[AD-A166995] N86-32300

ALPHA PARTICLES
Influence of radiation-induced segregation on ductility of a nickel-silicon alloy
[DE86-009500] N86-31720

ALTERNATING CURRENT
Phase-sensitive a.c. polarography and its data processing by microcomputer-controlled elecctroanalytical system
[DRIC-T-7634] N86-31679
A conservative rating procedure for cyclically loaded, buried cables
[S/T-REPT-VOL-3-NO-9] N86-31821

ALTIMETERS
Anemobarometry in flight control. A-320 aerodynamics. The turboreactors air inlet
[SNIAS-861-111-114] N86-31565
Anemobarometry: An essential element of flight control N86-31566

ALTIMETRY
Characteristics of altitude error at reduced quantization
[FAA/PM-86/35] N86-31580

ALTITUDE ACCLIMATIZATION
Altitude acclimatization (ventilation and chemoresponsiveness) during wakefulness and sleep
[AD-A167738] N86-32091

ALUMINUM
Damping characteristics of metal matrix composites
[AD-A167792] N86-31668
The variation of the dislocation density in aluminum deformed to large steady-state creep strains
[AD-A167715] N86-31708
Corrosion behaviour of aluminium plates in aqueous medium
[DE86-701575] N86-31711
Dimensionally stable electrodes for used salt electrolysis (substitute for petroleum coke)
[BMFT-FB-T-85-186] N86-31812

ALUMINUM ALLOYS
New aluminum alloys for satellite structures
[SNIAS-861-440-111] N86-31641
Study on effects of powder and flake chemistry and morphology on the properties of Al-Cu-Mg-X-X-X powder metallurgy advanced aluminum alloys
[NASA-CR-178145] N86-31698
The influence of incubation time on the passive film breakdown of aluminum alloys in seawater
[AD-A167398] N86-31705
Analysis of heat-affected zone cracking in Ni3Al alloys
[DE86-009449] N86-31712
Overview of transport mechanisms in beta-lithium/aluminum
[DE86-010522] N86-31724
An investigation into the tripping behavior of longitudinally T-stiffened rectangular flat plates loaded statically and impulsively
[AD-A167718] N86-31923

ALUMINUM OXIDES
Multilayer ceramic capacitor on printed circuit
[AD-D012246] N86-31797

AMBIENCE
Vertical directionality of ambient noise: 150-300 Hz
[AD-A167421] N86-32250

AMBIENT TEMPERATURE
Ambient temperature liquefaction using liquid clathrates
[DE86-010361] N86-31689

AMINES
Amine terminated bisaspartimide polymer
[NASA-CASE-ARC-11421-2] N86-31726

AMORPHOUS MATERIALS
Deposition of crystalline semiconductor layers on amorphous substrates (Graphoepitaxy)
[BMFT-FB-T-85-160] N86-32313

AMORPHOUS SEMICONDUCTORS
Solid state image sensor with an amorphous photoconversion layer
[BMFT-FB-T-85-164] N86-31869

AMPHIBIOUS AIRCRAFT
Technology demonstration for investigation of the new possibilities of amphibious flying boats, phase 2
[BMFT-FB-W-85-022] N86-31577

ANALOG CIRCUITS
System semantics and formal circuit description — programming languages
[REPT-69] N86-32156
Development of models for the simulation of the temperature behavior of MOSFETS in analog and digital circuits in the temperature range between minus 55 deg C to plus 150 deg C
[BMFT-FB-T-85-167] N86-32314

ANALOG COMPUTERS
Performance analysis of a microcomputer-based single-loop digital control system
[AD-A167914] N86-32177

ANALOG TO DIGITAL CONVERTERS
Multiple thermocouple testing device
[AD-D012276] N86-31860
Stability considerations in the design of sigma-delta modulators — sampled data control systems
[S-AND-C.85-1] N86-32117

ANALYTIC GEOMETRY
Break-up of invariant circles for a mapping with a cubic nonlinearity
[ESA-86-97378] N86-32213

ANEMOMETERS
Anemobarometry: An essential element of flight control N86-31566

ANGLE OF ATTACK
Low-speed aerodynamic characteristics of a 1/8-scale X-29A airplane model at high angles of attack and sideslip
[NASA-TM-87722] N86-31532

High speed viscous flow calculations about complex configurations
[NASA-TM-88237] N86-31827

ANISOTROPY
Radar cross-section of damped cylinders and anisotropic cylinders
[AD-A167773] N86-31769

ANNEALING
Floor planning and net assignment in layout compilation
[ESA-86-97530] N86-31818

ANNIHILATION REACTIONS
Deuteron properties studied in neutrino and antineutrino interactions
[NIKHER-H/86-7] N86-32256

ANNUAL VARIATIONS
Balance of the tropospheric ozone and its relation to stratospheric intrusions indicated by cosmogenic radionuclides, part 13
[DE85-015560] N86-32016
Continentality: Its estimation and physical significance
[AD-A167111] N86-32044

ANODES
Selective anodic oxidation of semiconductors for pattern generation
[AD-D012245] N86-32299

ANODIC COATINGS
Selective anodic oxidation of semiconductors for pattern generation
[AD-D012245] N86-32299

ANOMALIES
Gauge anomalies, gravitational anomalies and superstrings
[DE86-005489] N86-32383

ANTENNA ARRAYS
Microcomputer optimization of feed excitation voltages to obtain desired antenna radiation patterns
[AD-A167560] N86-31768

ANTENNA RADIATION PATTERNS
Microcomputer optimization of feed excitation voltages to obtain desired antenna radiation patterns
[AD-A167560] N86-31768

ANTIFERROMAGNETISM
Dynamic susceptibility on two first-order phase transformations
[ESA-86-97381] N86-32319

ANTIFRICTION BEARINGS
Improvement of the corrosion resistance of turbine engine bearings
[AD-A167355] N86-31893

ANTIMISSILE DEFENSE
Space and defense -- antimissile defense
[ESA-86-97272] N86-31805
Feasibility study of surveillance avoidance during the deployment of Soviet payloads of military interest into orbit from a Soviet shuttle
[AD-A167661] N86-31807
Rome Air Development Center Air Force technical objective document fiscal year 1987
[AD-A167425] N86-31767

ANTINEUTRINOS
Deuteron properties studied in neutrino and antineutrino interactions
[NIKHER-H/86-7] N86-32256

ANTIREFLECTION COATINGS
Coatings for high energy applications. The Nova laser
[DE86-009407] N86-31884

APPLICATIONS PROGRAMS (COMPUTERS)
ATRAN3S: An unsteady transonic code for clean wings
[NASA-TM-86783] N86-31535
NASA's Aircraft Icing Analysis Program
[NASA-TM-88791] N86-31548
Point-mass simulation tool (PMAST) user's manual
[DE86-009547] N86-31611
ICAN: A versatile code for predicting composite properties
[NASA-TM-87334] N86-31664
Formulation of numerical methods used in the XYZ Three-Dimensional Potential Flow Program
[AD-A168167] N86-31836
Theory and operation of the Gould 32/27 programs ABLE-2A and EBLE for the tropospheric air motion measurement system
[NASA-CR-176856] N86-32011
Aiding computer application programmers and users with the tools of the visual interface
[AD-A167886] N86-32139
The MSTN software. Trigonometric series manipulator
[CNES-CT/DTI/MS/MN/262] N86-32167
System analysis for the Huntsville Operation Support Center distributed computer system
[NASA-CR-178890] N86-32232

APPROACH CONTROL
Investigations in landing process of aircraft by means of the Monte-Carlo method
[ESA-TT-951] N86-31578

APPROACH INDICATORS
Portable glide slope indicator
[AD-D012240] N86-31552
Analysis of a mirror deck landing aid
[AD-A167968] N86-31556

APPROXIMATION
Physical significance of least mean squares criterion in nonstationary lattice predictors -- voice communication
[FUB-9-1985] N86-31789
Stability analysis of intermediate boundary conditions in approximate factorization schemes
[NASA-CR-178126] N86-32189
Minimal support for bivariate splines
[AD-A167519] N86-32196
Truncated cardinal spline functions
[ESA-86-97284] N86-32205
Upper bounds on Poisson tail probabilities
[AD-A167531] N86-32224

ARC HEATING
A review of methods to determine the ignitability of pyrotechnic compositions
[AD-A167429] N86-31745

ARCHITECTURE (COMPUTERS)
The RISC (Reduced Instruction Set Computer) architecture and computer performance evaluation
[AD-A167873] N86-32115
Flex Pascal: An implementation of the ISO-Pascal programming language
[AD-A168105] N86-32140
Practical paradigm for parallel processing problems
[DE86-006274] N86-32172
Hypercube project and a simulator for a hypercube of computers
[DE86-010164] N86-32174
System analysis for the Huntsville Operation Support Center distributed computer system
[NASA-CR-178890] N86-32232
Study and implementation of an image synthesizer based on a modular architecture
[ESA-86-97295] N86-32252

ARCTIC REGIONS
NORDA Arctic data collection, processing and interpretation capabilities
[AD-A167797] N86-31965
The cloud-topped boundary layer N86-32027

ARIANE LAUNCH VEHICLE
Study of the fixation of Hermes vehicle on the Ariane 5 launch vehicle
[SNIAS-861-422-121] N86-31623
Design of spacecraft
[ISBN-2-225-80732-9] N86-31629
Advantages and limitations of liquid propellant rocket engines
[ESA-86-97631] N86-31659
Study of test bench dangers in Vulcan engine turbopump tests. (A component of Ariane 5 launcher)
[ESA-86-97632] N86-31688
Lancelot: Long term distance computation and analysis software
[CNES-CT/DI/MS/MS/080] N86-32164

ARMED FORCES (UNITED STATES)
An analysis of the defense spacecraft market
[AD-A167602] N86-32326
Guide to Canadian aerospace related industries
[AD-A167794] N86-32327

ARRAYS
New array processors of floating point systems N86-31953
Installation of a modular building block photovoltaic concentrator array field
[DE85-016032] N86-31985

ARTIFICIAL INTELLIGENCE
Chemistry research resource
[DE86-009393] N86-31961
Use of artificial intelligence and psychology in the analysis of command and control -- military commanders
[STC-TM-749] N86-32095
Artificial intelligence and the Rule Oriented System Simulation (ROSS) language -- military commanders N86-32097
Text understanding: Interestingness as a basis for the variation of the analysis depth -- artificial intelligence
[BMFT-FB-ID-85-001] N86-32124
Text understanding: Interestingness as a basis for the variation of the analysis depth -- artificial intelligence N86-32126
Machine learning in METAXA -- learning model, inference N86-32131
The nature and evaluation of commercial expert system building tools
[NASA-TM-88331] N86-32132
Programming algebra in a data type variance -- artificial intelligence
[ESA-86-97300] N86-32149
REDUCE: A computer algebra system
[CNES-CT/DTI/MS/MN/201] N86-32165
Discovery systems
[AD-A167852] N86-32176

ARTIFICIAL SATELLITES
Fourier transform infrared spectroscopic study of aging in commercial polyurethane
[AD-A167418] N86-31790

ASPECT RATIO
Effect of aspect ratio on sidewall boundary-layer influence in two-dimensional airfoil testing
[NASA-CR-4008] N86-31534

ASSEMBLIES
Study of the fixation of Hermes vehicle on the Ariane 5 launch vehicle
[SNIAS-861-422-121] N86-31623

ASSEMBLY
Improved robotic kitting station
[AD-D012238] N86-31892

ASTRONOMICAL OBSERVATORIES
Gas flowmeter for a space cryostat -- Infrared Space Observatory
[SEP-TS/SE/BT/10.289/85] N86-31878
Activities of the Department of Astronomy and McDonald Observatory of the University of Texas at Austin
[NASA-CR-179667] N86-32378
Activities report in astronomy
[ISSN-0531-4496] N86-32380

ASTRONOMICAL TELESCOPES
Activities report in astronomy
[ISSN-0531-4496] N86-32380

ASYMPTOTES
On Delta Beta and the search for asymptotic scaling in lattice gauge theory
[NIKHEF-H/86-6] N86-32231

ASYMPTOTIC METHODS
Orbital compactness and asymptotic behavior of non-linear parabolic systems with functionals
[AD-A167486] N86-32191
Estimating problems in stationary time series with missing data
[ESA-86-97287] N86-32228

ASYMPTOTIC SERIES
Orbital compactness and asymptotic behavior of non-linear parabolic systems with functionals
[AD-A167486] N86-32191
Elementary symmetric polynomials of increasing order
[CWI-MS-R8601] N86-32220

ATLANTIC OCEAN
Acoustic description of south Atlantic Ocean warm core eddy
[AD-A168323] N86-32074
The CTD data from the Madeira Abyssal Plain, Charles Darwin cruise 1/85 -- conductivity-temperature-depth (CTD)
[IOS-217] N86-32078

ATMOSPHERIC ATTENUATION
Satellite-Earth range measurements. Part 1: Correction of the excess path length due to atmospheric water vapor by ground based microwave radiometry
[CTH-RR-147-PT-1] N86-32022

ATMOSPHERIC BOUNDARY LAYER
Development of a variational SEASAT data analysis technique
[NASA-CR-177175] N86-31942
Contributions to large-eddy simulation, part 1
[DE86-009710] N86-32021
Report of the JSC/CAS Workshop on Modeling of Cloud Topped Boundary Layer
[WCP-106] N86-32025
Extratropical cloud-topped boundary layers over the oceans N86-32026
The cloud-topped boundary layer N86-32027
Radiation in boundary layer clouds N86-32028
Theory and observation of cloud-topped boundary layer processes N86-32030
Satellite observations of the cloud-topped boundary layer N86-32031
Modeling and observations of the stratocumulus-topped atmospheric boundary layer N86-32033
Key problems of parameterization for simple cloud-topped boundary layer models N86-32035
Notes on modeling the cloud topped boundary layer N86-32036
Boundary layer and cloud parameterization in the NCAR community climate model -- National Center of Atmospheric Research (NCAR) N86-32037
Parameterization of the cloud-topped boundary layer in a global forecast model N86-32038
Boundary layer clouds in the ISCCP data sets -- International Satellite Cloud Cover Program (ISCCP) N86-32041

ATMOSPHERIC CHEMISTRY
System study of the utilization of space for carbon dioxide research
[NASA-CR-3923] N86-32005
ATMOSPHERIC CIRCULATION
Space systems requirements definition N86-32006
The sensitivity of one month GCM forecasts at GFDL to zonally symmetric clouds, quasi-realistic specified clouds, and model-predicted clouds --- Global Circulation Model (GCM); Geophysical Fluid Dynamics Laboratory (GFDL) N86-32040
Validation of General Circulation Model (GCM) control runs
[DE86-009697] N86-32062
ATMOSPHERIC COMPOSITION
Hypersonic aerodynamic coefficients and convection flow estimation in a Hermes type project
[SNIAS-861-422-106] N86-31540
System study of the utilization of space for carbon dioxide research
[NASA-CR-3923] N86-32005
Determination of the atmospheric aerosol distribution by multi-channel remote sensing techniques
[AD-A167865] N86-32014
Projecting the climatic effects of increasing carbon dioxide
[DE86-008810] N86-32061
ATMOSPHERIC CORRECTION
LANDSAT 4 band 6 data evaluation
[NASA-CR-177173] N86-31944
ATMOSPHERIC DIFFUSION
Balance of the tropospheric ozone and its relation to stratospheric intrusions indicated by cosmogenic radionuclides, part 13
[DE85-015560] N86-32016
ATMOSPHERIC HEAT BUDGET
Radiation in boundary layer clouds N86-32026
Physical properties of stratiform clouds and their parametrization N86-32029
Use of existing and suggested satellite observations of reflected spectral radiance to estimate properties of stratiform clouds N86-32032
ATMOSPHERIC MODELS
Model for the steady-state rotational stimulated Raman gain coefficients in the atmosphere
[AD-A167469] N86-32013
Mixing length and turbulent diffusion coefficient in atmospheric simulation models
[REPT-25] N86-32024
Report of the JSC/CAS Workshop on Modeling of Cloud Topped Boundary Layer
[WCP-106] N86-32025
Extratropical cloud-topped boundary layers over the oceans N86-32026
The cloud-topped boundary layer N86-32027
Physical properties of stratiform clouds and their parametrization N86-32029
Theory and observation of cloud-topped boundary layer processes N86-32030
Modeling and observations of the stratocumulus-topped atmospheric boundary layer N86-32033
The structure of a stratus-topped planetary boundary layer as seen through a large-eddy simulation N86-32034
Key problems of parameterization for simple cloud-topped boundary layer models N86-32035
Notes on modeling the cloud topped boundary layer N86-32036
Boundary layer and cloud parameterization in the NCAR community climate model --- National Center of Atmospheric Research (NCAR) N86-32037
Simulation of cloudiness with the UK Meteorological Office 11-layer AGCM N86-32039
The sensitivity of one month GCM forecasts at GFDL to zonally symmetric clouds, quasi-realistic specified clouds, and model-predicted clouds --- Global Circulation Model (GCM); Geophysical Fluid Dynamics Laboratory (GFDL) N86-32040
Effects of storm-related parameters on the accuracy of the nested tropical cyclone model
[AD-A167809] N86-32058
Validation of General Circulation Model (GCM) control runs
[DE86-009697] N86-32062
ATMOSPHERIC MOISTURE
Satellite-Earth range measurements. Part 1: Correction of the excess path length due to atmospheric water vapor by ground based microwave radiometry
[CTH-RR-147-PT-1] N86-32022
ATMOSPHERIC PHYSICS
Atmospheric molecules
[AERONOMICA-ACTA-F-38-1985] N86-32004
ATMOSPHERIC PRESSURE
Development of a variational SEASAT data analysis technique
[NASA-CR-177175] N86-31942
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Peterson AFB, Colorado Springs, Colorado
[AD-A167650] N86-32047
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Macdill AFB, Florida
[AD-A167651] N86-32048
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Cape Newenham, Alaska
[AD-A167652] N86-32049
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: White Sands MR, New Mexico
[AD-A167654] N86-32051
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: CAstle AFB, California
[AD-A167657] N86-32054
Validation of General Circulation Model (GCM) control runs
[DE86-009697] N86-32062
Climatological data of stations in the Netherlands. No. 25: A climatology of the main observatory at De Bilt for the period 1901-1984
[KNMI-150-25] N86-32068
ATMOSPHERIC RADIATION
An analysis of measurements of atmospheric trace gas infrared emissions
[BMFT-FB-W-85-016] N86-32003
ATMOSPHERIC SOUNDING
Second generation meteosat: Infrared atmospheric sounder design
[CNES-T-85/CT/DRT/TIT/ID-046] N86-32283
ATMOSPHERIC TEMPERATURE
Continentality: Its estimation and physical significance
[AD-A167111] N86-32044
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Macdill AFB, Florida
[AD-A167651] N86-32048
Climatological data of stations in the Netherlands. No. 25: A climatology of the main observatory at De Bilt for the period 1901-1984
[KNMI-150-25] N86-32068
ATMOSPHERIC TURBULENCE
Modeling and observations of the stratocumulus-topped atmospheric boundary layer N86-32033
The structure of a stratus-topped planetary boundary layer as seen through a large-eddy simulation N86-32034
Parameterization of the cloud-topped boundary layer in a global forecast model N86-32038
ATOMIC PHYSICS
Activities report in fundamental research on matter
[ESA-86-97778] N86-32246
ATOMIZING
Mechanical property development in Hot Isostatic Pressed (HIP) low alloy steel powder
[AD-A166666] N86-31703
AUDITORY PERCEPTION
Speech analysis based on a model of the auditory system
[AD-A167426] N86-32098
AUDITORY STIMULI
Auditory versus visual selective-attention tasks
[IZF-1985-19] N86-32100
AUDITORY TASKS
Auditory versus visual selective-attention tasks
[IZF-1985-19] N86-32100
AUGER SPECTROSCOPY
Photodesorption cleaning of silicon with vacuum ultraviolet irradiation
[AD-A167420] N86-31662
AURORAS
Sounding rocket program Magnetosphere payload CAESAR. Report on systems development, integration, testing and flight
[BMFT-FB-W-85-023] N86-32023
AUTOCLAVING
Autoclave moulding of carbon fibre reinforced plastics
[RAE-TR-85039] N86-31662
AUTOCORRELATION
Quality determination of the Heat and Flow Theory Department (WS) subsonic wind tunnel and experiments using laser Doppler velocity measurement
[ESA-86-97355] N86-31603
Utilizing remote sensing of Thematic Mapper data to improve our understanding of estuarine processes and their influence on the productivity of estuarine-dependent fisheries
[NASA-CR-177177] N86-31943
AUTOMATIC CONTROL
Automatic speech recognition for large vocabularies
[BMFT-FB-DV-85-003] N86-31779
Installation of a modular building block photovoltaic concentrator array field
[DE85-016032] N86-31985
Error control of meteorological measurements --- automatic control
[KNMI-TR-76] N86-32065
AUTOMATIC PILOTS
Centaur engine gimbal friction characteristics under simulated thrust load
[NASA-TM-87335] N86-31621
AUTOMATIC TEST EQUIPMENT
The functional test of complex integrated circuits --- very large scale integration
[ESA-86-97289] N86-31807
Functional tests of digital integrated circuits
[ESA-86-97301] N86-31810
AUTOPSIES
Special features of surgical intervention under conditions of weightlessness
[AD-A167916] N86-32092
AUTOREGRESSIVE PROCESSES
Longterm speech spectra of nonstationary autoregressive models
[FUB-8-1985] N86-31786
AVIONICS
Design of spacecraft
[ISBN-2-225-80732-9] N86-31629
AVOIDANCE
Feasibility study of surveillance avoidance during the deployment of Soviet payloads of military interest into orbit from a Soviet shuttle
[AD-A167661] N86-31607
AXIOMS
The algebra of communicating processes with empty process
[FVI-86-01] N86-32158
Extended general design theory
[CWI-CS-R8604] N86-32162
AXISYMMETRIC BODIES
Use of a special finite element for the static analysis of normal interfacial stresses
[SNIAS-861-422-109] N86-31936

B

BACKGROUND RADIATION
Properties of impurity doped infrared photoconductive detectors under conditions of low background photon flux --- space environments
[NPL-QU-76] N86-32298
BACKSCATTERING
Investigations of laser mirrors with different design
[DFVLR-FB-85-65] N86-31887
BALL BEARINGS
Evaluation of a hybrid hydrostatic bearing for cryogenic turbopump application
[NASA-TM-87255] N86-31649
BALLOONS
Balloon tracer for atmospheric pollutants
[DE86-007144] N86-31999
BANACH SPACE
A convergence theorem for Newton-like methods in Banach spaces
[AD-A167455] N86-32234
BAND STRUCTURE OF SOLIDS
Semiconductor alloy theory
[AD-A166995] N86-32300
BANDWIDTH
Time synchronization via SYMPHONIE High Accuracy Low Cost (HALO)
[BMFT-FB-W-85-021] N86-31781
BAROMETERS
Anemobarometry: An essential element of flight control N86-31566
BATHYMETERS
Coast of California storm and tidal waves study: Nearshore bathymetric survey report, San Diego region
[AD-A166119] N86-32076
BEAMS (RADIATION)
Selective anodic oxidation of semiconductors for pattern generation
[AD-D012245] N86-32299
BEAMS (SUPPORTS)
Large deformation dynamic bending of composite beams
[NASA-CR-4006] N86-31921
Elastoplastic torsion of a cylindrical beam, described by variational inequalities
[ESA-86-97704] N86-31937
BEARING ALLOYS
Improvement of the corrosion resistance of turbine engine bearings
[AD-A167355] N86-31893

BEND TESTS
Correlation of processing and sintering variables with the strength and radiography of silicon nitride
[NASA-TM-87251] N86-31729
BENZENE
Aromatics oxidation and soot formation in flames
[DE86-010585] N86-31690
BERYLLIUM 10
The 10Be contents of SNC meteorites N86-32365
Cosmogenic rare gases and 10-Be in a cross section of Knyahinya N86-32371
BIAS
Selectively etching microstructures in a glow discharge plasma
[AD-D012206] N86-31794
Selective anodic oxidation of semiconductors for pattern generation
[AD-D012245] N86-32299
BIBLIOGRAPHIES
Aeronautical engineering: A continuing bibliography with indexes (supplement 202)
[NASA-SP-7037(202)] N86-31525
Aeronautical engineering: A continuing bibliography with indexes (supplement 203)
[NASA-SP-7037(203)] N86-31526
Earth resources: A continuing bibliography with indexes, issue 50
[NASA-SP-7041(50)] N86-31940
Photovoltaics: Electricity from sunlight, FY 1985 accomplishments
[DE86-004429] N86-31986
USSR Space Life Sciences Digest, issue 7
[NASA-CR-3922(08)] N86-32083
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 288)
[NASA-SP-7011(288)] N86-32086
Bibliography of Lewis Research Center technical publications announced in 1985
[NASA-TM-87263] N86-32336
Unclassified publications of Lincoln Laboratory. Volume 2: Report bibliography
[AD-A167967] N86-32337
Carbon Dioxide Information Center thesaurus
[DE86-009013] N86-32339
BINARY SYSTEMS (MATERIALS)
Estimated heats of fusion of fluoride salt mixtures suitable for thermal energy storage applications
[NASA-TM-87320] N86-31982
BIOASTRONAUTICS
USSR Space Life Sciences Digest, issue 7
[NASA-CR-3922(08)] N86-32083
BIOCHEMICAL OXYGEN DEMAND
External respiration, gas exchange, and blood oxygen parameters in acute methemoglobinemia
[DRIC-T-7663] N86-32082
BIOCHEMISTRY
Guard cell biochemistry: Response to environmental stimuli causing changes in gas exchange
[DE86-010267] N86-32086
BIOLOGICAL EFFECTS
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 288)
[NASA-SP-7011(288)] N86-32088
Evaluation of the need for a large primate research facility in space
[NASA-CR-179661] N86-32111
BIOTECHNOLOGY
Air Force technical objective document, Aerospace Medical Division, FY 1987
[AD-A167422] N86-32090
BIREFRINGENCE
Broadband unpolarized light source
[AD-D012201] N86-32271
Uniformly-doped Cr, Nd:GGG crystals
[DE86-009692] N86-32311
BISMALEIMIDE
Amine terminated bisaspartimide polymer
[NASA-CASE-ARC-11421-2] N86-31726
BISMUTH ALLOYS
Mechanical properties testing of several 800 MeV proton irradiated BCC metals and alloys
[DE86-007372] N86-31714
BLUNT BODIES
Calculation of separated laminar supersonic flows over blunt bodies of revolution at zero angle of attack
[ESA-TT-953] N86-31546
BODY FLUIDS
Special features of surgical intervention under conditions of weightlessness
[AD-A167916] N86-32092
BODY-WING CONFIGURATIONS
Elliptic generation of composite three-dimensional grids about realistic aircraft
[NASA-TM-88240] N86-31527
BOLTS
Mechanical relocker for locking bolts
[AD-D012209] N86-31691
BONDING
Dome restraint assembly for rocket motors
[AD-D012278] N86-31656
BONNE PROJECTION
Three-dimensional views of cartograms in digital raster mode N86-31961
BOREHOLES
Effects of wellbore liquids in propellant-based fracturing
[DE86-007832] N86-31751
BOUNDARIES
Intraplate deformation due to continental collisions: A numerical study of deformation in a thin viscous sheet
[NASA-TM-86235] N86-32012
BOUNDARY ELEMENT METHOD
Research related to improved computer aided design software package --- comparative efficiency of finite, boundary, and hybrid element methods in elastostatics
[NASA-CR-179666] N86-32133
BOUNDARY LAYER EQUATIONS
Quasi-simultaneous calculation of strongly interacting viscous flow
[NLR-MP-84095-U] N86-31846
BOUNDARY LAYER FLOW
The Neumann problem for nonlinear second order singular perturbation problems
[AD-A167456] N86-32235
BOUNDARY LAYER SEPARATION
Calculation of separated laminar supersonic flows over blunt bodies of revolution at zero angle of attack
[ESA-TT-953] N86-31546
Quasi-simultaneous calculation of strongly interacting viscous flow
[NLR-MP-84095-U] N86-31846
BOUNDARY LAYER TRANSITION
Wall shear stress measurements on a prolate spheroid at zero incidence in the German-Netherlands Wind (DNW) Tunnel — boundary layer transition
[DFVLR-MITT-86-06] N86-31547
Numerical simulation of boundary layers. Part 2: Ribbon-induced transition in Blasius flow
[NASA-TM-88221] N86-31823
Conditioned hot-wire anemometer measurements and structural analysis of a turbulent spot in a laminar boundary layer
[MEAH-63] N86-31850
Numerical simulation of the active control of laminar-turbulent transition in the flat-plate boundary layer
[DFVLR-FB-86-05] N86-31852
BOUNDARY LAYERS
Effect of aspect ratio on sidewall boundary-layer influence in two-dimensional airfoil testing
[NASA-CR-4008] N86-31534
Numerical simulation of boundary layers. Part 2: Ribbon-induced transition in Blasius flow
[NASA-TM-88221] N86-31823
Theory and operation of the Gould 32/27 programs ABLE-2A and EBLE for the tropospheric air motion measurement system
[NASA-CR-176856] N86-32011
BOUNDARY VALUE PROBLEMS
Calculations of the stability of some axisymmetric flows proposed as a model of vortex breakdown
[NASA-CR-178124] N86-31825
Inflow boundary conditions for steady flows of viscoelastic fluids with differential constitutive laws
[AD-A167452] N86-31829
Efficient high order algorithms for elliptic boundary value problems using full multigrid techniques together with extrapolation methods
[GMD-192] N86-32187
Stability analysis of intermediate boundary conditions in approximate factorization schemes
[NASA-CR-178126] N86-32189
Pointwise a-priori bounds for strongly coupled semilinear parabolic systems
[AD-A167539] N86-32198
On asymptotic error estimates for the combined boundary and finite element method
[PREPRINT-929] N86-32215
The Hamilton-Jacobi-Bellman equation with a gradient constraint
[AD-A167532] N86-32237
Effect of triangular element orientation on finite element solutions of the Helmholtz equation
[NASA-TM-87351] N86-32247
Estimates of maximum trappable ion beam power in plasma channels
[DE86-006472] N86-32291
BRACKETS
Airfoil flutter model suspension system
[NASA-CASE-LAR-13522-1] N86-31594
BRAGG ANGLE
Optical matrix-matrix multiplier based on outer product decomposition
[AD-D012207] N86-32272
BRAKES (FOR ARRESTING MOTION)
Fireproof hydraulic brake system
[AD-A167774] N86-31549
BRAYTON CYCLE
Parabolic dish module experiment
[DE86-009819] N86-31987
BREAKING
Some features of SUSY breaking in N=2 supergravity
[DE85-703196] N86-32321
BROADBAND
Wide spectrum microwave pulse measurement
[DE86-006662] N86-31770
Broadband unpolarized light source
[AD-D012201] N86-32271
BROADCASTING
Microcomputer optimization of feed excitation voltages to obtain desired antenna radiation patterns
[AD-A167560] N86-31768
BROMINE
Infrared attenuation of thallium bromo-iodide fibers
[NASA-TM-86817] N86-32268
BUBBLE MEMORY DEVICES
A 32-bit microprocessor based solid state data recorder for space based applications
[AD-A167867] N86-32116
BUBBLES
A free streamline model for a rising bubble
[AD-A167535] N86-31832
BURNING RATE
In-situ solid-propellant burn-rate measurements using flash cineradiography
[AD-A167637] N86-31683

C

C-135 AIRCRAFT
Fireproof hydraulic brake system
[AD-A167774] N86-31549
CADASTRAL MAPPING
Topographic-cartographic data base in standardization N86-31949
A proposal for the development of a large-scale topographic-cartographic data base taking the planimetric data of automated cadastral map (ALK) system into account N86-31950
Hardware for data banks in cartography: Concepts N86-31951
Activities report in remote sensing supervision
[ESA-86-97383] N86-31970
CALCIUM ISOTOPES
Determination of CA-41, I-129 and OS-187 in the Rochester tandem accelerator and some applications of these isotopes N86-32352
CALCULATORS
The second machine class 2: An encyclopedic view of the parallel computation thesis
[FVI-85-14] N86-32119
CALCULUS
Functional temporal calculus versus temporal logic: An engineering approach
[REPT-59] N86-32217
CALCULUS OF VARIATIONS
Solution of the problem of elastoplastic torsion with a finite element method
[ESA-86-97546] N86-31935
Development of a variational SEASAT data analysis technique
[NASA-CR-177175] N86-31942
On the theorem of Weinstein
[AD-A167492] N86-32192
CALENDARS
Calendar of selected aeronautical and space meetings
[AGARD-CAL-86/1] N86-32324
CALIBRATING
Standard calibration procedure for pencil beam infrared sensors on spinning satellites, volume 1
[REPT-209-DT-54-VOL-1] N86-31644
Standard calibration procedure for pencil beam infrared sensors on spinning satellites. Volume 2: Applicable software and user manuals
[REPT-209-DT-55-VOL-2] N86-31645
A remote controlled calibration device for displacement transducers
[ECN-173] N86-31873
International comparison of interpolation procedures for the efficiency of germanium gamma-ray spectrometers (GAM83 exercise)
[ECN-181] N86-31874
LANDSAT 4 band 6 data evaluation
[NASA-CR-177173] N86-31944

Calibration of multispectral scanner (MSS) satellite data to evaluate change in the reflection of coniferous stocks
[ESA-TT-938] N86-31971
CALIFORNIA
Coast of California storm and tidal waves study: Nearshore bathymetric survey report, San Diego region
[AD-A168119] N86-32076
CAMBERED WINGS
Mission adaptive wing soars at NASA Facility
[P86-10182] N86-31563
CANOPIES (VEGETATION)
COVER Project and Earth resources research transition
[NASA-CR-177176] N86-31941
Moisture determinations in and under vegetation canopies
[FEL-1985-52] N86-31973
CAPACITORS
Multilayer ceramic capacitor on printed circuit
[AD-D012246] N86-31797
CAPE KENNEDY LAUNCH COMPLEX
An analysis of the Centaur Ground Processing System at the Kennedy Space Center/Cape Canaveral AFS
[AD-A167123] N86-31618
CARBIDES
Preparation and characterization of nickel substituted Fe5C2
[AD-A167410] N86-31707
CARBON
Wear improvement in titanium alloys by ion implantation
[AD-D012203] N86-31704
CARBON DIOXIDE
System study of the utilization of space for carbon dioxide research
[NASA-CR-3923] N86-32005
Space systems requirements definition N86-32006
A procedure for space SDR prioritization N86-32009
Carbon Dioxide Information Center thesaurus
[DE86-009013] N86-32339
CARBON DIOXIDE CONCENTRATION
Projecting the climatic effects of increasing carbon dioxide
[DE86-008810] N86-32061
CARBON FIBER REINFORCED PLASTICS
Autoclave moulding of carbon fibre reinforced plastics
[RAE-TR-85039] N86-31662
Development of fracture mechanics maps for composite materials, volume 1
[AD-A168002] N86-31669
Development of fracture mechanics maps for composite materials, volume 2
[AD-A168003] N86-31670
Development of fracture mechanics maps for composite materials, volume 3
[AD-A168004] N86-31671
Contribution of carbon fibers to the improvement of the performance of composite containers
[SNIAS-861-430-115] N86-31677
Specific need for composite structures in aerospace applications
[SNIAS-861-422-111] N86-31678
Diffusion of water vapor in CFRP. Measurement of the diffusion coefficient under influence of concentration
[ESA-TT-911] N86-31740
CARBON MONOXIDE
Carbon monoxide formation in UO2 kerneled HTR fuel particles containing oxygen getters
[OEFZS-4348] N86-32261
CARBON STEELS
Process for producing carbide coatings
[AD-D012202] N86-31667
CARBON 14
A direct time series comparison between the La Jolla and Belfast radiocarbon records N86-32368
CASCADE WIND TUNNELS
Aerodynamic design methods for modern transport aircraft
[ESA-TT-923] N86-31543
CASSEGRAIN ANTENNAS
Fields in the focal region of paraboloid and offset paraboloid reflectors
[AD-A167419] N86-31766
CATALYSTS
Ambient temperature liquefaction using liquid clathrates
[DE86-010361] N86-31689
CATHODE RAY TUBES
Absolute judgment versus absolute magnitude estimation to convey information through symbol magnitude changes in CRT displays
[AD-A167059] N86-32103
CAUCHY PROBLEM
On L sub 1-contraction for systems of conservation laws
[AD-A167484] N86-32244
CAVITATION FLOW
Characterization of ion implanted and laser processed wear surfaces
[AD-A167878] N86-31709
CAVITIES
Nonlinear optical interactions in semiconductors
[AD-A168162] N86-31880
A chinchilla restraint system
[AD-A167408] N86-32084
CAVITY RESONATORS
Design and cold testing of a high peak power X-band gyroklystron
[DE86-006898] N86-31799
Experimental and theoretical research on open resonators — precipitation measurement
[ESA-TT-931] N86-31816
Direct-coupled cavity filters with irises of arbitrary thickness
[ESA-TT-939] N86-31817
CEILINGS (METEOROLOGY)
Koln Bonn, West Germany limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167649] N86-32046
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Peterson AFB, Colorado Springs, Colorado
[AD-A167650] N86-32047
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Macdill AFB, Florida
[AD-A167651] N86-32048
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Cape Newenham, Alaska
[AD-A167652] N86-32049
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: White Sands MR, New Mexico
[AD-A167654] N86-32051
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: CAstle AFB, California
[AD-A167657] N86-32054
CELESTIAL MECHANICS
Radial velocity spectrometers. What they measure
[AD-A167986] N86-31863
CELLS (BIOLOGY)
Application of new technologies to radiation biodosimetry in mammalian systems
[AD-A168176] N86-31865
Guard cell biochemistry: Response to environmental stimuli causing changes in gas exchange
[DE86-010287] N86-32086
CELLULOSE NITRATE
Characterization of cellulose nitrate with liquid chromatography and membrane osmometry
[FOA-C-20602-D1] N86-31697
CENSORED DATA (MATHEMATICS)
A comparison of plotting positions on Weibull probability paper for small randomly censored samples
[ESA-86-97695] N86-32229
CENTAUR LAUNCH VEHICLE
Centaur engine gimbal friction characteristics under simulated thrust load
[NASA-TM-87335] N86-31621
CENTRIFUGING
Application of new technologies to radiation biodosimetry in mammalian systems
[AD-A168176] N86-31865
CEPHEID VARIABLES
Ultraviolet observations of astronomical phenomena
[NASA-CR-176859] N86-32376
CERAMICS
Degradation of materials in combustion environments
[DE86-011771] N86-31691
Correlation of processing and sintering variables with the strength and radiography of silicon nitride
[NASA-TM-87251] N86-31729
Chemical vapor infiltration of fiber-reinforced ceramic composites
[DE86-009513] N86-31735
Analysis of S-glass ceramic lot no. 84-132 for use as a standard reference material
[DE86-010309] N86-31736
Laser processing of ceramics
[DE86-011954] N86-31737
Certification of the Zirshot Z-600 and Z-150 ceramic sihst
[I-112/85] N86-31743
Determination of the fracture toughness of ceramic materials on bending samples with different notch types, at room temperature and high temperature
[DFVLR-FB-85-67] N86-31744
Multilayer ceramic capacitor on printed circuit
[AD-D012246] N86-31797
Mechanical interactions of rough surfaces
[DE86-009161] N86-31898
Factors that affect reliability of nondestructive detection of flaws in structural ceramics
[NASA-TM-87348] N86-31912
Quantitative void characterization in structural ceramics using scanning laser acoustic microscopy
[NASA-TM-88797] N86-31913
CERMETS
Slip casting and extruding shapes of rhenium with metal oxide additives. 1: Feasibility demonstration
[NASA-CR-174970] N86-31646
CHANGE DETECTION
Calibration of multispectral scanner (MSS) satellite data to evaluate change in the reflection of coniferous stocks
[ESA-TT-938] N86-31971
CHANNEL FLOW
Finite element, stream function-vorticity solution of secondary flow in the cross-plane of noncircular channels
[ECN-175] N86-31856
CHANNELS (DATA TRANSMISSION)
Competition noise in an optical divider
[ESA-86-97538] N86-31886
Design and implementation of a driver and initialization program for the Local Area Network (LAN) TWENTENET
[INF83/IPS/044] N86-32175
CHARACTER RECOGNITION
A software concept for interactive letter location through digital image processing N86-31959
CHARACTERIZATION
Characterization of cellulose nitrate with liquid chromatography and membrane osmometry
[FOA-C-20602-D1] N86-31697
Design of adhesive bonded structures for spacecraft
[SNIAS-861-430-114] N86-31741
CHARGE TRANSFER
Process for preparing highly optically transparent/colorless aromatic polyimide film
[NASA-CASE-LAR-13351-1] N86-31727
CHARON
Activities of the Department of Astronomy and McDonald Observatory of the University of Texas at Austin
[NASA-CR-179667] N86-32378
CHEMICAL ANALYSIS
Chemistry research resource
[DE86-009393] N86-31661
Liquid chromatography analysis of ester type synthetic lubricants
[ESA-86-97811] N86-31696
CHEMICAL BONDS
Semiconductor alloy theory
[AD-A166995] N86-32300
CHEMICAL COMPOSITION
Analysis of S-glass ceramic lot no. 84-132 for use as a standard reference material
[DE86-010309] N86-31736
Reduction and analysis of data from experiment CAI on the IMP-8 mission
[NASA-CR-177891] N86-32381
CHEMICAL ENERGY
Optical studies of chemical energy release during shock initiation of granular explosives
[DE86-010469] N86-31752
CHEMICAL FUELS
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 2: Aircraft engine nacelle fire test programs. Part 2: Small scale testing of dry chemical fire extinguishants
[AD-A167444] N86-31572
CHEMICAL PROPERTIES
Effect of an oxygen plasma on the physical and chemical properties of several fluids for the liquid droplet radiator
[NASA-TM-88839] N86-31834
Lubrication handbook for the space industry. Part A: Solid lubricants. Part B: Liquid lubricants
[NASA-TM-86556] N86-31730
CHEMICAL REACTIONS
Chemical reactions and properties of organosilicon compounds related to new materials
[AD-A166338] N86-31660
CHEMICAL WARFARE
Air Force technical objective document, Aerospace Medical Division, FY 1987
[AD-A167422] N86-32090
CHLORINE
Neutron capture production rates of cosmogenic 60Co, 59Ni and 36Cl in stony meteorites N86-32369
CHOLESKY FACTORIZATION
Sparse Cholesky factorization on a local-memory multiprocessor
[DE86-010082] N86-32173
CHONDRITES
Redetermination of parameters for semi-empirical model for spallogenic He and Ne in chondrites N86-32363

CHROMIUM

Studies on cosmogenic nuclides in meteorites with regard to an application as potential depth indicators N86-32366

The production rate of cosmogenic 21-Ne in chondrites deduced from 81-Kr measurements N86-32367

Cosmogenic rare gases and 10-Be in a cross section of Knyahinya N86-32371

CHROMIUM

In-vacuum cyclic fatigue behavior of Vanstar-7 at elevated temperatures
[DE86-007322] N86-31713

CHROMIUM ALLOYS

Effect of heat treatment and impurity concentration on some mechanical properties V-15Cr-5Ti alloy
[DE86-010496] N86-31722

Effect of helium on swelling and microstructural evolution in ion-irradiated V-15Cr-5Ti alloy
[DE86-010510] N86-31723

CHROMOSOMES

Application of new technologies to radiation biodosimetry in mammalian systems
[AD-A168176] N86-31865

CHROMOSPHERE

Extreme limb profiles of the sun at far-infrared and submillimeter wavelengths
[NASA-TM-88251] N86-32375

CINEMATOGRAPHY

Interferometric holographic cinematography
[ISL-CO-219/85] N86-31872

CIRCADIAN RHYTHMS

A 24-hour structure of vigilance under prolonged sleep deprivation: Relationship with performance
[AD-A167399] N86-32089

CIRCLES (GEOMETRY)

Fields in the focal region of paraboloid and offset paraboloid reflectors
[AD-A167419] N86-31766

CIRCUIT BOARDS

Improved robotic kitting station
[AD-D012238] N86-31892

CIRCUIT DIAGRAMS

Floor planning and net assignment in layout compilation
[ESA-86-97530] N86-31818

CIRCUIT PROTECTION

The effect of pigtailing braided screens on the transfer impedance of single-ended and balanced interface circuits
[EMCR-5/85] N86-31791

CIRCUIT RELIABILITY

An NMOS evaluation circuit
[REPT-IR-01] N86-31820

CIRCULAR CYLINDERS

Damping force exerted by a viscous medium upon an oscillating cylinder
[ESA-86-97374] N86-31844

CLASSIFICATIONS

Thematic classification of analytic models for orbit prediction, volume 1
[CNES-CT/DTI/MS/MN/240-VOL-1] N86-31616

Tree-structured classification via generalized discriminant analysis
[AD-A167453] N86-32134

CLATHRATES

Ambient temperature liquefaction using liquid clathrates
[DE86-010361] N86-31689

CLEANING

Photodesorption cleaning of silicon with vacuum ultraviolet irradiation
[AD-A167420] N86-31682

CLIMATE

Boundary layer and cloud parameterization in the NCAR community climate model — National Center of Atmospheric Research (NCAR) N86-32037

On the evolution of precipitation associated with a wintertime east coast cyclone: A GALE preliminary study
[AD-A166375] N86-32042

Continentality: Its estimation and physical significance
[AD-A167111] N86-32044

Guide to standard weather summaries and climatic services
[AD-A168099] N86-32060

Climatological data of stations in the Netherlands. No. 25: A climatology of the main observatory at De Bilt for the period 1901-1984
[KNMI-150-25] N86-32068

World climate research program. General circulation of the Southern Ocean: Status and recommendations for research, a report by SCOR Working Group 74
[WCP-108] N86-32077

Carbon Dioxide Information Center thesaurus
[DE86-009013] N86-32339

CLIMATOLOGY

Space systems requirements definition N86-32006

Secular climatic patterns of the North Central Great Plains and the continental US
[AD-A165743] N86-32043

Koln Bonn, West Germany limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167649] N86-32046

Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Macdill AFB, Florida
[AD-A167651] N86-32048

Misawa AB, Japan limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167655] N86-32052

Camp Page, South Korea limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167656] N86-32053

Kwang Ju AB, South Korea limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167659] N86-32055

Patrick AFB, Florida limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167660] N86-32056

Guide to standard weather summaries and climatic services
[AD-A168099] N86-32060

Climatological research in the period 1962-1978 in the delta region, south Flevoland, and Laurers region; Dutch water temperatures in the period 1860 to 1985
[KNMI-189] N86-32067

National Climate Program: Early achievements and future directions
[NASA-CR-177153] N86-32073

CLOUD COVER

Extratropical cloud-topped boundary layers over the oceans N86-32026

The cloud-topped boundary layer N86-32027

Radiation in boundary layer clouds N86-32028

Satellite observations of the cloud-topped boundary layer N86-32031

Key problems of parameterization for simple cloud-topped boundary layer models N86-32035

Simulation of cloudiness with the UK Meteorological Office 11-layer AGCM N86-32039

The sensitivity of one month GCM forecasts at GFDL to zonally symmetric clouds, quasi-realistic specified clouds, and model-predicted clouds — Global Circulation Model (GCM); Geophysical Fluid Dynamics Laboratory (GFDL) N86-32040

Boundary layer clouds in the ISCCP data sets — International Satellite Cloud Cover Program (ISCCP) N86-32041

Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Macdill AFB, Florida
[AD-A167651] N86-32048

CLOUD HEIGHT INDICATORS

A bispectral method for the height determination of ice clouds
[DFVLR-FB-86-03] N86-32072

CLOUD PHYSICS

Report of the JSC/CAS Workshop on Modeling of Cloud Topped Boundary Layer
[WCP-106] N86-32025

Physical properties of stratiform clouds and their parametrization N86-32029

Theory and observation of cloud-topped boundary layer processes N86-32030

Use of existing and suggested satellite observations of reflected spectral radiance to estimate properties of stratiform clouds N86-32032

Boundary layer and cloud parameterization in the NCAR community climate model — National Center of Atmospheric Research (NCAR) N86-32037

Parameterization of the cloud-topped boundary layer in a global forecast model N86-32038

COAL LIQUEFACTION

Ambient temperature liquefaction using liquid clathrates
[DE86-010361] N86-31689

COASTAL PLAINS

Utilizing remote sensing of Thematic Mapper data to improve our understanding of estuarine processes and their influence on the productivity of estuarine-dependent fisheries
[NASA-CR-177177] N86-31943

COASTAL WATER

Coast of California storm and tidal waves study: Nearshore bathymetric survey report, San Diego region
[AD-A168119] N86-32076

COASTS

Geotechnical data inventory, southern California coastal zone, Cape San Martin (Monterey County) to Mexican border
[AD-A167734] N86-32075

COATINGS

Investigations of laser mirrors with different design
[DFVLR-FB-85-65] N86-31867

Setup for the determination of the reflectivity of interference coatings — laser mirrors
[DFVLR-MITT-85-18] N86-32285

An improved model of thin film growth
[AD-A167147] N86-32302

COBALT

The effect of variations of cobalt content on the cyclic oxidation resistance of selected Ni-base superalloys
[NASA-TM-87297] N86-31702

COBALT ALLOYS

The low cycle fatigue behavior of a plasma-sprayed coating material
[NASA-TM-87318] N86-31699

COBALT 60

Neutron capture production rates of cosmogenic 60Co, 59Ni and 36Cl in stony meteorites N86-32369

CODING

Physics codes on parallel computers
[DE86-006712] N86-32170

COGNITION

The simulation of natural knowledge systems — artificial intelligence N86-32125

The representation of knowledge for situations and events in a dynamic world N86-32128

COGNITIVE PSYCHOLOGY

Use of artificial intelligence and psychology in the analysis of command and control — military commanders
[STC-TM-749] N86-32095

COLLECTION

CAPIR/DEM: A collection system for geographically based digital elevation data
[AD-A167471] N86-31963

COLLISIONAL PLASMAS

Numerics for the simulation of electromagnetic-field propagation in nonionized and plasma media
[DE86-009798] N86-31776

COLLISIONLESS PLASMAS

Numerics for the simulation of electromagnetic-field propagation in nonionized and plasma media
[DE86-009798] N86-31776

COLORADO

Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Peterson AFB, Colorado Springs, Colorado
[AD-A167650] N86-32047

COMBAT

Aerial combat
[ESA-86-97271] N86-31561

COMBUSTIBLE FLOW

Visualization of flows in a motored rotary combustion engine using holographic interferometry
[NASA-TM-88804] N86-31583

COMBUSTION

Intermittency and conditional velocities in premixed conical turbulent flames
[DE86-009363] N86-31687

Role of the radical pool in combustion
[DE86-010159] N86-31688

Laser velocimeter measurements and analysis in turbulent flows with combustion. Part 4: Two-component cold-flow measurements
[AD-A167554] N86-31834

Alcohol as a fuel in a high speed diesel engine with double injection system
[DE86-751653] N86-31904

COMBUSTION CHAMBERS

Small gas turbine combustor experimental study: Compliant metal/ceramic liner and performance evaluation
[NASA-TM-87304] N86-31582

Visualization of flows in a motored rotary combustion engine using holographic interferometry
[NASA-TM-88804] N86-31583

SSME main combustion chamber and nozzle flowfield analysis
[NASA-CR-178893] N86-31654

COMBUSTION CONTROL

Coherent structures in turbulent shear layers and relation to mixing reaction and combustion
[AD-A167042] N86-31681

COMBUSTION EFFICIENCY

Small gas turbine combustor experimental study: Compliant metal/ceramic liner and performance evaluation
[NASA-TM-87304] N86-31582

COMBUSTION PHYSICS

Theoretical studies of combustion dynamics
[DE86-009312] N86-31686

Intermittency and conditional velocities in premixed conical turbulent flames
[DE86-009363] N86-31687

COMETS
A digital imaging photometry system for cometary data acquisition
[NASA-TM-86554] N86-32373
COMMAND AND CONTROL
Aircrew training devices: Utility and utilization of advanced instructional features. Phase III: Electronic warfare trainers
[AD-A167922] N86-31601
Rome Air Development Center Air Force technical objective document fiscal year 1987
[AD-A167425] N86-31787
Use of artificial intelligence and psychology in the analysis of command and control — military commanders
[STC-TM-749] N86-32095
The psychology of decision making — military commanders N86-32096
Artificial intelligence and the Rule Oriented System Simulation (ROSS) language — military commanders N86-32097
COMMERCE
Semimanufactured products made of copper and copper alloys: An analysis of production and sale in a world perspective
[EUT/BDK/15] N86-31758
COMMUNICATION CABLES
The effect of pigtailing braided screens on the transfer impedance of single-ended and balanced interface circuits
[EMCR-5/85] N86-31791
COMMUNICATION NETWORKS
ACTS Experiments Program
[NASA-TM-86820] N86-31625
Interconnection between packet switching national networks and local packet radio communication networks
[FUB-24-1985] N86-31790
COMMUNICATION SATELLITES
Thermal control in telecommunication and direct television satellites
[SNIAS-861-440-102] N86-31635
Spacebus: Multimission communication satellites
[SNIAS-861-422-119] N86-31637
COMMUNICATION THEORY
The algebra of communicating processes with empty process
[FVI-86-01] N86-32158
COMMUTATORS
Multiple pseudospark switch (MUPS)
[ISL-R-110/85] N86-31819
COMPARISON
Comparison of Clifford and Grassmann algebras in applications to electromagnetics, revision 1
[DE86-009716] N86-31775
COMPILERS
Floor planning and net assignment in layout compilation
[ESA-86-97530] N86-31818
Ada (trade name) compiler validation summary report: Verdix Corporation Verdix Ada Development System, version 5.2 for the Tektronix 6130 under UTek, release 2.1.1
[AD-A166872] N86-32113
Ada (trade name) compiler validation summary report: TeleSoft, Inc. TeleSoft Ada, version 2.39 Gould PS3000 host, Gould CONCEPT/32 (trade name) model 6750 target
[AD-A167470] N86-32114
Flex Pascal: An implementation of the ISO-Pascal programming language
[AD-A168105] N86-32140
COMPOSITE MATERIALS
Composite structural materials
[NASA-CR-179659] N86-31665
Mechanics research directions in composites and manufacturing technologies
[DE86-008787] N86-31673
European Science Notes, volume 40, number 6
[AD-A167501] N86-32346
COMPOSITE PROPELLANTS
Model for normal and erosive burning of composite propellants
[ESA-TT-910] N86-31695
COMPOSITE STRUCTURES
Weight estimation techniques for composite airplanes in general aviation industry
[NASA-CR-178163] N86-31531
Composite structural materials
[NASA-CR-179659] N86-31665
Mechanical testing of graphite-epoxy composite tubes
[DE86-009608] N86-31674
Development and application of energy absorbing composite devices in crash-worthy structures
[ESA-86-97253] N86-31676
Exploration of advanced characterization techniques for molecular composites
[AD-A168102] N86-31733
Composite structural reliability calculation by finite element and statistical strength theory
[AD-A167890] N86-31924
COMPRESSIBLE FLOW
On travelling-wave solutions to systems of conservation laws with singular viscosity
[AD-A167518] N86-31830
Multiple grid problems on concurrent-processing computers
[NASA-TM-86675] N86-32112
COMPRESSION TESTS
Novel macromolecular structures and composites
[AD-A166243] N86-31731
SNLL materials testing compression facility
[DE86-009984] N86-31928
COMPUTATION
On the evolution of precipitation associated with a wintertime east coast cyclone: A GALE preliminary study
[AD-A166375] N86-32042
Multiple grid problems on concurrent-processing computers
[NASA-TM-86675] N86-32112
The second machine class 2: An encyclopedic view of the parallel computation thesis
[FVI-85-14] N86-32119
Research related to improved computer aided design software package — comparative efficiency of finite, boundary, and hybrid element methods in elastostatics
[NASA-CR-179668] N86-32133
A new result in the theory and computation of the least norm solution of a linear program
[AD-A167515] N86-32136
Finite difference methods for polar coordinate systems
[AD-A167512] N86-32194
The computational cost of simplex spline functions
[AD-A167513] N86-32195
COMPUTATIONAL FLUID DYNAMICS
ATRAN3S: An unsteady transonic code for clean wings
[NASA-TM-86783] N86-31535
Computations of separated subsonic and transonic flow about airfoils in unsteady motion
[NLR-MP-84094-U] N86-31541
Application of an inviscid multivortex model to the calculation of the vortex flow behind an airfoil profile with spoiler
[ISL-R-133/84] N86-31545
SSME main combustion chamber and nozzle flowfield analysis
[NASA-CR-178893] N86-31654
Calculations of the stability of some axisymmetric flows proposed as a model of vortex breakdown
[NASA-CR-178124] N86-31825
High speed viscous flow calculations about complex configurations
[NASA-TM-88237] N86-31827
Formulation of numerical methods used in the XYZ Three-Dimensional Potential Flow Program
[AD-A168167] N86-31836
Quasi-simultaneous calculation of strongly interacting viscous flow
[NLR-MP-84095-U] N86-31846
Turbulence modeling for incompressible flows: A report on the Euromech 180 Colloquium
[KU-SFB-210/T/22] N86-31854
Multiple grid problems on concurrent-processing computers
[NASA-TM-86675] N86-32112
Chimera: A grid-embedding technique
[NASA-TM-89246] N86-32242
COMPUTATIONAL GRIDS
Elliptic generation of composite three-dimensional grids about realistic aircraft
[NASA-TM-88240] N86-31527
A computer program for calculating the steady and oscillatory supersonic flow over thin wings
[AD-A167451] N86-31538
High speed viscous flow calculations about complex configurations
[NASA-TM-88237] N86-31827
Multiple grid problems on concurrent-processing computers
[NASA-TM-86675] N86-32112
Efficient high order algorithms for elliptic boundary value problems using full multigrid techniques together with extrapolation methods
[GMD-192] N86-32187
Investigation of the moving finite element method as proposed by A.J. Wathen
[DE86-009685] N86-32200
Chimera: A grid-embedding technique
[NASA-TM-89246] N86-32242
Effect of triangular element orientation on finite element solutions of the Helmholtz equation
[NASA-TM-87351] N86-32247
COMPUTER AIDED DESIGN
Aerodynamic design methods for modern transport aircraft
[ESA-TT-923] N86-31543
Evolving directions of PC applications in electromagnetics analysis and design
[DE86-009695] N86-31774
Specification and functional simulation of complex circuits: The CADOC system — integrated circuits
[ESA-86-97296] N86-31808
Floor planning and net assignment in layout compilation
[ESA-86-97530] N86-31818
Top-down design of VLSI microprocessors
[ESA-86-97299] N86-32118
Test of the system Micro Aided Engineering (MAE) CAD/CAM
[A-15] N86-32120
Model and functional design of a data base for computer aided design applications
[ESA-86-97288] N86-32145
PAOLA: Topological optimization system for Programmable Logical Arrays (PLA)
[ESA-86-97294] N86-32148
Extended general design theory
[CWI-CS-R8604] N86-32162
ESPRIT project 322: Computer Aided Design (CAD) design interfaces
[KFK-PFT-121] N86-32168
State and data techniques for control of discontinuous systems
[DE86-007240] N86-32179
Study and implementation of an image synthesizer based on a modular architecture
[ESA-86-97295] N86-32282
COMPUTER AIDED MANUFACTURING
Improved robotic kitting station
[AD-D012238] N86-31892
Test of the system Micro Aided Engineering (MAE) CAD/CAM
[A-15] N86-32120
ESPRIT project 322: Computer Aided Design (CAD) design interfaces
[KFK-PFT-121] N86-32168
COMPUTER AIDED MAPPING
Reports on Cartography and Geodesy. Series 1: Original reports, number 95
[ISSN-0469-4236] N86-31946
On data integrity of CAD applications in cartography: Concept of an information system with Siemens Computer Aided Design (SICAD) N86-31947
Geoscientific requirements on a graphical data base N86-31948
A proposal for the development of a large-scale topographic-cartographic data base taking the planimetric data of automated cadastral map (ALK) system into account N86-31950
Hardware for data banks in cartography: Concepts N86-31951
Introduction to the project design of a user's interface for graphic-alphanumerical data banks N86-31955
Calculation and representations of elevation changes in a tidal flat area from digital terrain models N86-31956
Brief report on design and implementation of a data bank core system N86-31957
Digital elevation for the Baden-Wurttemburg Land (West Germany) N86-31958
A software concept for interactive letter location through digital image processing N86-31959
Digital geoscientific cartography: A leading program of the German research community N86-31960
Three-dimensional views of cartograms in digital raster mode N86-31961
COMPUTER DESIGN
Hypercube project and a simulator for a hypercube of computers
[DE86-010164] N86-32174
COMPUTER GRAPHICS
Development of a data acquisition system to aid in the aerodynamic study of various helicopter configurations
[AD-A167717] N86-31539
A feasibility study for the use of electronic flight strips in Air Traffic Control (ATC) controller workstations
[ESA-TT-928] N86-31558

COMPUTER PROGRAMS
User's manual for XTRAN2L (version 1.2): A program for solving the general-frequency unsteady transonic small-disturbance equation
[NASA-TM-87737] N86-31533
A computer program for calculating the steady and oscillatory supersonic flow over thin wings
[AD-A167451] N86-31538
Aircrew training devices: Utility and utilization of advanced instructional features. Phase III: Electronic warfare trainers
[AD-A167922] N86-31601
Study on algorithms for prediction of solid propellant rocket motor performance
[AD-A167842] N86-31657
Eulerian transport in general orthogonal curvilinear coordinates
[DE86-010256] N86-31840
A new radiographic corrosion inspection capability
[AD-A167270] N86-31914
SWAY86: A computer program for calculating lug and sway brace loads
[DE86-009550] N86-31926
SNLL materials testing compression facility
[DE86-009984] N86-31928
Analysis of the FELIX experiments with cantilevered beams and hollow cylinders
[DE86-010528] N86-31933
Physics codes on parallel computers
[DE86-006712] N86-32170
Discovery systems
[AD-A167852] N86-32176
Some experiments with numerical pivoting in a code for solving large sparse stiff systems of odes
[DE86-010305] N86-32201
Computing Services Software Library
[DE86-009491] N86-32340

COMPUTER STORAGE DEVICES
A kernel decision support system for Canadian military satellite communications system planning
[AD-A167122] N86-31765
Evolving directions of PC applications in electromagnetics analysis and design
[DE86-009695] N86-31774

COMPUTER SYSTEMS DESIGN
Brief report on design and implementation of a data bank core system N86-31957
Control loops with human operators in space operations. Part 1: Human engineering analysis, synthesis and evaluation techniques
[NLR-TR-84116-L-PT-1] N86-32107
The nature and evaluation of commercial expert system building tools
[NASA-TM-88331] N86-32132
Models for program reliability: Application to a critical computer system validation test
[ESA-86-97283] N86-32144
A quantitative approach to computer systems engineering
[FUB-5-1985] N86-32169
Activities report of the Laboratory for Information Systems
[FOA-C-30410-E1] N86-32341
Coherence maintenance in distributed database systems
[ESA-86-97292] N86-32342

COMPUTER SYSTEMS PERFORMANCE
Hardware for data banks in cartography: Concepts N86-31951
New array processors of floating point systems N86-31953
Introduction to the project design of a user's interface for graphic-alphanumerical data banks N86-31955
Digital elevation for the Baden-Wurttemburg Land (West Germany) N86-31958
The RISC (Reduced Instruction Set Computer) architecture and computer performance evaluation
[AD-A167873] N86-32115
Models for program reliability: Application to a critical computer system validation test
[ESA-86-97283] N86-32144

COMPUTER SYSTEMS PROGRAMS
Standard calibration procedure for pencil beam infrared sensors on spinning satellites. Volume 2: Applicable software and user manuals
[REPT-209-DT-55-VOL-2] N86-31645
A software concept for interactive letter location through digital image processing N86-31959
A recent concept for application of interactive graphical data processing in cadastral map revisions N86-31962
Intelligent Data Analysis (INDA) software for data analysis
[ESA-86-97291] N86-32147
Computing Services Software Library
[DE86-009491] N86-32340
Legislation for software rights protection at last
[SNIAS-861-422-114] N86-32343

COMPUTER TECHNIQUES
Composite structural materials
[NASA-CR-179659] N86-31685
Computer assisted measurement techniques in Laser Doppler Anemometry (LDA). Part 1: Data acquisition. Part 2: Data reduction
[ISL-CO-210/85-PT-1-PT-2] N86-31875
Human problem solving in fault diagnosis tasks
[AD-A167397] N86-32104
Activities report of the Laboratory for Information Systems
[FOA-C-30410-E1] N86-32341

COMPUTER VISION
Activities report of the Laboratory for Information Systems
[FOA-C-30410-E1] N86-32341

COMPUTERIZED SIMULATION
An analytical methodology for predicting repair time distributions of advanced technology aircraft
[AD-A167149] N86-31529
NASA's Aircraft Icing Analysis Program
[NASA-TM-88791] N86-31548
A cost/performance analysis of hybrid inertial/externally referenced positioning/orientation systems
[AD-A167985] N86-31553
Development of a takeoff performance monitoring system
[NASA-TM-89001] N86-31591
Point-mass simulation tool (PMAST) user's manual
[DE86-009547] N86-31611
An analysis of the Centaur Ground Processing System at the Kennedy Space Center/Cape Canaveral AFS
[AD-A167123] N86-31618
Fiber composite sandwich thermostructural behavior: Computational simulation
[NASA-TM-88787] N86-31663
Propagation of long, high-power microwave pulses through the air
[DE86-009619] N86-31771
Evolving directions of PC applications in electromagnetics analysis and design
[DE86-009695] N86-31774
Numerics for the simulation of electromagnetic-field propagation in nonionized and plasma media
[DE86-009798] N86-31776
Adaptive control of the ALOHA protocol in a mobile radio cellular system
[ENST-85E013] N86-31785
A sensor failure simulator for control system reliability studies
[NASA-TM-87271] N86-31792
Predictability of Rayleigh-Taylor instability
[DE86-009932] N86-31839
Eulerian transport in general orthogonal curvilinear coordinates
[DE86-010256] N86-31840
Critical flow through small pipe breaks
[DE86-010907] N86-31842
Foundations of statistical crack mechanics
[DE86-000764] N86-31929
Design considerations for advanced battery concepts
[NASA-TM-87319] N86-31961
Estimates of available solar radiation and photovoltaic energy production for various tilted and tracking surfaces throughout the US based on PVFORM, a computerized performance model
[DE86-009549] N86-32019
The structure of a stratus-topped planetary boundary layer as seen through a large-eddy simulation N86-32034
Simulation of cloudiness with the UK Meteorological Office 11-layer AGCM N86-32039
Human problem solving in fault diagnosis tasks
[AD-A167397] N86-32104
The RISC (Reduced Instruction Set Computer) architecture and computer performance evaluation
[AD-A167873] N86-32115
Performance modelling of large-grained parallelism
[DE86-009664] N86-32171
Hypercube project and a simulator for a hypercube of computers
[DE86-010164] N86-32174
System analysis for the Huntsville Operation Support Center distributed computer system
[NASA-CR-178890] N86-32232
An improved model of thin film growth
[AD-A167147] N86-32302

COMPUTERS
The RISC (Reduced Instruction Set Computer) architecture and computer performance evaluation
[AD-A167873] N86-32115

CONCENTRATION (COMPOSITION)
The effect of variations of cobalt content on the cyclic oxidation resistance of selected Ni-base superalloys
[NASA-TM-87297] N86-31702

CONCRETES
Field performance of fiber-reinforced concrete airfield pavements
[FAA/PM-86/26] N86-31586

CONCURRENT PROCESSING
Multiple grid problems on concurrent-processing computers
[NASA-TM-88675] N86-32112
The cooperation test: A syntax-directed verification method — distributed message passing
[REPT-62] N86-32151
Performance modelling of large-grained parallelism
[DE86-009664] N86-32171

CONFERENCES
Report of the JSC/CAS Workshop on Modeling of Cloud Topped Boundary Layer
[WCP-106] N86-32025

Calendar of selected aeronautical and space meetings
[AGARD-CAL-86/1] N86-32324
Workshop on Cosmogenic Nuclides
[NASA-CR-176886] N86-32348

CONFIDENCE LIMITS
Measures of measurement adequacy N86-32006

CONGRUENCES
Coherence maintenance in distributed database systems
[ESA-86-87282] N86-32342

CONIFERS
COVER Project and Earth resources research transition
[NASA-CR-177176] N86-31941
Calibration of multispectral scanner (MSS) satellite data to evaluate change in the reflection of coniferous stocks
[ESA-TT-898] N86-31971

CONSERVATION EQUATIONS
On L sub 1-contraction for systems of conservation laws
[AD-A167484] N86-32244

CONSERVATION LAWS
On travelling-wave solutions to systems of conservation laws with singular viscosity
[AD-A167518] N86-31830
On L sub 1-contraction for systems of conservation laws
[AD-A167484] N86-32244

CONSISTENCY
Discovery systems
[AD-A167652] N86-32176

CONSOLIDATION
Study on effects of powder and flake chemistry and morphology on the properties of Al-Cu-Mg-X-X-X powder metallurgy advanced aluminum alloys
[NASA-CR-178145] N86-31698

CONSTRAINTS
Accessibility of applications specific integrated circuits
[DE86-006561] N86-31800
A chinchilla restraint system
[AD-A167408] N86-32084

CONSUMABLES (SPACECREW SUPPLIES)
NASA Facts: Space Shuttle food systems
[NF-150/1-86] N86-32102

CONTAMINATION
Special features of surgical intervention under conditions of weightlessness
[AD-A167918] N86-32092

CONTINENTAL DRIFT
Intraplate deformation due to continental collisions: A numerical study of deformation in a thin viscous sheet
[NASA-TM-86235] N86-32012

CONTINENTS
Continentality: Its estimation and physical significance
[AD-A167111] N86-32044

CONTINUOUS NOISE
LANDSAT-4 and LANDSAT-5 multispectral scanner coherent noise characterization and removal
[NASA-TP-2595] N86-31945

CONTINUOUS WAVE LASERS
Current status in development of averaging laser strainometer and testing system
[DE86-006727] N86-31882

CONTINUOUS WAVE RADAR
Analysis of a combined FMCW pulse radar system for Side Looking Airborne Radar (SLAR) applications
[REPT-05-1-533-A106-85] N86-31784

CONTRACTORS
Solicited proposal for a Navsat control segment harmonization study
[NLR-MEMO-RS-85-020-L] N86-31626

CONTROL EQUIPMENT
A sensor failure simulator for control system reliability studies
[NASA-TM-87271] N86-31792
Computer assisted measurement techniques in Laser Doppler Anemometry (LDA). Part 1: Data acquisition. Part 2: Data reduction
[ISL-CO-210/85-PT-1-PT-2] N86-31875

CONTROL SIMULATION
On control concept for in-flight simulation including actuator nonlinearities and time delays
[ESA-TT-948] N86-31593
A sensor failure simulator for control system reliability studies
[NASA-TM-87271] N86-31792
Numerical simulation of the active control of laminar-turbulent transition in the flat-plate boundary layer
[DFVLR-FB-86-05] N86-31852

CONTROL STABILITY
Stability considerations in the design of sigma-delta modulators — sampled data control systems
[S-AND-C.85-1] N86-32117

CONTROL SYSTEMS DESIGN
Solicited proposal for a Navsat control segment harmonization study
[NLR-MEMO-RS-85-020-L] N86-31626
Dynamics of flexible spacecraft: An analysis of approaches towards mathematical model order reduction
[NLR-TR-85086-U] N86-31643
Control loops with human operators in space operations. Part 1: Human engineering analysis, synthesis and evaluation techniques
[NLR-TR-84116-L-PT-1] N86-32107
Control loops with human operators in space operations. Part 4: Research requirements for human-in-the-loop space teleoperator development
[NLR-TR-84116-L-PT-4] N86-32109
Control loops with human operators in space operations. Part 5: Executive summary
[NLR-TR-84116-L-PT-5] N86-32110
Stability considerations in the design of sigma-delta modulators — sampled data control systems
[S-AND-C.85-1] N86-32117
Performance analysis of a microcomputer-based single-loop digital control system
[AD-A167914] N86-32177
State and data techniques for control of discontinuous systems
[DE86-007240] N86-32179
Self-tuning control principles applied to bilinear systems
[IR-SC-85-2] N86-32183
The structuring of production control systems
[THE/BDK/ORS/84/10] N86-32332

CONTROL THEORY
Control theoretic analysis of human operator mediated rendezvous and docking
[NLR-MP-85020-U] N86-32106
Control loops with human operators in space operations. Part 3: Rendezvous and docking operations and model analysis of performance with human-in-the-loop
[NLR-TR-84116-L-PT-3] N86-32108
Zero models and pole models for multivariable systems
[DE86-009442] N86-32181
The Hamilton-Jacobi-Bellman equation with a gradient constraint
[AD-A167532] N86-32237
On the stability of the problem of target tracking with the FLIR
[AD-A167721] N86-32273
Structuring the production control problem in a repair shop
[THE/BDK/KBS/84-16] N86-32334
A comparison of capacity oriented and product oriented approaches to goods flow control
[ARW-03-THE-BDK/ORS/84/11] N86-32335

CONTROLLED ATMOSPHERES
Controlled environment life support system: Growth studies with potatoes
[NASA-CR-177400] N86-32101

CONVECTION
A linear stability analysis of the rapid development of an extratropical cyclone
[AD-A167808] N86-32057

CONVECTION CURRENTS
Extratropical cloud-topped boundary layers over the oceans N86-32026
Parameterization of the cloud-topped boundary layer in a global forecast model N86-32038

CONVECTIVE FLOW
Theory and observation of cloud-topped boundary layer processes N86-32030

CONVECTIVE HEAT TRANSFER
Applications of infrared thermography in convective heat transfer
[AD-A167872] N86-31599
Calculation of heat flux through a wall containing a cavity: Comparison of several models
[DE86-010348] N86-31841

CONVERGENCE
Acoustic description of south Atlantic Ocean warm core eddy
[AD-A166323] N86-32074
A convergence theorem for Newton-like methods in Banach spaces
[AD-A167455] N86-32234
The Neumann problem for nonlinear second order singular perturbation problems
[AD-A167456] N86-32235
Light scattering from a deep metallic grating
[AD-A166319] N86-32270

COOL STARS
Ultraviolet observations of astronomical phenomena
[NASA-CR-176859] N86-32376
Definition and empirical structure of the range of stellar chromospheres-coronae across the H-R diagram: Cool stars
[NASA-CR-176863] N86-32377

COOLANTS
Effect of an oxygen plasma on the physical and chemical properties of several fluids for the liquid droplet radiator
[NASA-TM-88839] N86-31634

COOLING
Small gas turbine combustor experimental study: Compliant metal/ceramic liner and performance evaluation
[NASA-TM-87304] N86-31582

COPPER
Semimanufactured products made of copper and copper alloys: An analysis of production and sale in a world perspective
[EUT/BDK/15] N86-31758

COPPER ALLOYS
Semimanufactured products made of copper and copper alloys: An analysis of production and sale in a world perspective
[EUT/BDK/15] N86-31758

CORNERS
Stresses in the region of rounded corners
[WTHD-174] N86-31938

CORROSION
Degradation of materials in combustion environments
[DE86-011771] N86-31691
Corrosion behaviour of aluminium plates in aqueous medium
[DE86-701575] N86-31711
Solid electrolyte for high energy density batteries
[DE86-009358] N86-31803

CORROSION RESISTANCE
Technology demonstration for investigation of the new possibilities of amphibious flying boats, phase 2
[BMFT-FB-W-85-022] N86-31577
Solid rocket motor with nozzle containing aromatic amide fibers
[AD-D012250] N86-31655
Characterization of ion implanted and laser processed wear surfaces
[AD-A167878] N86-31709
Improvement of the corrosion resistance of turbine engine bearings
[AD-A167355] N86-31893

CORROSION TESTS
A new radiographic corrosion inspection capability
[AD-A167270] N86-31914

COSMIC RAYS
Workshop on Cosmogenic Nuclides
[NASA-CR-176886] N86-32348
The exposure history of Jilin and production rates of cosmogenic nuclides N86-32355
Cosmic ray interactions in the ground: Temporal variations in cosmic ray intensities and geophysical studies N86-32357
Live 129I-129Xe dating N86-32359
Calculations of cosmogenic nuclide production rates in the Earth's atmosphere and their inventories N86-32364
A direct time series comparison between the La Jolla and Belfast radiocarbon records N86-32368
Neutron capture production rates of cosmogenic 60Co, 59Ni and 36Cl in stony meteorites N86-32369
Simulation of cosmic irradiation conditions in thick target arrangements N86-32370

COSMOCHEMISTRY
Workshop on Cosmogenic Nuclides
[NASA-CR-176886] N86-32348
Evolution of gas-rich meteorites: Clues from cosmogenic nuclides N86-32354
The exposure history of Jilin and production rates of cosmogenic nuclides N86-32355
Production rates of neon xenon isotopes by energetic neutrons N86-32358
Live 129I-129Xe dating N86-32359
Production of radionuclides in artificial meteorites irradiated isotropically with 600 MeV protons N86-32360
Compilation of cosmogenic radionuclides in meteorites N86-32362
Redetermination of parameters for semi-empirical model for spallogenic He and Ne in chondrites N86-32363
The 10Be contents of SNC meteorites N86-32365
Neutron capture production rates of cosmogenic 60Co, 59Ni and 36Cl in stony meteorites N86-32369
Cosmogenic rare gases and 10-Be in a cross section of Knyahinya N86-32371

COSMOLOGY
A SIRTF interdiciplinary scientist proposal
[NASA-CR-176862] N86-32382

COSMONAUTS
Special features of surgical intervention under conditions of weightlessness
[AD-A167916] N86-32092
COST ANALYSIS
A cost/performance analysis of hybrid inertial/externally referenced positioning/orientation systems
[AD-A167685] N86-31553
Dimensionally stable electrodes for used salt electrolysis (substitute for petroleum coke)
[BMFT-FB-T-85-186] N86-31812
Reproduction of topographic map 1:200000 in digital raster mode N86-31954
COST EFFECTIVENESS
The trade-off module: An aid to balance logistically related costs
[BDK/KBS/84-06] N86-32331
COST ESTIMATES
Phase 3 study of selected tether applications in space, mid-term review
[NASA-CR-178900] N86-31632
COST REDUCTION
An overview of the Small Engine Component Technology (SECT) studies
[NASA-TM-88796] N86-31587
COUPLING
Broadband unpolarized light source
[AD-D012201] N86-32271
COUPLINGS
Preloaded space structural coupling joints
[NASA-CASE-LAR-13489-1] N86-31630
CRACK INITIATION
Test program to provide confidence in liquid oxygen cooling of hydrocarbon fueled rocket thrust chambers
[NASA-TM-88816] N86-31646
Finite element analysis to evaluate the stress distribution and the energy release rate at the cracking front of a fracture mechanics specimen for linear and nonlinear material behavior
[GKSS-85/E/54] N86-31934
CRACK PROPAGATION
Characterization of ion implanted and laser processed wear surfaces
[AD-A167878] N86-31709
Insights into the fracture toughness of martensitic stainless steels using stereoscopic fractographic measurements
[DE86-009415] N86-31719
Effects of wellbore liquids in propellant-based fracturing
[DE86-007832] N86-31751
Finite-element modeling of pinch welds
[DE86-009573] N86-31900
Microscopic image analysis of slow crack growth in vitreous materials
[DE86-009850] N86-31931
CRACKING (FRACTURING)
Analysis of heat-affected zone cracking in Ni3Al alloys
[DE86-009449] N86-31712
CRACKS
Damage assessment by acousto-ultrasonic techniques in composites
[AD-A168097] N86-31672
Insights into the fracture toughness of martensitic stainless steels using stereoscopic fractographic measurements
[DE86-009415] N86-31719
Foundations of statistical crack mechanics
[DE86-000764] N86-31929
CRASHES
Full-scale crash test (T-41) of the YAH-63 attack helicopter
[AD-A167813] N86-31550
CRASHWORTHINESS
Development and application of energy absorbing composite devices in crash-worthy structures
[ESA-86-97253] N86-31676
CREEP PROPERTIES
Microstructure-property relationships in directionally solidified single crystal nickel-base superalloys
[NASA-TM-88788] N86-31700
CRITICAL FLOW
Critical flow through small pipe breaks
[DE86-010907] N86-31842
CRITICAL FREQUENCIES
Separation of supposed stress-time functions by filtering with variable critical frequency
[LBF-TB-174] N86-32214
CRITICAL PATH METHOD
An analysis of the Centaur Ground Processing System at the Kennedy Space Center/Cape Canaveral AFS
[AD-A167123] N86-31618
CROP IDENTIFICATION
Activities report in remote sensing supervision
[ESA-86-97383] N86-31970
CRYOGENIC COOLING
The photopolarimeter of the infrared space telescope GIRL: Mechanical and electrical components for cryovacuum
[BMFT-FB-W-85-026] N86-32379
CRYOGENIC EQUIPMENT
Evaluation of a hybrid hydrostatic bearing for cryogenic turbopump application
[NASA-TM-87255] N86-31649
The noncavitating performance and life of a small vane-type positive displacement pump in liquid hydrogen
[NASA-TM-87347] N86-31651
Study of test bench dangers in Vulcan engine turbopump tests. (A component of Ariane 5 launcher)
[ESA-86-97632] N86-31886
CRYOGENIC WIND TUNNELS
Operating envelope charts for the Langley 0.3-meter transonic cryogenic wind tunnel
[NASA-TM-89008] N86-31595
CRYOGENICS
Design of tough ferritic steels for cryogenic use
[DE86-009361] N86-31718
CRYOSTATS
Multichannel automatic device for measuring ultralow temperatures
[DE86-701438] N86-31867
Gas flowmeter for a space cryostat --- Infrared Space Observatory
[SEP-TS/SE/BT/10.289/85] N86-31878
CRYSTAL DEFECTS
Radiation-induced segregation and precipitation in molybdenum-rhenium alloys
[DE86-007521] N86-31715
Overview of transport mechanisms in beta-lithium/aluminum
[DE86-010522] N86-31724
CRYSTAL GROWTH
Photovoltaics: Electricity from sunlight, FY 1985 accomplishments
[DE86-004429] N86-31986
Microcrystalline growth studies in model oxide by dynamic laser-light scattering methods
[DE86-007300] N86-32310
Uniformly-doped Cr, Nd:GGG crystals
[DE86-009692] N86-32311
CRYSTAL LATTICES
Nonlinear optical interactions in semiconductors
[AD-A166182] N86-31880
X-ray line profile analysis of shock-modified compounds
[DE86-003454] N86-31932
CRYSTAL OPTICS
Statistical analysis of nonhomogeneous Poisson processes. Statistical treatment of a particle multidetector --- crystal structure, neutron diffraction
[ESA-86-97281] N86-32221
Statistical treatment of a particle multidetector --- crystal structure, neutron diffraction N86-32223
CRYSTAL STRUCTURE
The continuing battle against defects in nickel-base superalloys
[NASA-TM-87343] N86-31701
Effect of crystallographical and geometrical changes of a ferrite head on magnetic signals during the sliding process with magnetic tape
[NASA-TM-87277] N86-31728
Statistical treatment of a particle multidetector --- crystal structure, neutron diffraction N86-32223
Optical characterization of nonlinear crystals
[DE86-006694] N86-32277
Raman spectrometer with microprobe capability
[AD-A167008] N86-32301
Single-crystal neutron diffraction study of the distribution and thermal motion of silver ions in alpha- and beta-Ag SI
[DE86-005056] N86-32309
Deposition of crystalline semiconductor layers on amorphous substrates (Graphoepitaxy)
[BMFT-FB-T-85-160] N86-32313
Study by synchrotron radiation of the superstructure of tetrataenite from the Saint-Severin meteorite
[DE86-701971] N86-32384
CRYSTALLINITY
Evidence for the formation of a metastable crystalline phase during crystallization of Zr-Ni metallic glasses of approximately 57 to 63.2 at. % Zr
[DE86-005031] N86-31734
CRYSTALLIZATION
Evidence for the formation of a metastable crystalline phase during crystallization of Zr-Ni metallic glasses of approximately 57 to 63.2 at. % Zr
[DE86-005031] N86-31734
CRYSTALLOGRAPHY
To what extent are grain boundaries in metals ordered structures
[DE86-007004] N86-31710
CRYSTALS
Selectively etching microstructures in a glow discharge plasma
[AD-D012206] N86-31794
Chinese Journal of Lasers (selected articles)
[AD-A167846] N86-31862
Uniformly-doped Cr, Nd:GGG crystals
[DE86-009692] N86-32311
CUBIC EQUATIONS
Break-up of invariant circles for a mapping with a cubic nonlinearity
[ESA-86-97378] N86-32213
CURING
Dome restraint assembly for rocket motors
[AD-D012278] N86-31656
Novel macromolecular structures and composites
[AD-A166243] N86-31731
CURRENT CONVERTERS (AC TO DC)
Description of a 20 Kilohertz power distribution system
[NASA-TM-87346] N86-31584
CURRENT DISTRIBUTION
Description of a 20 Kilohertz power distribution system
[NASA-TM-87346] N86-31584
CURVE FITTING
History of the Wilson-Fowler spline
[DE86-010264] N86-32143
CYCLES
Flow and cycle covering in graphs and matroids
[ESA-86-97285] N86-32206
CYCLIC HYDROCARBONS
Boundary conditions for the paleoenvironment: Chemical and physical processes in the pre-solar nebula
[NASA-CR-176870] N86-32374
CYCLIC LOADS
A conservative rating procedure for cyclically loaded, buried cables
[S/T-REPT-VOL-3-NO-9] N86-31821
CYCLOGENESIS
A diagnostic investigation of explosive maritime cyclogenesis during FGGE
[AD-A167810] N86-32059
CYCLONES
On the evolution of precipitation associated with a wintertime east coast cyclone: A GALE preliminary study
[AD-A166375] N86-32042
A linear stability analysis of the rapid development of an extratropical cyclone
[AD-A167806] N86-32057
Effects of storm-related parameters on the accuracy of the nested tropical cyclone model
[AD-A167809] N86-32058
A diagnostic investigation of explosive maritime cyclogenesis during FGGE
[AD-A167810] N86-32059
CYCLOTRON RESONANCE
Acceleration of ions and electrons by wave-particle interactions
[AD-A167631] N86-32258
CYCLOTRON RESONANCE DEVICES
Analysis of high power RF windows for gyrotrons
[AD-A167424] N86-31861
CYLINDRICAL BODIES
Radar cross-section of damped cylinders and anisotropic cylinders
[AD-A167773] N86-31769
Solitary and periodic waves in swirling flow
[AD-A167536] N86-31833

D

DAMAGE
The influence of incubation time on the passive film breakdown of aluminum alloys in seawater
[AD-A167398] N86-31705
DAMAGE ASSESSMENT
Damage assessment by acousto-ultrasonic techniques in composites
[AD-A168097] N86-31672
Mechanics research directions in composites and manufacturing technologies
[DE86-008787] N86-31673
A new radiographic corrosion inspection capability
[AD-A167270] N86-31914
DAMPING
Damping characteristics of metal matrix composites
[AD-A167792] N86-31668
Radar cross-section of damped cylinders and anisotropic cylinders
[AD-A167773] N86-31769
DAMPING TESTS
Calculation of separated laminar supersonic flows over blunt bodies of revolution at zero angle of attack
[ESA-TT-953] N86-31546

DARK ADAPTATION
A portable subject controlled night vision adaptometer
[AD-A167848] N86-32274
DATA ACQUISITION
Development of a data acquisition system to aid in the aerodynamic study of various helicopter configurations
[AD-A167717] N86-31539
A 3-component laser-Doppler velocimeter data acquisition and reduction system
[NASA-CR-177390] N86-31824
A densitometric analysis of IIaO film flown aboard the space shuttle transportation system STS-3, STS-8, and STS-7
[NASA-CR-176864] N86-31858
Computer assisted measurement techniques in Laser Doppler Anemometry (LDA). Part 1: Data acquisition. Part 2: Data reduction
[ISL-CO-210/85-PT-1-PT-2] N86-31875
NORDA Arctic data collection, processing and interpretation capabilities
[AD-A167797] N86-31965
Scientific data requirements
[ADL-C-69230] N86-32007
A procedure for space SDR prioritization N86-32009
Theory and operation of the Gould 32/27 programs ABLE-2A and EBLE for the tropospheric air motion measurement system
[NASA-CR-176856] N86-32011
A digital imaging photometry system for cometary data acquisition
[NASA-TM-86554] N86-32373
Reduction and analysis of data from experiment CAI on the IMP-8 mission
[NASA-CR-177891] N86-32381
DATA BASE MANAGEMENT SYSTEMS
Reports on Cartography and Geodesy. Series 1: Original reports, number 95
[ISSN-0469-4236] N86-31946
On data integrity of CAD applications in cartography: Concept of an information system with Siemens Computer Aided Design (SICAD) N86-31947
Geoscientific requirements on a graphical data base N86-31948
Topographic-cartographic data base in standardization N86-31949
A proposal for the development of a large-scale topographic-cartographic data base taking the planimetric data of automated cadastral map (ALK) system into account N86-31950
Hardware for data banks in cartography: Concepts N86-31951
Introduction to the project design of a user's interface for graphic-alphanumerical data banks N86-31955
Calculation and representations of elevation changes in a tidal flat area from digital terrain models N86-31956
Brief report on design and implementation of a data bank core system N86-31957
System study of the utilization of space for carbon dioxide research
[NASA-CR-3923] N86-32005
Space systems requirements definition N86-32006
Database capacity planning and management
[DE86-009076] N86-32338
Coherence maintenance in distributed database systems
[ESA-86-97292] N86-32342
DATA BASES
CAPIR/DEM: A collection system for geographically based digital elevation data
[AD-A167471] N86-31963
Observations of surface water temperature in the Netherlands from 1860: Description of the data file
[KNMI-TR-75] N86-32070
GEOSYS: A question-answer system with spatial imaginative faculty --- representation model N86-32130
Model and functional design of a data base for computer aided design applications
[ESA-86-97288] N86-32145
DATA COMPRESSION
Rate distortion characteristics of two adaptive data compression algorithms
[NLR-MP-85024-U] N86-32150
DATA LINKS
Vulnerability of low redundancy image data and text transmission over satellite communication links
[NLR-TR-85100-L] N86-31787
Competition noise in an optical divider
[ESA-86-97538] N86-31886
Design and implementation of a driver and initialization program for the Local Area Network (LAN) TWENTENET
[INF83/IPS/044] N86-32175
DATA MANAGEMENT
Application of a geographic information system in the study of acidic deposition
[DE86-008220] N86-32000
A procedure for space SDR prioritization N86-32009
DATA PROCESSING
Phase-sensitive a.c. polarography and its data processing by microcomputer-controlled elecctroanalytical system
[DRIC-T-7634] N86-31679
Intelligent Data Analysis (INDA) software for data analysis
[ESA-86-97291] N86-32147
ESPRIT project 322: Computer Aided Design (CAD) design interfaces
[KFK-PFT-121] N86-32168
Spline functions with form conditions
[ESA-86-97286] N86-32207
Database capacity planning and management
[DE86-009076] N86-32338
DATA PROCESSING EQUIPMENT
Study of optical computing
[FOA-C-30418-E1] N86-32287
DATA RECORDERS
A 32-bit microprocessor based solid state data recorder for space based applications
[AD-A167887] N86-32116
DATA REDUCTION
Numerical fusion of redundant telemetry sources
[SNIAS-861-422-113] N86-31627
A 3-component laser-Doppler velocimeter data acquisition and reduction system
[NASA-CR-177390] N86-31824
DATA RETRIEVAL
Automated valve expertise capture
[DE86-004127] N86-31897
DATA SMOOTHING
Spline functions with form conditions
[ESA-86-97286] N86-32207
DATA STORAGE
Theory and operation of the Gould 32/27 programs ABLE-2A and EBLE for the tropospheric air motion measurement system
[NASA-CR-176856] N86-32011
DATA SYSTEMS
State and data techniques for control of discontinuous systems
[DE86-007240] N86-32179
DATA TRANSMISSION
Optical fiber transmission on satellites and orbital stations
[SNIAS-861-440-108] N86-31786
Absolute judgment versus absolute magnitude estimation to convey information through symbol magnitude changes in CRT displays
[AD-A167059] N86-32103
DECAY
On L sub 1-contraction for systems of conservation laws
[AD-A167484] N86-32244
DECIDUOUS TREES
COVER Project and Earth resources research transition
[NASA-CR-177176] N86-31941
DECISION MAKING
A kernel decision support system for Canadian military satellite communications system planning
[AD-A167122] N86-31765
On data integrity of CAD applications in cartography: Concept of an information system with Siemens Computer Aided Design (SICAD) N86-31947
The psychology of decision making --- military commanders N86-32096
Artificial intelligence and the Rule Oriented System Simulation (ROSS) language --- military commanders N86-32097
Human problem solving in fault diagnosis tasks
[AD-A167397] N86-32104
A comparison of capacity oriented and product oriented approaches to goods flow control
[ARW-03-THE-BDK/ORS/84/11] N86-32335
DECISION THEORY
The psychology of decision making --- military commanders N86-32096
Monotonically improving limit-optimal strategies in finite state decision processes
[MEMO-COSOR-84-15] N86-32233
DECOMPOSITION
Effects of physical properties on the initiation behaviors of heterogeneous high explosives
[DE86-000807] N86-31749
Optical matrix-matrix multiplier based on outer product decomposition
[AD-D012207] N86-32272
DECONTAMINATION
Photodesorption cleaning of silicon with vacuum ultraviolet irradiation
[AD-A167420] N86-31682
DECOUPLING
Flight test of passive wing/store flutter suppression
[NASA-TM-87766] N86-31566
DEFECTS
The continuing battle against defects in nickel-base superalloys
[NASA-TM-87343] N86-31701
DEFENSE PROGRAM
An analysis of the defense spacecraft market
[AD-A167602] N86-32326
DEFLAGRATION
Radial buildup to detonation in pentaerythritol tetranitrate (PETN)
[DE86-002383] N86-31750
DEFLECTION
Analysis of the FELIX experiments with cantilevered beams and hollow cylinders
[DE86-010528] N86-31933
DEFORMATION
The variation of the dislocation density in aluminum deformed to large steady-state creep strains
[AD-A167715] N86-31708
Studies of stress and fatigue induced defects using small angle neutron scattering
[DE86-004985] N86-31925
DEGRADATION
Degradation of materials in combustion environments
[DE86-011771] N86-31691
Effect of crystallographical and geometrical changes of a ferrite head on magnetic signals during the sliding process with magnetic tape
[NASA-TM-87277] N86-31728
Electrical and environmental studies of conduction polymers
[AD-A167737] N86-31732
DEGREES OF FREEDOM
A closed-form solution for inverse kinematics of robot manipulator with redundancy
[AD-A167850] N86-31894
DEHYDRATION
Inorganic compounds for passive solar energy storage: Solid-state dehydration materials and high specific heat materials
[DE86-010214] N86-31990
DEICERS
NASA's Aircraft Icing Analysis Program
[NASA-TM-88791] N86-31548
DELTA WINGS
Theoretical and experimental investigation of vortex breakdown
[NASA-CR-176853] N86-31530
DEMOGRAPHY
Orbital compactness and asymptotic behavior of non-linear parabolic systems with functionals
[AD-A167486] N86-32191
DENSITOMETERS
A densitometric analysis of IIaO film flown aboard the space shuttle transportation system STS-3, STS-8, and STS-7
[NASA-CR-176864] N86-31858
DENSITY (MASS/VOLUME)
Effects of physical properties on the initiation behaviors of heterogeneous high explosives
[DE86-000807] N86-31749
DENSITY DISTRIBUTION
Correlation of processing and sintering variables with the strength and radiography of silicon nitride
[NASA-TM-87251] N86-31729
Investigation of density gradient fluctuations in a turbulent jet by means of the laser Schlieren crossed-beam method
[ESA-TT-942] N86-31849
DEPLOYMENT
Evaluation of solar array flight experiment response during flight for extension/retraction phase
[NASA-TM-86551] N86-31606
Feasibility study of surveillance avoidance during the deployment of Soviet payloads of military interest into orbit from a Soviet shuttle
[AD-A167661] N86-31607
Design and test of a space deployable radiator
[SNIAS-861-440-103] N86-31640
DEPOLARIZATION
Broadband unpolarized light source
[AD-D012201] N86-32271
DEPOLYMERIZATION
Effect of an oxygen plasma on the physical and chemical properties of several fluids for the liquid droplet radiator
[NASA-TM-88839] N86-31634

DEPOSITION
Application of a geographic information system in the study of acidic deposition
[DE86-008220] N86-32000
DEPTH MEASUREMENT
Level and discharge measurements under difficult conditions --- hydrology
[WMO-650] N86-31969
The CTD data from the Madeira Abyssal Plain, Charles Darwin cruise 1/85 --- conductivity-temperature-depth (CTD)
[IOS-217] N86-32078
DESIGN ANALYSIS
Study of the fixation of Hermes vehicle on the Ariane 5 launch vehicle
[SNIAS-861-422-121] N86-31623
Mechanical testing of graphite-epoxy composite tubes
[DE86-009608] N86-31674
Floor planning and net assignment in layout compilation
[ESA-86-97530] N86-31818
Design considerations for advanced battery concepts
[NASA-TM-87319] N86-31961
Top-down design of VLSI microprocessors
[ESA-86-97299] N86-32118
A relational approach to computer programming
[ESA-86-97290] N86-32146
A quantitative approach to computer systems engineering
[FUB-5-1985] N86-32169
DESORPTION
Photodesorption cleaning of silicon with vacuum ultraviolet irradiation
[AD-A167420] N86-31682
DETECTION
A new radiographic corrosion inspection capability
[AD-A167270] N86-31914
Studies of stress and fatigue induced defects using small angle neutron scattering
[DE86-004985] N86-31925
DETONATION
Effects of physical properties on the initiation behaviors of heterogeneous high explosives
[DE86-000807] N86-31749
Radial buildup to detonation in pentaerythritol tetranitrate (PETN)
[DE86-002383] N86-31750
Optical studies of chemical energy release during shock initiation of granular explosives
[DE86-010469] N86-31752
DETONATORS
Safe-arm explosive transfer mechanism
[AD-D012333] N86-31896
DEUTERONS
Deuteron properties studied in neutrino and antineutrino interactions
[NIKHER-H/86-7] N86-32256
DIAMINES
Amine terminated bisaspartimide polymer
[NASA-CASE-ARC-11421-2] N86-31726
Process for preparing highly optically transparent/colorless aromatic polyimide film
[NASA-CASE-LAR-13351-1] N86-31727
DIELECTRIC PROPERTIES
Electrical and environmental studies of conduction polymers
[AD-A167737] N86-31732
A single sideband suppressed carrier (SSBSC) interferometer for the measurement of dielectric properties of laser heated materials
[ISL-CO-228/85] N86-31877
Experimental study of electronic states at metal-dielectric interfaces
[AD-A167724] N86-32306
DIELECTRICS
Radar cross-section of damped cylinders and anisotropic cylinders
[AD-A167773] N86-31769
Analysis of high power RF windows for gyrotrons
[AD-A167424] N86-31861
Experimental study of electronic states at metal-dielectric interfaces
[AD-A167724] N86-32306
DIES
Correlation between microstructure and forging conditions of Combined Die-Forged (CDF) Ti-6Al-4V powder
[ESA-TT-952] N86-31725
DIESEL ENGINES
Alcohol as a fuel in a high speed diesel engine with double injection system
[DE86-751653] N86-31904
DIFFERENTIAL CALCULUS
Optimal implementation of differentiation arithmetic
[AD-A167494] N86-32193
DIFFERENTIAL EQUATIONS
Performance modelling of large-grained parallelism
[DE86-009664] N86-32171
Some experiments with numerical pivoting in a code for solving large sparse stiff systems of odes
[DE86-010305] N86-32201
DIFFERENTIAL GEOMETRY
Comparison of Clifford and Grassmann algebras in applications to electromagnetics, revision 1
[DE86-009716] N86-31775
DIFFRACTION PATHS
Satellite-Earth range measurements. Part 1: Correction of the excess path length due to atmospheric water vapor by ground based microwave radiometry
[CTH-RR-147-PT-1] N86-32022
Statistical treatment of a particle multidetector --- crystal structure, neutron diffraction N86-32223
DIFFUSERS
Comparison of analytical and experimental performance of a wind-tunnel diffuser section
[NASA-TM-88795] N86-31537
DIFFUSION
Diffusion of gases in porous solids: Simulation and measurement
[DE86-005380] N86-31837
Contributions to large-eddy simulation, part 1
[DE86-009710] N86-32021
DIFFUSION COEFFICIENT
Interdiffusion in binary salt melting under weightlessness
[BMFT-FB-W-85-017] N86-31609
Mixing length and turbulent diffusion coefficient in atmospheric simulation models
[REPT-25] N86-32024
DIGESTIVE SYSTEM
Influence of gravity on structure and behavior of Paramecium caudatum
[ESA-TT-963] N86-32087
DIGITAL COMPUTERS
Multiple thermocouple testing device
[AD-D012276] N86-31860
DIGITAL FILTERS
Separation of supposed stress-time functions by filtering with variable critical frequency
[LBF-TB-174] N86-32214
DIGITAL SIMULATION
The simulation of natural knowledge systems --- artificial intelligence N86-32125
GEOSYS: A question-answer system with spatial imaginative faculty --- representation model N86-32130
Machine learning in METAXA --- learning model, inference N86-32131
DIGITAL SPACECRAFT TELEVISION
A 2 Mbit/sec modem at 70 MHz based on the Tamed Frequency Modulation (TFM) principle
[ESA-86-97537] N86-31815
DIGITAL SYSTEMS
A new radiographic corrosion inspection capability
[AD-A167270] N86-31914
CAPIR/DEM: A collection system for geographically based digital elevation data
[AD-A167471] N86-31963
Performance analysis of a microcomputer-based single-loop digital control system
[AD-A167914] N86-32177
A digital imaging photometry system for cometary data acquisition
[NASA-TM-86554] N86-32373
DIGITAL TECHNIQUES
Development of a digital signal processor
[BMFT-FB-T-85-181] N86-31871
Microscopic image analysis of slow crack growth in vitreous materials
[DE86-009850] N86-31931
Reproduction of topographic map 1:200000 in digital raster mode N86-31954
A software concept for interactive letter location through digital image processing N86-31959
Study of optical computing
[FOA-C-30418-E1] N86-32287
DIMENSIONAL STABILITY
Fiber composite sandwich thermostructural behavior: Computational simulation
[NASA-TM-88787] N86-31663
DIODES
Fiber optic modification of a diode array spectrophotometer
[DE86-009572] N86-32278
DIPHENYL COMPOUNDS
Amine terminated bisaspartimide polymer
[NASA-CASE-ARC-11421-2] N86-31726
DIRECT LIFT CONTROLS
Design of a vertical thrust stand for a remotely piloted model helicopter
[AD-A167811] N86-31596
DIRECTION
Vertical directionality of ambient noise: 150-300 Hz
[AD-A167421] N86-32250
DIRECTIONAL SOLIDIFICATION (CRYSTALS)
Microstructure-property relationships in directionally solidified single crystal nickel-base superalloys
[NASA-TM-88788] N86-31700
The behavior of nonrotational striations in silicon
[BMFT-FB-W-85-014] N86-32316
DISCRIMINANT ANALYSIS (STATISTICS)
Tree-structured classification via generalized discriminant analysis
[AD-A167453] N86-32134
DISPERSING
Turbulent dispersion of the icing cloud from spray nozzles used in icing tunnels
[NASA-TM-87316] N86-31588
DISPERSIONS
Analysis of the Gas Particle Radiator (GPR)
[NASA-TM-88786] N86-31652
DISPLACEMENT
Parametric study of beam refraction problems across laser anemometer windows
[NASA-TM-87350] N86-31857
DISPLACEMENT MEASUREMENT
Advanced optical measuring systems for measuring the properties of fluids and structures
[NASA-TM-88829] N86-31859
A remote controlled calibration device for displacement transducers
[ECN-173] N86-31873
DISPLAY DEVICES
Simulation evaluation of display/FLIR concepts for low-altitude, terrain-following helicopter operations
[NASA-TM-86779] N86-31551
Feasibility study for a SAR test monitor
[BMFT-FB-W-85-013] N86-31780
Multiple thermocouple testing device
[AD-D012276] N86-31860
Absolute judgment versus absolute magnitude estimation to convey information through symbol magnitude changes in CRT displays
[AD-A167059] N86-32103
Semiconductor/solid electrolyte junctions for optical information storage. Electrochromic effects on Heptyl Viologen incorporated within a solid polymer electrolyte cell
[AD-A167666] N86-32305
DISSOLVED GASES
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 3: On-Board Inert Gas Generator System (OBIGGS) studies. Part 2: Fuel scrubbing and oxygen evolution tests
[AD-A167445] N86-31579
DISTRIBUTED PARAMETER SYSTEMS
An interative approximation method for the calculation of the balance distribution for a finite Markov chain
[ESA-86-97303] N86-32241
DISTRIBUTED PROCESSING
Coherence maintenance in distributed database systems
[ESA-86-97292] N86-32342
DIURNAL VARIATIONS
Continentality: Its estimation and physical significance
[AD-A167111] N86-32044
DOCUMENTATION
Bibliography of Lewis Research Center technical publications announced in 1985
[NASA-TM-87263] N86-32336
DOCUMENTS
Unclassified publications of Lincoln Laboratory. Volume 2: Report bibliography
[AD-A167987] N86-32337
DOMAINS
Comparison of the domain and frequency domain state feedbacks
[DE86-009429] N86-32180
DOMES (GEOLOGY)
On the global behavior of a cylindrical salt dome with a HLW repository
[ECN-180] N86-32264
DOMES (STRUCTURAL FORMS)
Dome restraint assembly for rocket motors
[AD-D012278] N86-31656
DOORS
Mechanical relocker for locking bolts
[AD-D012209] N86-31891
DOPED CRYSTALS
Properties of impurity doped infrared photoconductive detectors under conditions of low background photon flux --- space environments
[NPL-QU-76] N86-32298

DOPPLER RADAR
Investigation of polar motion from Doppler tracking of the NNSS (Navy Navigation Satellite System) during the MERIT campaign
[AD-A167565] N86-31964
DOSIMETERS
Application of new technologies to radiation biodosimetry in mammalian systems
[AD-A168176] N86-31865
DOWNLINKING
Spacecraft multibeam antenna system for 30/20 GHz
[NASA-CR-174654] N86-31760
DRAG REDUCTION
International Aviation (selected articles)
[AD-A168298] N86-31528
On wings and keels (2)
[NLR-MP-85048-U] N86-31847
DUCTILITY
Influence of radiation-induced segregation on ductility of a nickel-silicon alloy
[DE86-009503] N86-31720
DYNAMIC CHARACTERISTICS
Prediction of the high frequency response of satellites to diffuse acoustic environments
[SNIAS-851-422-122] N86-31636
The dynamic behavior of wind turbine masts (in the framework of wind turbine design criteria)
[B-85-324] N86-31918
DYNAMIC CONTROL
On the handling qualities of flight vehicles through variable flight conditions
[AD-A167727] N86-31592
DYNAMIC LOADS
Technique for megabar controlled strain experiments
[DE86-000805] N86-31930
DYNAMIC MODELS
Dynamics of flexible spacecraft: An analysis of approaches towards mathematical model order reduction
[NLR-TR-85068-U] N86-31643
DYNAMIC RESPONSE
An investigation into the tripping behavior of longitudinally T-stiffened rectangular flat plates loaded statically and impulsively
[AD-A167718] N86-31923
DYNAMIC STABILITY
Redundancy resolution of manipulators through torque optimization
[AD-A167651] N86-31895
DYNAMIC STRUCTURAL ANALYSIS
Full-scale crash test (T-41) of the YAH-63 attack helicopter
[AD-A167813] N86-31550
Dynamic analysis: Correlation of theory with experiment --- MSC/NASTRAN analysis of Westland 30 G-BGHF
[RP661] N86-31917
An investigation into the tripping behavior of longitudinally T-stiffened rectangular flat plates loaded statically and impulsively
[AD-A167718] N86-31923

E

E REGION
E-layer ionospheric disturbances following the Coalinga earthquake
[DE86-008588] N86-32017
EARTH (PLANET)
A sensitive radar search for small natural satellites of the Earth
[AD-A167777] N86-32387
EARTH ATMOSPHERE
Atmospheric molecules
[AERONOMICA-ACTA-F-38-1985] N86-32004
Contributions to large-eddy simulation, part 1
[DE86-009710] N86-32021
Calculations of cosmogenic nuclide production rates in the Earth's atmosphere and their inventories
N86-32364
EARTH CRUST
Intraplate deformation due to continental collisions: A numerical study of deformation in a thin viscous sheet
[NASA-TM-86235] N86-32012
EARTH MOVEMENTS
E-layer ionospheric disturbances following the Coalinga earthquake
[DE86-008588] N86-32017
EARTH ORBITS
A sensitive radar search for small natural satellites of the Earth
[AD-A167777] N86-32387
EARTH RESOURCES PROGRAM
Earth resources: A continuing bibliography with indexes, issue 50
[NASA-SP-7041(50)] N86-31940
EARTH SURFACE
Sound propagation over uneven ground and irregular topography
[NASA-CR-179673] N86-32248
Cosmic ray interactions in the ground: Temporal variations in cosmic ray intensities and geophysical studies N86-32357
A direct time series comparison between the La Jolla and Belfast radiocarbon records N86-32368
EARTHQUAKES
E-layer ionospheric disturbances following the Coalinga earthquake
[DE86-008588] N86-32017
ECONOMIC ANALYSIS
Prospects for small and marginal farmers in Trichy district (Tamil Nadu, India) to use water pumping windmills for irrigation
[ESA-86-97721] N86-31978
An analysis of the defense spacecraft market
[AD-A167602] N86-32326
EDDY CURRENTS
Analysis of the FELIX experiments with cantilevered beams and hollow cylinders
[DE86-010528] N86-31933
EDITING ROUTINES (COMPUTERS)
Interactive programs in a functional language. A functional implementation of an editor
[REPT-65] N86-32153
EDUCATION
Activities report in aerospace survey and space sciences
[ESA-86-98042] N86-31976
Calendar of selected aeronautical and space meetings
[AGARD-CAL-86/1] N86-32324
EFFICIENCY
Liquid helium pumps for in-orbit transfer
[NASA-TM-88239] N86-31890
EIGENVALUES
Flight control synthesis for flexible aircraft using Eigenspace assignment
[NASA-CR-178164] N86-31590
Zero and negative masses in finite element vibration and transient analysis
[AD-A167489] N86-31922
EIGENVECTORS
Flight control synthesis for flexible aircraft using Eigenspace assignment
[NASA-CR-178164] N86-31590
One-parameter families of optimization problems: Equality constraints, 2
[MEMO-420] N86-32204
ELASTIC BARS
Solution of the problem of elastoplastic torsion with a finite element method
[ESA-86-97546] N86-31935
ELASTIC BENDING
Influence of third-degree geometric nonlinearities on the vibration and stability of pretwisted, preconed, rotating blades
[NASA-TM-87307] N86-31920
Large deformation dynamic bending of composite beams
[NASA-CR-4006] N86-31921
ELASTIC DEFORMATION
Intraplate deformation due to continental collisions: A numerical study of deformation in a thin viscous sheet
[NASA-TM-86235] N86-32012
ELASTOPLASTICITY
Solution of the problem of elastoplastic torsion with a finite element method
[ESA-86-97546] N86-31935
Elastoplastic torsion of a cylindrical beam, described by variational inequalities
[ESA-86-97704] N86-31937
ELASTOSTATICS
Research related to improved computer aided design software package --- comparative efficiency of finite, boundary, and hybrid element methods in elastostatics
[NASA-CR-179668] N86-32133
ELECTRIC BATTERIES
Solid electrolyte for high energy density batteries
[DE86-009358] N86-31803
Interfacial electrochemical transport in batteries employing solid electrolytes
[DE86-010107] N86-31805
ELECTRIC CONDUCTORS
Electrical and environmental studies of conduction polymers
[AD-A167737] N86-31732
ELECTRIC CONTACTS
Interfacial electrochemical transport in batteries employing solid electrolytes
[DE86-010107] N86-31805
ELECTRIC CURRENT
Rail inductance calculations for some simple current distributions
[AD-A167915] N86-31619
A new model for the relation between conductivity and current in an MHD generator
[EG/84/373] N86-31814
ELECTRIC EQUIPMENT TESTS
SAPIENS Memo 11. Electromagnetic characteristics of the conical transmission-line EMP simulator SAPIENS
[FOA-C-30415-A3] N86-31778
ELECTRIC MOTOR VEHICLES
Progress in fuel cells for transportation applications
[DE86-010206] N86-31991
ELECTRIC POTENTIAL
A mathematical approach for evaluating nickel-hydrogen cells
[NASA-TM-88803] N86-31680
Microcomputer optimization of feed excitation voltages to obtain desired antenna radiation patterns
[AD-A167560] N86-31768
Light emission from metal-insulator-metal structures biased near breakdown voltages
[DE86-008505] N86-31802
ELECTRIC POWER
A conservative rating procedure for cyclically loaded, buried cables
[S/T-REPT-VOL-3-NO-9] N86-31821
ELECTRIC POWER PLANTS
Optical power flow with sequential quadratic programming --- electric power
[ESA-86-97708] N86-31995
ELECTRIC POWER SUPPLIES
Photovoltaic power system design for telecommunications
[ESA-86-97255] N86-31992
ELECTRIC POWER TRANSMISSION
Optical power flow with sequential quadratic programming --- electric power
[ESA-86-97708] N86-31995
ELECTRIC SWITCHES
Multiple pseudospark switch (MUPS)
[ISL-R-110/85] N86-31819
ELECTRICAL FAULTS
Fourier transform infrared spectroscopic study of aging in commercial polyurethane
[AD-A167418] N86-31798
ELECTRICAL IMPEDANCE
The effect of pigtailing braided screens on the transfer impedance of single-ended and balanced interface circuits
[EMCR-5/85] N86-31791
ELECTRICAL INSULATION
Fourier transform infrared spectroscopic study of aging in commercial polyurethane
[AD-A167418] N86-31798
Light emission from metal-insulator-metal structures biased near breakdown voltages
[DE86-008505] N86-31802
ELECTRICAL MEASUREMENT
An NMOS evaluation circuit
[REPT-IR-01] N86-31820
A single sideband suppressed carrier (SSBSC) interferometer for the measurement of dielectric properties of laser heated materials
[ISL-CO-226/85] N86-31877
Low frequency noise as a control test for space solar panels
[SNIAS-861-440-109] N86-31996
The development of a magnetooptic current measurement system for high, pulsed currents --- plasma currents
[REPT-85-161] N86-32294
ELECTRICAL PROPERTIES
Characterization of the redox behavior and stability of conducting oxides
[DE86-009871] N86-31804
Optimization of the thermoelectric figure of merit of fine-grained semiconductor materials based upon lead telluride
[AD-A167647] N86-32303
ELECTRO-OPTICAL EFFECT
Nova performance at ultra high fluence levels
[DE86-006724] N86-31881
ELECTRO-OPTICS
Optoelectronic current transducer
[BMFT-FB-T-85-165] N86-31870
Optical matrix-matrix multiplier based on outer product decomposition
[AD-D012207] N86-32272
Current German laser and quantum optics research reviewed at the 50th Annual Meeting of the Physikalische Gesellschaft
[AD-A167895] N86-32275

Optoelectronic devices and related physical phenomena in thin film semiconductor configurations
[AD-A167963] N86-32308

ELECTROCHEMICAL CELLS
Semiconductor/solid electrolyte junctions for optical information storage. Solid-state electrochromic cell using lutecium diphthalocyanine
[AD-A167869] N86-32307

ELECTROCHEMICAL OXIDATION
Dimensionally stable electrodes for used salt electrolysis (substitute for petroleum coke)
[BMFT-FB-T-85-186] N86-31812
Selective anodic oxidation of semiconductors for pattern generation
[AD-D012245] N86-32299

ELECTROCHEMISTRY
Workshop on the Frontiers of Theoretical and Experimental Electrochemistry
[DE86-007188] N86-31664
The influence of incubation time on the passive film breakdown of aluminum alloys in seawater
[AD-A167398] N86-31705

ELECTROCHROMISM
Semiconductor/solid electrolyte junctions for optical information storage. Electrochromic effects on Heptyl Viologen incorporated within a solid polymer electrolyte cell
[AD-A167666] N86-32305

ELECTRODE MATERIALS
Effect of impregnation method on cycle life of the nickel electrode
[NASA-TM-87326] N86-31980

ELECTRODES
Overview of transport mechanisms in beta-lithium/aluminum
[DE86-010522] N86-31724
Effect of impregnation method on cycle life of the nickel electrode
[NASA-TM-87326] N86-31980

ELECTRODYNAMICS
The SRI Ionospheric Structure and Dynamics Program, 1985 results
[AD-A168115] N86-32015
Experimental study of electronic states at metal-dielectric interfaces
[AD-A167724] N86-32306

ELECTROLESS DEPOSITION
Laser induced selective electroless plating
[AD-D012223] N86-31756

ELECTROLYSIS
Dimensionally stable electrodes for used salt electrolysis (substitute for petroleum coke)
[BMFT-FB-T-85-186] N86-31812
Selective anodic oxidation of semiconductors for pattern generation
[AD-D012245] N86-32299

ELECTROMAGNETIC ABSORPTION
Experimental investigations of the role of laser field fluctuations in non-linear optical absorption processes
[DE86-006919] N86-31883

ELECTROMAGNETIC COMPATIBILITY
The effect of pigtailing braided screens on the transfer impedance of single-ended and balanced interface circuits
[EMCR-5/85] N86-31791

ELECTROMAGNETIC FIELDS
Steady-state problems of nonlinear electro-magneto-thermo-elasticity
[AD-A167454] N86-32243

ELECTROMAGNETIC INTERFERENCE
Experimental investigations of pulse-pulse interference in heterodyne detection
[ESA-TT-949] N86-31783
Competition noise in an optical divider
[ESA-86-97538] N86-31886
Setup for the determination of the reflectivity of interference coatings --- laser mirrors
[DFVLR-MITT-85-18] N86-32285

ELECTROMAGNETIC MEASUREMENT
SAPIENS Memo 11. Electromagnetic characteristics of the conical transmission-line EMP simulator SAPIENS
[FOA-C-30415-A3] N86-31778

ELECTROMAGNETIC PULSES
Numerics for the simulation of electromagnetic-field propagation in nonionized and plasma media
[DE86-009796] N86-31776
SAPIENS Memo 11. Electromagnetic characteristics of the conical transmission-line EMP simulator SAPIENS
[FOA-C-30415-A3] N86-31778
Experimental investigations of pulse-pulse interference in heterodyne detection
[ESA-TT-949] N86-31783
Measurement techniques using ultrashort optical pulses
[DE86-009691] N86-32279

ELECTROMAGNETIC RADIATION
Pacific Northwest solar radiation data
[DE86-009635] N86-32020

ELECTROMAGNETIC SHIELDING
The effect of pigtailing braided screens on the transfer impedance of single-ended and balanced interface circuits
[EMCR-5/85] N86-31791

ELECTROMAGNETISM
Evolving directions of PC applications in electromagnetics analysis and design
[DE86-009695] N86-31774
Comparison of Clifford and Grassmann algebras in applications to electromagnetics, revision 1
[DE86-009716] N86-31775

ELECTRON BEAMS
Electron-beam programmable configuration circuits
[BMFT-FB-T-85-163] N86-31806
Acceleration of ions and electrons by wave-particle interactions
[AD-A167631] N86-32256

ELECTRON DENSITY PROFILES
Resonance scattering of solar radiation by the interplanetary medium
[BMFT-FB-W-85-032] N86-32385

ELECTRON GAS
Non-linear optical excitation and detection of the plasmon in two-dimensional electron gas
[DE85-703230] N86-32290

ELECTRON MICROSCOPY
Processing and correction of VLSI circuit images obtained with a scanning electronic microscope
[ESA-86-97297] N86-31809

ELECTRON MOBILITY
Semiconductor alloy theory
[AD-A166995] N86-32300

ELECTRON PARAMAGNETIC RESONANCE
Exploration of advanced characterization techniques for molecular composites
[AD-A168102] N86-31733

ELECTRON STATES
Experimental study of electronic states at metal-dielectric interfaces
[AD-A167724] N86-32306

ELECTRON TUNNELING
Light emission from metal-insulator-metal structures biased near breakdown voltages
[DE86-006505] N86-31802

ELECTRONIC EQUIPMENT
Fourier transform infrared spectroscopic study of aging in commercial polyurethane
[AD-A167418] N86-31798
Improved robotic kitting station
[AD-D012238] N86-31892
Unclassified publications of Lincoln Laboratory. Volume 2: Report bibliography
[AD-A167987] N86-32337

ELECTRONIC FILTERS
LANDSAT-4 and LANDSAT-5 multispectral scanner coherent noise characterization and removal
[NASA-TP-2595] N86-31945

ELECTRONIC MODULES
Study and implementation of an image synthesizer based on a modular architecture
[ESA-86-97295] N86-32282

ELECTRONIC TRANSDUCERS
Optoelectronic current transducer
[BMFT-FB-T-85-165] N86-31870

ELECTRONIC WARFARE
Aircrew training devices: Utility and utilization of advanced instructional features. Phase III: Electronic warfare trainers
[AD-A167922] N86-31601

ELECTRONS
A study of the interactions of high energy electron-neutrinos
[ESA-86-98072] N86-32257

ELECTROPLATING
Control of precious metal plating baths using electrogravimetric analysis
[DE86-005435] N86-31757

ELECTROSTATICS
The SRI Ionospheric Structure and Dynamics Program, 1985 results
[AD-A168115] N86-32015

ELEMENTARY PARTICLE INTERACTIONS
Hadronic phi production and the Lund model for low p sub T interactions
[NIKHEF-H/86-4] N86-32255
A study of the interactions of high energy electron-neutrinos
[ESA-86-98072] N86-32257

ELEVATION
Automatic interpolation of isolines from an irregular waterline digital terrain model (DGM) through triangulation network N86-31952
Calculation and representations of elevation changes in a tidal flat area from digital terrain models N86-31958
Digital elevation for the Baden-Wurttemburg Land (West Germany) N86-31958

ELLIPSOIDS
Chimera: A grid-embedding technique
[NASA-TM-89246] N86-32242

ELLIPTIC DIFFERENTIAL EQUATIONS
Elliptic generation of composite three-dimensional grids about realistic aircraft
[NASA-TM-88240] N86-31527
Efficient high order algorithms for elliptic boundary value problems using full multigrid techniques together with extrapolation methods
[GMD-192] N86-32187

ELUTION
Application of new technologies to radiation biodosimetry in mammalian systems
[AD-A168176] N86-31865

EMBEDDED COMPUTER SYSTEMS
Kalman filter real time tracking using microprocessors and a new language for military software
[AD-A167871] N86-32138

EMBRITTLEMENT
Effect of neutron irradiation on the tensile properties and microstructure of several vanadium alloys
[DE86-008234] N86-31716

EMISSION SPECTRA
A new way of organizing spectral line ratio fluctuations --- plasma spectra
[KGI-PREPRINT-084] N86-31692
A bispectral method for the height determination of ice clouds
[DFVLR-FB-86-03] N86-32072

EMISSIVITY
Analysis of the Gas Particle Radiator (GPR)
[NASA-TM-88786] N86-31652

ENDOSCOPES
Use of an endoscope for optical fiber holography
[ISL-CO-224/85] N86-31876

ENERGETIC PARTICLES
Hostile energetic particle radiation environments in Earth's outer magnetosphere
[DE86-008752] N86-32018

ENERGY ABSORPTION
Development and application of energy absorbing composite devices in crash-worthy structures
[ESA-86-97253] N86-31676

ENERGY CONSUMPTION
Subsystem fact sheets for NASA CO2 Project, revision 3 N86-32010

ENERGY CONVERSION EFFICIENCY
Space solar cell research: Problems and potential
[NASA-TM-88833] N86-31793
Photovoltaics: Electricity from sunlight, FY 1985 accomplishments
[DE86-004429] N86-31986

ENERGY POLICY
Masts for small wind turbines
[B-85-583] N86-31919

ENERGY SPECTRA
Reduction and analysis of data from experiment CAI on the IMP-8 mission
[NASA-CR-177891] N86-32381

ENERGY TRANSFER
Sounding rocket program Magnetosphere payload CAESAR. Report on systems development, integration, testing and flight
[BMFT-FB-W-85-023] N86-32023

ENGINE AIRFRAME INTEGRATION
New technology propulsion (ANT) for general aviation aircraft, phase 1
[BMFT-FB-W-85-031] N86-31589

ENGINE CONTROL
A sensor failure simulator for control system reliability studies
[NASA-TM-87271] N86-31792

ENGINE COOLANTS
Test program to provide confidence in liquid oxygen cooling of hydrocarbon fueled rocket thrust chambers
[NASA-TM-88816] N86-31646

ENGINE DESIGN
Aeropropulsion opportunities for the 21st century
[NASA-TM-88317] N86-31585
A parametric study of a gas-generator airturbo ramjet (ATR)
[NASA-TM-88808] N86-31586
An overview of the Small Engine Component Technology (SECT) studies
[NASA-TM-88796] N86-31587

ENGINE PARTS
An overview of the Small Engine Component Technology (SECT) studies
[NASA-TM-88796] N86-31587

Improvement of the corrosion resistance of turbine engine bearings
[AD-A167355] N86-31893

ENGINE TESTS
A parametric study of a gas-generator airturbo ramjet (ATR)
[NASA-TM-88808] N86-31586

ENGINEERING MANAGEMENT
The structuring of production control systems
[THE/BDK/ORS/84/10] N86-32332
Due-date reliability in a repair shop: Implications for organizational and work design
[THE/BDK/KBS/84-14] N86-32333

ENTHALPY
Semiconductor alloy theory
[AD-A166995] N86-32300

ENVIRONMENT EFFECTS
A procedure for space SDR prioritization N86-32009
Projecting the climatic effects of increasing carbon dioxide
[DE86-008810] N86-32061

ENVIRONMENT SIMULATION
Mixing length and turbulent diffusion coefficient in atmospheric simulation models
[REPT-25] N86-32024

ENVIRONMENTAL CONTROL
Airport noise control strategies
[AD-A167977] N86-31602
Controlled environment life support system: Growth studies with potatoes
[NASA-CR-177400] N86-32101

ENVIRONMENTAL MONITORING
Environmental gamma radiation monitoring system with a large volume air ionization chamber
[OEFZS-4344] N86-32001
Space systems requirements definition N86-32006

ENVIRONMENTAL TESTS
Centaur engine gimbal friction characteristics under simulated thrust load
[NASA-TM-87335] N86-31621
Effect of an oxygen plasma on the physical and chemical properties of several fluids for the liquid droplet radiator
[NASA-TM-88839] N86-31634

ENVIRONMENTS
Guard cell biochemistry: Response to environmental stimuli causing changes in gas exchange
[DE86-010287] N86-32086

ENZYME ACTIVITY
Gas exchange characteristics of leaves as indicators of the basic limitations to the rate of photosynthesis
[DE86-009632] N86-32085

EPOXY COMPOUNDS
Chemical reactions and properties of organosilicon compounds related to new materials
[AD-A166338] N86-31660

EPOXY MATRIX COMPOSITES
Development of fracture mechanics maps for composite materials, volume 1
[AD-A168002] N86-31669
Development of fracture mechanics maps for composite materials, volume 2
[AD-A168003] N86-31670
Development of fracture mechanics maps for composite materials, volume 3
[AD-A168004] N86-31671

EQUATIONS OF MOTION
Rail inductance calculations for some simple current distributions
[AD-A167915] N86-31619
Traveling waves in a one-dimensional chain with nonharmonic reciprocity
[ESA-86-97379] N86-31782
A free streamline model for a rising bubble
[AD-A167535] N86-31832
A closed-form solution for inverse kinematics of robot manipulator with redundancy
[AD-A167850] N86-31894
Space plasma research
[NASA-CR-178898] N86-32289
Estimates of maximum trappable ion beam power in plasma channels
[DE86-006472] N86-32291

EQUATIONS OF STATE
User's manual for XTRAN2L (version 1.2): A program for solving the general-frequency unsteady transonic small-disturbance equation
[NASA-TM-87737] N86-31533

EQUIPMENT SPECIFICATIONS
Modeling directional solidification furnaces
[NASA-CR-177148] N86-31617
Plastic Film Heat Exchanger Development Project
[DE86-009258] N86-31838

EQUIVALENCE
Equivalence between the methods involving Fourier series and the Poisson's summation formula and evaluation of a class of lattice sums in arbitrary dimensions
[DE86-701919] N86-32202
On the generation of equivalent Hamiltonians
[DE86-701920] N86-32203

EQUIVALENT CIRCUITS
Comparison of the domain and frequency domain state feedbacks
[DE86-009429] N86-32180

ERGODIC PROCESS
Estimating problems in stationary time series with missing data
[ESA-86-97287] N86-32228

EROSIVE BURNING
Solid rocket motor with nozzle containing aromatic amide fibers
[AD-D012250] N86-31655
In-situ solid-propellant burn-rate measurements using flash cineradiography
[AD-A167637] N86-31683
Model for normal and erosive burning of composite propellants
[ESA-TT-910] N86-31695

ERROR ANALYSIS
Problems of ARCADE-3 satellite attitude determination
[CNES-CT/DTI/MS/CD/122] N86-31615
Vulnerability of low redundancy image data and text transmission over satellite communication links
[NLR-TR-85100-L] N86-31787
Effects of storm-related parameters on the accuracy of the nested tropical cyclone model
[AD-A167809] N86-32058
On asymptotic error estimates for the combined boundary and finite element method
[PREPRINT-929] N86-32215

ERROR DETECTION CODES
Error control of meteorological measurements --- automatic control
[KNMI-TR-76] N86-32065

ERRORS
Scientific data requirements
[ADL-C-89230] N86-32007
Error bounds for strongly convex programs and (super)linearly convergent iterative schemes for the least 2-norm solution of linear programs
[AD-A167536] N86-32137

ESTIMATES
Estimates of available solar radiation and photovoltaic energy production for various tilted and tracking surfaces throughout the US based on PVFORM, a computerized performance model
[DE86-009549] N86-32019

ESTIMATING
Estimating problems in stationary time series with missing data
[ESA-86-97287] N86-32228

ESTUARIES
Utilizing remote sensing of Thematic Mapper data to improve our understanding of estuarine processes and their influence on the productivity of estuarine-dependent fisheries
[NASA-CR-177177] N86-31943

EULER BUCKLING
Stability of a rubber half-space, part 2
[WTHD-176-PT-2] N86-31939

EULER EQUATIONS OF MOTION
Chimera: A grid-embedding technique
[NASA-TM-89246] N86-32242

EULER-LAGRANGE EQUATION
Eulerian transport in general orthogonal curvilinear coordinates
[DE86-010266] N86-31840

EUROPEAN SPACE AGENCY
Solicited proposal for a Navsat control segment harmonization study
[NLR-MEMO-RS-85-020-L] N86-31628
Control loops with human operators in space operations. Part 4: Research requirements for human-in-the-loop space teleoperator development
[NLR-TR-84116-L-PT-4] N86-32109
Preparing for the future: The ESA technological research and development program 1986-1988
[ESA-SP-1079] N86-32347

EUROPEAN SPACE PROGRAMS
Hypersonic aerodynamic coefficients and convection flow estimation in a Hermes type project
[SNIAS-861-422-108] N86-31540
Problems of ARCADE-3 satellite attitude determination
[CNES-CT/DTI/MS/CD/122] N86-31615
Thermal control in telecommunication and direct television satellites
[SNIAS-861-440-102] N86-31635
Spacebus: Multimission communication satellites
[SNIAS-861-422-119] N86-31637
Advantages and limitations of liquid propellant rocket engines
[ESA-86-97631] N86-31659
Specific need for composite structures in aerospace applications
[SNIAS-861-422-111] N86-31678
Gas flowmeter for a space cryostat --- Infrared Space Observatory
[SEP-TS/SE/BT/10.289/85] N86-31878
Preparing for the future: The ESA technological research and development program 1986-1988
[ESA-SP-1079] N86-32347

EUTECTICS
Estimated heats of fusion of fluoride salt mixtures suitable for thermal energy storage applications
[NASA-TM-87320] N86-31982

EXCITATION
Microcomputer optimization of feed excitation voltages to obtain desired antenna radiation patterns
[AD-A167560] N86-31768
Non-linear optical excitation and detection of the plasmon in two-dimensional electron gas
[DE85-703230] N86-32290

EXHAUST FLOW SIMULATION
The highly underexpanded exhaust plume from nozzles with boundary layer
[ESA-TT-929] N86-31658

EXOBIOLOGY
USSR Space Life Sciences Digest, issue 7
[NASA-CR-3922(08)] N86-32083

EXPERIMENT DESIGN
ACTS Experiments Program
[NASA-TM-88820] N86-31625

EXPERT SYSTEMS
The simulation of natural knowledge systems --- artificial intelligence N86-32125
The representation of knowledge for situations and events in a dynamic world N86-32128
The nature and evaluation of commercial expert system building tools
[NASA-TM-88331] N86-32132
Extended general design theory
[CWI-CS-R8604] N86-32162

EXPLOSIONS
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 1: Executive summary
[AD-A167443] N86-31571
Technique for megabar controlled strain experiments
[DE86-000805] N86-31930

EXPLOSIVE DEVICES
Prediction of ignition transfer reliability in pyrotechnic systems using the VARICOMP technique
[AD-A167430] N86-31746
Safe-arm explosive transfer mechanism
[AD-D012333] N86-31896

EXPLOSIVE FORMING
X-ray line profile analysis of shock-modified compounds
[DE86-000454] N86-31932

EXPLOSIVES
Effects of physical properties on the initiation behaviors of heterogeneous high explosives
[DE86-000807] N86-31749
Optical studies of chemical energy release during shock initiation of granular explosives
[DE86-010469] N86-31752
Study on the rheology of RX-08-FK LLNL's paste explosive
[DE86-010781] N86-31753

EXPONENTIAL FUNCTIONS
Speech analysis based on a model of the auditory system
[AD-A167426] N86-32098

EXPOSURE
Electrical and environmental studies of conduction polymers
[AD-A167737] N86-31732
The exposure history of Jilin and production rates of cosmogenic nuclides N86-32355
Live 129I-129Xe dating N86-32359

EXTENSOMETERS
A remote controlled calibration device for displacement transducers
[ECN-173] N86-31873

EXTERNAL STORES
Flight test of passive wing/store flutter suppression
[NASA-TM-87766] N86-31568

EXTERNAL TANKS
SWAY85: A computer program for calculating lug and sway brace loads
[DE86-009550] N86-31926

EXTRAGALACTIC RADIO SOURCES
A SIRTF interdisciplinary scientist proposal
[NASA-CR-176862] N86-32382
EXTRAPOLATION
Estimating problems in stationary time series with missing data
[ESA-86-97287] N86-32228
EXTRATERRESTRIAL RADIATION
Activities report of the Institute of Extraterrestrial Physics
[MPE-194] N86-32372
EXTRUDING
Slip casting and extruding shapes of rhenium with metal oxide additives. 1: Feasibility demonstration
[NASA-CR-174970] N86-31646

F

F-111 AIRCRAFT
Mission adaptive wing soars at NASA Facility
[P86-10182] N86-31563
FABRICATION
Composite structural materials
[NASA-CR-179659] N86-31965
Apparatus and method for aligning a mask and wafer in the fabrication of integrated circuits
[AD-D012208] N86-31795
Coatings for high energy applications. The Nova laser
[DE86-009407] N86-31884
FACSIMILE COMMUNICATION
Vulnerability of low redundancy image data and text transmission over satellite communication links
[NLR-TR-85100-L] N86-31787
FACTORIAL DESIGN
Intelligent Data Analysis (INDA) software for data analysis
[ESA-86-97291] N86-32147
FACTORIZATION
A recent algorithm for the factorization of polynomials
N86-32123
Stability analysis of intermediate boundary conditions in approximate factorization schemes
[NASA-CR-178126] N86-32169
Note on the factorization of a square matrix into two Hermitian or symmetric matrices
[ESA-86-97306] N86-32210
FAILURE ANALYSIS
Field performance of fiber-reinforced concrete airfield pavements
[FAA/PM-86/26] N86-31596
A sensor failure simulator for control system reliability studies
[NASA-TM-87271] N86-31792
A comparison of plotting positions on Weibull probability paper for small randomly censored samples
[ESA-86-97695] N86-32229
Plasma and ion etching for failure analysis. Part 1: Review of current theory and techniques — semiconductors
[AERE-R-11907-PT-1] N86-32292
FAILURE MODES
Stability of a rubber half-space, part 2
[WTHD-176-PT-2] N86-31939
FAINT OBJECTS
A digital imaging photometry system for cometary data acquisition
[NASA-TM-86554] N86-32373
FAR INFRARED RADIATION
Extreme limb profiles of the sun at far-infrared and submillimeter wavelengths
[NASA-TM-88251] N86-32375
FAR ULTRAVIOLET RADIATION
Photodesorption cleaning of silicon with vacuum ultraviolet irradiation
[AD-A167420] N86-31682
FARADAY EFFECT
The development of a magnetooptic current measurement system for high, pulsed currents — plasma currents
[REPT-85-161] N86-32294
FAST FOURIER TRANSFORMATIONS
Vertical directionality of ambient noise: 150-300 Hz
[AD-A167421] N86-32250
FAST NEUTRONS
Simulation experiments for gamma-ray mapping of planetary surfaces: Scattering of high-energy neutrons
N86-32350
Production rates of neon xenon isotopes by energetic neutrons N86-32358
FATIGUE (MATERIALS)
Development of fracture mechanics maps for composite materials, volume 1
[AD-A166002] N86-31669
Development of fracture mechanics maps for composite materials, volume 2
[AD-A166003] N86-31670
FATIGUE LIFE
A trade-off study of tilt rotor aircraft versus helicopters using VASCOMP 2 and HESCOMP
[AD-A167719] N86-31575
FATIGUE TESTS
The low cycle fatigue behavior of a plasma-sprayed coating material
[NASA-TM-87318] N86-31690
FAULT TOLERANCE
Sensor-driven, fault-tolerant control of a maintenance robot
[DE86-002116] N86-31901
FEASIBILITY ANALYSIS
Flight data recorders (FDR) and/or cockpit Voice Recorders (CVR) in the Lockheed Orion P-3C Update 2
[ESA-86-97395] N86-31581
Studies for the application of a flexible weight and balance (W/B) measuring facility for commercial aircraft
[BMFT-FB-W-85-029] N86-31604
Feasibility study for a SAR test monitor
[BMFT-FB-W-85-013] N86-31780
Reports on Cartography and Geodesy. Series 1: Original reports, number 95
[ISSN-0460-4236] N86-31946
Brief report on design and implementation of a data bank core system N86-31957
A recent concept for application of interactive graphical data processing in cadastral map revisions N86-31962
FEEDBACK CONTROL
Magnetic bearings: An adaptive solution to motion-control problems
[DE86-010615] N86-31905
Semiactive magnetic bearings for space application
[SNIAS-861-422-120] N86-31910
Comparison of the domain and frequency domain state feedbacks
[DE86-009420] N86-32180
Zero models and pole models for multivariable systems
[DE86-009442] N86-32181
The simple plant location problem. A plea for Balinski's conjecture
[ESA-86-97304] N86-32184
Polynomial matrices and feedback
[MEMO-COSOR-84-01] N86-32211
An algorithm for the evaluation of performance measures in a CP-terminal system
[MEMO-COSOR-84-07] N86-32212
FERRITES
Effect of crystallographical and geometrical changes of a ferrite head on magnetic signals during the sliding process with magnetic tape
[NASA-TM-87277] N86-31726
FERROMAGNETISM
Magnetic properties in the paramagnetic area of two ferromagnetic superconductors
[ESA-86-97377] N86-32317
Investigation of three ferromagnetic superconductors in the milli-Kelvin area
[ESA-86-97380] N86-32318
FIBER COMPOSITES
Fiber composite sandwich thermostructural behavior: Computational simulation
[NASA-TM-88787] N86-31663
ICAN: A versatile code for predicting composite properties
[NASA-TM-87334] N86-31664
FIBER OPTICS
Optical fiber transmission on satellites and orbital stations
[SNIAS-861-440-109] N86-31786
Use of an endoscope for optical fiber holography
[ISL-CO-224/85] N86-31876
Direct measurement of the nonlinear phase shift between the orthogonally polarized states of a single-mode fiber
[FUB-36-1994] N86-32267
Infrared attenuation of thallium bromo-iodide fibers
[NASA-TM-86817] N86-32268
Fiber optic pressure sensors in skin-friction measurements
[NASA-CR-176861] N86-32269
Broadband unpolarized light source
[AD-D012201] N86-32271
Fiber optic modification of a diode array spectrophotometer
[DE86-009572] N86-32278
Fiber optic sensors
[FOA-C-30416-E1] N86-32286
The development of a magnetooptic current measurement system for high, pulsed currents — plasma currents
[REPT-85-161] N86-32294
FIBER ORIENTATION
Damping characteristics of metal matrix composites
[AD-A167792] N86-31988
FIBER REINFORCED COMPOSITES
Field performance of fiber-reinforced concrete airfield pavements
[FAA/PM-86/26] N86-31596
Chemical vapor infiltration of fiber-reinforced ceramic composites
[DE86-009513] N86-31735
FIBONACCI NUMBERS
Evaluation of some Fibonacci and Lucas series via certain functions of the Q matrix
[FUB-23-1985] N86-32219
FIELD EFFECT TRANSISTORS
High power high voltage linear amplifier apparatus
[AD-D012244] N86-31796
Development of models for the simulation of the temperature behavior of MOSFETS in analog and digital circuits in the temperature range between minus 55 deg C to plus 150 deg C
[BMFT-FB-T-85-167] N86-32314
FIELD THEORY (PHYSICS)
Structure of supersymmetric theories — field theories
[NIKHEF-H/86-6] N86-32323
FIGHTER AIRCRAFT
An analytical methodology for predicting repair time distributions of advanced technology aircraft
[AD-A167149] N86-31529
Aerial combat
[ESA-86-97271] N86-31581
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 2: Aircraft engine nacelle fire test programs. Part 1: Fire detection, fire extinguishment and surface ignition studies
[AD-A167356] N86-31570
A visit to China's first domestic made fighter flight simulator
[AD-A167898] N86-31600
Multiple thermocouple testing device
[AD-D012276] N86-31880
FIGURE OF MERIT
Optimization of the thermoelectric figure of merit of fine-grained semiconductor materials based upon lead telluride
[AD-A167647] N86-32303
FILE MAINTENANCE (COMPUTERS)
Algorithms for on-the-fly garbage collection revisited
[CS-8507] N86-32157
Database capacity planning and management
[DE86-009076] N86-32338
FILM COOLING
Effects of variable properties in film cooled turbulent boundary layers
[AD-A167716] N86-31835
FINITE DIFFERENCE THEORY
Theoretical and experimental investigation of vortex breakdown
[NASA-CR-176853] N86-31530
User's manual for XTRAN2L (version 1.2): A program for solving the general-frequency unsteady transonic small-disturbance equation
[NASA-TM-87737] N86-31533
Calculation of separated laminar supersonic flows over blunt bodies of revolution at zero angle of attack
[ESA-TT-953] N86-31546
Finite difference methods for polar coordinate systems
[AD-A167512] N86-32194
FINITE ELEMENT METHOD
Finite element, stream function-vorticity solution of secondary flow in the cross-plane of noncircular channels
[ECN-175] N86-31856
Finite-element modeling of pinch welds
[DE86-009573] N86-31900
Dynamic analysis: Correlation of theory with experiment — MSC/NASTRAN analysis of Westland 30 G-BGHF
[RP661] N86-31917
Zero and negative masses in finite element vibration and transient analysis
[AD-A167489] N86-31922
Composite structural reliability calculation by finite element and statistical strength theory
[AD-A167890] N86-31924
Finite element analysis to evaluate the stress distribution and the energy release rate at the cracking front of a fracture mechanics specimen for linear and nonlinear material behavior
[GKSS-85/E/54] N86-31934
Solution of the problem of elastoplastic torsion with a finite element method
[ESA-86-97546] N86-31935
Use of a special finite element for the static analysis of normal interfacial stresses
[SNIAS-861-422-109] N86-31936

Research related to improved computer aided design software package — comparative efficiency of finite, boundary, and hybrid element methods in elastostatics
[NASA-CR-179666] N86-32133
Least squares finite element simulation of transonic flows
[NASA-CR-178121] N86-32188
Investigation of the moving finite element method as proposed by A.J. Wathen
[DE86-009665] N86-32200
Network improving by subgradient methods
[ESA-86-97280] N86-32208
On asymptotic error estimates for the combined boundary and finite element method
[PREPRINT-929] N86-32215
Effect of triangular element orientation on finite element solutions of the Helmholtz equation
[NASA-TM-87351] N86-32247

FIRE EXTINGUISHERS
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 2: Aircraft engine nacelle fire test programs. Part 1: Fire detection, fire extinguishment and surface ignition studies
[AD-A167356] N86-31570
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 1: Executive summary
[AD-A167443] N86-31571
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 2: Aircraft engine nacelle fire test programs. Part 2: Small scale testing of dry chemical fire extinguishants
[AD-A167444] N86-31572

FIRES
Fireproof hydraulic brake system
[AD-A167774] N86-31549
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 2: Aircraft engine nacelle fire test programs. Part 1: Fire detection, fire extinguishment and surface ignition studies
[AD-A167356] N86-31570
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 1: Executive summary
[AD-A167443] N86-31571
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 2: Aircraft engine nacelle fire test programs. Part 2: Small scale testing of dry chemical fire extinguishants
[AD-A167444] N86-31572
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 3: On-Board Inert Gas Generator System (OBIGGS) studies. Part 2: Fuel scrubbing and oxygen evolution tests
[AD-A167445] N86-31573

FISSION PRODUCTS
Integral-data test of JEF-1 fission-product cross sections
[ECN-176] N86-32263

FLAKES
Study on effects of powder and flake chemistry and morphology on the properties of Al-Cu-Mg-X-X-X powder metallurgy advanced aluminum alloys
[NASA-CR-178145] N86-31698

FLAME RETARDANTS
Fireproof hydraulic brake system
[AD-A167774] N86-31549

FLAMES
Aromatics oxidation and soot formation in flames
[DE86-010585] N86-31690

FLANGES
Dome restraint assembly for rocket motors
[AD-D012278] N86-31656

FLASH BLINDNESS
A portable subject controlled night vision adaptometer
[AD-A167848] N86-32274

FLAT PLATES
Numerical simulation of the active control of laminar-turbulent transition in the flat-plate boundary layer
[DFVLR-FB-86-05] N86-31852
An investigation into the tripping behavior of longitudinally T-stiffened rectangular flat plates loaded statically and impulsively
[AD-A167718] N86-31923

FLEXIBLE BODIES
Flight control synthesis for flexible aircraft using Eigenspace assignment
[NASA-CR-178164] N86-31590

FLEXIBLE SPACECRAFT
Dynamics of flexible spacecraft: An analysis of approaches towards mathematical model order reduction
[NLR-TR-85066-U] N86-31643

FLIGHT ALTITUDE
Characteristics of altitude error at reduced quantization
[FAA/PM-86/35] N86-31580

FLIGHT CONDITIONS
On the handling qualities of flight vehicles through variable flight conditions
[AD-A167727] N86-31592

FLIGHT CONTROL
Mission adaptive wing soars at NASA Facility
[P86-10182] N86-31563
Flight control synthesis for flexible aircraft using Eigenspace assignment
[NASA-CR-178164] N86-31590
On the handling qualities of flight vehicles through variable flight conditions
[AD-A167727] N86-31592
Development of flight control systems for maneuverable missile weapon systems. Example of operation organization
[MBB-UA-929/85] N86-31622

FLIGHT CREWS
A visit to China's first domestic made fighter flight simulator
[AD-A167898] N86-31600
Aircrew training devices: Utility and utilization of advanced instructional features. Phase III: Electronic warfare trainers
[AD-A167922] N86-31601

FLIGHT INSTRUMENTS
Simulation evaluation of display/FLIR concepts for low-altitude, terrain-following helicopter operations
[NASA-TM-86779] N86-31551

FLIGHT OPTIMIZATION
A trade-off study of tilt rotor aircraft versus helicopters using VASCOMP 2 and HESCOMP
[AD-A167719] N86-31575

FLIGHT RECORDERS
Flight data recorders (FDR) and/or cockpit Voice Recorders (CVR) in the Lockheed Orion P-3C Update 2
[ESA-86-97395] N86-31581

FLIGHT SAFETY
Characteristics of altitude error at reduced quantization
[FAA/PM-86/35] N86-31580

FLIGHT SIMULATORS
Simulation evaluation of display/FLIR concepts for low-altitude, terrain-following helicopter operations
[NASA-TM-86779] N86-31551
A visit to China's first domestic made fighter flight simulator
[AD-A167898] N86-31600
Aircrew training devices: Utility and utilization of advanced instructional features. Phase III: Electronic warfare trainers
[AD-A167922] N86-31601

FLIGHT STABILITY TESTS
Loran C 1984 spring-summer stability
[AD-A167867] N86-31555

FLIGHT TEST INSTRUMENTS
The application of energy techniques to propeller-driven airplanes
[AD-A167113] N86-31569

FLIGHT TESTS
Mission adaptive wing soars at NASA Facility
[P86-10182] N86-31563
Flight test of passive wing/store flutter suppression
[NASA-TM-87766] N86-31568
Aerial refueling evaluation of the CH-47D helicopter
[AD-A167575] N86-31574
Technology demonstration for investigation of the new possibilities of amphibious flying boats, phase 2
[BMFT-FB-W-85-022] N86-31577
ACTS Experiments Program
[NASA-TM-88820] N86-31625
Determination of Solid Rocket Motor (SRM) case segment growth
[NASA-TM-86557] N86-31653

FLIGHT TRAINING
A visit to China's first domestic made fighter flight simulator
[AD-A167898] N86-31600
Aircrew training devices: Utility and utilization of advanced instructional features. Phase III: Electronic warfare trainers
[AD-A167922] N86-31601

FLIR DETECTORS
Simulation evaluation of display/FLIR concepts for low-altitude, terrain-following helicopter operations
[NASA-TM-86779] N86-31551
On the stability of the problem of target tracking with the FLIR
[AD-A167721] N86-32273

FLOATING POINT ARITHMETIC
New array processors of floating point systems N86-31953
Optimal implementation of differentiation arithmetic
[AD-A167494] N86-32193

FLORIDA
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Macdill AFB, Florida
[AD-A167651] N86-32048
Patrick AFB, Florida limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167660] N86-32056

FLOW COEFFICIENTS
Steep gravity waves: Havelock's method revisited
[AD-A167520] N86-31831

FLOW DISTRIBUTION
Elliptic generation of composite three-dimensional grids about realistic aircraft
[NASA-TM-88240] N86-31527
Comparison of analytical and experimental performance of a wind-tunnel diffuser section
[NASA-TM-88795] N86-31537
Visualization of flows in a motored rotary combustion engine using holographic interferometry
[NASA-TM-88804] N86-31583
SSME main combustion chamber and nozzle flowfield analysis
[NASA-CR-178893] N86-31654

FLOW EQUATIONS
ATRAN3S: An unsteady transonic code for clean wings
[NASA-TM-86783] N86-31535

FLOW MEASUREMENT
Parametric study of beam refraction problems across laser anemometer windows
[NASA-TM-87350] N86-31857
Advanced optical measuring systems for measuring the properties of fluids and structures
[NASA-TM-88829] N86-31859
Level and discharge measurements under difficult conditions — hydrology
[WMO-650] N86-31969

FLOW STABILITY
Calculations of the stability of some axisymmetric flows proposed as a model of vortex breakdown
[NASA-CR-178124] N86-31825

FLOW VELOCITY
A free streamline model for a rising bubble
[AD-A167535] N86-31832
Space plasma research
[NASA-CR-178898] N86-32289

FLOW VISUALIZATION
Visualization of flows in a motored rotary combustion engine using holographic interferometry
[NASA-TM-88804] N86-31583
Advanced optical measuring systems for measuring the properties of fluids and structures
[NASA-TM-88829] N86-31859

FLUE GASES
Degradation of materials in combustion environments
[DE86-011771] N86-31691

FLUENCE
Nova performance at ultra high fluence levels
[DE86-006724] N86-31881

FLUID BOUNDARIES
Inflow boundary conditions for steady flows of viscoelastic fluids with differential constitutive laws
[AD-A167452] N86-31829

FLUID DYNAMICS
Theoretical study of the Bernard-Karman vortex path. Application to the experimental study of the flow around a thick obstacle
[ISL-R-105/85] N86-31544

FLUID FLOW
Eulerian transport in general orthogonal curvilinear coordinates
[DE86-010266] N86-31840
Leakage flow-induced vibrations for variations of a tube-in-tube slip joint
[DE86-010765] N86-31907

FLUORIDES
Estimated heats of fusion of fluoride salt mixtures suitable for thermal energy storage applications
[NASA-TM-87320] N86-31962

FLUORINE
Role of the radical pool in combustion
[DE86-010159] N86-31688

FLUTTER
Airfoil flutter model suspension system
[NASA-CASE-LAR-13522-1] N86-31594

FOCUSING
Installation of a modular building block photovoltaic concentrator array field
[DE85-016032] N86-31985
Focused ion beam technology
[AD-A167762] N86-32259

FORECASTING
Effects of storm-related parameters on the accuracy of the nested tropical cyclone model
[AD-A167809] N86-32058
A diagnostic investigation of explosive maritime cyclogenesis during FGGE
[AD-A167810] N86-32059
FORESTS
COVER Project and Earth resources research transition
[NASA-CR-177176] N86-31941
FORGING
Correlation between microstructure and forging conditions of Combined Die-Forged (CDF) Ti-6Al-4V powder
[ESA-TT-952] N86-31725
FORMALISM
Functional temporal calculus versus temporal logic: An engineering approach
[REPT-59] N86-32217
Foundations of O-Theory 1: The intersection rule
[DE86-008565] N86-32226
FORMAT
Theory and operation of the Gould 32/27 programs ABLE-2A and EBLE for the tropospheric air motion measurement system
[NASA-CR-176856] N86-32011
FORTRAN
Physics codes on parallel computers
[DE86-006712] N86-32170
FOUNDATIONS
Masts for small wind turbines
[E-85-583] N86-31919
FOURIER ANALYSIS
Finite difference methods for polar coordinate systems
[AD-A167512] N86-32194
Equivalence between the methods involving Fourier series and the Poisson's summation formula and evaluation of a class of lattice sums in arbitrary dimensions
[DE86-701919] N86-32202
FOURIER SERIES
Equivalence between the methods involving Fourier series and the Poisson's summation formula and evaluation of a class of lattice sums in arbitrary dimensions
[DE86-701919] N86-32202
FOURIER TRANSFORMATION
Fourier transform infrared spectroscopic study of aging in commercial polyurethane
[AD-A167418] N86-31796
Development of an imaging Fourier transform spectrometer
[AD-A168172] N86-31864
Measurement techniques using ultrashort optical pulses
[DE86-009691] N86-32279
FRACTURE MECHANICS
Development of fracture mechanics maps for composite materials, volume 1
[AD-A168002] N86-31669
Development of fracture mechanics maps for composite materials, volume 2
[AD-A168003] N86-31670
Development of fracture mechanics maps for composite materials, volume 3
[AD-A168004] N86-31671
Mechanics research directions in composites and manufacturing technologies
[DE86-008787] N86-31673
Advanced processing and properties of high performance alloys
[AD-A167404] N86-31706
Analysis of heat-affected zone cracking in NiAl alloys
[DE86-009449] N86-31712
Mechanical interactions of rough surfaces
[DE86-009161] N86-31896
Finite element analysis to evaluate the stress distribution and the energy release rate at the cracking front of a fracture mechanics specimen for linear and nonlinear material behavior
[GKSS-85/E/54] N86-31934
FRACTURE STRENGTH
Study on effects of powder and flake chemistry and morphology on the properties of Al-Cu-Mg-X-X-X powder metallurgy advanced aluminum alloys
[NASA-CR-178145] N86-31698
Insights into the fracture toughness of martensitic stainless steels using stereoscopic fractographic measurements
[DE86-009415] N86-31719
Correlation of processing and sintering variables with the strength and radiography of silicon nitride
[NASA-TM-87251] N86-31729
Determination of the fracture toughness of ceramic materials on bending samples with different notch types, at room temperature and high temperature
[DFVLR-FB-85-67] N86-31744
FRACTURES (MATERIALS)
Development of fracture mechanics maps for composite materials, volume 1
[AD-A168002] N86-31669
Development of fracture mechanics maps for composite materials, volume 2
[AD-A168003] N86-31670
Development of fracture mechanics maps for composite materials, volume 3
[AD-A168004] N86-31671
European Science Notes, volume 40, number 6
[AD-A167501] N86-32346
FRACTURING
Effects of wellbore fluids in propellant-based fracturing
[DE86-007832] N86-31751
FRANCE
Legislation for software rights protection at last
[SNIAS-861-422-114] N86-32343
FREDHOLM EQUATIONS
Numerical quadrature methods for integrals of singular periodic functions and their application to singular and weakly singular integral equations
[NASA-CR-178151] N86-31828
FREE JETS
Investigation of density gradient fluctuations in a turbulent jet by means of the laser Schlieren crossed-beam method
[ESA-TT-842] N86-31849
FREQUENCIES
Scattering from a planar equiangular spiral antenna
[AD-A167068] N86-31764
Experimental investigations of the role of laser field fluctuations in non-linear optical absorption processes
[DE86-006919] N86-31883
Comparison of the domain and frequency domain state feedbacks
[DE86-009429] N86-32180
FREQUENCY MODULATION
Analysis of a combined FMCW pulse radar system for Side Looking Airborne Radar (SLAR) applications
[REPT-05-1-533-A106-85] N86-31784
FREQUENCY SHIFT
Raman spectrometer with microprobe capability
[AD-A167008] N86-32301
FREQUENCY SHIFT KEYING
A 2 Mbit/sec modem at 70 MHz based on the Tamed Frequency Modulation (TFM) principle
[ESA-86-97537] N86-31815
FRESNEL LENSES
Installation of a modular building block photovoltaic concentrator array field
[DE85-016032] N86-31985
FRETTING
Wear improvement in titanium alloys by ion implantation
[AD-D012203] N86-31704
FRICTION
Characterization of ion implanted and laser processed wear surfaces
[AD-A167878] N86-31709
FRICTION FACTOR
Centaur engine gimbal friction characteristics under simulated thrust load
[NASA-TM-87336] N86-31621
FUEL CELL POWER PLANTS
Gas cooled fuel cell systems technology development
[NASA-CR-175047] N86-31984
FUEL CELLS
Progress in fuel cells for transportation applications
[DE86-010206] N86-31991
FUEL COMBUSTION
Small gas turbine combustor experimental study: Compliant metal/ceramic liner and performance evaluation
[NASA-TM-87304] N86-31582
An experimental investigation of various metallic/polymer fuels in a two-dimensional solid fuel ramjet
[AD-A167869] N86-31747
FUEL CONSUMPTION
A trade-off study of tilt rotor aircraft versus helicopters using VASCOMP 2 and HESCOMP
[AD-A167719] N86-31575
FUEL INJECTION
Alcohol as a fuel in a high speed diesel engine with double injection system
[DE86-/51653] N86-31904
FUEL PUMPS
The noncavitating performance and life of a small vane-type positive displacement pump in liquid hydrogen
[NASA-TM-87347] N86-31651
Liquid helium pumps for in-orbit transfer
[NASA-TM-88239] N86-31890
FUEL SPRAYS
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 2: Aircraft engine nacelle fire test programs. Part 2: Small scale testing of dry chemical fire extinguishants
[AD-A167444] N86-31572
FUEL SYSTEMS
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 3: On-Board Inert Gas Generator System (OBIGGS) studies. Part 2: Fuel scrubbing and oxygen evolution tests
[AD-A167445] N86-31573
FUEL TANKS
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 1: Executive summary
[AD-A167443] N86-31571
Contribution of carbon fibers to the improvement of the performance of composite containers
[SNIAS-861-430-115] N86-31677
FUNCTIONAL ANALYSIS
Orbital compactness and asymptotic behavior of non-linear parabolic systems with functionals
[AD-A167486] N86-32191
Iterative refinement of the method of moments
[AD-A167537] N86-32197
Steady-state problems of nonlinear electro-magneto-thermo-elasticity
[AD-A167454] N86-32243
FUNCTIONAL DESIGN SPECIFICATIONS
Specification and functional simulation of complex circuits: The CADOC system --- integrated circuits
[ESA-86-97296] N86-31808
Model and functional design of a data base for computer aided design applications
[ESA-86-97286] N86-32145
Second generation Meteosat imager design
[CNES-T-85/052-DRT/TIT/IO] N86-32284
FUNCTIONALS
Orbital compactness and asymptotic behavior of non-linear parabolic systems with functionals
[AD-A167486] N86-32191
FUNCTIONS (MATHEMATICS)
Orbital compactness and asymptotic behavior of non-linear parabolic systems with functionals
[AD-A167486] N86-32191
Elementary functions computing methodology
[ESA-86-97298] N86-32209
Evaluation of some Fibonacci and Lucas series via certain functions of the Q matrix
[FUB-23-1985] N86-32219
FURNACES
Modeling directional solidification furnaces
[NASA-CR-177148] N86-31617
Degradation of materials in combustion environments
[DE86-011771] N86-31691
A review of methods to determine the ignitability of pyrotechnic compositions
[AD-A167429] N86-31745

G

GADOLINIUM
Uniformly-doped Cr, Nd:GGG crystals
[DE86-009692] N86-32311
GALACTIC COSMIC RAYS
Nuclide production in (very) small meteorites
N86-32349
Solar modulation of galactic cosmic rays: Contemporary observations and theories N86-32353
Production of radionuclides in artificial meteorites irradiated isotropically with 600 MeV protons
N86-32360
Reduction and analysis of data from experiment CAI on the IMP-8 mission
[NASA-CR-177891] N86-32381
GALERKIN METHOD
Effect of triangular element orientation on finite element solutions of the Helmholtz equation
[NASA-TM-87351] N86-32247
GALLIUM ARSENIDES
Nonlinear optical interactions in semiconductors
[AD-A166182] N86-31880
Selective anodic oxidation of semiconductors for pattern generation
[AD-D012245] N86-32299
GALLIUM COMPOUNDS
Uniformly-doped Cr, Nd:GGG crystals
[DE86-009692] N86-32311
GAMMA RAY SPECTRA
Petrophysical quantities from high resolution gamma-ray spectra arising from energetic neutron bombardment
[ESA-86-97256] N86-32262

Simulation experiments for gamma-ray mapping of planetary surfaces: Scattering of high-energy neutrons
N86-32350

GAMMA RAY SPECTROMETERS
International comparison of interpolation procedures for the efficiency of germanium gamma-ray spectrometers (GAM83 exercise)
[ECN-181] N86-31874
Petrophysical quantities from high resolution gamma-ray spectra arising from energetic neutron bombardment
[ESA-86-97256] N86-32262

GAMMA RAYS
Environmental gamma radiation monitoring system with a large volume air ionization chamber
[OEFZS-4344] N86-32001

GARBAGE
Algorithms for on-the-fly garbage collection revisted
[CS-8507] N86-32157

GAS ANALYSIS
Remote gas analysis with lasers. Analytic laboratory investigations in the 3.4 to 4.2 microns range
[BMFT-FB-W-85-020] N86-31694
An analysis of measurements of atmospheric trace gas infrared emissions
[BMFT-FB-W-85-016] N86-32003

GAS BEARINGS
Vibration damping in externally pressurized gas bearings
[DE86-003470] N86-31902

GAS COOLING
Gas cooled fuel cell systems technology development
[NASA-CR-175047] N86-31984

GAS DYNAMICS
SSME main combustion chamber and nozzle flowfield analysis
[NASA-CR-178893] N86-31654

GAS EXCHANGE
Gas exchange characteristics of leaves as indicators of the basic limitations to the rate of photosynthesis
[DE86-009632] N86-32085
Guard cell biochemistry: Response to environmental stimuli causing changes in gas exchange
[DE86-010287] N86-32086

GAS EXPANSION
The highly underexpanded exhaust plume from nozzles with boundary layer
[ESA-TT-929] N86-31658

GAS GENERATORS
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 3: On-Board Inert Gas Generator System (OBIGGS) studies. Part 2: Fuel scrubbing and oxygen evolution tests
[AD-A167445] N86-31573
A parametric study of a gas-generator airturbo ramjet (ATR)
[NASA-TM-88808] N86-31586

GAS LASERS
Current German laser and quantum optics research reviewed at the 50th Annual Meeting of the Physikalische Gesellschaft
[AD-A167895] N86-32275

GAS METERS
Gas flowmeter for a space cryostat — Infrared Space Observatory
[SEP-TS/SE/BT/10.269/85] N86-31878

GAS TUNGSTEN ARC WELDING
Calorimetry of the arc welding process
[DE86-009280] N86-31899

GAS TURBINE ENGINES
Small gas turbine combustor experimental study: Compliant metal/ceramic liner and performance evaluation
[NASA-TM-87304] N86-31582
An overview of the Small Engine Component Technology (SECT) studies
[NASA-TM-82796] N86-31587
A sensor failure simulator for control system reliability studies
[NASA-TM-87271] N86-31792

GASEOUS DIFFUSION
Diffusion of water vapor in CFRP. Measurement of the diffusion coefficient under influence of concentration
[ESA-TT-911] N86-31740

GASEOUS FUELS
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 3: On-Board Inert Gas Generator System (OBIGGS) studies. Part 2: Fuel scrubbing and oxygen evolution tests
[AD-A167445] N86-31573

GASES
Diffusion of gases in porous solids: Simulation and measurement
[DE86-005380] N86-31837

GAUGE INVARIANCE
Gauge anomalies, gravitational anomalies and superstrings
[DE86-005489] N86-32363

GAUGE THEORY
Painleve test for the complete integrability of Bogomolny's monopole equation
[DE85-703173] N86-32199
On Delta Beta and the search for asymptotic scaling in lattice gauge theory
[NIKHEF-H/86-6] N86-32231
Structure of supersymmetric theories — field theories
[NIKHEF-H/86-8] N86-32323
Gauge anomalies, gravitational anomalies and superstrings
[DE86-005489] N86-32363

GEARS
Surface fatigue and failure characteristics of hot forged powder metal AISI 4620, AISI 4640, and machined AISI 4340 steel spur gears
[NASA-TM-87330] N86-31889

GELATION
Molecular weight distributions of Durham polyacetylene precursor polymers
[ESA-86-97254] N86-31738

GENERAL AVIATION AIRCRAFT
Weight estimation techniques for composite airplanes in general aviation industry
[NASA-CR-178163] N86-31531

GEODESY
Course on radiopositioning
[ESA-86-98039] N86-31560
Interiors of the giant planets
[NASA-CR-177154] N86-32386

GEODETIC SURVEYS
Development of a receiver concept for geodetic application of the NAVSTAR Global Positioning System (GPS) satellite navigation system
[BMFT-FB-W-85-036] N86-31557
Reports on Cartography and Geodesy. Series 1: Original reports, number 95
[ISSN-0469-4236] N86-31946

GEODYNAMICS
Intraplate deformation due to continental collisions: A numerical study of deformation in a thin viscous sheet
[NASA-TM-86235] N86-32012

GEOGRAPHIC INFORMATION SYSTEMS
Application of a geographic information system in the study of acidic deposition
[DE86-008220] N86-32000
Activities report of the Laboratory for Information Systems
[FOA-C-30410-E1] N86-32341

GEOGRAPHY
Scientific data requirements
[ADL-C-89230] N86-32007

GEOLOGICAL SURVEYS
The USGS (US Geological Survey) X-, C-, and L- band SAR data collection program
[AD-A168173] N86-31967

GEOMETRIC RECTIFICATION (IMAGERY)
The USGS (US Geological Survey) X-, C-, and L- band SAR data collection program
[AD-A168173] N86-31967

GEOMETRY
Analysis of the FELIX experiments with cantilevered beams and hollow cylinders
[DE86-010528] N86-31933
Chimera: A grid-embedding technique
[NASA-TM-89246] N86-32242

GEOMORPHOLOGY
Geotechnical data inventory, southern California coastal zone, Cape San Martin (Monterey County) to Mexican border
[AD-A167734] N86-32075

GEOPHYSICS
Cosmic ray interactions in the ground: Temporal variations in cosmic ray intensities and geophysical studies N86-32357

GEOSTROPHIC WIND
Development of a variational SEASAT data analysis technique
[NASA-CR-177175] N86-31942

GEOSYNCHRONOUS ORBITS
NASA to launch NOAA-G weather satellite
[NASA-TM-89245] N86-31633

GEOTECHNICAL ENGINEERING
Geotechnical data inventory, southern California coastal zone, Cape San Martin (Monterey County) to Mexican border
[AD-A167734] N86-32075

GEOTROPISM
Influence of gravity on structure and behavior of Paramecium caudatum
[ESA-TT-963] N86-32087

GETTERS
Carbon monoxide formation in UO2 kerneled HTR fuel particles containing oxygen getters
[OEFZS-4348] N86-32261

GIANT STARS
Ultraviolet observations of astronomical phenomena
[NASA-CR-176859] N86-32376
Definition and empirical structure of the range of stellar chromospheres-coronae across the H-R diagram: Cool stars
[NASA-CR-176863] N86-32377

GIMBALS
Centaur engine gimbal friction characteristics under simulated thrust load
[NASA-TM-87335] N86-31621

GLASS
Residual stress and deformation energy under ground surfaces of brittle solids — glass grinding
[WB-85-16] N86-31911

GLASS ELECTRODES
Semiconductor/solid electrolyte junctions for optical information storage. Solid-state electrochromic cell using lutecium diphthalocyanine
[AD-A167869] N86-32307

GLASS FIBERS
Competition noise in an optical divider
[ESA-86-97538] N86-31886

GLASS LASERS
Chinese Journal of Lasers (selected articles)
[AD-A167846] N86-31862

GLIDE PATHS
Portable glide slope indicator
[AD-D012240] N86-31552
Analysis of a mirror deck landing aid
[AD-A167988] N86-31558

GLOBAL POSITIONING SYSTEM
A cost/performance analysis of hybrid inertial/externally referenced positioning/orientation systems
[AD-A167685] N86-31553

GOVERNMENT PROCUREMENT
An analysis of the defense spacecraft market
[AD-A167602] N86-32326
Guide to Canadian aerospace related industries
[AD-A167794] N86-32327

GRADIENTS
Network improving by subgradient methods
[ESA-86-97293] N86-32208

GRAIN BOUNDARIES
The continuing battle against defects in nickel-base superalloys
[NASA-TM-87343] N86-31701
The variation of the dislocation density in aluminum deformed to large steady-state creep strains
[AD-A167715] N86-31708
To what extent are grain boundaries in metals ordered structures
[DE86-007004] N86-31710

GRAIN SIZE
The variation of the dislocation density in aluminum deformed to large steady-state creep strains
[AD-A167715] N86-31708
Effects of physical properties on the initiation behaviors of heterogeneous high explosives
[DE86-000807] N86-31749
Optimization of the thermoelectric figure of merit of fine-grained semiconductor materials based upon lead telluride
[AD-A167647] N86-32303

GRAMMARS
Direct parsing using immediate dominance/linear precedence (ID/LP) grammars N86-32127

GRAPH THEORY
A proposal for the development of a large-scale topographic-cartographic data base taking the planimetric data of automated cadastral map (ALK) system into account N86-31950
Avoiding redex copying in lambda reduction — functional programming languages
[RLPT-63] N86-32152
Performance modelling of large-grained parallelism
[DE86-009664] N86-32171
Flow and cycle covering in graphs and matroids
[ESA-86-97285] N86-32206

GRAPHITE
Preparation and characterization of nickel substituted Fe5C2
[AD-A167410] N86-31707

GRAPHITE-EPOXY COMPOSITES
Mechanical testing of graphite-epoxy composite tubes
[DE86-009608] N86-31674
— Strongback baseline design: Mechanical properties of composite facesheets
[DE86-011913] N86-31675

GRAPHITIZATION
Novel macromolecular structures and composites
[AD-A166243] N86-31731

GRAPHOEPITAXY
Deposition of crystalline semiconductor layers on amorphous substrates (Graphoepitaxy)
[BMFT-FB-T-85-160] N86-32313

GRAPHOLOGY
Production of codicological catalogs using computers (PCC project)
[REPT-87] N86-32155

GRAPHS (CHARTS)
Cumulative sum charts --- statistical quality control
[ARW-03-THE-BDK/ORS/84/13] N86-31916

GRASSLANDS
Secular climatic patterns of the North Central Great Plains and the continental US
[AD-A166743] N86-32043

GRATINGS (SPECTRA)
Light scattering from a deep metallic grating
[AD-A166319] N86-32270

GRAVITATION THEORY
Scheme to unify gravity and electro-weak interactions
[DE86-701921] N86-32322
Gauge anomalies, gravitational anomalies and superstrings
[DE86-005489] N86-32383

GRAVITATIONAL EFFECTS
A free streamline model for a rising bubble
[AD-A167535] N86-31832
Influence of gravity on structure and behavior of Paramecium caudatum
[ESA-TT-963] N86-32087
The behavior of nonrotational striations in silicon
[BMFT-FB-W-85-014] N86-32316

GRAVITY WAVES
Steep gravity waves: Havelock's method revisited
[AD-A167520] N86-31831

GREASES
Lubrication handbook for the space industry. Part A: Solid lubricants. Part B: Liquid lubricants
[NASA-TM-86556] N86-31730

GREAT PLAINS CORRIDOR (NORTH AMERICA)
Secular climatic patterns of the North Central Great Plains and the continental US
[AD-A166743] N86-32043

GRINDING (MATERIAL REMOVAL)
Residual stress and deformation energy under ground surfaces of brittle solids --- glass grinding
[WB-85-16] N86-31911

GROUND STATIONS
Meteorological work station METIS: A glance at the future
[KNMI TR-74] N86-32069

GROUND WAVE PROPAGATION
Loran C 1984 spring-summer stability
[AD-A167867] N86-31555

GROUND WIND
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Peterson AFB, Colorado Springs, Colorado
[AD-A167650] N86-32047
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Macdill AFB, Florida
[AD-A167651] N86-32048
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Cape Newenham, Alaska
[AD-A167652] N86-32049
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: White Sands MR, New Mexico
[AD-A167654] N86-32051
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: CAstle AFB, California
[AD-A167657] N86-32054

GROWTH
A linear stability analysis of the rapid development of an extratropical cyclone
[AD-A167808] N86-32057
Controlled environment life support system: Growth studies with potatoes
[NASA-CR-177400] N86-32101

GUN PROPELLANTS
Novel macromolecular structures and composites
[AD-A166243] N86-31731

GUSTS
Design wind analysis
[AD-A167576] N86-32045

H

HALF LIFE
On the statistical evaluation of inconsistent measurement results illustrated on the example of the Sr 90 half life
[ECN-179] N86-32252

HALF SPACES
Stability of a rubber half-space, part 2
[WTHD-176-PT-2] N86-31939

HALLEY'S COMET
Activities of the Department of Astronomy and McDonald Observatory of the University of Texas at Austin
[NASA-CR-179667] N86-32378

HAMILTON-JACOBI EQUATION
On the generation of equivalent Hamiltonians
[DE86-701920] N86-32203
Hamilton-jacobi equations in infinite dimensions, part 3
[AD-A167521] N86-32236
The Hamilton-Jacobi-Bellman equation with a gradient constraint
[AD-A167532] N86-32237

HAMILTONIAN FUNCTIONS
On the theorem of Weinstein
[AD-A167492] N86-32192
On the generation of equivalent Hamiltonians
[DE86-701920] N86-32203

HARDNESS
Mechanical property development in Hot Isostatic Pressed (HIP) low alloy steel powder
[AD-A166666] N86-31703

HARMONIC ANALYSIS
Measurement and extraction of recurring waveforms: For applications to active transmissions, flow-noise, and helicopter-radiated noise problems
[AD-A167400] N86-32249

HARMONIC OSCILLATION
Evaluation of solar array flight experiment response during flight for extension/retraction phase
[NASA-TM-86551] N86-31606

HAZARDS
Advisory Circular: Design considerations to protect fuel systems during a wheels-up landing
[FAA-AC/25.994-1] N86-31564

HEARING
A chinchilla restraint system
[AD-A167408] N86-32084
Speech analysis based on a model of the auditory system
[AD-A167426] N86-32098

HEAT AFFECTED ZONE
Analysis of heat-affected zone cracking in Ni3Al alloys
[DE86-009449] N86-31712

HEAT EXCHANGERS
Plastic Film Heat Exchanger Development Project
[DE86-009258] N86-31836
Stirling machines: Adiabatic to isothermal
[DE86-005407] N86-31903

HEAT FLUX
Calorimetry of the arc welding process
[DE86-009280] N86-31899

HEAT MEASUREMENT
Calorimetry of the arc welding process
[DE86-009280] N86-31899

HEAT OF FUSION
Estimated heats of fusion of fluoride salt mixtures suitable for thermal energy storage applications
[NASA-TM-87320] N86-31982

HEAT PIPES
Design and test of a space deployable radiator
[SNIAS-861-440-103] N86-31640
Vapor Controlled Heat Pipe (VCHP) telecommunications panel. Performances evolution after four years of life testing
[SNIAS-861-440-106] N86-31822

HEAT RESISTANT ALLOYS
Microstructure-property relationships in directionally solidified single crystal nickel-base superalloys
[NASA-TM-88788] N86-31700
The continuing battle against defects in nickel-base superalloys
[NASA-TM-87343] N86-31701
The effect of variations of cobalt content on the cyclic oxidation resistance of selected Ni-base superalloys
[NASA-TM-87297] N86-31702
Advanced processing and properties of high performance alloys
[AD-A167404] N86-31706

HEAT SOURCES
Nonlinear optical interactions in semiconductors
[AD-A166182] N86-31880

HEAT STORAGE
Estimated heats of fusion of fluoride salt mixtures suitable for thermal energy storage applications
[NASA-TM-87320] N86-31982
Inorganic compounds for passive solar energy storage: Solid-state dehydration materials and high specific heat materials
[DE86-010214] N86-31990

HEAT TRANSFER
Modeling of zero gravity venting: Studies of two-phase heat transfer under reduced gravity
[NASA-CR-179662] N86-31826
Plastic Film Heat Exchanger Development Project
[DE86-009258] N86-31836
Critical flow through small pipe breaks
[DE86-010907] N86-31842
Development of advanced thermal insulation for appliances
[DE86-011357] N86-31843
Calorimetry of the arc welding process
[DE86-009280] N86-31899
Stirling machines: Adiabatic to isothermal
[DE86-005407] N86-31903

HEAT TRANSFER COEFFICIENTS
Applications of infrared thermography in convective heat transfer
[AD-A167872] N86-31599
Effects of variable properties in film cooled turbulent boundary layers
[AD-A167716] N86-31835

HEAT TRANSMISSION
Pointwise ε priori bounds for strongly coupled semilinear parabolic systems
[AD-A167539] N86-32198

HEAT TREATMENT
Mechanical property development in Hot Isostatic Pressed (HIP) low alloy steel powder
[AD-A166666] N86-31703
Wear improvement in titanium alloys by ion implantation
[AD-D012203] N86-31704
Effect of heat treatment and impurity concentration on some mechanical properties V-15Cr-5Ti alloy
[DE86-010498] N86-31722

HEIGHT
Level and discharge measurements under difficult conditions --- hydrology
[WMO-650] N86-31989

HELICOPTER PERFORMANCE
A trade-off study of tilt rotor aircraft versus helicopters using VASCOMP 2 and HESCOMP
[AD-A167719] N86-31575

HELICOPTERS
Development of a data acquisition system to aid in the aerodynamic study of various helicopter configurations
[AD-A167717] N86-31539
Aerial refueling evaluation of the CH-47D helicopter
[AD-A167575] N86-31574
Airborne intruder detection considerations
[DE86-006462] N86-31576
Design of a vertical thrust stand for a remotely piloted model helicopter
[AD-A167811] N86-31598
Dynamic analysis. Correlation of theory with experiment --- MSC/NASTRAN analysis of Westland 30 G-BGHF
[RP661] N86-31917
Measurement and extraction of recurring waveforms: For applications to active transmissions, flow-noise, and helicopter-radiated noise problems
[AD-A167400] N86-32249

HELIOSTATS
Evaluation of heliostat field-receiver configurations
[DE86-009875] N86-31988

HELIUM
Finite-element modeling of pinch welds
[DE86-009573] N86-31900
Resonance scattering of solar radiation by the interplanetary medium
[BMFT-FB-W-85-032] N86-32385

HELIUM ISOTOPES
Redetermination of parameters for semi-empirical model for spallogenic He and Ne in chondrites N86-32363

HELMHOLTZ EQUATIONS
Effect of triangular element orientation on finite element solutions of the Helmholtz equation
[NASA-TM-87351] N86-32247

HEURISTIC METHODS
Functional tests of digital integrated circuits
[ESA-86-97301] N86-31810

HIERARCHIES
Automatic speech recognition for large vocabularies
[BMFT-FB-DV-85-003] N86-31779

HIGH ACCELERATION
Telemetry system for very high acceleration
[ISL-CO-214/85] N86-31626

HIGH ALTITUDE
A portable subject controlled night vision adaptometer
[AD-A167848] N86-32274

HIGH ALTITUDE BREATHING
Altitude acclimatization (ventilation and chemoresponsiveness) during wakefulness and sleep
[AD-A167738] N86-32091
HIGH ALTITUDE PRESSURE
Characteristics of altitude error at reduced quantization
[FAA/PM-86/35] N86-31580
HIGH CURRENT
Optoelectronic current transducer
[BMFT-FB-T-85-165] N86-31870
HIGH ENERGY INTERACTIONS
International Centre for Theoretical Physics: Scientific activities in 1984
[DE86-701454] N86-32245
A study of the interactions of high energy electron-neutrinos
[ESA-86-98072] N86-32257
HIGH LEVEL LANGUAGES
Tracing and debugging in SASL — functional programming language
[REPT-66] N86-32154
System semantics and formal circuit description --- programming languages
[REPT-69] N86-32156
HIGH REYNOLDS NUMBER
Operating envelope charts for the Langley 0.3-meter transonic cryogenic wind tunnel
[NASA-TM-89008] N86-31595
HIGH STRENGTH ALLOYS
Advanced processing and properties of high performance alloys
[AD-A167404] N86-31706
HIGH STRENGTH STEELS
Mechanical property development in Hot Isostatic Pressed (HIP) low alloy steel powder
[AD-A166666] N86-31703
HIGH TEMPERATURE
Determination of the fracture toughness of ceramic materials on bending samples with different notch types, at room temperature and high temperature
[DFVLR-FB-85-67] N86-31744
A single sideband suppressed carrier (SSBSC) interferometer for the measurement of dielectric properties of laser heated materials
[ISL-CO-228/85] N86-31877
HIGH TEMPERATURE NUCLEAR REACTORS
Carbon monoxide formation in UO2 kerneled HTR fuel particles containing oxygen getters
[OEFZS-4348] N86-32261
HIGH TEMPERATURE TESTS
In-vacuum cyclic fatigue behavior of Vanstar-7 at elevated temperatures
[DE86-007322] N86-31713
Evaluation of high temperature accelerated aging tests used on integrated circuits
[DE86-009615] N86-31801
HIGH VOLTAGES
High voltage technology for a Traveling Wave Tube Electronic Power Conditioner (TWT-EPC) for a Synthetic Aperture Radar (SAR)
[BMFT-FB-W-85-015] N86-31813
HILBERT SPACE
Iterative refinement of the method of moments
[AD-A167537] N86-32197
HISTORIES
Evolution of nuclear emulsion techniques in the first half of this century — photographic emulsions
[NOTA-INTERNA-860] N86-31879
HOLOGRAPHIC INTERFEROMETRY
Visualization of flows in a motored rotary combustion engine using holographic interferometry
[NASA-TM-88804] N86-31583
Advanced optical measuring systems for measuring the properties of fluids and structures
[NASA-TM-88829] N86-31859
Interferometric holographic cinematography
[ISL-CO-219/85] N86-31872
HOLOGRAPHY
Advanced optical measuring systems for measuring the properties of fluids and structures
[NASA-TM-88829] N86-31859
Chinese Journal of Lasers (selected articles)
[AD-A167846] N86-31862
Use of an endoscope for optical fiber holography
[ISL-CO-224/85] N86-31876
HOMOTOPY THEORY
Study of a homotopy continuation method for early orbit determination with the Tracking and Data Relay Satellite System (TDRSS)
[NASA-TM-86230] N86-31610
HONEYCOMB STRUCTURES
Fiber composite sandwich thermostructural behavior: Computational simulation
[NASA-TM-88787] N86-31663
HORIZON SCANNERS
Feasibility study of surveillance avoidance during the deployment of Soviet payloads of military interest into orbit from a Soviet shuttle
[AD-A167661] N86-31607
HORIZONTAL ORIENTATION
A linear stability analysis of the rapid development of an extratropical cyclone
[AD-A167808] N86-32057
HOT PRESSING
Mechanical property development in Hot Isostatic Pressed (HIP) low alloy steel powder
[AD-A166666] N86-31703
Advanced processing and properties of high performance alloys
[AD-A167404] N86-31706
HOT STARS
Ultraviolet observations of astronomical phenomena
[NASA-CR-176859] N86-32376
HOT-WIRE ANEMOMETERS
Conditioned hot-wire anemometer measurements and structural analysis of a turbulent spot in a laminar boundary layer
[MEAH-63] N86-31850
HOVERING
A trade-off study of tilt rotor aircraft versus helicopters using VASCOMP 2 and HESCOMP
[AD-A167719] N86-31575
Design of a vertical thrust stand for a remotely piloted model helicopter
[AD-A167811] N86-31598
HUMAN CENTRIFUGES
Activities report on physical and psychological health of flying personnel
[ESA-86-97395] N86-32093
Activities report on physical and psychological health of flying personnel
[ESA-86-97386] N86-32094
HUMAN FACTORS ENGINEERING
Hardware for data banks in cartography: Concepts N86-31951
A recent concept for application of interactive graphical data processing in cadastral map revisions N86-31962
Striving for natural usage
[DE86-009402] N86-32105
Control loops with human operators in space operations. Part 1: Human engineering analysis, synthesis and evaluation techniques
[NLR-TR-84116-L-PT-1] N86-32107
Control loops with human operators in space operations. Part 4: Research requirements for human-in-the-loop space teleoperator development
[NLR-TR-84116-L-PT-4] N86-32109
Control loops with human operators in space operations. Part 5: Executive summary
[NLR-TR-84116-L-PT-5] N86-32110
HUMAN PERFORMANCE
Artificial intelligence and the Rule Oriented System Simulation (ROSS) language --- military commanders N86-32097
Auditory versus visual selective-attention tasks
[IZF-1985-19] N86-32100
Human problem solving in fault diagnosis tasks
[AD-A167397] N86-32104
HUMIDITY
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Cape Newenham, Alaska
[AD-A167652] N86-32049
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: CAstle AFB, California
[AD-A167657] N86-32054
HUMIDITY MEASUREMENT
Development of humidity sensors in tantalum thin film technology
[BMFT-FB-T-85-175] N86-32315
HYBRID CIRCUITS
Telemetry system for very high acceleration
[ISL-CO-214/85] N86-31626
HYBRID COMPUTERS
Performance analysis of a microcomputer-based single-loop digital control system
[AD-A167914] N86-32177
HYDRAULIC FLUIDS
Fireproof hydraulic brake system
[AD-A167774] N86-31549
Lubrication handbook for the space industry. Part A: Solid lubricants. Part B: Liquid lubricants
[NASA-TM-86556] N86-31730
HYDRIDES
Advanced hydrogen storage: Modified vanadium hydrides
[DE86-009916] N86-31748
HYDRODYNAMICS
Predictability of Rayleigh-Taylor instability
[DE86-009932] N86-31839
Eulerian transport in general orthogonal curvilinear coordinates
[DE86-010266] N86-31840
On wings and keels (2)
[NLR-MP-85048-U] N86-31847
Physics codes on parallel computers
[DE86-006712] N86-32170
HYDROGEN
Role of the radical pool in combustion
[DE86-010159] N86-31688
Advanced hydrogen storage: Modified vanadium hydrides
[DE86-009916] N86-31748
Resonance scattering of solar radiation by the interplanetary medium
[BMFT-FB-W-85-032] N86-32385
HYDROGEN EMBRITTLEMENT
Finite-element modeling of pinch welds
[DE86-009573] N86-31900
HYDROGEN OXYGEN ENGINES
Space station propulsion technology
[NASA-CR-178897] N86-31647
The noncavitating performance and life of a small vane-type positive displacement pump in liquid hydrogen
[NASA-TM-87347] N86-31651
HYDROGRAPHY
Three-dimensional views of cartograms in digital raster mode N86-31961
Application of multiple lines of position for hydrography
[AD-A167884] N86-31966
HYDROLOGY
The results of hydrological measurements in the southern Adriatic, the west coast of Sicily and the Vatican Cape, preliminary report
[PREPRINT-502] N86-31975
HYDROLOGY MODELS
Evaluation of wave calculations using the model GONO, in the period October 1983 - April 1984 — water waves
[KNMI-TR-56] N86-32079
Time sequence of the Royal Dutch Meteorlogical Institute's operational wave model GONO, October 1983 - April 1984. Supplement
[KNMI-TR-56-SUPPL] N86-32080
HYDROSTATIC PRESSURE
An investigation into the tripping behavior of longitudinally T-stiffened rectangular flat plates loaded statically and impulsively
[AD-A167718] N86-31923
HYDROTHERMAL STRESS ANALYSIS
Fiber composite sandwich thermostructural behavior: Computational simulation
[NASA-TM-88787] N86-31663
HYGIENE
NASA Facts: Space Shuttle food systems
[NF-150/1-86] N86-32102
HYGRAL PROPERTIES
Fiber composite sandwich thermostructural behavior: Computational simulation
[NASA-TM-88787] N86-31663
HYPERBOLIC COORDINATES
Finite difference methods for polar coordinate systems
[AD-A167512] N86-32194
HYPERBOLIC SYSTEMS
Optimal control for parabolic-hyperbolic system with time delay
[DE86-701709] N86-32182
HYPERCAPNIA
Altitude acclimatization (ventilation and chemoresponsiveness) during wakefulness and sleep
[AD-A167738] N86-32091
HYPERSONIC FLOW
Hypersonic aerodynamic coefficients and convection flow estimation in a Hermes type project
[SNIAS-861-422-108] N86-31540
Reentry body three-dimensional flow computation. (Euler and parabolized Navier-Stokes)
[SNIAS-861-422-107] N86-31845
HYPERSONICS
High speed viscous flow calculations about complex configurations
[NASA-TM-88237] N86-31827
HYPERVELOCITY GUNS
Electromagnetic railgun and its applications
[DE86-009487] N86-31620
HYPOXEMIA
External respiration, gas exchange, and blood oxygen parameters in acute methemoglobinemia
[DRIC-T-7663] N86-32082
HYPOXIA
External respiration, gas exchange, and blood oxygen parameters in acute methemoglobinemia
[DRIC-T-7663] N86-32082

Altitude acclimatization (ventilation and chemoresponsiveness) during wakefulness and sleep
[AD-A167738] N86-32091
A portable subject controlled night vision adaptometer
[AD-A167848] N86-32274

HYSTERESIS
Orbital compactness and asymptotic behavior of non-linear parabolic systems with functionals
[AD-A167486] N86-32191

I

IBM COMPUTERS
MUMATH computer algebra system for microcomputers
[CNES-CT/DTI/MS/MN/311] N86-32166

ICE
A bispectral method for the height determination of ice clouds
[DFVLR-FB-86-03] N86-32072

ICE FORMATION
NASA's Aircraft Icing Analysis Program
[NASA-TM-88791] N86-31548
In-flight photogrammetric measurement of wing ice accretions
[NASA-TM-87191] N86-31562
Turbulent dispersion of the icing cloud from spray nozzles used in icing tunnels
[NASA-TM-87316] N86-31586

ICE MAPPING
NORDA Arctic data collection, processing and interpretation capabilities
[AD-A167797] N86-31965

ICE PREVENTION
NASA's Aircraft Icing Analysis Program
[NASA-TM-88791] N86-31548

IGNITERS
Prediction of ignition transfer reliability in pyrotechnic systems using the VARICOMP technique
[AD-A167430] N86-31746

IGNITION
Role of the radical pool in combustion
[DE86-010159] N86-31688
A review of methods to determine the ignitability of pyrotechnic compositions
[AD-A167429] N86-31745
Alcohol as a fuel in a high speed diesel engine with double injection system
[DE86-751653] N86-31904

IGNITION SYSTEMS
Prediction of ignition transfer reliability in pyrotechnic systems using the VARICOMP technique
[AD-A167430] N86-31746

IMAGE ANALYSIS
Microscopic image analysis of slow crack growth in vitreous materials
[DE86-009850] N86-31931
Image quality criteria with emphasis on criteria for remote sensing imagery
[NLR-TR-84040-U] N86-31974

IMAGE ENHANCEMENT
Optical studies of chemical energy release during shock initiation of granular explosives
[DE86-010469] N86-31752

IMAGE INTENSIFIERS
A new radiographic corrosion inspection capability
[AD-A167270] N86-31914

IMAGE PROCESSING
In-situ solid-propellant burn-rate measurements using flash cineradiography
[AD-A167637] N86-31683
Vulnerability of low redundancy image data and text transmission over satellite communication links
[NLR-TR-85100-L] N86-31787
Processing and correction of VLSI circuit images obtained with a scanning electronic microscope
[ESA-86-97297] N86-31855
Current status in development of averaging laser stranometer and tracking system
[DE86-006727] N86-31882
Microscopic image analysis of slow crack growth in vitreous materials
[DE86-009850] N86-31931
Utilizing remote sensing of Thematic Mapper data to improve our understanding of estuarine processes and their influence on the productivity of estuarine-dependent fisheries
[NASA-CR-177177] N86-31943
LANDSAT-4 and LANDSAT-5 multispectral scanner coherent noise characterization and removal
[NASA-TP-2595] N86-31945
New array processors of floating point systems N86-31953
A software concept for interactive letter location through digital image processing N86-31959
Digital processing of Landsat TM images for lineament occurrence and spatial frequency in sedimentary rocks
[DE86-009834] N86-31968
Integration of the topography in teledetection image data processing
[ESA-86-97852] N86-31972
Image quality criteria with emphasis on criteria for remote sensing imagery
[NLR-TR-84040-U] N86-31974
Determination of the atmospheric aerosol distribution by multi-channel remote sensing techniques
[AD-A167886] N86-32014
Striving for natural usage
[DE86-009402] N86-32105
Rate distortion characteristics of two adaptive data compression algorithms
[NLR-MP-85024-U] N86-32150
Real time math model for infrared
[AD-A168133] N86-32276
Study and implementation of an image synthesizer based on a modular architecture
[ESA-86-97295] N86-32282

IMAGE RECONSTRUCTION
Use of an endoscope for optical fiber holography
[ISL-CO-224/85] N86-31876

IMAGE RESOLUTION
Feasibility study for a SAR test monitor
[BMFT-FB-W-85-013] N86-31780

IMAGE TRANSDUCERS
Solid state image sensor with an amorphous photoconversion layer
[BMFT-FB-T-85-164] N86-31869

IMAGERY
GEOSYS: A question-answer system with spatial imaginative faculty — representation model N86-32130
A digital imaging photometry system for cometary data acquisition
[NASA-TM-86554] N86-32373

IMAGES
Digital processing of Landsat TM images for lineament occurrence and spatial frequency in sedimentary rocks
[DE86-009834] N86-31968

IMAGING SPECTROMETERS
Development of an imaging Fourier transform spectrometer
[AD-A168172] N86-31864

IMAGING TECHNIQUES
Pattern representation
[CWI-CS-R8602] N86-32160
Fundamentals of thin lens optical systems, lectures 1, 2 and 3
[DE86-010642] N86-32281

IMMUNOLOGY
European Science Notes, volume 40, number 6
[AD-A167501] N86-32346

IMPACT TESTS
Space Nuclear Safety Program
[DE86-008579] N86-32260

IMPEDANCE
Scattering from a planar equiangular spiral antenna
[AD-A167068] N86-31764

IMPLOSIONS
Technique for megabar controlled strain experiments
[DE86-000805] N86-31930

IMPREGNATING
Effect of impregnation method on cycle life of the nickel electrode
[NASA-TM-87326] N86-31980

IMPULSES
An investigation into the tripping behavior of longitudinally T-stiffened rectangular flat plates loaded statically and impulsively
[AD-A167718] N86-31923

IMPURITIES
Effect of heat treatment and impurity concentration on some mechanical properties V-15Cr-5Ti alloy
[DE86-010496] N86-31722
An improved model of thin film growth
[AD-A167147] N86-32302

INCLUSIONS
Computing narrow inclusions for definite integrals
[AD-A167491] N86-32135

INCOHERENT SCATTERING
The SRI ionospheric Structure and Dynamics Program, 1985 results
[AD-A168115] N86-32015

INCOMPRESSIBLE FLOW
Turbulence modeling for incompressible flows: A report on the Euromech 160 Colloquium
[KU-SFB-210/T/22] N86-31854
Multiple grid problems on concurrent-processing computers
[NASA-TM-86675] N86-32112

INDEXES (DOCUMENTATION)
Guide to standard weather summaries and climatic services
[AD-A168099] N86-32080
Production of codicological catalogs using computers (PCC project)
[REPT-87] N86-32155
Carbon Dioxide Information Center thesaurus
[DE86-009013] N86-32339

INDICATING INSTRUMENTS
Multiple thermocouple testing device
[AD-D012276] N86-31980

INEQUALITIES
On travelling-wave solutions to systems of conservation laws with singular viscosity
[AD-A167518] N86-31830
Elastoplastic torsion of a cylindrical beam, described by variational inequalities
[ESA-86-97704] N86-31837
The central limit theorem and poincare-type inequalities
[AD-A167534] N86-32225

INERTIAL CONFINEMENT FUSION
Nova performance at ultra high fluence levels
[DE86-006724] N86-31881
Estimates of maximum trappable ion beam power in plasma channels
[DE86-006472] N86-32291

INERTIAL NAVIGATION
A cost/performance analysis of hybrid inertial/externally referenced positioning/orientation systems
[AD-A167665] N86-31553

INFERENCE
Machine learning in METAXA — learning model, inference N86-32131

INFILTRATION
Chemical vapor infiltration of fiber-reinforced ceramic composites
[DE86-009513] N86-31735

INFLECTION POINTS
Methods for the detection and estimation of multiphase regression models
[ESA-86-97262] N86-32227

INFORMATION SYSTEMS
On data integrity of CAD applications in cartography: Concept of an information system with Siemens Computer Aided Design (SICAD) N86-31947
Geoscientific requirements on a graphical data base N86-31948
Topographic-cartographic data base in standardization N86-31949
Calculation and representations of elevation changes in a tidal flat area from digital terrain models N86-31956
Brief report on design and implementation of a data bank core system N86-31957
Digital geoscientific cartography: A leading program of the German research community N86-31960
Activities report of the Laboratory for Information Systems
[FOA-C-30410-E1] N86-32341

INFORMATION THEORY
Auditory versus visual selective-attention tasks
[IZF-1985-19] N86-32100
Absolute judgment versus absolute magnitude estimation to convey information through symbol magnitude changes in CRT displays
[AD-A167059] N86-32103

INFRARED ASTRONOMY
Activities report of the Institute of Extraterrestrial Physics
[MPE-194] N86-32372

INFRARED ASTRONOMY SATELLITE
In-flight attitude estimation and control experiments with IRAS based on modern control theory
[NLR-TR-84029-U] N86-31642

INFRARED DETECTORS
Real time math model for infrared
[AD-A168133] N86-32276
Properties of impurity doped infrared photoconductive detectors under conditions of low background photon flux — space environments
[NPL-QU-76] N86-32298

INFRARED IMAGERY
Applications of infrared thermography in convective heat transfer
[AD-A167872] N86-31589
Real time math model for infrared
[AD-A168133] N86-32276
Second generation meteosat: Infrared atmospheric sounder design
[CNES-T-85/CT/DRT/TIT/IO-046] N86-32283
Second generation Meteosat imager design
[CNES-T-85/052-DRT/TIT/IO] N86-32284

INFRARED INSTRUMENTS
Standard calibration procedure for pencil beam infrared sensors on spinning satellites. Volume 2: Applicable software and user manuals
[REPT-209-DT-55-VOL-2] N86-31645
Second generation Meteosat imager design
[CNES-T-85/052-DRT/TIT/IO] N86-32284
INFRARED PHOTOGRAPHY
Boundary layer clouds in the ISCCP data sets --- International Satellite Cloud Cover Program (ISCCP)
N86-32041
INFRARED RADAR
Simulation evaluation of display/FLIR concepts for low-altitude, terrain-following helicopter operations
[NASA-TM-86779] N86-31551
INFRARED RADIATION
An analysis of measurements of atmospheric trace gas infrared emissions
[BMFT-FB-W-85-016] N86-32003
Infrared attenuation of thallium bromo-iodide fibers
[NASA-TM-86817] N86-32268
INFRARED SPECTRA
Use of existing and suggested satellite observations of reflected spectral radiance to estimate properties of stratiform clouds N86-32032
Second generation Meteosat imager design
[CNES-T-85/052-DRT/TIT/IO] N86-32284
INFRARED SPECTROMETERS
Development of an imaging Fourier transform spectrometer
[AD-A168172] N86-31864
Raman spectrometer with microprobe capability
[AD-A167008] N86-32301
INFRARED SPECTROSCOPY
Fourier transform infrared spectroscopic study of aging in commercial polyurethane
[AD-A167418] N86-31798
Development of an imaging Fourier transform spectrometer
[AD-A168172] N86-31864
INFRARED TELESCOPES
Standard calibration procedure for pencil beam infrared sensors on spinning satellites, volume 1
[REPT-209-DT-54-VOL-1] N86-31644
Standard calibration procedure for pencil beam infrared sensors on spinning satellites. Volume 2: Applicable software and user manuals
[REPT-209-DT-55-VOL-2] N86-31645
The photopolarimeter of the infrared space telescope GIRL: Mechanical and electrical components for cryovacuum
[BMFT-FB-W-85-026] N86-32379
INFRARED TRACKING
On the stability of the problem of target tracking with the FLIR
[AD-A167721] N86-32273
INHOMOGENEITY
Statistical analysis of nonhomogeneous Poisson processes N86-32222
INLET TEMPERATURE
Multiple thermocouple testing device
[AD-D012278] N86-31860
INORGANIC COMPOUNDS
Inorganic compounds for passive solar energy storage: Solid-state dehydration materials and high specific heat materials
[DE86-010214] N86-31990
INPUT/OUTPUT ROUTINES
System analysis for the Huntsville Operation Support Center distributed computer system
[NASA-CR-178890] N86-32232
INSOLATION
Estimates of available solar radiation and photovoltaic energy production for various tilted and tracking surfaces throughout the US based on PVFORM, a computerized performance model
[DE86-009540] N86-32019
Pacific Northwest solar radiation data
[DE86-009635] N86-32020
Climatological data of stations in the Netherlands. No. 25: A climatology of the main observatory at De Bilt for the period 1901-1984
[KNMI-150-25] N86-32068
INSPECTION
A new radiographic corrosion inspection capability
[AD-A167270] N86-31914
Ultrasonic inspection of partially completed welds using pattern recognition techniques
[DE86-003227] N86-31915
Low frequency noise as a control test for space solar panels
[SNIAS-861-440-109] N86-31996
INSTRUMENT ERRORS
Characteristics of altitude error at reduced quantization
[FAA/PM-86/35] N86-31580
INSTRUMENT LANDING SYSTEMS
Evaluation of alternatives for an Army precision landing system
[AD-A167780] N86-31554
INTEGRALS
Computing narrow inclusions for definite integrals
[AD-A167491] N86-32135
Painleve test for the complete integrability of Bogomolny's monopole equation
[DE85-703173] N86-32199
INTEGRATED CIRCUITS
Apparatus and method for aligning a mask and wafer in the fabrication of integrated circuits
[AD-D012208] N86-31795
Accessibility of applications specific integrated circuits
[DE86-009561] N86-31800
Evaluation of high temperature accelerated aging tests used on integrated circuits
[DE86-009615] N86-31801
Electron-beam programmable configuration circuits
[BMFT-FB-T-85-163] N86-31806
The functional test of complex integrated circuits --- very large scale integration
[ESA-86-97289] N86-31807
Specification and functional simulation of complex circuits: The CADOC system --- integrated circuits
[ESA-86-97296] N86-31808
Functional tests of digital integrated circuits
[ESA-86-97301] N86-31810
Floor planning and net assignment in layout compilation
[ESA-86-97530] N86-31818
PAOLA: Topological optimization system for Programmable Logical Arrays (PLA)
[ESA-86-97294] N86-32148
Selective anodic oxidation of semiconductors for pattern generation
[AD-D012245] N86-32299
INTEGRATED OPTICS
Current German laser and quantum optics research reviewed at the 50th Annual Meeting of the Physikalische Gesellschaft
[AD-A167895] N86-32275
INTERFACES
Feasibility study for a SAR test monitor
[BMFT-FB-W-85-013] N86-31780
Interfacial electrochemical transport in batteries employing solid electrolytes
[DE86-010107] N86-31805
ESPRIT project 322: Computer Aided Design (CAD) design interfaces
[KFK-PFT-121] N86-32168
INTERFACIAL TENSION
A free streamline model for a rising bubble
[AD-A167535] N86-31832
INTERMITTENCY
Intermittency and conditional velocities in premixed conical turbulent flames
[DE86-009363] N86-31687
INTERNAL PRESSURE
Operating envelope charts for the Langley 0.3-meter transonic cryogenic wind tunnel
[NASA-TM-89008] N86-31595
INTERNAL WAVES
Solitary and periodic waves in swirling flow
[AD-A167538] N86-31833
INTERPLANETARY MEDIUM
Resonance scattering of solar radiation by the interplanetary medium
[BMFT-FB-W-85-032] N86-32385
INTERPLANETARY TRAJECTORIES
Start solution for interplanetary low thrust trajectory optimization and model refinement, volume 1
[ESA-CR(P)-2175-VOL-1] N86-31612
Start solution for interplanetary low thrust trajectory optimisation and model refinement. Volume 2: User's guide to the software for low thrust orbit optimization for interplanetary missions using a linear model
[ESA-CR(P)-2175-VOL-2] N86-31613
Start solution for interplanetary low thrust trajectory optimization and model refinement. Volume 3: Low thrust orbit optimization for interplanetary missions using a Pontryagin/Lambert approach
[ESA-CR(P)-2175-VOL-3] N86-31614
INTERPOLATION
International comparison of interpolation procedures for the efficiency of germanium gamma-ray spectrometers (GAM83 exercise)
[ECN-181] N86-31874
Automatic interpolation of isolines from an irregular waterline digital terrain model (DGM) through triangulation network N86-31952
Spline functions with form conditions
[ESA-86-97286] N86-32207
INTESTINES
Special features of surgical intervention under conditions of weightlessness
[AD-A167916] N86-32092
INVARIANCE
Orbital compactness and asymptotic behavior of non-linear parabolic systems with functionals
[AD-A167486] N86-32191
INVENTORY CONTROLS
Control of precious metal plating baths using electrogravimetric analysis
[DE86-005435] N86-31757
Production and inventory control with the base stock system
[EUT/BDK/12] N86-32328
Balancing production level variations and inventory variations in complex production systems
[THE/BDK/84] N86-32329
INVERTED CONVERTERS (DC TO AC)
Description of a 20 Kilohertz power distribution system
[NASA-TM-87346] N86-31584
INVISCID FLOW
Application of an inviscid multivortex model to the calculation of the vortex flow behind an airfoil profile with spoiler
[ISL-R-133/84] N86-31545
Solitary and periodic waves in swirling flow
[AD-A167538] N86-31833
IO
Activities of the Department of Astronomy and McDonald Observatory of the University of Texas at Austin
[NASA-CR-179667] N86-32378
IODINE
Infrared attenuation of thallium bromo-iodide fibers
[NASA-TM-86817] N86-32268
IODINE ISOTOPES
Determination of CA-41, I-129 and OS-187 in the Rochester tandem accelerator and some applications of these isotopes N86-32352
Live 129I-129Xe dating N86-32359
ION BEAMS
Acceleration of ions and electrons by wave-particle interactions
[AD-A167631] N86-32258
Focused ion beam technology
[AD-A167762] N86-32259
Estimates of maximum trappable ion beam power in plasma channels
[DE86-006472] N86-32291
Ion beam channeling in superlattices
[DE86-010094] N86-32312
ION ENGINES
Performance characteristics of ring-cusp thrusters with xenon propellant
[NASA-TM-87338] N86-31650
ION IMPLANTATION
Process for producing carbide coatings
[AD-D012202] N86-31667
Wear improvement in titanium alloys by ion implantation
[AD-D012203] N86-31704
Characterization of ion implanted and laser processed wear surfaces
[AD-A167878] N86-31709
Effect of helium on swelling and microstructural evolution in ion-irradiated V-15Cr-5Ti alloy
[DE86-010510] N86-31723
Focused ion beam technology
[AD-A167762] N86-32259
Raman spectrometer with microprobe capability
[AD-A167008] N86-32301
ION IRRADIATION
Radiation-induced segregation and precipitation in molybdenum-rhenium alloys
[DE86-007521] N86-31715
Ion damage microstructures in a Fe-10Cr-6Mo-0.5Nb
[DE86-008500] N86-31717
Plasma and ion etching for failure analysis. Part 1: Review of current theory and techniques --- semiconductors
[AERE-R-11907-PT-1] N86-32292
ION PROPULSION
Performance characteristics of ring-cusp thrusters with xenon propellant
[NASA-TM-87338] N86-31650
ION TEMPERATURE
Ion temperature in TORTUR 3 --- tokamak
[REPT-85-162] N86-32295
Optimization study for ion temperature measurements by means of Rutherford scattering --- tokamak experiments
[REPT-86-164] N86-32296
IONIC MOBILITY
Interfacial electrochemical transport in batteries employing solid electrolytes
[DE86-010107] N86-31805

IONIZATION CHAMBERS
Environmental gamma radiation monitoring system with a large volume air ionization chamber
[OEFZS-4344] N86-32001
IONOSPHERE
The SRI Ionospheric Structure and Dynamics Program, 1985 results
[AD-A168115] N86-32015
IONOSPHERIC DISTURBANCES
E-layer ionospheric disturbances following the Coalinga earthquake
[DE86-008588] N86-32017
IONOSPHERIC ION DENSITY
Frontiers of the plasmasphere (theoretical aspects)
[AERONOMICA-ACTA-A-298-1985] N86-32288
IONS
Space plasma research
[NASA-CR-178898] N86-32289
IRISES (MECHANICAL APERTURES)
Direct-coupled cavity filters with irises of arbitrary thickness
[ESA-TT-939] N86-31817
IRON
In-vacuum cyclic fatigue behavior of Vanstar-7 at elevated temperatures
[DE86-007322] N86-31713
Mechanical properties testing of several 800 MeV proton irradiated BCC metals and alloys
[DE86-007372] N86-31714
IRON ALLOYS
Solid state transformations in Fe-Ni alloys from meteorites in powder form
[DE86-701936] N86-32388
IRON COMPOUNDS
Preparation and characterization of nickel substituted Fe5C2
[AD-A167410] N86-31707
IRON METEORITES
Compilation of cosmogenic radionuclides in meteorites N86-32362
Study by synchrotron radiation of the superstructure of tetrataenite from the Saint-Severin meteorite
[DE86-701971] N86-32384
Solid state transformations in Fe-Ni alloys from meteorites in powder form
[DE86-701936] N86-32388
IRRADIATION
Photodesorption cleaning of silicon with vacuum ultraviolet irradiation
[AD-A167420] N86-31682
Mechanical properties testing of several 800 MeV proton irradiated BCC metals and alloys
[DE86-007372] N86-31714
Influence of radiation-induced segregation on ductility of a nickel-silicon alloy
[DE86-009500] N86-31720
Laser induced selective electroless plating
[AD-D012223] N86-31756
Application of new technologies to radiation biodosimetry in mammalian systems
[AD-A168176] N86-31865
Precompaction irradiation effects: Particles from an early active sun? N86-32351
Evolution of gas-rich meteorites: Clues from cosmogenic nuclides N86-32354
The exposure history of Jilin and production rates of cosmogenic nuclides N86-32355
IRRIGATION
Prospects for small and marginal farmers in Trichy district (Tamil Nadu, India) to use water pumping windmills for irrigation
[ESA-86-97721] N86-31978
ISOPARAMETRIC FINITE ELEMENTS
Use of a special finite element for the static analysis of normal interfacial stresses
[SNIAS-861-422-109] N86-31936
ISOSTATIC PRESSURE
Mechanical property development in Hot Isostatic Pressed (HIP) low alloy steel powder
[AD-A166666] N86-31703
ISOTOPE SEPARATION
Determination of CA-41, I-129 and OS-187 in the Rochester tandem accelerator and some applications of these isotopes N86-32352
ISOTOPES
Resonance ionization mass spectrometry for isotopic abundance measurements N86-32361
Reduction and analysis of data from experiment CAI on the IMP-8 mission
[NASA-CR-177891] N86-32381
ITALY
Preliminary report on the hydrological measurements carried out in the southern Tyrrhenian sea and in the Messina strait
[PREPRINT-489] N86-32061
ITERATION
A new result in the theory and computation of the least norm solution of a linear program
[AD-A167515] N86-32136
Iterative refinement of the method of moments
[AD-A167537] N86-32197
An interative approximation method for the calculation of the balance distribution for a finite Markov chain
[ESA-86-97303] N86-32241
ITERATIVE SOLUTION
Reentry body three-dimensional flow computation. (Euler and parabolized Navier-Stokes)
[SNIAS-861-422-107] N86-31845
Error bounds for strongly convex programs and (super)linearly convergent iterative schemes for the least 2-norm solution of linear programs
[AD-A167536] N86-32137

J

JACOBI MATRIX METHOD
A closed-form solution for inverse kinematics of robot manipulator with redundancy
[AD-A167850] N86-31894
JAPAN
Misawa AB, Japan limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167655] N86-32052
JET AIRCRAFT
Multiple thermocouple testing device
[AD-D012276] N86-31860
JET ENGINE FUELS
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 1: Executive summary
[AD-A167443] N86-31571
JET PROPULSION
Aeropropulsion opportunities for the 21st century
[NASA-TM-88817] N86-31585
JET VANES
Applications of infrared thermography in convective heat transfer
[AD-A167872] N86-31589
JOINING
Interconnection between packet switching national networks and local packet radio communication networks
[FUB-24-1985] N86-31790
JOINTS (JUNCTIONS)
Preloaded space structural coupling joints
[NASA-CASE-LAR-13489-1] N86-31630
Redundancy resolution of manipulators through torque optimization
[AD-A167851] N86-31895
Leakage flow-induced vibrations for variations of a tube-in-tube slip joint
[DE86-010765] N86-31907
JORDAN FORM
Note on the factorization of a square matrix into two Hermitian or symmetric matrices
[ESA-86-97306] N86-32210
JOURNAL BEARINGS
Evaluation of a hybrid hydrostatic bearing for cryogenic turbopump application
[NASA-TM-87255] N86-31649
Determination of the wear of thermoplastic journal bearings in the initial strain
[OEFZS-4345] N86-31908
JUPITER SATELLITES
Activities of the Department of Astronomy and McDonald Observatory of the University of Texas at Austin
[NASA-CR-179667] N86-32378

K

KALMAN FILTERS
A cost/performance analysis of hybrid inertial/externally referenced positioning/orientation systems
[AD-A167665] N86-31553
Linear filter theory
[ESA-86-97391] N86-31811
Kalman filter real time tracking using microprocessors and a new language for military software
[AD-A167871] N86-32138
KAPOETA ACHONDRITE
Precompaction irradiation effects: Particles from an early active sun? N86-32351
KEELS
On wings and keels (2)
[NLR-MP-85048-U] N86-31847
KERNEL FUNCTIONS
A kernel decision support system for Canadian military satellite communications system planning
[AD-A167122] N86-31765
KINEMATICS
A closed-form solution for inverse kinematics of robot manipulator with redundancy
[AD-A167850] N86-31894
Redundancy resolution of manipulators through torque optimization
[AD-A167851] N86-31895
A diagnostic investigation of explosive maritime cyclogenesis during FGGE
[AD-A167810] N86-32059
KINETIC ENERGY
Reduction and analysis of data from experiment CAI on the IMP-8 mission
[NASA-CR-177891] N86-32381
KLYSTRONS
Design and cold testing of a high peak power X-band gyroklystron
[DE86-006898] N86-31799
KNOWLEDGE
The simulation of natural knowledge systems — artificial intelligence N86-32125
The representation of knowledge for situations and events in a dynamic world N86-32128
Machine learning in METAXA — learning model, inference N86-32131
KRYPTON ISOTOPES
The production rate of cosmogenic 21-Ne in chondrites deduced from 81-Kr measurements N86-32367

L

LAKES
Application of a geographic information system in the study of acidic deposition
[DE86-008220] N86-32000
LAMINAR BOUNDARY LAYER
Conditioned hot-wire anemometer measurements and structural analysis of a turbulent spot in a laminar boundary layer
[MEAH-63] N86-31850
LAMINAR FLOW
Interdiffusion in binary salt melting under weightlessness
[BMFT-FB-W-85-017] N86-31609
High speed viscous flow calculations about complex configurations
[NASA-TM-88237] N86-31827
LAMINATES
Fiber composite sandwich thermostructural behavior: Computational simulation
[NASA-TM-88787] N86-31663
ICAN: A versatile code for predicting composite properties
[NASA-TM-87334] N86-31664
Temperature dependent nonlinear metal matrix laminae behavior
[NASA-CR-4016] N86-31666
Development of fracture mechanics maps for composite materials, volume 1
[AD-A168002] N86-31669
Development of fracture mechanics maps for composite materials, volume 2
[AD-A168003] N86-31670
Development of fracture mechanics maps for composite materials, volume 3
[AD-A168004] N86-31671
Damage assessment by acousto-ultrasonic techniques in composites
[AD-A168097] N86-31672
Large deformation dynamic bending of composite beams
[NASA-CR-4006] N86-31921
LAND USE
Activities report in remote sensing supervision
[ESA-86-97383] N86-31970
LANDING AIDS
Portable glide slope indicator
[AD-D012240] N86-31552
LANDING GEAR
Studies for the application of a flexible weight and balance (W/B) measuring facility for commercial aircraft
[BMFT-FB-W-85-029] N86-31604
LANDING SIMULATION
Investigations in landing process of aircraft by means of the Monte-Carlo method
[ESA-TT-951] N86-31578
LANDSAT SATELLITES
Digital processing of Landsat TM images for lineament occurrence and spatial frequency in sedimentary rocks
[DE86-009634] N86-31968
LANDSAT 4
LANDSAT 4 band 6 data evaluation
[NASA-CR-177173] N86-31944

LANDSAT-4 and LANDSAT-5 multispectral scanner coherent noise characterization and removal
[NASA-TP-2595] N86-31945

LANDSAT 5
LANDSAT-4 and LANDSAT-5 multispectral scanner coherent noise characterization and removal
[NASA-TP-2595] N86-31945

LANGUAGE PROGRAMMING
Text understanding: Interestingness as a basis for the variation of the analysis depth — artificial intelligence
[BMFT-FB-ID-85-001] N86-32124

LANGUAGES
Local jargon in weather reports
[KIT-18] N86-32064

LARGE SCALE INTEGRATION
Evaluation of high temperature accelerated aging tests used on integrated circuits
[DE86-009615] N86-31801
Processing and correction of VLSI circuit images obtained with a scanning electronic microscope
[ESA-86-97297] N86-31809
Functional tests of digital integrated circuits
[ESA-86-97301] N86-31810
Top-down design of VLSI microprocessors
[ESA-86-97299] N86-32118

LARGE SPACE STRUCTURES
Preloaded space structural coupling joints
[NASA-CASE-LAR-13489-1] N86-31630
Dynamics of flexible spacecraft: An analysis of approaches towards mathematical model order reduction
[NLR-TR-85068-U] N86-31643

LASER ANEMOMETERS
Parametric study of beam refraction problems across laser anemometer windows
[NASA-TM-87350] N86-31857

LASER APPLICATIONS
Characterization of cellulose nitrate with liquid chromatography and membrane osmometry
[FOA-C-20602-D1] N86-31697
Characterization of ion implanted and laser processed wear surfaces
[AD-A167878] N86-31709
Laser induced selective electroless plating
[AD-D012223] N86-31756
Advanced optical measuring systems for measuring the properties of fluids and structures
[NASA-TM-88829] N86-31859
Raman spectrometer with microprobe capability
[AD-A167008] N86-32301
Microcrystalline growth studies in model oxide by dynamic laser-light scattering methods
[DE86-007300] N86-32310

LASER CAVITIES
Nonlinear optical interactions in semiconductors
[AD-A166182] N86-31880
Investigations of laser mirrors with different design
[DFVLR-FB-85-65] N86-31887
Setup for the determination of the reflectivity of interference coatings — laser mirrors
[DFVLR-MITT-85-18] N86-32285

LASER DOPPLER VELOCIMETERS
Quality determination of the Heat and Flow Theory Department (WS) subsonic wind tunnel and experiments using laser Doppler velocity measurement
[ESA-86-97355] N86-31603
A 3-component laser-Doppler velocimeter data acquisition and reduction system
[NASA-CR-177390] N86-31824
Laser velocimeter measurements and analysis in turbulent flows with combustion. Part 4: Two-component cold-flow measurements
[AD-A167554] N86-31834
Computer assisted measurement techniques in Laser Doppler Anemometry (LDA). Part 1: Data acquisition. Part 2: Data reduction
[ISL-CO-210/85-PT-1-PT-2] N86-31875

LASER HEATING
A single sideband suppressed carrier (SSBSC) interferometer for the measurement of dielectric properties of laser heated materials
[ISL-CO-228/85] N86-31877

LASER MICROSCOPY
Factors that affect reliability of nondestructive detection of flaws in structural ceramics
[NASA-TM-87348] N86-31912
Quantitative void characterization in structural ceramics using scanning laser acoustic microscopy
[NASA-TM-88797] N86-31913

LASER OUTPUTS
Experimental investigations of the role of laser field fluctuations in non-linear optical absorption processes
[DE86-006919] N86-31883

LASER PLASMAS
Stationary, one-dimensional models for laser-produced plasmas
[ISL-R-107/85] N86-32293

LASER SPECTROMETERS
Remote gas analysis with lasers. Analytic laboratory investigations in the 3.4 to 4.2 microns range
[BMFT-FB-W-85-020] N86-31694

LASER SPECTROSCOPY
Resonance ionization mass spectrometry for isotopic abundance measurements N86-32361

LASER WEAPONS
Space and defense — antimissile defense
[ESA-86-97272] N86-31605

LASER WELDING
Laser processing of ceramics
[DE86-011954] N86-31737

LASERS
Measurement techniques using ultrashort optical pulses
[DE86-009691] N86-32279

LATITUDE
Continentality: Its estimation and physical significance
[AD-A167111] N86-32044

LATTICES (MATHEMATICS)
On Delta Beta and the search for asymptotic scaling in lattice gauge theory
[NIKHEF-H/86-6] N86-32231

LAY-UP
Temperature dependent nonlinear metal matrix laminae behavior
[NASA-CR-4016] N86-31666

LAYOUTS
Floor planning and net assignment in layout compilation
[ESA-86-97530] N86-31818

LEAD ALLOYS
Mechanical properties testing of several 800 MeV proton irradiated BCC metals and alloys
[DE86-007372] N86-31714

LEAD TELLURIDES
Optimization of the thermoelectric figure of merit of fine-grained semiconductor materials based upon lead telluride
[AD-A167647] N86-32303

LEADERSHIP
Use of artificial intelligence and psychology in the analysis of command and control — military commanders
[STC-TM-749] N86-32095
The psychology of decision making — military commanders N86-32096

LEAKAGE
Leakage flow-induced vibrations for variations of a tube-in-tube slip joint
[DE86-010765] N86-31907

LEARNING MACHINES
Machine learning in METAXA — learning model, inference N86-32131

LEAST SQUARES METHOD
Physical significance of least mean squares criterion in nonstationary lattice predictors — voice communication
[FUB-9-1985] N86-31789
Redundancy resolution of manipulators through torque optimization
[AD-A167851] N86-31895
Application of multiple lines of position for hydrography
[AD-A167884] N86-31966
Quality control of filed subroutines. Least squares method. Development and validation of some algorithms
[CNES-CT/DTI/MS/MN/132] N86-32163
Least squares finite element simulation of transonic flows
[NASA-CR-178121] N86-32188

LEAVES
COVER Project and Earth resources research transition
[NASA-CR-177176] N86-31941
Gas exchange characteristics of leaves as indicators of the basic limitations to the rate of photosynthesis
[DE86-009632] N86-32085

LENNARD-JONES GAS
Traveling waves in a one-dimensional chain with nonharmonic reciprocity
[ESA-86-97379] N86-31782

LENSES
Fundamentals of thin lens optical systems, lectures 1, 2 and 3
[DE86-010642] N86-32281

LIBRARIES
Computing Services Software Library
[DE86-009491] N86-32340

LIFE (DURABILITY)
Evaluation of high temperature accelerated aging tests used on integrated circuits
[DE86-009615] N86-31801
Vapor Controlled Heat Pipe (VCHP) telecommunications panel. Performances evolution after four years of life testing
[SNIAS-861-440-106] N86-31822
Effect of impregnation method on cycle life of the nickel electrode
[NASA-TM-87326] N86-31980

LIFE SUPPORT SYSTEMS
Air Force technical objective document, Aerospace Medical Division, FY 1987
[AD-A167422] N86-32090
Controlled environment life support system: Growth studies with potatoes
[NASA-CR-177400] N86-32101

LIGHT BEAMS
Parametric study of beam refraction problems across laser anemometer windows
[NASA-TM-87350] N86-31857

LIGHT EMISSION
Light emission from metal-insulator-metal structures biased near breakdown voltages
[DE86-008505] N86-31802

LIGHT EMITTING DIODES
Broadband unpolarized light source
[AD-D012201] N86-32271
Optical matrix-matrix multiplier based on outer product decomposition
[AD-D012207] N86-32272

LIGHT SCATTERING
Nonlinear optical interactions in semiconductors
[AD-A166182] N86-31880
Noncontact measurement of roughness of ground and polished metal surfaces
[BMFT-FB-T-85-150] N86-31909
Light scattering from a deep metallic grating
[AD-A166319] N86-32270
Microcrystalline growth studies in model oxide by dynamic laser-light scattering methods
[DE86-007300] N86-32310

LIGHT SOURCES
Portable glide slope indicator
[AD-D012240] N86-31552

LIGHT TRANSMISSION
Infrared attenuation of thallium bromo-iodide fibers
[NASA-TM-86817] N86-32268

LIMB BRIGHTENING
Extreme limb profiles of the sun at far-infrared and submillimeter wavelengths
[NASA-TM-88251] N86-32375

LINE SPECTRA
A new way of organizing spectral line ratio fluctuations — plasma spectra
[KGI-PREPRINT-084] N86-31692
Radial velocity spectrometers. What they measure
[AD-A167986] N86-31863

LINEAR AMPLIFIERS
High power high voltage linear amplifier apparatus
[AD-D012244] N86-31796

LINEAR ARRAYS
Optical matrix-matrix multiplier based on outer product decomposition
[AD-D012207] N86-32272

LINEAR PROGRAMMING
CWI Newsletter, no. 8
[CWI-NEWSLETTER-ISSUE-8] N86-32121
The new linear programming method of Karmarkar N86-32122
Tree-structured classification via generalized discriminant analysis
[AD-A167453] N86-32134
A new result in the theory and computation of the least norm solution of a linear program
[AD-A167515] N86-32136
Error bounds for strongly convex programs and (super)linearly convergent iterative schemes for the least 2-norm solution of linear programs
[AD-A167536] N86-32137
The simple plant location problem. A plea for Balinski's conjecture
[ESA-86-97304] N86-32184
The evaluation of inner products of multivariate simplex splines
[AD-A167485] N86-32190

LINEAR SYSTEMS
A linear stability analysis of the rapid development of an extratropical cyclone
[AD-A167808] N86-32057
Optimal control for parabolic-hyperbolic system with time delay
[DE86-701709] N86-32182

Self-tuning control principles applied to bilinear systems
[IR-SC-85-2] N86-32183

LINEARITY
Mappings with closed range and finite dimensional linear spaces
[DE85-703172] N86-32238

LINGUISTICS
Local jargon in weather reports
[KIT-18] N86-32064

LININGS
Small gas turbine combustor experimental study: Compliant metal/ceramic liner and performance evaluation
[NASA-TM-87304] N86-31582

LIPSCHITZ CONDITION
Error bounds for strongly convex programs and (super)linearly convergent iterative schemes for the least 2-norm solution of linear programs
[AD-A167536] N86-32137
On the theorem of Weinstein
[AD-A167492] N86-32192

LIQUID BEARINGS
Evaluation of a hybrid hydrostatic bearing for cryogenic turbopump application
[NASA-TM-87255] N86-31649

LIQUID CHROMATOGRAPHY
Liquid chromatography analysis of ester type synthetic lubricants
[ESA-86-97811] N86-31696
Characterization of cellulose nitrate with liquid chromatography and membrane osmometry
[FOA-C-20602-D1] N86-31697

LIQUID COOLING
Test program to provide confidence in liquid oxygen cooling of hydrocarbon fueled rocket thrust chambers
[NASA-TM-88816] N86-31646

LIQUID HELIUM
Liquid helium pumps for in-orbit transfer
[NASA-TM-88239] N86-31690
The photopolarimeter of the infrared space telescope GIRL: Mechanical and electrical components for cryovacuum
[BMFT-FB-W-85-026] N86-32979

LIQUID HYDROGEN
The noncavitating performance and life of a small vane-type positive displacement pump in liquid hydrogen
[NASA-TM-87347] N86-31651

LIQUID METALS
Mechanical properties testing of several 800 MeV proton irradiated BCC metals and alloys
[DE86-007372] N86-31714

LIQUID OXYGEN
Test program to provide confidence in liquid oxygen cooling of hydrocarbon fueled rocket thrust chambers
[NASA-TM-88816] N86-31646

LIQUID PROPELLANT ROCKET ENGINES
Advantages and limitations of liquid propellant rocket engines
[ESA-86-97631] N86-31659

LIQUID-VAPOR INTERFACES
Modeling of zero gravity venting: Studies of two-phase heat transfer under reduced gravity
[NASA-CR-179662] N86-31826

LIQUIDS
Effects of wellbore liquids in propellant-based fracturing
[DE86-007832] N86-31751
A free streamline model for a rising bubble
[AD-A167535] N86-31832

LISP (PROGRAMMING LANGUAGE)
REDUCE: A computer algebra system
[CNES-CT/DTI/MS/MN/201] N86-32165

LITHIUM ALLOYS
New aluminum alloys for satellite structures
[SNIAS-861-440-111] N86-31641
Study on effects of powder and flake chemistry and morphology on the properties of Al-Cu-Mg-X-X-X powder metallurgy advanced aluminum alloys
[NASA-CR-178145] N86-31698
Overview of transport mechanisms in beta-lithium/aluminum
[DE86-010522] N86-31724

LITHIUM FLUORIDES
Estimated heats of fusion of fluoride salt mixtures suitable for thermal energy storage applications
[NASA-TM-87320] N86-31982

LOCKING
Mechanical relocker for locking bolts
[AD-D012209] N86-31891

LOGISTICS MANAGEMENT
The trade-off module: An aid to balance logistically related costs
[BDK/KBS/84-06] N86-32331

LONG DURATION SPACE FLIGHT
Evaluation of the need for a large primate research facility in space
[NASA-CR-179661] N86-32111

LONG RANGE WEATHER FORECASTING
The sensitivity of one month GCM forecasts at GFDL to zonally symmetric clouds, quasi-realistic specified clouds, and model-predicted clouds — Global Circulation Model (GCM); Geophysical Fluid Dynamics Laboratory (GFDL) N86-32040

LONG TERM EFFECTS
Composite structural materials
[NASA-CR-179659] N86-31665

LORAN C
Loran C 1984 spring-summer stability
[AD-A167867] N86-31555
The results of hydrological measurements in the southern Adriatic, the west coast of Sicily and the Vatican Cape, preliminary report
[PREPRINT-502] N86-31975

LOUDSPEAKERS
Interferometric holographic cinematography
[ISL-CO-219/85] N86-31872

LOUISIANA
Utilizing remote sensing of Thematic Mapper data to improve our understanding of estuarine processes and their influence on the productivity of estuarine-dependent fisheries
[NASA-CR-177177] N86-31943

LOW FREQUENCIES
Interferometric holographic cinematography
[ISL-CO-219/85] N86-31872

LOW PASS FILTERS
LANDSAT-4 and LANDSAT-5 multispectral scanner coherent noise characterization and removal
[NASA-TP-2595] N86-31945

LOW SPEED STABILITY
Low-speed aerodynamic characteristics of a 1/8-scale X-29A airplane model at high angles of attack and sideslip
[NASA-TM-87722] N86-31532

LOW TEMPERATURE TESTS
The photopolarimeter of the infrared space telescope GIRL: Mechanical and electrical components for cryovacuum
[BMFT-FB-W-85-026] N86-32379

LOW THRUST
Start solution for interplanetary low thrust trajectory optimization and model refinement, volume 1
[ESA-CR(P)-2175-VOL-1] N86-31612
Start solution for interplanetary low thrust trajectory optimisation and model refinement. Volume 2: User's guide to the software for low thrust orbit optimization for interplanetary missions using a linear model
[ESA-CR(P)-2175-VOL-2] N86-31613
Start solution for interplanetary low thrust trajectory optimization and model refinement. Volume 3: Low thrust orbit optimization for interplanetary missions using a Pontryagin/Lambert approach
[ESA-CR(P)-2175-VOL-3] N86-31614

LUBRICANTS
Liquid chromatography analysis of ester type synthetic lubricants
[ESA-86-97811] N86-31696

LUBRICATING OILS
Lubrication handbook for the space industry. Part A: Solid lubricants. Part B: Liquid lubricants
[NASA-TM-86556] N86-31730

LUMINESCENCE
Chinese Journal of Lasers (selected articles)
[AD-A167846] N86-31862

LUTETIUM COMPOUNDS
Semiconductor/solid electrolyte junctions for optical information storage. Solid-state electrochromic cell using lutecium diphthalocyanine
[AD-A167869] N86-32307

LYMPHOCYTES
Application of new technologies to radiation bioquantimetry in mammalian systems
[AD-A168176] N86-31865

M

MAGNETIC BEARINGS
Magnetic bearings: An adaptive solution to motion-control problems
[DE86-010615] N86-31905
Semiactive magnetic bearings for space application
[SNIAS-861-422-120] N86-31910

MAGNETIC FIELDS
Electromagnetic railgun and its applications
[DE86-009487] N86-31620
Radar cross-section of damped cylinders and anisotropic cylinders
[AD-A167773] N86-31769

MAGNETIC FLUX
Definition and empirical structure of the range of stellar chromospheres-coronae across the H-R diagram: Cool stars
[NASA-CR-176863] N86-32377

MAGNETIC INDUCTION
Rail inductance calculations for some simple current distributions
[AD-A167915] N86-31619
Acceleration of ions and electrons by wave-particle interactions
[AD-A167631] N86-32258

MAGNETIC MEASUREMENT
Magnetic properties in the paramagnetic area of two ferromagnetic superconductors
[ESA-86-97377] N86-32317

MAGNETIC PERMEABILITY
Magnetic properties in the paramagnetic area of two ferromagnetic superconductors
[ESA-86-97377] N86-32317
Dynamic susceptibility on two first-order phase transformations
[ESA-86-97381] N86-32319

MAGNETIC RECORDING
A 32-bit microprocessor based solid state data recorder for space based applications
[AD-A167887] N86-32116

MAGNETIC SIGNALS
Effect of crystallographical and geometrical changes of a ferrite head on magnetic signals during the sliding process with magnetic tape
[NASA-TM-87277] N86-31728

MAGNETIC SUSPENSION
Magnetic bearings: An adaptive solution to motion-control problems
[DE86-010615] N86-31905

MAGNETIC TAPES
Effect of crystallographical and geometrical changes of a ferrite head on magnetic signals during the sliding process with magnetic tape
[NASA-TM-87277] N86-31728

MAGNETO-OPTICS
The development of a magnetooptic current measurement system for high, pulsed currents — plasma currents
[REPT-85-161] N86-32294

MAGNETOHYDRODYNAMIC GENERATORS
A new model for the relation between conductivity and current in an MHD generator
[EG/84/373] N86-31811

MAGNETOHYDRODYNAMICS
Numerics for the simulation of electromagnetic-field propagation in nonionized and plasma media
[DE86-009798] N86-31776

MAGNETOMETERS
Problems of ARCADE-3 satellite attitude determination
[CNES-CT/DTI/MS/CD/122] N86-31615

MAGNETOSPHERE
Hostile energetic particle radiation environments in Earth's outer magnetosphere
[DE86-008752] N86-32018

MAGNETOSPHERIC ELECTRON DENSITY
The SRI Ionospheric Structure and Dynamics Program, 1985 results
[AD-A168115] N86-32015
Sounding rocket program Magnetosphere payload CAESAR. Report on systems development, integration, testing and flight
[BMFT-FB-W-85-023] N86-32023

MAGNETOSPHERIC INSTABILITY
The SRI Ionospheric Structure and Dynamics Program, 1985 results
[AD-A168115] N86-32015

MAINTENANCE
Sensor-driven, fault-tolerant control of a maintenance robot
[DE86-002118] N86-31901
Remote maintenance robot system for a pulsed nuclear reactor
[DE86-000206] N86-32178
Due-date reliability in a repair shop: implications for organizational and work design
[THE/BDK/KBS/84-14] N86-32333
Structuring the production control problem in a repair shop
[THE/BDK/KBS/84-16] N86-32334

MAN MACHINE SYSTEMS
A feasibility study for the use of electronic flight strips in Air Traffic Control (ATC) controller workstations
[ESA-TT-928] N86-31558
Aerial combat
[ESA-86-97271] N86-31561
Control theoretic analysis of human operator mediated rendezvous and docking
[NLR-MP-85020-U] N86-32106

Control loops with human operators in space operations. Part 1: Human engineering analysis, synthesis and evaluation techniques
[NLR-TR-84116-L-PT-1] N86-32107
Control loops with human operators in space operations. Part 3: Rendezvous and docking operations and model analysis of performance with human-in-the-loop
[NLR-TR-84116-L-PT-3] N86-32108
Control loops with human operators in space operations. Part 4: Research requirements for human-in-the-loop space teleoperator development
[NLR-TR-84116-L-PT-4] N86-32109
Control loops with human operators in space operations. Part 5: Executive summary
[NLR-TR-84116-L-PT-5] N86-32110
The representation of knowledge for situations and events in a dynamic world N86-32128
Aiding computer application programmers and users with the tools of the visual interface
[AD-A167886] N86-32139

MANAGEMENT INFORMATION SYSTEMS
Introduction to the project design of a user's interface for graphic-alphanumerical data banks N86-31955
Methodology for Generating Efficiency and Effectiveness Measures (MGEEM): A guide for commanders, managers and supervisors
[AD-A167503] N86-32325

MANAGEMENT METHODS
Production and inventory control with the base stock system
[EUT/BDK/12] N86-32328

MANAGEMENT PLANNING
A kernel decision support system for Canadian military satellite communications system planning
[AD-A167122] N86-31765
Methodology for Generating Efficiency and Effectiveness Measures (MGEEM): A guide for commanders, managers and supervisors
[AD-A167503] N86-32325

MANEUVERABILITY
Development of flight control systems for maneuverable missile weapon systems. Example of operation organization
[MBB-UA-929/85] N86-31622

MANIFOLDS
One-parameter families of optimization problems: Equality constraints, 2
[MEMO-420] N86-32204

MANIPULATORS
A closed-form solution for inverse kinematics of robot manipulator with redundancy
[AD-A167850] N86-31894
Redundancy resolution of manipulators through torque optimization
[AD-A167851] N86-31895

MANNED ORBITAL RESEARCH LABORATORIES
The use of manned space flight
[ESA-86-97412] N86-31608

MANUALS
User's manual for the Falcon system --- Falcon research aircraft
[ESA-TT-936] N86-31579

MANUFACTURING
Modeling directional solidification furnaces
[NASA-CR-177148] N86-31617

MAPPING
Integration of the topography in teledetection image data processing
[ESA-86-97652] N86-31972
Mappings with closed range and finite dimensional linear spaces
[DE85-703172] N86-32238

MAPS
CAPIR/DEM: A collection system for geographically based digital elevation data
[AD-A167471] N86-31963

MARANGONI CONVECTION
The behavior of nonrotational striations in silicon
[BMFT-FB-W-85-014] N86-32316

MARINE METEOROLOGY
On the evolution of precipitation associated with a wintertime east coast cyclone: A GALE preliminary study
[AD-A166375] N86-32042
A diagnostic investigation of explosive maritime cyclogenesis during FGGE
[AD-A167810] N86-32059

MARKET RESEARCH
Semimanufactured products made of copper and copper alloys: An analysis of production and sale in a world perspective
[EUT/BDK/15] N86-31758

MARKETING
An analysis of the defense spacecraft market
[AD-A167802] N86-32326

MARKOV CHAINS
Chains with infinite connections: Uniqueness and Markov representation
[CWI-MS-R8509] N86-32230
An interative approximation method for the calculation of the balance distribution for a finite Markov chain
[ESA-86-97303] N86-32241

MARKOV PROCESSES
Rate distortion characteristics of two adaptive data compression algorithms
[NLR-MP-85024-U] N86-32150
Upper bounds on Poisson tail probabilities
[AD-A167531] N86-32224
Monotonically improving limit-optimal strategies in finite state decision processes
[MEMO-COSOR-84-15] N86-32233

MARSHLANDS
Utilizing remote sensing of Thematic Mapper data to improve our understanding of estuarine processes and their influence on the productivity of estuarine-dependent fisheries
[NASA-CR-177177] N86-31943

MARTENSITIC STAINLESS STEELS
Insights into the fracture toughness of martensitic stainless steels using stereoscopic fractographic measurements
[DE86-009415] N86-31719

MASKING
Selectively etching microstructures in a glow discharge plasma
[AD-D012206] N86-31794

MASKS
Apparatus and method for aligning a mask and wafer in the fabrication of integrated circuits
[AD-D012208] N86-31795

MASS
Some features of SUSY breaking in N=2 supergravity
[DE85-703196] N86-32321
Scheme to unify gravity and electro-weak interactions
[DE86-701921] N86-32322

MASS SPECTROMETERS
High statistics inclusive phi meson production at SPS energies
[NIKHEF-H/86-1] N86-32253

MASS SPECTROSCOPY
Determination of CA-41, I-129 and OS-187 in the Rochester tandem accelerator and some applications of these isotopes N86-32352
Radionuclide measurements by accelerator mass spectrometry at Arizona N86-32356
Resonance ionization mass spectrometry for isotopic abundance measurements N86-32361

MASS TRANSFER
Overview of transport mechanisms in beta-lithium/aluminum
[DE86-010522] N86-31724

MATERIALS HANDLING
SNLL materials testing compression facility
[DE86-009984] N86-31928

MATHEMATICAL LOGIC
Functional temporal calculus versus temporal logic: An engineering approach
[REPT-59] N86-32217
Foundations of O-Theory 1: The intersection rule
[DE86-008565] N86-32226

MATHEMATICAL MODELS
Comparison of analytical and experimental performance of a wind-tunnel diffuser section
[NASA-TM-88795] N86-31537
Application of an inviscid multivortex model to the calculation of the vortex flow behind an airfoil profile with spoiler
[ISL-R-133/84] N86-31545
Thematic classification of analytic models for orbit prediction, volume 1
[CNES-CT/DTI/MS/MN/240-VOL-1] N86-31616
A mathematical approach for evaluating nickel-hydrogen cells
[NASA-TM-88803] N86-31680
Propagation of long, high-power microwave pulses through the air
[DE86-009619] N86-31771
Physical significance of least mean squares criterion in nonstationary lattice predictors --- voice communication
[FUB-9-1985] N86-31789
A new model for the relation between conductivity and current in an MHD generator
[EG/84/373] N86-31814
A free streamline model for a rising bubble
[AD-A167535] N86-31832
Solitary and periodic waves in swirling flow
[AD-A167538] N86-31833
Turbulence modeling for incompressible flows: A report on the Euromech 180 Colloquium
[KU-SFB-210/T/22] N86-31854
Integrable systems in the description of waves in straits and channels of variable width and depth --- solitary waves
[PREPRINT-493] N86-31855
Investigation of ultrasonic methods for residual stress measurement
[DE86-009614] N86-31927
Automatic interpolation of isolines from an irregular waterline digital terrain model (DGM) through triangulation network N86-31952
Design considerations for advanced battery concepts
[NASA-TM-87319] N86-31981
Rotor aerodynamics of horizontal axis wind turbines. Summary of lectures and discussions. Presentation of results of calculation methods
[THD-IW-R505] N86-31994
Space systems requirements definition N86-32006
Measures of measurement adequacy N86-32008
Intraplate deformation due to continental collisions: A numerical study of deformation in a thin viscous sheet
[NASA-TM-88235] N86-32012
Performance modelling of large-grained parallelism
[DE86-009664] N86-32171
Zero models and pole models for multivariable systems
[DE86-009442] N86-32181
Methods for the detection and estimation of multiphase regression models
[ESA-86-97282] N86-32227
Fundamentals of thin lens optical systems, lectures 1, 2 and 3
[DE86-010642] N86-32281
Stationary, one-dimensional models for laser-produced plasmas
[ISL-R-107/85] N86-32293
Models of two queues: A few new views
[CWI-OS-R8603] N86-32297
Development of models for the simulation of the temperature behavior of MOSFETS in analog and digital circuits in the temperature range between minus 55 deg C to plus 150 deg C
[BMFT-FB-T-85-167] N86-32314
The trade-off module: An aid to balance logistically related costs
[BDK/KBS/84-06] N86-32331

MATRICES (MATHEMATICS)
Zero and negative masses in finite element vibration and transient analysis
[AD-A167489] N86-31922
Reproduction of topographic map 1:200000 in digital raster mode N86-31954
Three-dimensional views of cartograms in digital raster mode N86-31961
Two algorithms for the construction of greatest right divisors of a polynomial matrix
[ESA-86-97302] N86-32186
Polynomial matrices and feedback
[MEMO-COSOR-84-01] N86-32211
Evaluation of some Fibonacci and Lucas series via certain functions of the Q matrix
[FUB-23-1985] N86-32219
Optical matrix-matrix multiplier based on outer product decomposition
[AD-D012207] N86-32272

MATRIX THEORY
Evaluation of some Fibonacci and Lucas series via certain functions of the Q matrix
[FUB-23-1985] N86-32219

MAXWELL EQUATION
Numerics for the simulation of electromagnetic-field propagation in nonionized and plasma media
[DE86-009798] N86-31776

MEASURING INSTRUMENTS
Current status in development of averaging laser strainometer and testing system
[DE86-006727] N86-31882
Measures of measurement adequacy N86-32008
Subsystem fact sheets for NASA CO2 Project, revision 3 N86-32010
A portable subject controlled night vision adaptometer
[AD-A167848] N86-32274

MECHANICAL DEVICES
On the theorem of Weinstein
[AD-A167492] N86-32192

MECHANICAL PROPERTIES
ICAN: A versatile code for predicting composite properties
[NASA-TM-87334] N86-31664
Mechanical property development in Hot Isostatic Pressed (HIP) low alloy steel powder
[AD-A168666] N86-31703
Mechanical properties testing of several 800 MeV proton irradiated BCC metals and alloys
[DE86-007372] N86-31714

Lubrication handbook for the space industry. Part A: Solid lubricants. Part B: Liquid lubricants
[NASA-TM-86556] N86-31730
Novel macromolecular structures and composites
[AD-A166243] N86-31731
Design of adhesive bonded structures for spacecraft
[SNIAS-861-430-114] N86-31741
Plastic Film Heat Exchanger Development Project
[DE86-009258] N86-31836

MEDICAL SERVICES
Activities report on physical and psychological health of flying personnel
[ESA-86-97385] N86-32093
Activities report on physical and psychological health of flying personnel
[ESA-86-97386] N86-32094

MEDITERRANEAN SEA
Preliminary report on the hydrological measurements carried out in the southern Tyrrhenian sea and in the Messina strait
[PREPRINT-489] N86-32081

MELTING
Interdiffusion in binary salt melting under weightlessness
[BMFT-FB-W-85-017] N86-31609
Modeling directional solidification furnaces
[NASA-CR-177148] N86-31617
Laser processing of ceramics
[DE86-011954] N86-31737

MEMORY (COMPUTERS)
A 32-bit microprocessor based solid state data recorder for space based applications
[AD-A167887] N86-32116
Sparse Cholesky factorization on a local-memory multiprocessor
[DE86-010082] N86-32173
Database capacity planning and management
[DE86-009076] N86-32338

MESONS
High statistics inclusive phi meson production at SPS energies
[NIKHEF-H/86-1] N86-32253
Inclusive phi meson production, the parton fusion model and strange quark structure functions
[NIKHEF-H/86-3] N86-32254
Hadronic phi production and the Lund model for low p sub T interactions
[NIKHEF-H/86-4] N86-32255

MESSAGE PROCESSING
The cooperation test: A syntax-directed verification method --- distributed message passing
[REPT-62] N86-32151

METABOLISM
Gas exchange characteristics of leaves as indicators of the basic limitations to the rate of photosynthesis
[DE86-009632] N86-32085

METAL COATINGS
Process for producing carbide coatings
[AD-D012202] N86-31667
The low cycle fatigue behavior of a plasma-sprayed coating material
[NASA-TM-87318] N86-31699

METAL FATIGUE
Study on effects of powder and flake chemistry and morphology on the properties of Al-Cu-Mg-X-X-X powder metallurgy advanced aluminum alloys
[NASA-CR-178145] N86-31696
The low cycle fatigue behavior of a plasma-sprayed coating material
[NASA-TM-87318] N86-31699
In-vacuum cyclic fatigue behavior of Vanstar-7 at elevated temperatures
[DE86-007322] N86-31713
Surface fatigue and failure characteristics of hot forged powder metal AISI 4620, AISI 4640, and machined AISI 4340 steel spur gears
[NASA-TM-87330] N86-31889

METAL FILMS
Experimental study of electronic states at metal-dielectric interfaces
[AD-A167724] N86-32306

METAL MATRIX COMPOSITES
Temperature dependent nonlinear metal matrix laminae behavior
[NASA-CR-4016] N86-31666
Damping characteristics of metal matrix composites
[AD-A167792] N86-31668

METAL OXIDE SEMICONDUCTORS
An NMOS evaluation circuit
[REPT-IR-01] N86-31820

METAL OXIDES
Slip casting and extruding shapes of rhenium with metal oxide additives. 1: Feasibility demonstration
[NASA-CR-174970] N86-31648

METAL PLATES
An investigation into the tripping behavior of longitudinally T-stiffened rectangular flat plates loaded statically and impulsively
[AD-A167718] N86-31923

METAL POWDER
Mechanical property development in Hot Isostatic Pressed (HIP) low alloy steel powder
[AD-A166666] N86-31703
Advanced processing and properties of high performance alloys
[AD-A167404] N86-31706

METAL PROPELLANTS
An experimental investigation of various metallic/polymer fuels in a two-dimensional solid fuel ramjet
[AD-A167889] N86-31747

METAL SURFACES
Noncontact measurement of roughness of ground and polished metal surfaces
[BMFT-FB-T-85-150] N86-31909

METAL WORKING
Slip casting and extruding shapes of rhenium with metal oxide additives. 1: Feasibility demonstration
[NASA-CR-174970] N86-31648

METALS
To what extent are grain boundaries in metals ordered structures
[DE86-007004] N86-31710
Investigation of ultrasonic methods for residual stress measurement
[DE86-009614] N86-31927

METASTABLE STATE
Evidence for the formation of a metastable crystalline phase during crystallization of Zr-Ni metallic glasses of approximately 57 to 63.2 at. % Zr
[DE86-005031] N86-31734

METEORITE CRATERS
Determination of CA-41, I-129 and OS-187 in the Rochester tandem accelerator and some applications of these isotopes N86-32352

METEORITES
Workshop on Cosmogenic Nuclides
[NASA-CR-176886] N86-32348
Nuclide production in (very) small meteorites N86-32349
Evolution of gas-rich meteorites: Clues from cosmogenic nuclides N86-32354
Live 129I-129Xe dating N86-32359
The 10Be contents of SNC meteorites N86-32365

METEORITIC COMPOSITION
Precompaction irradiation effects: Particles from an early active sun? N86-32351
Evolution of gas-rich meteorites: Clues from cosmogenic nuclides N86-32354
The exposure history of Jilin and production rates of cosmogenic nuclides N86-32355
Radionuclide measurements by accelerator mass spectrometry at Arizona N86-32356
Compilation of cosmogenic radionuclides in meteorites N86-32362
Redetermination of parameters for semi-empirical model for spallogenic He and Ne in chondrites N86-32363
The 10Be contents of SNC meteorites N86-32365
Studies on cosmogenic nuclides in meteorites with regard to an application as potential depth indicators N86-32366
The production rate of cosmogenic 21-Ne in chondrites deduced from 81-Kr measurements N86-32367
Neutron capture production rates of cosmogenic 60Co, 59Ni and 36Cl in stony meteorites N86-32369
Cosmogenic rare gases and 10-Be in a cross section of Knyahinya N86-32371
Study by synchrotron radiation of the superstructure of tetrataenite from the Saint-Severin meteorite
[DE86-701971] N86-32384

METEORITIC MICROSTRUCTURES
Study by synchrotron radiation of the superstructure of tetrataenite from the Saint-Severin meteorite
[DE86-701971] N86-32384

METEOROLOGICAL FLIGHT
User's manual for the Falcon system --- Falcon research aircraft
[ESA-TT-936] N86-31579

METEOROLOGICAL PARAMETERS
Space systems requirements definition N86-32006
Secular climatic patterns of the North Central Great Plains and the continental US
[AD-A166743] N86-32043
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: George AFB, California
[AD-A167653] N86-32050
Misawa AB, Japan limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167655] N86-32052
Camp Page, South Korea limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167656] N86-32053
Kwang Ju AB, South Korea limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167659] N86-32055
Patrick AFB, Florida limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167660] N86-32056
Error control of meteorological measurements --- automatic control
[KNMI-TR-76] N86-32065
Monsoons
[WMO-613] N86-32066

METEOROLOGY
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: George AFB, California
[AD-A167653] N86-32050
National Climate Program: Early achievements and future directions
[NASA-CR-177153] N86-32073

METEOSAT SATELLITE
Second generation meteosat: Infrared atmospheric sounder design
[CNES-T-85/CT/DRT/TIT/IO-046] N86-32283
Second generation Meteosat imager design
[CNES-T-85/052-DRT/TIT/IO] N86-32284

METHOD OF MOMENTS
Iterative refinement of the method of moments
[AD-A167537] N86-32197

METRIC SPACE
Transition systems, metric spaces and ready sets in the semantics of uniform concurrency
[CWI-CS-R8601] N86-32159

METROLOGY
Current status in development of averaging laser strainometer and testing system
[DE86-006727] N86-31882

MICROCOMPUTERS
Microcomputer optimization of feed excitation voltages to obtain desired antenna radiation patterns
[AD-A167560] N86-31768

MICROCRYSTALS
Microcrystalline growth studies in model oxide by dynamic laser-light scattering methods
[DE86-007300] N86-32310

MICROELECTRONICS
Selectively etching microstructures in a glow discharge plasma
[AD-D012206] N86-31794

MICROMECHANICS
ICAN: A versatile code for predicting composite properties
[NASA-TM-87334] N86-31664

MICROMETEOROLOGY
Design wind analysis
[AD-A167576] N86-32045

MICROPROCESSORS
Evolving directions of PC applications in electromagnetics analysis and design
[DE86-009695] N86-31774
The functional test of complex integrated circuits --- very large scale integration
[ESA-86-97289] N86-31807
Top-down design of VLSI microprocessors
[ESA-86-97299] N86-32118
Kalman filter real time tracking using microprocessors and a new language for military software
[AD-A167871] N86-32138
Performance modelling of large-grained parallelism
[DE86-009664] N86-32171
Practical paradigm for parallel processing problems
[DE86-009274] N86-32172
Elementary functions computing methodology
[ESA-86-97298] N86-32209

MICROROCKET ENGINES
The highly underexpanded exhaust plume from nozzles with boundary layer
[ESA-TT-929] N86-31658

MICROSCOPY
Microscopic image analysis of slow crack growth in vitreous materials
[DE86-009850] N86-31931

MICROSTRUCTURE
Mechanics research directions in composites and manufacturing technologies
[DE86-008787] N86-31673
Study on effects of powder and flake chemistry and morphology on the properties of Al-Cu-Mg-X-X-X powder metallurgy advanced aluminum alloys
[NASA-CR-178145] N86-31696
Microstructure-property relationships in directionally solidified single crystal nickel-base superalloys
[NASA-TM-88788] N86-31700

The continuing battle against defects in nickel-base superalloys
[NASA-TM-87343] N86-31701
Radiation-induced segregation and precipitation in molybdenum-rhenium alloys
[DE86-007521] N86-31715
Ion damage microstructures in a Fe-10Cr-6Mo-0.5Nb
[DE86-008500] N86-31717
Effect of helium on swelling and microstructural evolution in ion-irradiated V-15Cr-5Ti alloy
[DE86-010510] N86-31723
Correlation between microstructure and forging conditions of Combined Die-Forged (CDF) Ti-6Al-4V powder
[ESA-TT-952] N86-31725
Selectively etching microstructures in a glow discharge plasma
[AD-D012206] N86-31794
Mechanical interactions of rough surfaces
[DE86-009161] N86-31898
An improved model of thin film growth
[AD-A167147] N86-32302

MICROWAVE IMAGERY
NORDA Arctic data collection, processing and interpretation capabilities
[AD-A167797] N86-31965

MICROWAVE LANDING SYSTEMS
Evaluation of alternatives for an Army precision landing system
[AD-A167780] N86-31554

MICROWAVE OSCILLATORS
Microwave undulator
[DE86-009910] N86-31773

MICROWAVE RADIOMETERS
Satellite-Earth range measurements. Part 1: Correction of the excess path length due to atmospheric water vapor by ground based microwave radiometry
[CTH-RR-147-PT-1] N86-32022

MICROWAVE SENSORS
NORDA Arctic data collection, processing and interpretation capabilities
[AD-A167797] N86-31965

MICROWAVE TRANSMISSION
A single sideband suppressed carrier (SSBSC) interferometer for the measurement of dielectric properties of laser heated materials
[ISL-CO-228/85] N86-31877

MICROWAVES
Wide spectrum microwave pulse measurement
[DE86-006662] N86-31770
Propagation of long, high-power microwave pulses through the air
[DE86-009619] N86-31771

MILITARY AIR FACILITIES
An analysis of the Centaur Ground Processing System at the Kennedy Space Center/Cape Canaveral AFS
[AD-A167123] N86-31618
Misawa AB, Japan limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167655] N86-32052
Kwang Ju AB, South Korea limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167659] N86-32055
Patrick AFB, Florida limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167660] N86-32056

MILITARY AIRCRAFT
Flight data recorders (FDR) and/or cockpit Voice Recorders (CVR) in the Lockheed Orion P-3C Update 2
[ESA-86-97395] N86-31581

MILITARY HELICOPTERS
Full-scale crash test (T-41) of the YAH-63 attack helicopter
[AD-A167813] N86-31550

MILITARY OPERATIONS
STS (Space Transportation System) experiment support structure needs assessment
[AD-A167859] N86-31624
A kernel decision support system for Canadian military satellite communications system planning
[AD-A167122] N86-31765

MILITARY SPACECRAFT
Space and defense — antimissile defense
[ESA-86-97272] N86-31605
Feasibility study of surveillance avoidance during the deployment of Soviet payloads of military interest into orbit from a Soviet shuttle
[AD-A167661] N86-31607

MILITARY TECHNOLOGY
Kalman filter real time tracking using microprocessors and a new language for military software
[AD-A167871] N86-32138

MINIATURIZATION
Pyrotechnic valves and miniature devices
[SNIAS-861-422-112] N86-31754

MINICOMPUTERS
The RISC (Reduced Instruction Set Computer) architecture and computer performance evaluation
[AD-A167873] N86-32115

MINIMAX TECHNIQUE
On the theorem of Weinstein
[AD-A167492] N86-32192
The Hamilton-Jacobi-Bellman equation with a gradient constraint
[AD-A167532] N86-32237

MINKOWSKI SPACE
Some features of SUSY breaking in N=2 supergravity
[DE85-703198] N86-32321

MINNESOTA
COVER Project and Earth resources research transition
[NASA-CR-177176] N86-31941

MIRRORS
Analysis of a mirror deck landing aid
[AD-A167988] N86-31556
Investigations of laser mirrors with different design
[DFVLR-FB-85-65] N86-31887
Extreme ultraviolet multilayer reflectors
[DE86-010194] N86-32280
Setup for the determination of the reflectivity of interference coatings — laser mirrors
[DFVLR-MITT-85-18] N86-32285

MISSILE COMPONENTS
Applications of infrared thermography in convective heat transfer
[AD-A167872] N86-31599

MISSILES
Development of flight control systems for maneuverable missile weapon systems. Example of operation organization
[MBB-UA-929/85] N86-31622

MISSION ADAPTIVE WINGS
Mission adaptive wing soars at NASA Facility
[P86-10182] N86-31563

MIST
Controlled environment life support system: Growth studies with potatoes
[NASA-CR-177400] N86-32101

MIXING
Coherent structures in turbulent shear layers and relation to mixing reaction and combustion
[AD-A167042] N86-31681

MIXING LENGTH FLOW THEORY
Mixing length and turbulent diffusion coefficient in atmospheric simulation models
[REPT-25] N86-32024

MOBILE COMMUNICATION SYSTEMS
Adaptive control of the ALOHA protocol in a mobile radio cellular system
[ENST-85E013] N86-31785

MODAL RESPONSE
Flight control synthesis for flexible aircraft using Eigenspace assignment
[NASA-CR-178164] N86-31590

MODEMS
A 2 Mbit/sec modem at 70 MHz based on the Tamed Frequency Modulation (TFM) principle
[ESA-86-97537] N86-31815

MODES (STANDING WAVES)
Direct measurement of the nonlinear phase shift between the orthogonally polarized states of a single-mode fiber
[FUB-36-1984] N86-32267

MODULATORS
Stability considerations in the design of sigma-delta modulators — sampled data control systems
[S-AND-C.85-1] N86-32117

MODULES
Spacebus: Multimission communication satellites
[SNIAS-861-422-119] N86-31637

MODULUS OF ELASTICITY
Novel macromolecular structures and composites
[AD-A166243] N86-31731

MOISTURE CONTENT
Moisture measurement in solids
[BMFT-FB-T-85-174] N86-31693
Moisture determinations in and under vegetation canopies
[FEL-1965-52] N86-31973

MOISTURE METERS
Moisture measurement in solids
[BMFT-FB-T-85-174] N86-31693
Development of humidity sensors in tantalum thin film technology
[BMFT-FB-T-85-175] N86-32315

MOLDS
Autoclave moulding of carbon fibre reinforced plastics
[RAE-TR-85039] N86-31662

MOLECULAR ABSORPTION
An improved model of thin film growth
[AD-A167147] N86-32302

MOLECULAR BEAMS
Aromatics oxidation and soot formation in flames
[DE86-010585] N86-31690

MOLECULAR CHAINS
Traveling waves in a one-dimensional chain with nonharmonic reciprocity
[ESA-86-97379] N86-31782

MOLECULAR CLOUDS
Boundary conditions for the paleoenvironment: Chemical and physical processes in the pre-solar nebula
[NASA-CR-176870] N86-32374

MOLECULAR INTERACTIONS
Atmospheric molecules
[AERONOMICA-ACTA-F-38-1985] N86-32004

MOLECULAR ROTATION
Model for the steady-state rotational stimulated Raman gain coefficients in the atmosphere
[AD-A167469] N86-32013

MOLECULAR STRUCTURE
Raman spectra of rings in silicate material
[DE86-009629] N86-31685
Model for the steady-state rotational stimulated Raman gain coefficients in the atmosphere
[AD-A167469] N86-32013

MOLECULAR WEIGHT
Molecular weight distributions of Durham polyacetylene precursor polymers
[ESA-86-97254] N86-31738

MOLECULES
Novel macromolecular structures and composites
[AD-A166243] N86-31731

MOLTEN SALTS
Dimensionally stable electrodes for used salt electrolysis (substitute for petroleum coke)
[BMFT-FB-T-85-186] N86-31812

MOLYBDENUM ALLOYS
Radiation-induced segregation and precipitation in molybdenum-rhenium alloys
[DE86-007521] N86-31715
Ion damage microstructures in a Fe-10Cr-6Mo-0.5Nb
[DE86-008500] N86-31717

MOLYBDENUM DISULFIDES
Use of MoS2 applied by Physical Vapor Deposition (PVD) on space mechanisms
[SNIAS-861-440-101] N86-31639

MONITORS
Development of a takeoff performance monitoring system
[NASA-TM-89001] N86-31591
Optical distance measuring instrument
[NASA-CASE-GSC-12761-1] N86-32266

MONKEYS
Evaluation of the need for a large primate research facility in space
[NASA-CR-179661] N86-32111

MONOMERS
Process for preparing highly optically transparent/colorless aromatic polyimide film
[NASA-CASE-LAR-13351-1] N86-31727

MONOPOLES
Painleve test for the complete integrability of Bogomolnyi's monopole equation
[DE85-703173] N86-32199

MONSOONS
Monsoons
[WMO-513] N86-32066

MONTE CARLO METHOD
An analytical methodology for predicting repair time distributions of advanced technology aircraft
[AD-A167149] N86-31529
Investigations in landing process of aircraft by means of the Monte-Carlo method
[ESA-TT-951] N86-31578
Diffusion of gases in porous solids: Simulation and measurement
[DE86-005380] N86-31837

MOTION PICTURES
In-situ solid-propellant burn-rate measurements using flash cineradiography
[AD-A167637] N86-31683

MOTORS
Dome restraint assembly for rocket motors
[AD-D012278] N86-31656

MOUNTING
Airfoil flutter model suspension system
[NASA-CASE-LAR-13522-1] N86-31594

MULTIBEAM ANTENNAS
Spacecraft multibeam antenna system for 30/20 GHz
[NASA-CR-174654] N86-31760

MULTIPLE ACCESS
A kernel decision support system for Canadian military satellite communications system planning
[AD-A167122] N86-31765

MULTIPLICATION
Optimal implementation of differentiation arithmetic
[AD-A167494] N86-32193

MULTIPLIERS
Optical matrix-matrix multiplier based on outer product decomposition
[AD-D012207] N86-32272
MULTIPROCESSING (COMPUTERS)
Sparse Cholesky factorization on a local-memory multiprocessor
[DE86-010082] N86-32173
MULTISPECTRAL BAND SCANNERS
LANDSAT 4 band 6 data evaluation
[NASA-CR-177173] N86-31944
LANDSAT-4 and LANDSAT-5 multispectral scanner coherent noise characterization and removal
[NASA-TP-2595] N86-31945
Calibration of multispectral scanner (MSS) satellite data to evaluate change in the reflection of coniferous stocks
[ESA-TT-936] N86-31971
MULTIVARIATE STATISTICAL ANALYSIS
Zero models and pole models for multivariable systems
[DE86-009442] N86-32181
The evaluation of inner products of multivariate simplex splines
[AD-A167485] N86-32190
The computational cost of simplex spline functions
[AD-A167513] N86-32195
MURCHISON METEORITE
Precompaction irradiation effects: Particles from an early active sun? N86-32351

N

N-TYPE SEMICONDUCTORS
Characterization of illuminated semiconductor/solid-electrolyte junctions. Semiconductor redox polymer detector junctions
[AD-A167665] N86-32304
NACELLES
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 2: Aircraft engine nacelle fire test programs. Part 1: Fire detection, fire extinguishment and surface ignition studies
[AD-A167356] N86-31570
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 1: Executive summary
[AD-A167443] N86-31571
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 2: Aircraft engine nacelle fire test programs. Part 2: Small scale testing of dry chemical fire extinguishants
[AD-A167444] N86-31572
NASA PROGRAMS
NASA's Aircraft Icing Analysis Program
[NASA-TM-88791] N86-31546
Evaluation of the need for a large primate research facility in space
[NASA-CR-179661] N86-32111
NATURAL SATELLITES
A sensitive radar search for small natural satellites of the Earth
[AD-A167777] N86-32387
NAVIER-STOKES EQUATION
Theoretical and experimental investigation of vortex breakdown
[NASA-CR-176853] N86-31530
Calculation of separated laminar supersonic flows over blunt bodies of revolution at zero angle of attack
[ESA-TT-953] N86-31546
Reentry body three-dimensional flow computation. (Euler and parabolized Navier-Stokes)
[SNIAS-861-422-107] N86-31845
NAVIGATION AIDS
Simulation evaluation of display/FLIR concepts for low-altitude, terrain-following helicopter operations
[NASA-TM-88779] N86-31551
NAVIGATION SATELLITES
Solicited proposal for a Navsat control segment harmonization study
[NLR-MEMO-RS-85-020-L] N86-31628
Investigation of polar motion from Doppler tracking of the NNSS (Navy Navigation Satellite System) during the MERIT campaign
[AD-A167565] N86-31964
NEAR WAKES
Coherent vortex structures in the wake of a rigid and an externally driven disk
[DFVLR-FB-86-04] N86-31651
NEON ISOTOPES
Precompaction irradiation effects: Particles from an early active sun? N86-32351
Production rates of neon xenon isotopes by energetic neutrons N86-32358
Redetermination of parameters for semi-empirical model for spallogenic He and Ne in chondrites N86-32363
The production rate of cosmogenic 21-Ne in chondrites deduced from 81-Kr measurements N86-32367
NEPTUNE (PLANET)
Interiors of the giant planets
[NASA-CR-177154] N86-32386
NEPTUNE ATMOSPHERE
Interiors of the giant planets
[NASA-CR-177154] N86-32386
NETHERLANDS
Climatological research in the period 1962-1978 in the delta region, south Flevoland, and Lauwers region; Dutch water temperatures in the period 1860 to 1985
[KNMI-169] N86-32067
Climatological data of stations in the Netherlands. No. 25: A climatology of the main observatory at De Bilt for the period 1901-1984
[KNMI-150-25] N86-32068
Observations of surface water temperature in the Netherlands from 1860: The temperature regime and the changes in it
[KNMI-WR-85-6] N86-32071
NETWORK ANALYSIS
Programming a massively parallel, computation universal system: Static behavior
[DE86-010171] N86-32142
Network improving by subgradient methods
[ESA-86-97293] N86-32208
An interative approximation method for the calculation of the balance distribution for a finite Markov chain
[ESA-86-97303] N86-32241
Models of two queues: A few new views
[CWI-OS-R8603] N86-32297
NEUMANN PROBLEM
Formulation of numerical methods used in the XYZ Three-Dimensional Potential Flow Program
[AD-A168167] N86-31836
The Neumann problem for nonlinear second order singular perturbation problems
[AD-A167456] N86-32235
NEURAL NETS
Programming a massively parallel, computation universal system: Static behavior
[DE86-010171] N86-32142
NEUTRINOS
Deuteron properties studied in neutrino and antineutrino interactions
[NIKHER-H/86-7] N86-32256
A study of the interactions of high energy electron-neutrinos
[ESA-86-98072] N86-32257
NEUTRON DIFFRACTION
Studies of stress and fatigue induced defects using small angle neutron scattering
[DE86-004985] N86-31925
Statistical analysis of nonhomogeneous Poisson processes. Statistical treatment of a particle multidetector — crystal structure, neutron diffraction
[ESA-86-97281] N86-32221
Statistical treatment of a particle multidetector — crystal structure, neutron diffraction N86-32223
Single-crystal neutron diffraction study of the distribution and thermal motion of silver ions in alpha- and beta-Ag Si
[DE86-005056] N86-32309
NEUTRON IRRADIATION
Effect of neutron irradiation on the tensile properties and microstructure of several vanadium alloys
[DE86-008234] N86-31716
Petrophysical quantities from high resolution gamma-ray spectra arising from energetic neutron bombardment
[ESA-86-97256] N86-32262
Production rates of neon xenon isotopes by energetic neutrons N86-32358
NEUTRON SCATTERING
Studies of stress and fatigue induced defects using small angle neutron scattering
[DE86-004985] N86-31925
Simulation experiments for gamma-ray mapping of planetary surfaces: Scattering of high-energy neutrons N86-32350
NEWTON THEORY
A convergence theorem for Newton-like methods in Banach spaces
[AD-A167455] N86-32234
NICKEL
Preparation and characterization of nickel substituted Fe5C2
[AD-A167410] N86-31707
NICKEL ALLOYS
The low cycle fatigue behavior of a plasma-sprayed coating material
[NASA-TM-87319] N86-31699
Microstructure-property relationships in directionally solidified single crystal nickel-base superalloys
[NASA-TM-88788] N86-31700
The continuing battle against defects in nickel-base superalloys
[NASA-TM-87343] N86-31701
The effect of variations of cobalt content on the cyclic oxidation resistance of selected Ni-base superalloys
[NASA-TM-87297] N86-31702
Analysis of heat-affected zone cracking in Ni3Al alloys
[DE86-009449] N86-31712
Postirradiation tensile behavior of nickel-doped ferritic steels
[DE86-009502] N86-31721
Evidence for the formation of a metastable crystalline phase during crystallization of Zr-Ni metallic glasses of approximately 57 to 63.2 at. % Zr
[DE86-005031] N86-31734
Solid state transformations in Fe-Ni alloys from meteorites in powder form
[DE86-701936] N86-32366
NICKEL HYDROGEN BATTERIES
A mathematical approach for evaluating nickel-hydrogen cells
[NASA-TM-88803] N86-31980
Parametric and cycle tests of a 40-A-hr bipolar nickel-hydrogen battery
[NASA-TM-88793] N86-31979
Effect of impregnation method on cycle life of the nickel electrode
[NASA-TM-87326] N86-31980
NICKEL ISOTOPES
Neutron capture production rates of cosmogenic 60Co, 59Ni and 36Cl in stony meteorites N86-32369
NICKEL STEELS
Design of tough ferritic steels for cryogenic use
[DE86-009361] N86-31718
NIGHT VISION
A portable subject controlled night vision adaptometer
[AD-A167848] N86-32274
NIOBIUM ALLOYS
Ion damage microstructures in a Fe-10Cr-6Mo-0.5Nb
[DE86-008500] N86-31717
NITRATES
Preparation and characterization of nickel substituted Fe5C2
[AD-A167410] N86-31707
NITROGEN
Model for the steady-state rotational stimulated Raman gain coefficients in the atmosphere
[AD-A167469] N86-32013
NITROGEN DIOXIDE
Investigations of depth-resolved laser remote measurement of NO2 and SO2 in the visible and UV spectral domains — atmospheric pollution
[GKSS-85/E/48] N86-32002
NOAA SATELLITES
NASA to launch NOAA-G weather satellite
[NASA-TM-89245] N86-31633
NOAA 6 SATELLITE
Use of existing and suggested satellite observations of reflected spectral radiance to estimate properties of stratiform clouds N86-32032
NOBLE METALS
Control of precious metal plating baths using electrogravimetric analysis
[DE86-005435] N86-31757
NOISE (SOUND)
Vertical directionality of ambient noise: 150-300 Hz
[AD-A167421] N86-32250
Compendium of methods for applying measured data to vibration and acoustic problems
[AD-A168174] N86-32251
NOISE GENERATORS
Measurement and extraction of recurring waveforms: For applications to active transmissions, flow-noise, and helicopter-radiated noise problems
[AD-A167400] N86-32249
NOISE MEASUREMENT
Low frequency noise as a control test for space solar panels
[SNIAS-861-440-109] N86-31996
NOISE PREDICTION
Direct measurement of the nonlinear phase shift between the orthogonally polarized states of a single-mode fiber
[FUB-36-1984] N86-32267
NOISE REDUCTION
Investigation on reduction of flow noise of the 0.6m x 0.6m trisonic wind tunnels
[AD-A167602] N86-31597
Airport noise control strategies
[AD-A167977] N86-31602
NONDESTRUCTIVE TESTS
Damage assessment by acousto-ultrasonic techniques in composites
[AD-A168097] N86-31672

Factors that affect reliability of nondestructive detection of flaws in structural ceramics
[NASA-TM-87348] N86-31912
Quantitative void characterization in structural ceramics using scanning laser acoustic microscopy
[NASA-TM-86797] N86-31913
Investigation of ultrasonic methods for residual stress measurement
[DE86-009614] N86-31927
Low frequency noise as a control test for space solar panels
[SNIAS-861-440-109] N86-31996

NONLINEAR EQUATIONS
Study of a homotopy continuation method for early orbit determination with the Tracking and Data Relay Satellite System (TDRSS)
[NASA-TM-86230] N86-31610
Quasi-periodic solutions of the Boomeron equation
[MEMO-436] N86-32239
Quasi-periodic solutions of the Boomeron Equation, 2
[MEMO-472] N86-32240

NONLINEAR OPTICS
Nova performance at ultra high fluence levels
[DE86-006724] N86-31881
Current German laser and quantum optics research reviewed at the 50th Annual Meeting of the Physikalische Gesellschaft
[AD-A167895] N86-32275

NONLINEAR PROGRAMMING
One-parameter families of optimization problems: Equality constraints, 2
[MEMO-420] N86-32204

NONLINEAR SYSTEMS
On control concept for in-flight simulation including actuator nonlinearities and time delays
[ESA-TT-948] N86-31593
Temperature dependent nonlinear metal matrix laminae behavior
[NASA-CR-4016] N86-31666
Nonlinear optical interactions in semiconductors
[AD-A166182] N86-31880
Influence of third-degree geometric nonlinearities on the vibration and stability of pretwisted, preconed, rotating blades
[NASA-TM-87307] N86-31920
Quality control of filed subroutines. Least squares method. Development and validation of some algorithms
[CNES-CT/DTI/MS/MN/132] N86-32163
Orbital compactness and asymptotic behavior of non-linear parabolic systems with functionals
[AD-A167486] N86-32191
Steady-state problems of nonlinear electro-magneto-thermo-elasticity
[AD-A167454] N86-32243
Direct measurement of the nonlinear phase shift between the orthogonally polarized states of a single-mode fiber
[FUR-36-1984] N86-32267
Non-linear optical excitation and detection of the plasmon in two-dimensional electron gas
[DE85-703230] N86-32290

NONLINEARITY
Experimental investigations of the role of laser field fluctuations in non-linear optical absorption processes
[DE86-006919] N86-31883
Influence of third-degree geometric nonlinearities on the vibration and stability of pretwisted, preconed, rotating blades
[NASA-TM-87307] N86-31920
Painleve test for the complete integrability of Bogomolny's monopole equation
[DE85-703173] N86-32199
Investigation of the moving finite element method as proposed by A.J. Wathen
[DE86-009685] N86-32200
The Neumann problem for nonlinear second order singular perturbation problems
[AD-A167456] N86-32235
Optical characterization of nonlinear crystals
[DE86-006694] N86-32277

NONPARAMETRIC STATISTICS
Estimating problems in stationary time series with missing data
[ESA-86-97287] N86-32228

NORMAL DENSITY FUNCTIONS
The central limit theorem and poincare-type inequalities
[AD-A167534] N86-32225

NORTH SEA
Evaluation of wave calculations using the model GONO, in the period October 1983 - April 1984 --- water waves
[KNMI-TR-56] N86-32079

NOSES (FOREBODIES)
Development of a data acquisition system to aid in the aerodynamic study of various helicopter configurations
[AD-A167717] N86-31539

NOTCH TESTS
Determination of the fracture toughness of ceramic materials on bending samples with different notch types, at room temperature and high temperature
[DFVLR-FB-85-67] N86-31744

NOVA LASER SYSTEM
Coatings for high energy applications. The Nova laser
[DE86-009407] N86-31884

NOZZLE FLOW
SSME main combustion chamber and nozzle flowfield analysis
[NASA-CR-178693] N86-31654

NOZZLE GEOMETRY
Alcohol as a fuel in a high speed diesel engine with double injection system
[DE86-751653] N86-31904

NOZZLELESS ROCKET ENGINES
Solid rocket motor with nozzle containing aromatic amide fibers
[AD-D012250] N86-31655

NUCLEAR BINDING ENERGY
Semiconductor alloy theory
[AD-A166995] N86-32300

NUCLEAR FUELS
Space Nuclear Safety Program
[DE86-008579] N86-32260
Carbon monoxide formation in UO2 kerneled HTR fuel particles containing oxygen getters
[OEFZS-4348] N86-32261

NUCLEAR INTERACTIONS
A study of the interactions of high energy electron-neutrinos
[ESA-86-98072] N86-32257

NUCLEAR MAGNETIC RESONANCE
Exploration of advanced characterization techniques for molecular composites
[AD-A168102] N86-31733

NUCLEAR PHYSICS
International Centre for Theoretical Physics: Scientific activities in 1984
[DE86-701454] N86-32245
Activities report in fundamental research on matter
[ESA-86-97778] N86-32246
Activities report of the Interuniversity Reactor Institute
[ESA-86-97769] N86-32265

NUCLEAR POWER PLANTS
State and data techniques for control of discontinuous systems
[DE86-007240] N86-32179

NUCLEAR REACTORS
Sensor-driven, fault-tolerant control of a maintenance robot
[DE86-002118] N86-31901
Thermal history of HT-9 weldment heat-affected zones during welding
[DE86-010684] N86-31906
Remote maintenance robot system for a pulsed nuclear reactor
[DE86-000206] N86-32178
Activities report of the Interuniversity Reactor Institute
[ESA-86-97769] N86-32265

NUCLEAR RESEARCH AND TEST REACTORS
Corrosion behaviour of aluminium plates in aqueous medium
[DE86-701575] N86-31711

NUCLIDES
Workshop on Cosmogenic Nuclides
[NASA-CR-176886] N86-32348
Nuclide production in (very) small meteorites N86-32349
Precompaction irradiation effects: Particles from an early active sun? N86-32351
Evolution of gas-rich meteorites: Clues from cosmogenic nuclides N86-32354
The exposure history of Jilin and production rates of cosmogenic nuclides N86-32355
Production of radionuclides in artificial meteorites irradiated isotropically with 600 MeV protons N86-32360
Compilation of cosmogenic radionuclides in meteorites N86-32362
Calculations of cosmogenic nuclide production rates in the Earth's atmosphere and their inventories N86-32364
Studies on cosmogenic nuclides in meteorites with regard to an application as potential depth indicators N86-32366
Cosmogenic rare gases and 10-Be in a cross section of Knyahinya N86-32371

NUMBER THEORY
Elementary functions computing methodology
[ESA-86-97298] N86-32209

NUMERICAL ANALYSIS
Numerical simulation of boundary layers. Part 2: Ribbon-induced transition in Blasius flow
[NASA-TM-88221] N86-31823
Calculations of the stability of some axisymmetric flows proposed as a model of vortex breakdown
[NASA-CR-178124] N86-31825
Numerical quadrature methods for integrals of singular periodic functions and their application to singular and weakly singular integral equations
[NASA-CR-178151] N86-31828
Steep gravity waves: Havelock's method revisited
[AD-A167520] N86-31831
Computing narrow inclusions for definite integrals
[AD-A167491] N86-32135
Some experiments with numerical pivoting in a code for solving large sparse stiff systems of odes
[DE86-010305] N86-32201

NUMERICAL FLOW VISUALIZATION
Numerical simulation of the active control of laminar-turbulent transition in the flat-plate boundary layer
[DFVLR-FB-86-05] N86-31852

O

OBJECT PROGRAMS
Geoscientific requirements on a graphical data base N86-31948

OBSERVATION
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F. George AFB, California
[AD-A167653] N86-32050

OCCULTATION
Interiors of the giant planets
[NASA-CR-177154] N86-32386

OCEAN CURRENTS
World climate research program. General circulation of the Southern Ocean: Status and recommendations for research, a report by SCOR Working Group 74
[WCP-108] N86-32077

OCEAN DATA ACQUISITIONS SYSTEMS
World climate research program. General circulation of the Southern Ocean: Status and recommendations for research, a report by SCOR Working Group 74
[WCP-108] N86-32077

OCEAN SURFACE
Development of a variational SEASAT data analysis technique
[NASA-CR-177175] N86-31942
Activities report in remote sensing supervision
[ESA-86-97383] N86-31970

OCEAN TEMPERATURE
The results of hydrological measurements in the southern Adriatic, the west coast of Sicily and the Vatican Cape, preliminary report
[PREPRINT-502] N86-31975
Climatological research in the period 1962-1978 in the delta region, south Flevoland, and Lauwers region; Dutch water temperatures in the period 1860 to 1985
[KNMI-169] N86-32067
The CTD data from the Madeira Abyssal Plain. Charles Darwin cruise 1/85 --- conductivity-temperature-depth (CTD)
[IOS-217] N86-32078
Preliminary report on the hydrological measurements carried out in the southern Tyrrhenian sea and in the Messina strait
[PREPRINT-489] N86-32081

OCEANOGRAPHIC PARAMETERS
Preliminary report on the hydrological measurements carried out in the southern Tyrrhenian sea and in the Messina strait
[PREPRINT-489] N86-32081

OCEANOGRAPHY
The results of hydrological measurements in the southern Adriatic, the west coast of Sicily and the Vatican Cape, preliminary report
[PREPRINT-502] N86-31975

OCEANS
Simulation of cloudiness with the UK Meteorological Office 11-layer AGCM N86-32039

ONBOARD DATA PROCESSING
In-flight attitude estimation and control experiments with IRAS based on modern control theory
[NLR-TR-84029-U] N86-31642
Subsystem fact sheets for NASA CO2 Project, revision 3 N86-32010
Rate distortion characteristics of two adaptive data compression algorithms
[NLR-MP-85024-U] N86-32150

ONBOARD EQUIPMENT
Gas flowmeter for a space cryostat --- infrared Space Observatory
[SEP-TS/SE/BT/10.289/85] N86-31878

ONE DIMENSIONAL FLOW
Integrable systems in the description of waves in straits and channels of variable width and depth --- solitary waves
[PREPRINT-493] N86-31855
Stationary, one-dimensional models for laser-produced plasmas
[ISL-R-107/85] N86-32293
OPEN CHANNEL FLOW
Integrable systems in the description of waves in straits and channels of variable width and depth --- solitary waves
[PREPRINT-493] N86-31855
OPERATING TEMPERATURE
Operating envelope charts for the Langley 0.3-meter transonic cryogenic wind tunnel
[NASA-TM-89008] N86-31595
OPERATOR PERFORMANCE
Control loops with human operators in space operations. Part 3: Rendezvous and docking operations and model analysis of performance with human-in-the-loop
[NLR-TR-84116-L-PT-3] N86-32108
OPERATORS (MATHEMATICS)
Programming algebra in a data type variance --- artificial intelligence
[ESA-86-97300] N86-32149
Discovery systems
[AD-A167852] N86-32178
Optimal implementation of differentiation arithmetic
[AD-A167494] N86-32193
Note on the factorization of a square matrix into two Hermitian or symmetric matrices
[ESA-86-97306] N86-32210
Foundations of O-Theory 1: The intersection rule
[DE86-008565] N86-32226
OPTICAL BISTABILITY
Study of optical computing
[FOA-C-30418-E1] N86-32287
OPTICAL COMMUNICATION
Optical fiber transmission on satellites and orbital stations
[SNIAS-861-440-108] N86-31786
Competition noise in an optical divider
[ESA-86-97538] N86-31886
OPTICAL COMPUTERS
Study of optical computing
[FOA-C-30418-E1] N86-32287
OPTICAL CORRECTION PROCEDURE
Digital elevation for the Baden-Wurttemburg Land (West Germany) N86-31958
OPTICAL DATA PROCESSING
A recent concept for application of interactive graphical data processing in cadastral map revisions N86-31962
OPTICAL DATA STORAGE MATERIALS
Semiconductor/solid electrolyte junctions for optical information storage. Electrochromic effects on Heptyl Viologen incorporated within a solid polymer electrolyte cell
[AD-A167666] N86-32305
OPTICAL EQUIPMENT
Portable glide slope indicator
[AD-D012240] N86-31552
Optical studies of chemical energy release during shock initiation of granular explosives
[DE86-010469] N86-31752
Optical matrix-matrix multiplier based on outer product decomposition
[AD-D012207] N86-32272
Second generation meteosat: Infrared atmospheric sounder design
[CNES-T-85/CT/DRT/TIT/IO-046] N86-32283
Second generation Meteosat imager design
[CNES-T-85/052-DRT/TIT/IO] N86-32284
OPTICAL HETERODYNING
An introduction to the optical heterodyne receiver
[NPL-QU-77] N86-31759
Experimental investigations of pulse-pulse interference in heterodyne detection
[ESA-TT-949] N86-31783
Advanced optical measuring systems for measuring the properties of fluids and structures
[NASA-TM-88829] N86-31859
OPTICAL MEASUREMENT
Advanced optical measuring systems for measuring the properties of fluids and structures
[NASA-TM-88829] N86-31859
Optical profiling instrument for the measurement of the figure and finish of optical quality surfaces
[DE86-009433] N86-31868
Setup for the determination of the reflectivity of interference coatings --- laser mirrors
[DFVLR-MITT-85-18] N86-32285
OPTICAL MEASURING INSTRUMENTS
Noncontact measurement of roughness of ground and polished metal surfaces
[BMFT-FB-T-85-150] N86-31909
Optical distance measuring instrument
[NASA-CASE-GSC-12781-1] N86-32266
Fiber optic sensors
[FOA-C-30416-E1] N86-32286
OPTICAL PROPERTIES
Coatings for high energy applications. The Nova laser
[DE86-009407] N86-31884
Optical characterization of nonlinear crystals
[DE86-006694] N86-32277
Fundamentals of thin lens optical systems, lectures 1, 2 and 3
[DE86-010842] N86-32281
OPTICAL RADAR
Investigations of depth-resolved laser remote measurement of NO2 and SO2 in the visible and UV spectral domains --- atmospheric pollution
[GKSS-85/E/48] N86-32002
OPTICAL REFLECTION
Study and implementation of an image syntheseizer based on a modular architecture
[ESA-86-97295] N86-32282
OPTIMAL CONTROL
Control theoretic analysis of human operator mediated rendezvous and docking
[NLR-MP-85020-U] N86-32106
Optimal control for parabolic-hyperbolic system with time delay
[DE86-701709] N86-32182
OPTIMIZATION
Microcomputer optimization of feed excitation voltages to obtain desired antenna radiation patterns
[AD-A167560] N86-31768
Solution of the problem of elastoplastic torsion with a finite element method
[ESA-86-97546] N86-31935
Top-down design of VLSI microprocessors
[ESA-86-97299] N86-32118
PAOLA: Topological optimization system for Programmable Logical Arrays (PLA)
[ESA-86-97294] N86-32148
One-parameter families of optimization problems: Equality constraints, 2
[MEMO-420] N86-32204
Truncated cardinal spline functions
[ESA-86-97264] N86-32205
Network improving by subgradient methods
[ESA-86-97293] N86-32206
Polynomial matrices and feedback
[MEMO-COSOR-84-01] N86-32211
Monotonically improving limit-optimal strategies in finite state decision processes
[MEMO-COSOR-84-15] N86-32233
ORBIT CALCULATION
Study of a homotopy continuation method for early orbit determination with the Tracking and Data Relay Satellite System (TDRSS)
[NASA-TM-86230] N86-31610
Thematic classification of analytic models for orbit prediction, volume 1
[CNES-CT/DTI/MS/MN/240-VOL-1] N86-31616
Lancelot: Long term distance computation and analysis software
[CNES-CT/DI/MS/MS/080] N86-32164
ORBITAL MANEUVERING VEHICLES
Phase 3 study of selected tether applications in space, mid-term review
[NASA-CR-178900] N86-31632
ORBITAL POSITION ESTIMATION
In-flight attitude estimation and control experiments with IRAS based on modern control theory
[NLR-TR-84029-U] N86-31642
ORBITAL RENDEZVOUS
Control loops with human operators in space operations. Part 3: Rendezvous and docking operations and model analysis of performance with human-in-the-loop
[NLR-TR-84116-L-PT-3] N86-32108
ORBITAL SERVICING
Liquid helium pumps for in-orbit transfer
[NASA-TM-88239] N86-31890
ORDER-DISORDER TRANSFORMATIONS
To what extent are grain boundaries in metals ordered structures
[DE86-007004] N86-31710
Investigation of three ferromagnetic superconductors in the milli-Kelvin area
[ESA-86-97380] N86-32318
Dynamic susceptibility on two first-order phase transformations
[ESA-86-97381] N86-32319
ORDNANCE
Safe-arm explosive transfer mechanism
[AD-D012333] N86-31896
ORGANIC COMPOUNDS
Amine terminated bisaspartimide polymer
[NASA-CASE-ARC-11421-2] N86-31726
ORGANIC SILICON COMPOUNDS
Chemical reactions and properties of organosilicon compounds related to new materials
[AD-A166338] N86-31660
ORGANIZATIONS
Methodology for Generating Efficiency and Effectiveness Measures (MGEEM): A guide for commanders, managers and supervisors
[AD-A167503] N86-32325
ORTHOPHOTOGRAPHY
Digital elevation for the Baden-Wurttemburg Land (West Germany) N86-31958
OSCILLATING CYLINDERS
Damping force exerted by a viscous medium upon an oscillating cylinder
[ESA-86-97374] N86-31844
OSCILLATING FLOW
Damping force exerted by a viscous medium upon an oscillating cylinder
[ESA-86-97374] N86-31844
OSCILLATORS
High power high voltage linear amplifier apparatus
[AD-D012244] N86-31796
OSMIUM ISOTOPES
Determination of CA-41, I-129 and OS-187 in the Rochester tandem accelerator and some applications of these isotopes N86-32352
OXIDATION
Aromatics oxidation and soot formation in flames
[DE86-010585] N86-31690
Degradation of materials in combustion environments
[DE86-011771] N86-31691
Characterization of the redox behavior and stability of conducting oxides
[DE86-009871] N86-31804
OXIDATION RESISTANCE
The effect of variations of cobalt content on the cyclic oxidation resistance of selected Ni-base superalloys
[NASA-TM-87297] N86-31702
OXIDES
Extreme ultraviolet multilayer reflectors
[DE86-010194] N86-32280
OXYGEN
Role of the radical pool in combustion
[DE86-010159] N86-31688
OXYGEN ATOMS
Effect of an oxygen plasma on the physical and chemical properties of several fluids for the liquid droplet radiator
[NASA-TM-88839] N86-31634
OXYGEN BREATHING
Gas exchange characteristics of leaves as indicators of the basic limitations to the rate of photosynthesis
[DE86-009632] N86-32085
OZONE
Balance of the tropospheric ozone and its relation to stratospheric intrusions indicated by cosmogenic radionuclides, part 13
[DE85-015560] N86-32016

P

P-3 AIRCRAFT
Flight data recorders (FDR) and/or cockpit Voice Recorders (CVR) in the Lockheed Orion P-3C Update 2
[ESA-86-97395] N86-31581
PACIFIC OCEAN
Coast of California storm and tidal waves study: Nearshore bathymetric survey report, San Diego region
[AD-A168119] N86-32076
PACKET SWITCHING
Interconnection between packet switching national networks and local packet radio communication networks
[FUB-24-1985] N86-31790
PANEL METHOD (FLUID DYNAMICS)
Formulation of numerical methods used in the XYZ Three-Dimensional Potential Flow Program
[AD-A168167] N86-31836
PARABOLIC BODIES
Fields in the focal region of paraboloid and offset paraboloid reflectors
[AD-A167419] N86-31766
PARABOLIC DIFFERENTIAL EQUATIONS
Reentry body three-dimensional flow computation. (Euler and parabolized Navier-Stokes)
[SNIAS-861-422-107] N86-31845
Optimal control for parabolic-hyperbolic system with time delay
[DE86-701709] N86-32182
Orbital compactness and asymptotic behavior of non-linear parabolic systems with functionals
[AD-A167486] N86-32191
Pointwise a-priori bounds for strongly coupled semilinear parabolic systems
[AD-A167539] N86-32198

PARABOLIC REFLECTORS
Parabolic dish module experiment
[DE86-009819] N86-31987
PARACHUTES
Safe-arm explosive transfer mechanism
[AD-D012333] N86-31806
PARALLEL COMPUTERS
Physics codes on parallel computers
[DE86-006712] N86-32170
PARALLEL PROCESSING (COMPUTERS)
The second machine class 2: An encyclopedic view of the parallel computation thesis
[FVI 85-14] N86-32119
Programming a massively parallel, computation universal system: Static behavior
[DE86-010171] N86-32142
Physics codes on parallel computers
[DE86-006712] N86-32170
Performance modeling of large-grained parallelism
[DE86-009864] N86-32171
Practical paradigm for parallel processing problems
[DE86-009274] N86-32172
Sparse Cholesky factorization on a local-memory multiprocessor
[DE86-010082] N86-32173
PARALLEL PROGRAMMING
Multiple grid problems on concurrent-processing computers
[NASA-TM-86675] N86-32112
PARAMAGNETISM
Magnetic properties in the paramagnetic area of two ferromagnetic superconductors
[ESA-86-97377] N86-32317
PARAMECIA
Influence of gravity on structure and behavior of Paramecium caudatum
[ESA-TT-963] N86-32087
PARAMETER IDENTIFICATION
Scientific data requirements
[ADL-C-89230] N86-32007
Subsystem fact sheets for NASA CO2 Project, revision 3 N86-32010
Quality control of filed subroutines. Least squares method. Development and validation of some algorithms
[CNES-CT/DTI/MS/MN/132] N86-32163
Methods for the detection and estimation of multiphase regression models
[ESA-86-97262] N86-32227
A portable subject controlled night vision adaptometer
[AD-A167848] N86-32274
PARAMETERIZATION
Radiation in boundary layer clouds N86-32028
Physical properties of stratiform clouds and their parametrization N86-32029
Key problems of parameterization for simple cloud-topped boundary layer models N86-32035
Boundary layer and cloud parameterization in the NCAR community climate model — National Center of Atmospheric Research (NCAR) N86-32037
Parameterization of the cloud-topped boundary layer in a global forecast model N86-32038
One-parameter families of optimization problems: Equality constraints, 2
[MEMO-420] N86-32204
PARSING ALGORITHMS
Direct parsing using immediate dominance/linear precedence (ID/LP) grammars N86-32127
PARTIAL DIFFERENTIAL EQUATIONS
Painleve test for the complete integrability of Bogomolny's monopole equation
[DE85-703173] N86-32199
Investigation of the moving finite element method as proposed by A.J. Wathen
[DE86-009685] N86-32200
Hamilton-jacobi equations in infinite dimensions, part 3
[AD-A167521] N86-32236
Quasi-periodic solutions of the Boomeron equation
[MEMO-436] N86-32239
Quasi-periodic solutions of the Boomeron Equation, 2
[MEMO-472] N86-32240
PARTICLE ACCELERATION
Space plasma research
[NASA-CR-178898] N86-32289
PARTICLE ACCELERATOR TARGETS
Simulation of cosmic irradiation conditions in thick target arrangements N86-32370
PARTICLE ACCELERATORS
Acceleration of ions and electrons by wave-particle interactions
[AD-A167631] N86-32258
Determination of CA-41, I-129 and OS-187 in the Rochester tandem accelerator and some applications of these isotopes N86-32352
Radionuclide measurements by accelerator mass spectrometry at Arizona N86-32356
PARTICLE FLUX DENSITY
A study of the interactions of high energy electron-neutrinos
[ESA-86-98072] N86-32257
PARTICLE PRODUCTION
High statistics inclusive phi meson production at SPS energies
[NIKHEF-H/86-1] N86-32253
Hadronic phi production and the Lund model for low p sub T interactions
[NIKHEF-H/86-4] N86-32255
PARTICLE SIZE DISTRIBUTION
Aromatics oxidation and soot formation in flames
[DE86-010585] N86-31690
Determination of the atmospheric aerosol distribution by multi-channel remote sensing techniques
[AD-A167885] N86-32014
PARTITIONS (MATHEMATICS)
Minimal support for bivariate splines
[AD-A167519] N86-32196
PARTONS
Inclusive phi meson production, the parton fusion model and strange quark structure functions
[NIKHEF-H/86-3] N86-32254
PASCAL (PROGRAMMING LANGUAGE)
Flex Pascal: An implementation of the ISO-Pascal programming language
[AD-A168105] N86-32140
PASTES
Study on the rheology of RX-08-FK LLNL's paste explosive
[DE86-010781] N86-31753
PATTERN RECOGNITION
Ultrasonic inspection of partially completed welds using pattern recognition techniques
[DE86-003227] N86-31915
Image quality criteria with emphasis on criteria for remote sensing imagery
[NLR-TR-84040-U] N86-31974
Human problem solving in fault diagnosis tasks
[AD-A167397] N86-32104
Pattern representation
[CWI-CS-R8602] N86-32160
PAVEMENTS
Field performance of fiber-reinforced concrete airfield pavements
[FAA/PM-86/26] N86-31596
PAYLOADS
Balloon tracer for atmospheric pollutants
[DE86-007144] N86-31999
Lancelot: Long term distance computation and analysis software
[CNES-CT/DI/MS/MS/080] N86-32164
PELLETS
Certification of the Zirshot Z-600 and Z-150 ceramic shot
[I-112/85] N86-31743
PERFORMANCE PREDICTION
Full-scale crash test (T-41) of the YAH-63 attack helicopter
[AD-A167813] N86-31550
Study on algorithms for prediction of solid propellant rocket motor performance
[AD-A167842] N86-31657
PERFORMANCE TESTS
Mission adaptive wing aoars at NASA Facility
[P86-10182] N86-31563
Quality determination of the Heat and Flow Theory Department (WS) subsonic wind tunnel and experiments using laser Doppler velocity measurement
[ESA-86-97355] N86-31603
Use of MoS2 applied by Physical Vapor Deposition (PVD) on space mechanisms
[SNIAS-861-440-101] N86-31639
Evaluation of a hybrid hydrostatic bearing for cryogenic turbopump application
[NASA-TM-87255] N86-31649
The noncavitating performance and life of a small vane-type positive displacement pump in liquid hydrogen
[NASA-TM-87347] N86-31651
Certification of the Zirshot Z-600 and Z-150 ceramic shot
[I-112/85] N86-31743
Vapor Controlled Heat Pipe (VCHP) telecommunications panel. Performances evolution after four years of life testing
[SNIAS-861-440-106] N86-31822
Parametric and cycle tests of a 40-A-hr bipolar nickel-hydrogen battery
[NASA-TM-88793] N86-31979
The RISC (Reduced Instruction Set Computer) architecture and computer performance evaluation
[AD-A167873] N86-32115
Test of the system Micro Aided Engineering (MAE) CAD/CAM
[A-15] N86-32120
PERIODIC FUNCTIONS
Numerical quadrature methods for integrals of singular periodic functions and their application to singular and weakly singular integral equations
[NASA-CR-178151] N86-31828
PERIODIC VARIATIONS
Break-up of invariant circles for a mapping with a cubic nonlinearity
[ESA-8C-97378] N86-32213
PERIODICALS
Unclassified publications of Lincoln Laboratory. Volume 2: Report bibliography
[AD-A167987] N86-32337
PERMEABILITY
Diffusion of gases in porous solids: Simulation and measurement
[DE86-005360] N86-31837
PERSONAL COMPUTERS
Intelligent Data Analysis (INDA) software for data analysis
[ESA-86-97291] N86-32147
PERT
An analysis of the Centaur Ground Processing System at the Kennedy Space Center/Cape Canaveral AFS
[AD-A167123] N86-31618
PERTURBATION
Inflow boundary conditions for steady flows of viscoelastic fluids with differential constitutive laws
[AD-A167452] N86-31829
The Neumann problem for nonlinear second order singular perturbation problems
[AD-A167456] N86-32235
PETN
Radial buildup to detonation in pentaerythritol tetranitrate (PETN)
[DE86-002383] N86-31750
PETROGRAPHY
Geotechnical data inventory, southern California coastal zone, Cape San Martin (Monterey County) to Mexican border
[AD-A167734] N86-32075
Petrophysical quantities from high resolution gamma-ray spectra arising from energetic neutron bombardment
[ESA-86-97256] N86-32262
PHASE CHANGE MATERIALS
Chemistry research resource
[DE86-009393] N86-31661
Estimated heats of fusion of fluoride salt mixtures suitable for thermal energy storage applications
[NASA-TM-87320] N86-31982
PHASE COHERENCE
Coherent vortex structures in the wake of a rigid and an externally driven disk
[DFVLR-FB-86-04] N86-31851
PHASE SHIFT
Direct measurement of the nonlinear phase shift between the orthogonally polarized states of a single-mode fiber
[FUB-36-1984] N86-32267
PHASE SHIFT KEYING
A 2 Mbit/sec modem at 70 MHz based on the Tamed Frequency Modulation (TFM) principle
[ESA-86-97537] N86-31815
PHASE TRANSFORMATIONS
Dynamic susceptibility on two first-order phase transformations
[ESA-86-97381] N86-32319
Solid state transformations in Fe-Ni alloys from meteorites in powder form
[DE86-701936] N86-32388
PHASE-SPACE INTEGRAL
On the generation of equivalent Hamiltonians
[DE86-701920] N86-32203
PHONEMES
Speech analysis based on a model of the auditory system
[AD-A167426] N86-32098
PHOSPHORIC ACID FUEL CELLS
Gas cooled fuel cell systems technology development
[NASA-CR-175047] N86-31984
PHOTOCHEMICAL REACTIONS
Workshop on the Frontiers of Theoretical and Experimental Electrochemistry
[DE86-007188] N86-31684
PHOTOCONDUCTIVE CELLS
Properties of impurity doped infrared photoconductive detectors under conditions of low background photon flux — space environments
[NPL-QU-76] N86-32298
PHOTOCONDUCTORS
Solid state image sensor with an amorphous photoconversion layer
[BMFT-FB-T-85-164] N86-31869

Properties of impurity doped infrared photoconductive detectors under conditions of low background photon flux --- space environments
[NPL-QU-76] N86-32298

PHOTOELECTRIC CELLS
Characterization of illuminated semiconductor/solid-electrolyte junctions. Semiconductor redox polymer detector junctions
[AD-A167665] N86-32304

PHOTOELECTROCHEMICAL DEVICES
Semiconductor/solid electrolyte junctions for optical information storage. Solid-state electrochromic cell using lutecium diphthalocyanine
[AD-A167869] N86-32307

PHOTOGRAMMETRY
In-flight photogrammetric measurement of wing ice accretions
[NASA-TM-87191] N86-31562
Earth resources: A continuing bibliography with indexes, issue 50
[NASA-SP-7041(50)] N86-31940
Real time math model for infrared
[AD-A168133] N86-32276

PHOTOGRAPHIC EMULSIONS
Evolution of nuclear emulsion techniques in the first half of this century --- photographic emulsions
[NOTA-INTERNA-860] N86-31879

PHOTOGRAPHIC FILM
A densitometric analysis of IIaO film flown aboard the space shuttle transportation system STS-3, STS-8, and STS-7
[NASA-CR-176864] N86-31858

PHOTOINTERPRETATION
Introduction to the interpretation of remote sensing data
[ESA-86-98067] N86-31977

PHOTOMAPPING
Reproduction of topographic map 1:200000 in digital raster mode N86-31954

PHOTOMETERS
Radial velocity spectrometers. What they measure
[AD-A167986] N86-31863
Measurement techniques using ultrashort optical pulses
[DE86-009691] N86-32279

PHOTOMETRY
A digital imaging photometry system for cometary data acquisition
[NASA-TM-86554] N86-32373

PHOTONS
Workshop on Standards for Photonic Streak Camera Characterization
[DE86-002430] N86-31866
Properties of impurity doped infrared photoconductive detectors under conditions of low background photon flux --- space environments
[NPL-QU-76] N86-32298

PHOTOOXIDATION
Chemical reactions and properties of organosilicon compounds related to new materials
[AD-A166336] N86-31660

PHOTOSYNTHESIS
Gas exchange characteristics of leaves as indicators of the basic limitations to the rate of photosynthesis
[DE86-009632] N86-32085

PHOTOVOLTAIC CELLS
Space station propulsion technology
[NASA-CR-178897] N86-31647
Installation of a modular building block photovoltaic concentrator array field
[DE85-016032] N86-31985
Photovoltaic power system design for telecommunications
[ESA-86-97255] N86-31992
Photovoltaic solar generators: From satellites to a space station
[SNIAS-861-440-112] N86-31993

PHOTOVOLTAIC CONVERSION
Space solar cell research: Problems and potential
[NASA-TM-88833] N86-31793

PHTHALOCYANIN
Semiconductor/solid electrolyte junctions for optical information storage. Solid-state electrochromic cell using lutecium diphthalocyanine
[AD-A167869] N86-32307

PHYSIOLOGICAL EFFECTS
Evaluation of the need for a large primate research facility in space
[NASA-CR-179661] N86-32111

PHYSIOLOGY
Guard cell biochemistry: Response to environmental stimuli causing changes in gas exchange
[DE86-010287] N86-32086

PIEZOELECTRIC GAGES
A remote controlled calibration device for displacement transducers
[ECN-173] N86-31873

PILOT ERROR
Speed of work and error rate: Analyses of individual differences in a choice reaction series with a cognitive component
[ESA-TT-944] N86-32099

PIPE FLOW
Critical flow through small pipe breaks
[DE86-010907] N86-31842
Experimental investigation of noise generated by turbulence in a pipe flow behind a discontinuous area enlargement
[DFVLR-FB-86-06] N86-31853

PIPELINING (COMPUTERS)
The RISC (Reduced Instruction Set Computer) architecture and computer performance evaluation
[AD-A167873] N86-32115

PIPES (TUBES)
Mechanical testing of graphite-epoxy composite tubes
[DE86-009608] N86-31674
Critical flow through small pipe breaks
[DE86-010907] N86-31842

PITTING
The influence of incubation time on the passive film breakdown of aluminum alloys in seawater
[AD-A167398] N86-31705

PLANAR STRUCTURES
Non-contact polishing
[AD-D012210] N86-31755
Microwave undulator
[DE86-009910] N86-31773
History of the Wilson-Fowler spline
[DE86-010264] N86-32143

PLANETARY BOUNDARY LAYER
The structure of a stratus-topped planetary boundary layer as seen through a large-eddy simulation
N86-32034

PLANETARY COMPOSITION
Simulation experiments for gamma-ray mapping of planetary surfaces: Scattering of high-energy neutrons
N86-32350

PLANETARY RINGS
Interiors of the giant planets
[NASA-CR-177154] N86-32386

PLANETARY SURFACES
Simulation experiments for gamma-ray mapping of planetary surfaces: Scattering of high-energy neutrons
N86-32350

PLANNING
Identification of Air Force emerging technologies and militarily significant emerging technologies
[AD-A167088] N86-32345

PLANT STRESS
Activities report in remote sensing supervision
[ESA-86-97383] N86-31970

PLASMA ARC WELDING
Calorimetry of the arc welding process
[DE86-009280] N86-31899

PLASMA CURRENTS
The development of a magnetooptic current measurement system for high, pulsed currents --- plasma currents
[REPT-85-161] N86-32294

PLASMA DIAGNOSTICS
Ion temperature in TORTUR 3 --- tokamak
[REPT-85-162] N86-32295

PLASMA DIFFUSION
The SRI Ionospheric Structure and Dynamics Program, 1985 results
[AD-A168115] N86-32015

PLASMA ETCHING
Selectively etching microstructures in a glow discharge plasma
[AD-D012206] N86-31794
Plasma and ion etching for failure analysis. Part 1: Review of current theory and techniques --- semiconductors
[AERE-R-11907-PT-1] N86-32292

PLASMA INTERACTIONS
Effect of an oxygen plasma on the physical and chemical properties of several fluids for the liquid droplet radiator
[NASA-TM-88839] N86-31634

PLASMA PHYSICS
Activities report in fundamental research on matter
[ESA-86-97778] N86-32246
Frontiers of the plasmasphere (theoretical aspects)
[AERONOMICA-ACTA-A-298-1985] N86-32268

PLASMA SPRAYING
The low cycle fatigue behavior of a plasma-sprayed coating material
[NASA-TM-87318] N86-31699

PLASMA-PARTICLE INTERACTIONS
Sounding rocket program Magnetosphere payload CAESAR. Report on systems development, integration, testing and flight
[BMFT-FB-W-85-023] N86-32023

PLASMAPAUSE
Frontiers of the plasmasphere (theoretical aspects)
[AERONOMICA-ACTA-A-298-1985] N86-32268

PLASMAS (PHYSICS)
Estimates of maximum trappable ion beam power in plasma channels
[DE86-006472] N86-32281

PLASMASPHERE
Frontiers of the plasmasphere (theoretical aspects)
[AERONOMICA-ACTA-A-298-1985] N86-32268

PLASMONS
Light emission from metal-insulator-metal structures biased near breakdown voltages
[DE86-008505] N86-31802
Non-linear optical excitation and detection of the plasmon in two-dimensional electron gas
[DE85-703230] N86-32290

PLASTIC COATINGS
Process for preparing highly optically transparent/colorless aromatic polyimide film
[NASA-CASE-LAR-13351-1] N86-31727

PLASTIC DEFORMATION
Residual stress and deformation energy under ground surfaces of brittle solids --- glass grinding
[WB-85-16] N86-31911
X-ray line profile analysis of shock-modified compounds
[DE86-003454] N86-31932

PLASTIC PROPERTIES
Temperature dependent nonlinear metal matrix laminae behavior
[NASA-CR-4016] N86-31686

PLASTICS
Plastic Film Heat Exchanger Development Project
[DE86-009258] N86-31838

PLATES (TECTONICS)
Intraplate deformation due to continental collisions: A numerical study of deformation in a thin viscous sheet
[NASA-TM-86235] N86-32012

PLATING
Laser induced selective electroless plating
[AD-D012223] N86-31756

PLOTTING
SIG: A general-purpose signal processing program
[DE86-009725] N86-31772
Continentality: Its estimation and physical significance
[AD-A167111] N86-32044
A comparison of plotting positions on Weibull probability paper for small randomly censored samples
[ESA-86-97695] N86-32229

PLUTO (PLANET)
Activities of the Department of Astronomy and McDonald Observatory of the University of Texas at Austin
[NASA-CR-179667] N86-32378

POINCARE SPHERES
Break-up of invariant circles for a mapping with a cubic nonlinearity
[ESA-86-97378] N86-32213

POISSON DENSITY FUNCTIONS
Statistical analysis of nonhomogeneous Poisson processes. Statistical treatment of a particle multidetector --- crystal structure, neutron diffraction
[ESA-86-97281] N86-32221
Statistical analysis of nonhomogeneous Poisson processes N86-32222
Statistical treatment of a particle multidetector --- crystal structure, neutron diffraction N86-32223
Upper bounds on Poisson tail probabilities
[AD-A167531] N86-32224

POISSON EQUATION
Elliptic generation of composite three-dimensional grids about realistic aircraft
[NASA-TM-88240] N86-31527
Equivalence between the methods involving Fourier series and the Poisson's summation formula and evaluation of a class of lattice sums in arbitrary dimensions
[DE86-701919] N86-32202

POLAR COORDINATES
Finite difference methods for polar coordinate systems
[AD-A167512] N86-32194

POLAR NAVIGATION
Investigation of polar motion from Doppler tracking of the NNSS (Navy Navigation Satellite System) during the MERIT campaign
[AD-A167565] N86-31964

POLAR REGIONS
Investigation of polar motion from Doppler tracking of the NNSS (Navy Navigation Satellite System) during the MERIT campaign
[AD-A167565] N86-31964

The SRI Ionospheric Structure and Dynamics Program, 1985 results
[AD-A168115] N86-32015

POLARIMETERS
The photopolarimeter of the infrared space telescope GIRL: Mechanical and electrical components for cryovacuum
[BMFT-FB-W-85-026] N86-32379

POLAROGRAPHY
Phase-sensitive a.c. polarography and its data processing by microcomputer-controlled electroanalytical system
[DRIC-T-7634] N86-31679

POLICIES
Tendencies for liberalization in European air transport
[ESA-TT-947] N86-31559

POLISHING
Non-contact polishing
[AD-D012210] N86-31755

POLLUTION TRANSPORT
Balance of the tropospheric ozone and its relation to stratospheric intrusions indicated by cosmogenic radionuclides, part 13
[DE85-015560] N86-32016

POLYACETYLENE
Molecular weight distributions of Durham polyacetylene precursor polymers
[ESA-86-97254] N86-31738

POLYAMIDE RESINS
Process for preparing highly optically transparent/colorless aromatic polyimide film
[NASA-CASE-LAR-13351-1] N86-31727
Exploration of advanced characterization techniques for molecular composites
[AD-A168102] N86-31733

POLYCRYSTALS
Infrared attenuation of thallium bromo-iodide fibers
[NASA-TM-86817] N86-32268

POLYESTERS
Liquid chromatography analysis of ester type synthetic lubricants
[ESA-86-97811] N86-31696

POLYIMIDE RESINS
High temperature adhesives
[SNIAS-861-422-118] N86-31739

POLYMER CHEMISTRY
Chemical reactions and properties of organosilicon compounds related to new materials
[AD-A166338] N86-31660
Chemistry research resource
[DE86-009393] N86-31661
Amine terminated bisaspartimide polymer
[NASA-CASE-ARC-11421-2] N86-31726

POLYMERIC FILMS
Process for preparing highly optically transparent/colorless aromatic polyimide film
[NASA-CASE-LAR-13351-1] N86-31727
Plastic Film Heat Exchanger Development Project
[DE86-009258] N86-31838

POLYMERIZATION
Electrical and environmental studies of conduction polymers
[AD-A167737] N86-31732

POLYNOMIALS
CWI Newsletter, no. 8
[CWI-NEWSLETTER-ISSUE-8] N86-32121
The new linear programming method of Karmarkar N86-32122
A recent algorithm for the factorization of polynomials N86-32123
Computing narrow inclusions for definite integrals
[AD-A167491] N86-32135
Two algorithms for the construction of greatest right divisors of a polynomial matrix
[ESA-86-97302] N86-32186
Minimal support for bivariate splines
[AD-A167519] N86-32196
Elementary symmetric polynomials of increasing order
[CWI-MS-R8601] N86-32220

POLYSTATION DOPPLER TRACKING SYSTEM
Investigation of polar motion from Doppler tracking of the NNSS (Navy Navigation Satellite System) during the MERIT campaign
[AD-A167565] N86-31964

POLYURETHANE RESINS
Fourier transform infrared spectroscopic study of aging in commercial polyurethane
[AD-A167418] N86-31798

PONTRYAGIN PRINCIPLE
Start solution for interplanetary low thrust trajectory optimization and model refinement. Volume 3: Low thrust orbit optimization for interplanetary missions using a Pontryagin/Lambert approach
[ESA-CR(P)-2175-VOL-3] N86-31614

POROUS MATERIALS
Diffusion of gases in porous solids: Simulation and measurement
[DE86-005380] N86-31837

PORTABLE EQUIPMENT
Portable glide slope indicator
[AD-D012240] N86-31552

POSITION (LOCATION)
Continentality: Its estimation and physical significance
[AD-A167111] N86-32044
Calendar of selected aeronautical and space meetings
[AGARD-CAL-86/1] N86-32324

POSITIONING
Course on radiopositioning
[ESA-86-98039] N86-31560
Application of multiple lines of position for hydrography
[AD-A167884] N86-31966

POSTFLIGHT ANALYSIS
Evaluation of solar array flight experiment response during flight for extension/retraction phase
[NASA-TM-86551] N86-31606

POTATOES
Controlled environment life support system: Growth studies with potatoes
[NASA-CR-177400] N86-32101

POTENTIAL ENERGY
The application of energy techniques to propeller-driven airplanes
[AD-A167113] N86-31569

POTENTIAL FLOW
A computer program for calculating the steady and oscillatory supersonic flow over thin wings
[AD-A167451] N86-31538
Formulation of numerical methods used in the XYZ Three-Dimensional Potential Flow Program
[AD-A168167] N86-31836

POWDER (PARTICLES)
Laser processing of ceramics
[DE86-011954] N86-31737
Development of advanced thermal insulation for appliances
[DE86-011357] N86-31843
Solid state transformations in Fe-Ni alloys from meteorites in powder form
[DE86-701936] N86-32386

POWDER METALLURGY
Study on effects of powder and flake chemistry and morphology on the properties of Al-Cu-Mg-X-X-X powder metallurgy advanced aluminum alloys
[NASA-CR-178145] N86-31698
Mechanical property development in Hot Isostatic Pressed (HIP) low alloy steel powder
[AD-A166666] N86-31703
Advanced processing and properties of high performance alloys
[AD-A167404] N86-31706
Surface fatigue and failure characteristics of hot forged powder metal AISI 4620, AISI 4640, and machined AISI 4340 steel spur gears
[NASA-TM-87330] N86-31889

POWER AMPLIFIERS
High power high voltage linear amplifier apparatus
[AD-D012244] N86-31796

POWER CONDITIONING
Description of a 20 Kilohertz power distribution system
[NASA-TM-87346] N86-31584
High voltage technology for a Traveling Wave Tube Electronic Power Conditioner (TWT-EPC) for a Synthetic Aperture Radar (SAR)
[BMFT-FB-W-85-015] N86-31813
Optical power flow with sequential quadratic programming --- electric power
[ESA-86-97708] N86-31995

POWER LINES
A conservative rating procedure for cyclically loaded, buried cables
[S/T-REPT-VOL-3-NO-9] N86-31821

PRANDTL-MEYER EXPANSION
The highly underexpanded exhaust plume from nozzles with boundary layer
[ESA-TT-929] N86-31658

PRECIPITATION (METEOROLOGY)
On the evolution of precipitation associated with a wintertime east coast cyclone: A GALE preliminary study
[AD-A166375] N86-32042
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Peterson AFB, Colorado Springs, Colorado
[AD-A167650] N86-32047
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Macdill AFB, Florida
[AD-A167651] N86-32048
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Cape Newenham, Alaska
[AD-A167652] N86-32049
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: White Sands MR, New Mexico
[AD-A167654] N86-32051
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: CAstle AFB, California
[AD-A167657] N86-32054
Climatological data of stations in the Netherlands. No. 25: A climatology of the main observatory at De Bilt for the period 1901-1984
[KNMI-150-25] N86-32068

PRECIPITATION HARDENING
Radiation-induced segregation and precipitation in molybdenum-rhenium alloys
[DE86-007521] N86-31715

PRECIPITATION PARTICLE MEASUREMENT
Experimental and theoretical research on open resonators --- precipitation measurement
[ESA-TT-931] N86-31816

PRECISION
A recent concept for application of interactive graphical data processing in cadastral map revisions N86-31962
Measures of measurement adequacy N86-32008

PREDICTION ANALYSIS TECHNIQUES
An analytical methodology for predicting repair time distributions of advanced technology aircraft
[AD-A167149] N86-31529
Theoretical and experimental investigation of vortex breakdown
[NASA-CR-176853] N86-31530
Why the straightforward method of antithetic variates is so disappointing in practice --- systems simulation
[ESA-86-97694] N86-32216

PREDICTIONS
Thematic classification of analytic models for orbit prediction, volume 1
[CNES-CT/DTI/MS/MN/240-VOL-1] N86-31616
Predictability of Rayleigh-Taylor instability
[DE86-009932] N86-31839

PREMIXED FLAMES
Intermittency and conditional velocities in premixed conical turbulent flames
[DE86-009363] N86-31687

PRESSURE DISTRIBUTION
Development of a variational SEASAT data analysis technique
[NASA-CR-177175] N86-31942
Validation of General Circulation Model (GCM) control runs
[DE86-009697] N86-32062

PRESSURE OSCILLATIONS
A computer program for calculating the steady and oscillatory supersonic flow over thin wings
[AD-A167451] N86-31538

PRESSURE REDUCTION
Modeling of zero gravity venting: Studies of two-phase heat transfer under reduced gravity
[NASA-CR-179662] N86-31826

PRESSURE SENSORS
Fiber optic pressure sensors in skin-friction measurements
[NASA-CR-176861] N86-32269

PRINTED CIRCUITS
Multilayer ceramic capacitor on printed circuit
[AD-D012246] N86-31797

PRIORITIES
Ready trace semantics for process algebra with priority operator
[FVI-85-15] N86-32218

PROBABILITY DISTRIBUTION FUNCTIONS
The central limit theorem and poincare-type inequalities
[AD-A167534] N86-32225

PROBABILITY THEORY
An analytical methodology for predicting repair time distributions of advanced technology aircraft
[AD-A167149] N86-31529
Elementary symmetric polynomials of increasing order
[CWI-MS-R8601] N86-32220
Upper bounds on Poisson tail probabilities
[AD-A167531] N86-32224
Foundations of O-Theory 1: The intersection rule
[DE86-008565] N86-32226
Chains with infinite connections: Uniqueness and Markov representation
[CWI-MS-R8509] N86-32230

PROBLEM SOLVING
Use of a special finite element for the static analysis of normal interfacial stresses
[SNIAS-861-422-109] N86-31936

Subsystem fact sheets for NASA CO2 Project, revision 3 N86-32010
Human problem solving in fault diagnosis tasks
[AD-A167397] N86-32104
A relational approach to computer programming
[ESA-86-97290] N86-32146
Some experiments with numerical pivoting in a code for solving large sparse stiff systems of odes
[DE86-010305] N86-32201
Quasi-periodic solutions of the Boomeron equation
[MEMO-436] N86-32239
Quasi-periodic solutions of the Boomeron Equation, 2
[MEMO-472] N86-32240
Chimera: A grid-embedding technique
[NASA-TM-89246] N86-32242
On L sub 1-contraction for systems of conservation laws
[AD-A167484] N86-32244

PRODUCT DEVELOPMENT
Development of flight control systems for maneuverable missile weapon systems. Example of operation organization
[MBB-UA-929/85] N86-31622
Attitude control of spacecraft: An overview of recent developments and research
[NLR-MP-85055-U] N86-31636
Moisture measurement in solids
[BMFT-FB-T-85-174] N86-31693
Development of a digital signal processor
[BMFT-FB-T-85-181] N86-31871
Preparing for the future: The ESA technological research and development program 1986-1988
[ESA-SP-1079] N86-32347

PRODUCTION ENGINEERING
Mechanics research directions in composites and manufacturing technologies
[DE86-008787] N86-31673
Correlation between microstructure and forging conditions of Combined Die-Forged (CDF) Ti-6Al-4V powder
[ESA-TT-952] N86-31725
Production and inventory control with the base stock system
[EUT/BDK/12] N86-32328
Balancing production level variations and inventory variations in complex production systems
[THE/BDK/84] N86-32329
Calculating workload norms for job shops
[BDK/KBS/84-04] N86-32330
The structuring of production control systems
[THE/BDK/ORS/84/10] N86-32332

PRODUCTION MANAGEMENT
The trade-off module: An aid to balance logistically related costs
[BDK/KBS/84-06] N86-32331
Due-date reliability in a repair shop: Implications for organizational and work design
[THE/BDK/KBS/84-14] N86-32333
Structuring the production control problem in a repair shop
[THE/BDK/KBS/84-16] N86-32334

PRODUCTION PLANNING
Production and inventory control with the base stock system
[EUT/BDK/12] N86-32328
Balancing production level variations and inventory variations in complex production systems
[THE/BDK/84] N86-32329
Calculating workload norms for job shops
[BDK/KBS/84-04] N86-32330
The structuring of production control systems
[THE/BDK/ORS/84/10] N86-32332
Due-date reliability in a repair shop: Implications for organizational and work design
[THE/BDK/KBS/84-14] N86-32333
Structuring the production control problem in a repair shop
[THE/BDK/KBS/84-16] N86-32334
A comparison of capacity oriented and product oriented approaches to goods flow control
[ARW-03-THE-BDK/ORS/84/11] N86-32335

PRODUCTIVITY
Methodology for Generating Efficiency and Effectiveness Measures (MGEEM): A guide for commanders, managers and supervisors
[AD-A167503] N86-32325

PRODUCTS
Semimanufactured products made of copper and copper alloys: An analysis of production and sale in a world perspective
[EUT/BDK/15] N86-31758
The evaluation of inner products of multivariate simplex splines
[AD-A167485] N86-32190
Optical matrix-matrix multiplier based on outer product decomposition
[AD-D012207] N86-32272

PROGRAM VERIFICATION (COMPUTERS)
Ada (trade name) compiler validation summary report: Verdix Corporation Verdix Ada Development System, version 5.2 for the Tektronix 6130 under UTek, release 2.1.1
[AD-A166872] N86-32113
The cooperation test: A syntax-directed verification method — distributed message passing
[REPT-62] N86-32151

PROGRAMMED INSTRUCTION
Electron-beam programmable configuration circuits
[BMFT-FB-T-85-183] N86-31806

PROGRAMMING LANGUAGES
Standard generalized markup language: A technique for document interchange
[DE86-011504] N86-31777
Specification and functional simulation of complex circuits: The CADOC system — integrated circuits
[ESA-86-97296] N86-31808
Direct parsing using immediate dominance/linear precedence (ID/LP) grammars N86-32127
Kalman filter real time tracking using microprocessors and a new language for military software
[AD-A167871] N86-32138
Programming algebra in a data type variance — artificial intelligence
[ESA-86-97300] N86-32149
Avoiding redex copying in lambda reduction — functional programming languages
[REPT-63] N86-32152
Interactive programs in a functional language. A functional implementation of an editor
[REPT-65] N86-32153
Transition systems, metric spaces and ready sets in the semantics of uniform concurrency
[CWI-CS-R8601] N86-32159
Contrasting themes in the semantics of imperative concurrency
[CWI-CS-R8603] N86-32161

PROJECTILES
Electromagnetic railgun and its applications
[DE86-009487] N86-31620
Telemetry system for very high acceleration
[ISL-CO-214/85] N86-31626

PROLATE SPHEROIDS
Wall shear stress measurements on a prolate spheroid at zero incidence in the German-Netherlands Wind (DNW) Tunnel — boundary layer transition
[DFVLR-MITT-86-06] N86-31547

PROP-FAN TECHNOLOGY
System design and integration of the large-scale advanced prop-fan
[NASA-CR-174799] N86-31536

PROPAGATION MODES
Use of an endoscope for optical fiber holography
[ISL-CO-224/85] N86-31676

PROPELLANT COMBUSTION
Solid rocket motor with nozzle containing aromatic amide fibers
[AD-D012250] N86-31655
Model for normal and erosive burning of composite propellants
[ESA-TT-910] N86-31695

PROPELLANT GRAINS
Dome restraint assembly for rocket motors
[AD-D012278] N86-31656
Study on algorithms for prediction of solid propellant rocket motor performance
[AD-A167942] N86-31657

PROPELLANT TESTS
An experimental investigation of various metallic/polymer fuels in a two-dimensional solid fuel ramjet
[AD-A167889] N86-31747

PROPELLER BLADES
Influence of third-degree geometric nonlinearities on the vibration and stability of pretwisted, preconed, rotating blades
[NASA-TM-87307] N86-31920

PROPELLER EFFICIENCY
New technology propulsion (ANT) for general aviation aircraft, phase 1
[BMFT-FB-W-85-031] N86-31589

PROPELLERS
The application of energy techniques to propeller-driven airplanes
[AD-A167113] N86-31569

PROPULSION SYSTEM CONFIGURATIONS
New technology propulsion (ANT) for general aviation aircraft, phase 1
[BMFT-FB-W-85-031] N86-31589
Space station propulsion technology
[NASA-CR-178697] N86-31647

PROPULSION SYSTEM PERFORMANCE
Aeropropulsion opportunities for the 21st century
[NASA-TM-88817] N86-31585
Performance characteristics of ring-cusp thrusters with xenon propellant
[NASA-TM-87336] N86-31650
Progress in fuel cells for transportation applications
[DE86-010206] N86-31991

PROPULSIVE EFFICIENCY
Aeropropulsion opportunities for the 21st century
[NASA-TM-88817] N86-31585

PROTECTIVE COATINGS
Improvement of the corrosion resistance of turbine engine bearings
[AD-A167355] N86-31693

PROTOCOL (COMPUTERS)
Adaptive control of the ALOHA protocol in a mobile radio cellular system
[ENST-85E013] N86-31785

PROTON BEAMS
Influence of radiation-induced segregation on ductility of a nickel-silicon alloy
[DE86-009500] N86-31720

PROTON IRRADIATION
Production of radionuclides in artificial meteorites irradiated isotropically with 600 MeV protons N86-32360
Simulation of cosmic irradiation conditions in thick target arrangements N86-32370

PROTOTYPES
Processing and correction of VLSI circuit images obtained with a scanning electronic microscope
[ESA-86-97297] N86-31809
Plastic Film Heat Exchanger Development Project
[DE86-009258] N86-31838
Balloon tracer for atmospheric pollutants
[DE86-007144] N86-31999

PSYCHOLOGICAL FACTORS
The psychology of decision making — military commanders N86-32096
Absolute judgment versus absolute magnitude estimation to convey information through symbol magnitude changes in CRT displays
[AD-A167059] N86-32103

PSYCHOLOGICAL TESTS
Speed of work and error rate: Analyses of individual differences in a choice reaction series with a cognitive component
[ESA-TT-844] N86-32099

PSYCHOMOTOR PERFORMANCE
A 24-hour structure of vigilance under prolonged sleep deprivation: Relationship with performance
[AD-A167399] N86-32089

PSYCHOPHYSICS
Absolute judgment versus absolute magnitude estimation to convey information through symbol magnitude changes in CRT displays
[AD-A167059] N86-32103

PUBLIC LAW
Legislation for software rights protection at last
[SNIAS-861-422-114] N86-32343

PULSE AMPLITUDE
Wide spectrum microwave pulse measurement
[DE86-008862] N86-31770

PULSE COMMUNICATION
Direct measurement of the nonlinear phase shift between the orthogonally polarized states of a single-mode fiber
[FUB-36-1984] N86-32267

PULSE GENERATORS
SAPIENS Memo 11. Electromagnetic characteristics of the conical transmission-line EMP simulator SAPIENS
[FOA-C-30415-A3] N86-31778

PULSE RADAR
Analysis of a combined FMCW pulse radar system for Side Looking Airborne Radar (SLAR) applications
[REPT-05-1-533-A106-85] N86-31784

PULSES
Propagation of long, high-power microwave pulses through the air
[DE86-009619] N86-31771
European Science Notes, volume 40, number 6
[AD-A167501] N86-32346

PYLONS
Flight test of passive wing/store flutter suppression
[NASA-TM-87766] N86-31598

PYROTECHNICS
A review of methods to determine the ignitability of pyrotechnic compositions
[AD-A167425] N86-31745
Prediction of ignition transfer reliability in pyrotechnic systems using the VARICOMP technique
[AD-A167430] N86-31746
Pyrotechnic valves and miniature devices
[SNIAS-861-422-112] N86-31754

Q

QUADRATIC EQUATIONS
Zero and negative masses in finite element vibration and transient analysis
[AD-A167489] N86-31922

QUADRATIC PROGRAMMING
Optical power flow with sequential quadratic programming — electric power
[ESA-88-97708] N86-31995
A new result in the theory and computation of the least norm solution of a linear program
[AD-A167515] N86-32136

QUADRATURES
Numerical quadrature methods for integrals of singular periodic functions and their application to singular and weakly singular integral equations
[NASA-CR-179151] N86-31828
Zero and negative masses in finite element vibration and transient analysis
[AD-A167489] N86-31922
Computing narrow inclusions for definite integrals
[AD-A167491] N86-32135

QUALITY CONTROL
Cumulative sum charts — statistical quality control
[ARW-03-THE-BDK/ORS/84/13] N86-31916
Quality control of filed subroutines. Least squares method. Development and validation of some algorithms
[CNES-CT/DTI/MS/MN/132] N86-32163

QUANTUM STATISTICS
High statistics inclusive phi meson production at SPS energies
[NIKHEF-H/86-1] N86-32253
Hadronic phi production and the Lund model for low p sub T interactions
[NIKHEF-H/86-4] N86-32255

QUANTUM THEORY
Theoretical studies of combustion dynamics
[DE86-009312] N86-31686
Structure of supersymmetric theories — field theories
[NIKHEF-H/86-6] N86-32323

QUARKS
Inclusive phi meson production, the parton fusion model and strange quark structure functions
[NIKHEF-H/86-3] N86-32254

QUASARS
A SIRTF interdisciplinary scientist proposal
[NASA-CR-176862] N86-32382

QUEUEING THEORY
An interative approximation method for the calculation of the balance distribution for a finite Markov chain
[ESA-86-97303] N86-32241
Models of two queues: A few new views
[CWI-OS-R8603] N86-32297
Calculating workload norms for job shops
[BDK/KBS/84-04] N86-32330

R

RADAR
Unclassified publications of Lincoln Laboratory. Volume 2: Report bibliography
[AD-A167967] N86-32337

RADAR APPROACH CONTROL
Airborne intruder detection considerations
[DE86-006462] N86-31576

RADAR CROSS SECTIONS
Radar cross-section of damped cylinders and anisotropic cylinders
[AD-A167773] N86-31769

RADAR IMAGERY
Simulation study synthetic aperture radar imagery (SIMSAR)
[ESA-88-97554] N86-31761
SIMSAR study, section 1 N86-31762
SIMSAR study, section 2 N86-31763
The USGS (US Geological Survey) X-, C-, and L- band SAR data collection program
[AD-A168173] N86-31967

RADAR MEASUREMENT
Development of a variational SEASAT data analysis technique
[NASA-CR-177175] N86-31942
Moisture determinations in and under vegetation canopies
[FEL-1985-52] N86-31973

RADAR SCATTERING
The SRI Ionospheric Structure and Dynamics Program, 1985 results
[AD-A168115] N86-32015

RADAR TRACKING
Feasibility study of surveillance avoidance during the deployment of Soviet payloads of military interest into orbit from a Soviet shuttle
[AD-A167661] N86-31607
Investigation of polar motion from Doppler tracking of the NNSS (Navy Navigation Satellite System) during the MERIT campaign
[AD-A167565] N86-31964
A sensitive radar search for small natural satellites of the Earth
[AD-A167777] N86-32387

RADIAL VELOCITY
Radial velocity spectrometers. What they measure
[AD-A167986] N86-31863

RADIATION COUNTERS
Evolution of nuclear emulsion techniques in the first half of this century — photographic emulsions
[NOTA-INTERNA-860] N86-31879
Environmental gamma radiation monitoring system with a large volume air ionization chamber
[OEFZS-4344] N86-32001

RADIATION DAMAGE
Ion damage microstructures in a Fe-10Cr-6Mo-0.5Nb
[DE86-008500] N86-31717
Effect of helium on swelling and microstructural evolution in ion-irradiated V-15Cr-5Ti alloy
[DE86-010510] N86-31723
Hostile energetic particle radiation environments in Earth's outer magnetosphere
[DE86-008752] N86-32018

RADIATION DOSAGE
Radiation-induced segregation and precipitation in molybdenum-rhenium alloys
[DE86-007521] N86-31715

RADIATION EFFECTS
Mechanical properties testing of several 800 MeV proton irradiated BCC metals and alloys
[DE86-007372] N86-31714
Radiation-induced segregation and precipitation in molybdenum-rhenium alloys
[DE86-007521] N86-31715
Postirradiation tensile behavior of nickel-doped ferritic steels
[DE86-009502] N86-31721
A densitometric analysis of IIaO film flown aboard the space shuttle transportation system STS-3, STS-8, and STS-7
[NASA-CR-176864] N86-31858
Application of new technologies to radiation biodosimetry in mammalian systems
[AD-A168176] N86-31865
A remote controlled calibration device for displacement transducers
[ECN-173] N86-31873

RADIATION HAZARDS
Air Force technical objective document, Aerospace Medical Division, FY 1987
[AD-A167422] N86-32090

RADIATION MEASUREMENT
Pacific Northwest solar radiation data
[DE86-009635] N86-32020

RADIATIVE HEAT TRANSFER
Analysis of the Gas Particle Radiator (GPR)
[NASA-TM-88786] N86-31652

RADICALS
Role of the radical pool in combustion
[DE86-010159] N86-31688

RADIO COMMUNICATION
Interconnection between packet switching national networks and local packet radio communication networks
[FUB-24-1985] N86-31790

RADIO FREQUENCIES
Analysis of high power RF windows for gyrotrons
[AD-A167424] N86-31861

RADIO NAVIGATION
Course on radiopositioning
[ESA-86-96039] N86-31560

RADIO SPECTRA
A SIRTF interdiciplinary scientist proposal
[NASA-CR-176862] N86-32382

RADIO TRANSMISSION
Satellite-Earth range measurements. Part 1: Correction of the excess path length due to atmospheric water vapor by ground based microwave radiometry
[CTH-RR-147-PT-1] N86-32022

RADIO WAVES
The SRI Ionospheric Structure and Dynamics Program, 1985 results
[AD-A168115] N86-32015

RADIOACTIVE AGE DETERMINATION
Determination of CA-41, I-129 and OS-187 in the Rochester tandem accelerator and some applications of these isotopes N86-32352
Live 129I-129Xe dating N86-32359

RADIOACTIVE ISOTOPES
Balance of the tropospheric ozone and its relation to stratospheric intrusions indicated by cosmogenic radionuclides, part 13
[DE85-015560] N86-32016
Workshop on Cosmogenic Nuclides
[NASA-CR-176886] N86-32348
Radionuclide measurements by accelerator mass spectrometry at Arizona N86-32356
Cosmic ray interactions in the ground: Temporal variations in cosmic ray intensities and geophysical studies N86-32357
Production of radionuclides in artificial meteorites inadiated isotropically with 600 MeV protons N86-32360
Compilation of cosmogenic radionuclides in meteorites N86-32362
Simulation of cosmic irradiation conditions in thick target arrangements N86-32370

RADIOACTIVE MATERIALS
Integral-data test of JEF-1 fission-product cross sections
[ECN-176] N86-32263

RADIOACTIVE WASTES
The CTD data from the Madeira Abyssal Plain. Charles Darwin cruise 1/85 — conductivity-temperature-depth (CTD)
[IOS-217] N86-32078
On the global behavior of a cylindrical salt dome with a HLW repository
[ECN-180] N86-32264

RADIOGRAPHY
In-situ solid-propellant burn-rate measurements using flash cineradiography
[AD-A167637] N86-31683
Factors that affect reliability of nondestructive detection of flaws in structural ceramics
[NASA-TM-87348] N86-31912
A new radiographic corrosion inspection capability
[AD-A167270] N86-31914

RADIOMETERS
A new radiographic corrosion inspection capability
[AD-A167270] N86-31914

RADIOMETRIC CORRECTION
The USGS (US Geological Survey) X-, C-, and L- band SAR data collection program
[AD-A168173] N86-31967

RADIOMETRIC RESOLUTION
LANDSAT 4 band 6 data evaluation
[NASA-CR-177173] N86-31944

RAILGUN ACCELERATORS
Rail inductance calculations for some simple current distributions
[AD-A167915] N86-31619
Electromagnetic railgun and its applications
[DE86-009487] N86-31620

RAILS
Rail inductance calculations for some simple current distributions
[AD-A167915] N86-31619

RAMAN SPECTRA
Raman spectra of rings in silicate material
[DE86-009629] N86-31685
Model for the steady-state rotational stimulated Raman gain coefficients in the atmosphere
[AD-A167469] N86-32013

RAMAN SPECTROSCOPY
Raman spectra of rings in silicate material
[DE86-009629] N86-31685
Raman spectrometer with microprobe capability
[AD-A167008] N86-32301

RAMJET ENGINES
An experimental investigation of various metallic/polymer fuels in a two-dimensional solid fuel ramjet
[AD-A167889] N86-31747

RANDOM NOISE
Competition noise in an optical divider
[ESA-86-97538] N86-31886
The Hamilton-Jacobi-Bellman equation with a gradient constraint
[AD-A167532] N86-32237

RANGE FINDERS
Optical distance measuring instrument
[NASA-CASE-GSC-12761-1] N86-32266

RAPID EYE MOVEMENT STATE
Altitude acclimatization (ventilation and chemoresponsiveness) during wakefulness and sleep
[AD-A167738] N86-32091

RARE EARTH ELEMENTS
Chinese Journal of Lasers (selected articles)
[AD-A167846] N86-31862

RARE GASES
Cosmogenic rare gases and 10-Be in a cross section of Knyahinya N86-32371

RAREFIED GAS DYNAMICS
The highly underexpanded exhaust plume from nozzles with boundary layer
[ESA-TT-929] N86-31658
RATES (PER TIME)
A linear stability analysis of the rapid development of an extratropical cyclone
[AD-A167808] N86-32057
RATINGS
A conservative rating procedure for cyclically loaded, buried cables
[S/T-REPT-VOL-3-NO-9] N86-31821
RATS
External respiration, gas exchange, and blood oxygen parameters in acute methemoglobinemia
[DRIC-T-7663] N86-32082
RAY TRACING
Parametric study of beam refraction problems across laser anemometer windows
[NASA-TM-87350] N86-31857
Acoustic description of south Atlantic Ocean warm core eddy
[AD-A166323] N86-32074
Fundamentals of thin lens optical systems, lectures 1, 2 and 3
[DE86-010642] N86-32281
RAYLEIGH DISTRIBUTION
Predictability of Rayleigh-Taylor instability
[DE86-009932] N86-31839
REACTION KINETICS
Workshop on the Frontiers of Theoretical and Experimental Electrochemistry
[DE86-007188] N86-31684
Theoretical studies of combustion dynamics
[DE86-009312] N86-31686
Aromatics oxidation and soot formation in flames
[DE86-010585] N86-31690
REACTION TIME
A 24-hour structure of vigilance under prolonged sleep deprivation: Relationship with performance
[AD-A167399] N86-32089
REACTOR MATERIALS
In-vacuum cyclic fatigue behavior of Vanstar-7 at elevated temperatures
[DE86-007322] N86-31713
Thermal history of HT-9 weldment heat-affected zones during welding
[DE86-010684] N86-31906
REACTOR PHYSICS
Activities report of the Interuniversity Reactor Institute
[ESA-86-97769] N86-32265
REACTOR SAFETY
Sensor-driven, fault-tolerant control of a maintenance robot
[DE86-002118] N86-31901
Space Nuclear Safety Program
[DE86-008579] N86-32260
REACTOR TECHNOLOGY
Leakage flow-induced vibrations for variations of a tube-in-tube slip joint
[DE86-010765] N86-31907
Estimates of maximum trappable ion beam power in plasma channels
[DE86-006472] N86-32291
REAL TIME OPERATION
Kalman filter real time tracking using microprocessors and a new language for military software
[AD-A167871] N86-32138
On the stability of the problem of target tracking with the FLIR
[AD-A167721] N86-32273
RECEIVERS
Loran C 1984 spring-summer stability
[AD-A167867] N86-31555
Development of a receiver concept for geodetic application of the NAVSTAR Global Positioning System (GPS) satellite navigation system
[BMFT-FB-W-85-036] N86-31557
An introduction to the optical heterodyne receiver
[NPL-QU-77] N86-31759
Acoustic description of south Atlantic Ocean warm core eddy
[AD-A166323] N86-32074
RECOGNITION
Geoscientific requirements on a graphical data base
N86-31948
RECORDING HEADS
Effect of crystallographical and geometrical changes of a ferrite head on magnetic signals during the sliding process with magnetic tape
[NASA-TM-87277] N86-31728
RECTANGULAR WAVEGUIDES
Microwave undulator
[DE86-009910] N86-31773
RECURSIVE FUNCTIONS
Tree-structured classification via generalized discriminant analysis
[AD-A167453] N86-32134
REDOX CELLS
Characterization of illuminated semiconductor/solid-electrolyte junctions. Semiconductor redox polymer detector junctions
[AD-A167665] N86-32304
REDUCED GRAVITY
Modeling of zero gravity venting: Studies of two-phase heat transfer under reduced gravity
[NASA-CR-179662] N86-31826
REDUCTION (CHEMISTRY)
Preparation and characterization of nickel substituted Fe5C2
[AD-A167410] N86-31707
Characterization of the redox behavior and stability of conducting oxides
[DE86-009871] N86-31804
REDUNDANCY
Numerical fusion of redundant telemetry sources
[SNIAS-861-422-113] N86-31627
A closed-form solution for inverse kinematics of robot manipulator with redundancy
[AD-A167850] N86-31894
Redundancy resolution of manipulators through torque optimization
[AD-A167851] N86-31895
REDUNDANCY ENCODING
Vulnerability of low redundancy image data and text transmission over satellite communication links
[NLR-TR-85100-L] N86-31787
REENTRY VEHICLES
Reentry body three-dimensional flow computation. (Euler and parabolized Navier-Stokes)
[SNIAS-861-422-107] N86-31845
REFLECTANCE
Investigations of laser mirrors with different design
[DFVLR-FB-85-65] N86-31887
Setup for the determination of the reflectivity of interference coatings --- laser mirrors
[DFVLR-MITT-85-18] N86-32285
REFLECTION
Extreme ultraviolet multilayer reflectors
[DE86-010194] N86-32280
REFLECTORS
Fields in the focal region of paraboloid and offset paraboloid reflectors
[AD-A167419] N86-31766
Extreme ultraviolet multilayer reflectors
[DE86-010194] N86-32280
REFRACTION
Parametric study of beam refraction problems across laser anemometer windows
[NASA-TM-87350] N86-31857
REFRACTIVITY
Loran C 1984 spring-summer stability
[AD-A167867] N86-31555
REFRACTORY COATINGS
The low cycle fatigue behavior of a plasma-sprayed coating material
[NASA-TM-87318] N86-31699
REGENERATORS
An overview of the Small Engine Component Technology (SECT) studies
[NASA-TM-88796] N86-31587
REGIONAL PLANNING
Activities report in remote sensing supervision
[ESA-86-97383] N86-31970
REGRESSION ANALYSIS
Methods for the detection and estimation of multiphase regression models
[ESA-86-97282] N86-32227
REGULATIONS
Tendencies for liberalization in European air transport
[ESA-TT-947] N86-31559
REINFORCING FIBERS
Mechanical testing of graphite-epoxy composite tubes
[DE86-009608] N86-31674
Exploration of advanced characterization techniques for molecular composites
[AD-A168102] N86-31733
RELATIVISTIC PARTICLES
On the generation of equivalent Hamiltonians
[DE86-701920] N86-32203
RELIABILITY ANALYSIS
A sensor failure simulator for control system reliability studies
[NASA-TM-87271] N86-31792
Factors that affect reliability of nondestructive detection of flaws in structural ceramics
[NASA-TM-87348] N86-31912
Composite structural reliability calculation by finite element and statistical strength theory
[AD-A167890] N86-31924
RELIABILITY ENGINEERING
Models for program reliability: Application to a critical computer system validation test
[ESA-86-97283] N86-32144
A relational approach to computer programming
[ESA-86-97290] N86-32146
REMOTE CONTROL
Sensor-driven, fault-tolerant control of a maintenance robot
[DE86-002118] N86-31901
Remote maintenance robot system for a pulsed nuclear reactor
[DE86-000206] N86-32178
REMOTE SENSING
Remote gas analysis with lasers. Analytic laboratory investigations in the 3.4 to 4.2 microns range
[BMFT-FB-W-85-020] N86-31694
Earth resources: A continuing bibliography with indexes, issue 50
[NASA-SP-7041(50)] N86-31940
Digital geoscientific cartography: A leading program of the German research community N86-31960
The USGS (US Geological Survey) X-, C-, and L- band SAR data collection program
[AD-A168173] N86-31967
Activities report in remote sensing supervision
[ESA-86-97383] N86-31970
Image quality criteria with emphasis on criteria for remote sensing imagery
[NLR-TR-84040-U] N86-31974
Activities report in aerospace survey and space sciences
[ESA-86-98042] N86-31976
Introduction to the interpretation of remote sensing data
[ESA-86-98067] N86-31977
Investivations of depth-resolved laser remote measurement of NO2 and SO2 in the visible and UV spectral domains --- atmospheric pollution
[GKSS-85/E/48] N86-32002
System study of the utilization of space for carbon dioxide research
[NASA-CR-3923] N86-32005
Scientific data requirements
[ADL-C-89230] N86-32007
A procedure for space SDR prioritization N86-32009
Determination of the atmospheric aerosol distribution by multi-channel remote sensing techniques
[AD-A167885] N86-32014
Simulation experiments for gamma-ray mapping of planetary surfaces: Scattering of high-energy neutrons
N86-32350
REMOTE SENSORS
Standard calibration procedure for pencil beam infrared sensors on spinning satellites, volume 1
[REPT-209-DT-54-VOL-1] N86-31644
Standard calibration procedure for pencil beam infrared sensors on spinning satellites. Volume 2: Applicable software and user manuals
[REPT-209-DT-55-VOL-2] N86-31645
Noncontact measurement of roughness of ground and polished metal surfaces
[BMFT-FB-T-85-150] N86-31909
Multisensor systems seen from different points of view
[FVI-86-02] N86-32185
Second generation meteosat: Infrared atmospheric sounder design
[CNES-T-85/CT/DRT/TIT/IO-046] N86-32283
REMOTELY PILOTED VEHICLES
Design of a vertical thrust stand for a remotely piloted model helicopter
[AD-A167811] N86-31598
RENDEZVOUS GUIDANCE
Control theoretic analysis of human operator mediated rendezvous and docking
[NLR-MP-85020-U] N86-32106
REPORTS
Research activities report of the German Federal Government
[ISSN-0722-8333] N86-32344
REPRESENTATIONS
The temporal aspect of text representation --- formal representation N86-32129
REPRODUCTION (COPYING)
Reproduction of topographic map 1:200000 in digital raster mode N86-31954
Calculation and representations of elevation changes in a tidal flat area from digital terrain models
N86-31956
RESEARCH AIRCRAFT
User's manual for the Falcon system --- Falcon research aircraft
[ESA-TT-936] N86-31579
RESEARCH AND DEVELOPMENT
Space and defense --- antimissile defense
[ESA-86-97272] N86-31605

Attitude control of spacecraft: An overview of recent developments and research
[NLR-MP-85055-U] N86-31636
Evolution of nuclear emulsion techniques in the first half of this century — photographic emulsions
[NOTA-INTERNA-860] N86-31879
Photovoltaics: Electricity from sunlight, FY 1985 accomplishments
[DE86-004429] N86-31986
Control loops with human operators in space operations. Part 4: Research requirements for human-in-the-loop space teleoperator development
[NLR-TR-84116-L-PT-4] N86-32109
Research activities report of the German Federal Government
[ISSN-0722-8333] N86-32344
Preparing for the future: The ESA technological research and development program 1986-1988
[ESA-SP-1079] N86-32347

RESEARCH FACILITIES
Evaluation of the need for a large primate research facility in space
[NASA-CR-179661] N86-32111

RESEARCH MANAGEMENT
STS (Space Transportation System) experiment support structure needs assessment
[AD-A167859] N86-31624
Evaluation of the need for a large primate research facility in space
[NASA-CR-179661] N86-32111
Research activities report of the German Federal Government
[ISSN-0722-8333] N86-32344
Identification of Air Force emerging technologies and militarily significant emerging technologies
[AD-A167088] N86-32345

RESIDUAL STRESS
Residual stress and deformation energy under ground surfaces of brittle solids — glass grinding
[WB-85-16] N86-31911
Investigation of ultrasonic methods for residual stress measurement
[DE86-009614] N86-31927

RESISTANCE THERMOMETERS
Multichannel automatic device for measuring ultralow temperatures
[DE86-701438] N86-31867

RESOLUTION
Scientific data requirements
[ADL-C-89230] N86-32007

RESONANCE
Painleve test for the complete integrability of Bogomolny's monopole equation
[DE85-703173] N86-32199

RESONANCE SCATTERING
Optimization study for ion temperature measurements by means of Rutherford scattering — tokamak experiments
[REPT-86-164] N86-32296
Resonance scattering of solar radiation by the interplanetary medium
[BMFT-FB-W-85-032] N86-32385

RESONANT FREQUENCIES
Experimental and theoretical research on open resonators — precipitation measurement
[ESA-TT-931] N86-31816

RESONANT VIBRATION
Evaluation of solar array flight experiment response during flight for extension/retraction phase
[NASA-TM-86551] N86-31606

RESOURCES MANAGEMENT
Methodology for Generating Efficiency and Effectiveness Measures (MGEEM): A guide for commanders, managers and supervisors
[AD-A167503] N86-32325

RESPIRATORY PHYSIOLOGY
External respiration, gas exchange, and blood oxygen parameters in acute methemoglobinemia
[DRIC-T-7863] N86-32082

RETRACTABLE EQUIPMENT
Evaluation of solar array flight experiment response during flight for extension/retraction phase
[NASA-TM-86551] N86-31606

REVISIONS
Comparison of Clifford and Grassmann algebras in applications to electromagnetics, revision 1
[DE86-009716] N86-31775
Digital geoscientific cartography: A leading program of the German research community N86-31960

RHENIUM
Slip casting and extruding shapes of rhenium with metal oxide additives. 1: Feasibility demonstration
[NASA-CR-174970] N86-31648

RHENIUM ALLOYS
Radiation-induced segregation and precipitation in molybdenum-rhenium alloys
[DE86-007521] N86-31715

RHEOLOGY
Study on the rheology of RX-08-FK LLNL's paste explosive
[DE86-010781] N86-31753

RIEMANN MANIFOLD
Quasi-periodic solutions of the Boomeron equation
[MEMO-436] N86-32239
Quasi-periodic solutions of the Boomeron Equation, 2
[MEMO-472] N86-32240

RIGID STRUCTURES
Novel macromolecular structures and composites
[AD-A166243] N86-31731

ROBOTICS
Improved robotic kitting station
[AD-D012238] N86-31892
Redundancy resolution of manipulators through torque optimization
[AD-A167851] N86-31895
Multisensor systems seen from different points of view
[FVI-86-02] N86-32185

ROBOTS
Improved robotic kitting station
[AD-D012238] N86-31892
Sensor-driven, fault-tolerant control of a maintenance robot
[DE86-002118] N86-31901
Remote maintenance robot system for a pulsed nuclear reactor
[DE86-000206] N86-32178

ROCKET ENGINE CASES
Determination of Solid Rocket Motor (SRM) case segment growth
[NASA-TM-86557] N86-31653
Dome restraint assembly for rocket motors
[AD-D012278] N86-31656

ROCKET ENGINES
Test program to provide confidence in liquid oxygen cooling of hydrocarbon fueled rocket thrust chambers
[NASA-TM-88816] N86-31646

ROCKET EXHAUST
The highly underexpanded exhaust plume from nozzles with boundary layer
[ESA-TT-929] N86-31658

ROCKET NOZZLES
Solid rocket motor with nozzle containing aromatic amide fibers
[AD-D012250] N86-31655

ROCKET SOUNDING
Sounding rocket program Magnetosphere payload CAESAR. Report on systems development, integration, testing and flight
[BMFT-FB-W-85-023] N86-32023

RODENTS
A chinchilla restraint system
[AD-A167408] N86-32084

ROOM TEMPERATURE
Determination of the fracture toughness of ceramic materials on bending samples with different notch types, at room temperature and high temperature
[DFVLR-FB-85-67] N86-31744

ROTARY ENGINES
Visualization of flows in a motored rotary combustion engine using holographic interferometry
[NASA-TM-88804] N86-31583

ROTARY STABILITY
Influence of third-degree geometric nonlinearities on the vibration and stability of pretwisted, preconed, rotating blades
[NASA-TM-87307] N86-31920

ROTARY WING AIRCRAFT
A trade-off study of tilt rotor aircraft versus helicopters using VASCOMP 2 and HESCOMP
[AD-A167719] N86-31575

ROTATING BODIES
The investigation of tethered satellite system dynamics
[NASA-CR-178895] N86-31631

ROTATING DISKS
Coherent vortex structures in the wake of a rigid and an externally driven disk
[DFVLR-FB-86-04] N86-31851

ROTOR AERODYNAMICS
Rotor aerodynamics of horizontal axis wind turbines. Summary of lectures and discussions. Presentation of results of calculation methods
[THD-IW-R505] N86-31994

ROTOR BLADES
Summary of NASA/DOE Aileron-Control Development Program for Wind Turbines
[NASA-TM-88811] N86-31983

ROTORS
Magnetic bearings: An adaptive solution to motion-control problems
[DE86-010615] N86-31905

RUBBER
Stability of a rubber half-space, part 2
[WTHD-176-PT-2] N86-31939

RUNWAYS
Field performance of fiber-reinforced concrete airfield pavements
[FAA/PM-86/26] N86-31596

RURAL AREAS
Photovoltaic power system design for telecommunications
[ESA-86-97255] N86-31992

S

S GLASS
Analysis of S-glass ceramic lot no. 84-132 for use as a standard reference material
[DE86-010309] N86-31736

SAFETY
Full-scale crash test (T-41) of the YAH-63 attack helicopter
[AD-A167813] N86-31550

SAFETY DEVICES
Safe-arm explosive transfer mechanism
[AD-D012333] N86-31896

SALINITY
The results of hydrological measurements in the southern Adriatic, the west coast of Sicily and the Vatican Cape, preliminary report
[PREPRINT-502] N86-31975
The CTD data from the Madeira Abyssal Plain, Charles Darwin cruise 1/85 — conductivity-temperature-depth (CTD)
[IOS-217] N86-32078
Preliminary report on the hydrological measurements carried out in the southern Tyrrhenian sea and in the Messina strait
[PREPRINT-489] N86-32081

SALT BEDS
On the global behavior of a cylindrical salt dome with a HLW repository
[ECN-180] N86-32264

SALTS
Estimated heats of fusion of fluoride salt mixtures suitable for thermal energy storage applications
[NASA-TM-87320] N86-31982

SANDWICH STRUCTURES
Fiber composite sandwich thermostructural behavior: Computational simulation
[NASA-TM-88787] N86-31663
Strongback baseline design: Mechanical properties of composite facesheets
[DE86-011913] N86-31675

SATELLITE ANTENNAS
Spacecraft multibeam antenna system for 30/20 GHz
[NASA-CR-174654] N86-31760

SATELLITE ATTITUDE CONTROL
Attitude control of spacecraft: An overview of recent developments and research
[NLR-MP-85055-U] N86-31636
In-flight attitude estimation and control experiments with IRAS based on modern control theory
[NLR-TR-84029-U] N86-31642

SATELLITE COMMUNICATION
ACTS Experiments Program
[NASA-TM-88820] N86-31625

SATELLITE DOPPLER POSITIONING
Development of a receiver concept for geodetic application of the NAVSTAR Global Positioning System (GPS) satellite navigation system
[BMFT-FB-W-85-036] N86-31557

SATELLITE IMAGERY
COVER Project and Earth resources research transition
[NASA-CR-177176] N86-31941
Utilizing remote sensing of Thematic Mapper data to improve our understanding of estuarine processes and their influence on the productivity of estuarine-dependent fisheries
[NASA-CR-177177] N86-31943
LANDSAT 4 band 6 data evaluation
[NASA-CR-177173] N86-31944

SATELLITE OBSERVATION
Radial velocity spectrometers. What they measure
[AD-A167986] N86-31863
Earth resources: A continuing bibliography with indexes, issue 50
[NASA-SP-7041(50)] N86-31940
Development of a variational SEASAT data analysis technique
[NASA-CR-177175] N86-31942

Calibration of multispectral scanner (MSS) satellite data to evaluate change in the reflection of coniferous stocks
[ESA-TT-938] N86-31971
Integration of the topography in teledetection image data processing
[ESA-86-97652] N86-31972
The results of hydrological measurements in the southern Adriatic, the west coast of Sicily and the Vatican Cape, preliminary report
[PREPRINT-502] N86-31975
Satellite observations of the cloud-topped boundary layer N86-32031
Use of existing and suggested satellite observations of reflected spectral radiance to estimate properties of stratiform clouds N86-32032
Boundary layer clouds in the ISCCP data sets — International Satellite Cloud Cover Program (ISCCP)
N86-32041

SATELLITE ORBITS
Feasibility study of surveillance avoidance during the deployment of Soviet payloads of military interest into orbit from a Soviet shuttle
[AD-A167861] N86-31607

SATELLITE ORIENTATION
Problems of ARCADE-3 satellite attitude determination
[CNES-CT/DTI/MS/CD/122] N86-31615

SATELLITE SOLAR POWER STATIONS
Space solar cell research: Problems and potential
[NASA-TM-88833] N86-31793

SATELLITE TRANSMISSION
Vulnerability of low redundancy image data and text transmission over satellite communication links
[NLR-TR-85100-L] N86-31787
Satellite-Earth range measurements. Part 1: Correction of the excess path length due to atmospheric water vapor by ground based microwave radiometry
[CTH-RR-147-PT-1] N86-32022

SATELLITE-BORNE INSTRUMENTS
Standard calibration procedure for pencil beam infrared sensors on spinning satellites, volume 1
[REPT-209-DT-54-VOL-1] N86-31644
Standard calibration procedure for pencil beam infrared sensors on spinning satellites. Volume 2: Applicable software and user manuals
[REPT-209-DT-55-VOL-2] N86-31645

SCALARS
Coherent structures in turbulent shear layers and relation to mixing reaction and combustion
[AD-A167042] N86-31681
Experimental and theoretical research on open resonators — precipitation measurement
[ESA-TT-931] N86-31816

SCALING LAWS
Absolute judgment versus absolute magnitude estimation to convey information through symbol magnitude changes in CRT displays
[AD-A167059] N86-32103
On Delta Beta and the search for asymptotic scaling in lattice gauge theory
[NIKHEF-H/86-6] N86-32231

SCANNERS
Processing and correction of VLSI circuit images obtained with a scanning electronic microscope
[ESA-86-97297] N86-31809

SCANNING
Current status in development of averaging laser strainometer and testing system
[DE86-006727] N86-31882

SCATTERING
Theoretical studies of combustion dynamics
[DE86-009312] N86-31686
Scattering from a planar equiangular spiral antenna
[AD-A167068] N86-31764

SCHEDULING
Subsystem fact sheets for NASA CO2 Project, revision 3 N86-32010
Calendar of selected aeronautical and space meetings
[AGARD-CAL-86/1] N86-32324
Calculating workload norms for job shops
[BDK/KBS/84-04] N86-32330

SCHLIEREN PHOTOGRAPHY
Investigation of density gradient fluctuations in a turbulent jet by means of the laser Schlieren crossed-beam method
[ESA-TT-942] N86-31849
Advanced optical measuring systems for measuring the properties of fluids and structures
[NASA-TM-88829] N86-31859

SCIENTISTS
Identification of Air Force emerging technologies and militarily significant emerging technologies
[AD-A167088] N86-32345

SCRUBBERS
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 3: On-Board Inert Gas Generator System (OBIGGS) studies. Part 2: Fuel scrubbing and oxygen evolution tests
[AD-A167445] N86-31573

SEA ICE
NORDA Arctic data collection, processing and interpretation capabilities
[AD-A167797] N86-31965

SEA TRUTH
Preliminary report on the hydrological measurements carried out in the southern Tyrrhenian sea and in the Messina strait
[PREPRINT-489] N86-32081

SEA WATER
The influence of incubation time on the passive film breakdown of aluminum alloys in seawater
[AD-A167398] N86-31705

SEARCH PROFILES
Automated valve expertise capture
[DE86-004127] N86-31897

SEARCH RADAR
Feasibility study of surveillance avoidance during the deployment of Soviet payloads of military interest into orbit from a Soviet shuttle
[AD-A167861] N86-31607
A sensitive radar search for small natural satellites of the Earth
[AD-A167777] N86-32387

SEARCHING
Discovery systems
[AD-A167852] N86-32176

SECONDARY COSMIC RAYS
Production rates of neon xenon isotopes by energetic neutrons N86-32358

SECONDARY FLOW
Finite element, stream function-vorticity solution of secondary flow in the cross-plane of noncircular channels
[ECN-175] N86-31856

SECURITY
Airborne intruder detection considerations
[DE86-006462] N86-31576
Mechanical relocker for locking bolts
[AD-D012209] N86-31891

SEDIMENT TRANSPORT
Geotechnical data inventory, southern California coastal zone, Cape San Martin (Monterey County) to Mexican border
[AD-A167734] N86-32075

SEGMENTS
Determination of Solid Rocket Motor (SRM) case segment growth
[NASA-TM-86557] N86-31653

SEISMIC WAVES
E-layer ionospheric disturbances following the Coalinga earthquake
[DE86-008588] N86-32017

SELECTION
Automated valve expertise capture
[DE86-004127] N86-31897

SELF ADAPTIVE CONTROL SYSTEMS
Self-tuning control principles applied to bilinear systems
[IR-SC-85-2] N86-32183

SEMANTICS
System semantics and formal circuit description — programming languages
[REPT-69] N86-32156
Transition systems, metric spaces and ready sets in the semantics of uniform concurrency
[CWI-CS-R8601] N86-32159
Contrasting themes in the semantics of imperative concurrency
[CWI-CS-R8603] N86-32161
Ready trace semantics for process algebra with priority operator
[FVI-85-15] N86-32218

SEMICONDUCTOR DEVICES
Apparatus and method for aligning a mask and wafer in the fabrication of integrated circuits
[AD-D012208] N86-31795
Nonlinear optical interactions in semiconductors
[AD-A166182] N86-31880
Focused ion beam technology
[AD-A167762] N86-32259
Plasma and ion etching for failure analysis. Part 1: Review of current theory and techniques — semiconductors
[AERE-R-11907-PT-1] N86-32292
Characterization of illuminated semiconductor/solid-electrolyte junctions. Semiconductor redox polymer detector junctions
[AD-A167665] N86-32304

SEMICONDUCTOR JUNCTIONS
Semiconductor/solid electrolyte junctions for optical information storage. Electrochromic effects on Heptyl Viologen incorporated within a solid polymer electrolyte cell
[AD-A167666] N86-32305
Semiconductor/solid electrolyte junctions for optical information storage. Solid-state electrochromic cell using lutecium diphthalocyanine
[AD-A167669] N86-32307

SEMICONDUCTOR LASERS
Optoelectronic devices and related physical phenomena in thin film semiconductor configurations
[AD-A167983] N86-32308

SEMICONDUCTORS (MATERIALS)
Non-contact polishing
[AD-D012210] N86-31755
Measurement techniques using ultrashort optical pulses
[DE86-009691] N86-32279
Non-linear optical excitation and detection of the plasmon in two-dimensional electron gas
[DE85-703230] N86-32290
Plasma and ion etching for failure analysis. Part 1: Review of current theory and techniques — semiconductors
[AERE-R-11907-PT-1] N86-32292
Selective anodic oxidation of semiconductors for pattern generation
[AD-D012245] N86-32299
Semiconductor alloy theory
[AD-A166995] N86-32300
Optimization of the thermoelectric figure of merit of fine-grained semiconductor materials based upon lead telluride
[AD-A167647] N86-32303
Optoelectronic devices and related physical phenomena in thin film semiconductor configurations
[AD-A167983] N86-32308
Deposition of crystalline semiconductor layers on amorphous substrates (Graphoepitaxy)
[BMFT-FB-T-85-160] N86-32313

SENSORS
A sensor failure simulator for control system reliability studies
[NASA-TM-87271] N86-31792

SEPARATED FLOW
Computations of separated subsonic and transonic flow about airfoils in unsteady motion
[NLR-MP-84094-U] N86-31541
SSME main combustion chamber and nozzle flowfield analysis
[NASA-CR-178893] N86-31654

SEPARATION
Influence of radiation-induced segregation on ductility of a nickel-silicon alloy
[DE86-009500] N86-31720

SEQUENTIAL ANALYSIS
Optical power flow with sequential quadratic programming — electric power
[ESA-86-97708] N86-31995

SERIES EXPANSION
Steep gravity waves: Havelock's method revisited
[AD-A167520] N86-31831
Evaluation of some Fibonacci and Lucas series via certain functions of the Q matrix
[FUB-23-1985] N86-32219
Elementary symmetric polynomials of increasing order
[CWI-MS-R8601] N86-32220

SERVICE LIFE
The noncavitating performance and life of a small vane-type positive displacement pump in liquid hydrogen
[NASA-TM-87347] N86-31651
A mathematical approach for evaluating nickel-hydrogen cells
[NASA-TM-88803] N86-31680

SERVICES
Guide to standard weather summaries and climatic services
[AD-A168099] N86-32060
Computing Services Software Library
[DE86-009491] N86-32340

SERVOMECHANISMS
Magnetic bearings: An adaptive solution to motion-control problems
[DE86-010615] N86-31905
Balloon tracer for atmospheric pollutants
[DE86-007144] N86-31999

SET THEORY
Contrasting themes in the semantics of imperative concurrency
[CWI-CS-R8603] N86-32161
Chains with infinite connections: Uniqueness and Markov representation
[CWI-MS-R8509] N86-32230

Mappings with closed range and finite dimensional linear spaces
[DE85-703172] N86-32236

SHALLOW WATER
Integrable systems in the description of waves in straits and channels of variable width and depth — solitary waves
[PREPRINT-493] N86-31855

SHEAR FLOW
Coherent structures in turbulent shear layers and relation to mixing reaction and combustion
[AD-A167042] N86-31681

SHEAR LAYERS
Coherent structures in turbulent shear layers and relation to mixing reaction and combustion
[AD-A167042] N86-31681

SHEAR PROPERTIES
Fiber composite sandwich thermostructural behavior: Computational simulation
[NASA-TM-88787] N86-31663
Novel macromolecular structures and composites
[AD-A166243] N86-31731

SHEAR STRESS
Wall shear stress measurements on a prolate spheroid at zero incidence in the German-Netherlands Wind (DNW) Tunnel — boundary layer transition
[DFVLR-MITT-86-06] N86-31547
Studies for the application of a flexible weight and balance (W/B) measuring facility for commercial aircraft
[BMFT-FB-W-85-029] N86-31604
Fiber optic pressure sensors in skin-friction measurements
[NASA-CR-176861] N86-32269

SHIP HULLS
On wings and keels (2)
[NLR-MP-85048-U] N86-31847

SHOCK WAVES
Optical studies of chemical energy release during shock initiation of granular explosives
[DE86-010469] N86-31752
Technique for megabar controlled strain experiments
[DE86-000605] N86-31930

SHORELINES
Utilizing remote sensing of Thematic Mapper data to improve our understanding of estuarine processes and their influence on the productivity of estuarine-dependent fisheries
[NASA-CR-177177] N86-31943

SHORT TAKEOFF AIRCRAFT
A trade-off study of tilt rotor aircraft versus helicopters using VASCOMP 2 and HESCOMP
[AD-A167719] N86-31575

SIDE-LOOKING RADAR
Analysis of a combined FMCW pulse radar system for Side Looking Airborne Radar (SLAR) applications
[REPT-05-1-533-A106-85] N86-31784

SIDESLIP
Low-speed aerodynamic characteristics of a 1/8-scale X-29A airplane model at high angles of attack and sideslip
[NASA-TM-87722] N86-31532

SIGNAL PROCESSING
Development of a receiver concept for geodetic application of the NAVSTAR Global Positioning System (GPS) satellite navigation system
[BMFT-FB-W-85-036] N86-31557
Effect of crystallographical and geometrical changes of a ferrite head on magnetic signals during the sliding process with magnetic tape
[NASA-TM-87277] N86-31728
SIG: A general-purpose signal processing program
[DE86-009725] N86-31772
Linear filter theory
[ESA-86-97391] N86-31811
Development of a digital signal processor
[BMFT-FB-T-85-181] N86-31871
New array processors of floating point systems
N86-31953
Speech analysis based on a model of the auditory system
[AD-A167426] N86-32098
Performance analysis of a microcomputer-based single-loop digital control system
[AD-A167914] N86-32177
Measurement and extraction of recurring waveforms: For applications to active transmissions, flow-noise, and helicopter-radiated noise problems
[AD-A167400] N86-32249

SIGNAL TO NOISE RATIOS
Loran C 1984 spring-summer stability
[AD-A167867] N86-31555

SILANES
Chemical reactions and properties of organosilicon compounds related to new materials
[AD-A166338] N86-31660
Microcrystalline growth studies in model oxide by dynamic laser-light scattering methods
[DE86-007300] N86-32310

SILICATES
Raman spectra of rings in silicate material
[DE86-009629] N86-31685

SILICON
Photodesorption cleaning of silicon with vacuum ultraviolet irradiation
[AD-A167420] N86-31682
Extreme ultraviolet multilayer reflectors
[DE86-010194] N86-32280
The behavior of nonrotational striations in silicon
[BMFT-FB-W-85-014] N86-32316

SILICON CARBIDES
Chemical vapor infiltration of fiber-reinforced ceramic composites
[DE86-009513] N86-31735
Factors that affect reliability of nondestructive detection of flaws in structural ceramics
[NASA-TM-87348] N86-31912

SILICON DIOXIDE
Chemical reactions and properties of organosilicon compounds related to new materials
[AD-A166338] N86-31660

SILICON NITRIDES
Correlation of processing and sintering variables with the strength and radiography of silicon nitride
[NASA-TM-87251] N86-31729
Factors that affect reliability of nondestructive detection of flaws in structural ceramics
[NASA-TM-87348] N86-31912
Quantitative void characterization in structural ceramics using scanning laser acoustic microscopy
[NASA-TM-88797] N86-31913

SILICON POLYMERS
Chemical reactions and properties of organosilicon compounds related to new materials
[AD-A166338] N86-31660

SILOXANES
Chemical reactions and properties of organosilicon compounds related to new materials
[AD-A166338] N86-31660
Raman spectra of rings in silicate material
[DE86-009629] N86-31685

SILVER COMPOUNDS
Single-crystal neutron diffraction study of the distribution and thermal motion of silver ions in alpha- and beta-Ag SI
[DE86-005056] N86-32309

SILVER NITRATES
Interdiffusion in binary salt melting under weightlessness
[BMFT-FB-W-85-017] N86-31609

SIMPLEX METHOD
The evaluation of inner products of multivariate simplex splines
[AD-A167485] N86-32190
The computational cost of simplex spline functions
[AD-A167513] N86-32195

SIMULATION
Flight control synthesis for flexible aircraft using Eigenspace assignment
[NASA-CR-178164] N86-31590
Numerical simulation of boundary layers. Part 2: Ribbon-induced transition in Blasius flow
[NASA-TM-88221] N86-31823
Diffusion of gases in porous solids: Simulation and measurement
[DE86-005380] N86-31837
Contributions to large-eddy simulation, part 1
[DE86-009710] N86-32021
Simulation experiments for gamma-ray mapping of planetary surfaces: Scattering of high-energy neutrons
N86-32350
Simulation of cosmic irradiation conditions in thick target arrangements N86-32370

SIMULATORS
SAPIENS Memo 11. Electromagnetic characteristics of the conical transmission-line EMP simulator SAPIENS
[FOA-C-30415-A3] N86-31778

SINGLE CRYSTALS
Microstructure-property relationships in directionally solidified single crystal nickel-base superalloys
[NASA-TM-88788] N86-31700
Single-crystal neutron diffraction study of the distribution and thermal motion of silver ions in alpha- and beta-Ag SI
[DE86-005056] N86-32309

SINGLE SIDEBAND TRANSMISSION
A single sideband suppressed carrier (SSBSC) interferometer for the measurement of dielectric properties of laser heated materials
[ISL-CO-228/85] N86-31877

SINGULAR INTEGRAL EQUATIONS
Numerical quadrature methods for integrals of singular periodic functions and their application to singular and weakly singular integral equations
[NASA-CR-178151] N86-31828

SINTERING
Slip casting and extruding shapes of rhenium with metal oxide additives. 1: Feasibility demonstration
[NASA-CR-174970] N86-31648
Correlation of processing and sintering variables with the strength and radiography of silicon nitride
[NASA-TM-87251] N86-31729

SITE SELECTION
The CTD data from the Madeira Abyssal Plain. Charles Darwin cruise 1/85 — conductivity-temperature-depth (CTD)
[IOS-217] N86-32078

SIZE (DIMENSIONS)
European Science Notes, volume 40, number 6
[AD-A167501] N86-32346

SIZE DETERMINATION
Quantitative void characterization in structural ceramics using scanning laser acoustic microscopy
[NASA-TM-88797] N86-31913
Determination of the atmospheric aerosol distribution by multi-channel remote sensing techniques
[AD-A167885] N86-32014

SKIN FRICTION
Fiber optic pressure sensors in skin-friction measurements
[NASA-CR-176861] N86-32269

SKY RADIATION
Radiation in boundary layer clouds N86-32028

SLEEP
Altitude acclimatization (ventilation and chemoresponsiveness) during wakefulness and sleep
[AD-A167738] N86-32091

SLEEP DEPRIVATION
A 24-hour structure of vigilance under prolonged sleep deprivation: Relationship with performance
[AD-A167399] N86 32089

SLIP CASTING
Slip casting and extruding shapes of rhenium with metal oxide additives. 1: Feasibility demonstration
[NASA-CR-174970] N86-31648

SODIUM FLUORIDES
Estimated heats of fusion of fluoride salt mixtures suitable for thermal energy storage applications
[NASA-TM-87320] N86-31962

SODIUM NITRATES
External respiration, gas exchange, and blood oxygen parameters in acute methemoglobinemia
[DRIC-T-7663] N86-32082

SODIUM SULFUR BATTERIES
Design considerations for advanced battery concepts
[NASA-TM-87319] N86-31961

SOFTWARE ENGINEERING
Theory and operation of the Gould 32/27 programs ABLE-2A and EBLE for the tropospheric air motion measurement system
[NASA-CR-176856] N86-32011
Aiding computer application programmers and users with the tools of the visual interface
[AD-A167886] N86-32139
Production of codicological catalogs using computers (PCC project)
[REPT-67] N86-32155
Performance analysis of a microcomputer-based single-loop digital control system
[AD-A167914] N86-32177
Space plasma research
[NASA-CR-176898] N86-32289

SOFTWARE TOOLS
SNLL materials testing compression facility
[DE86-009984] N86-31928
Striving for natural usage
[DE86-009402] N86-32105
The nature and evaluation of commercial expert system building tools
[NASA-TM-88331] N86-32132
Aiding computer application programmers and users with the tools of the visual interface
[AD-A167886] N86-32139
Tracing and debugging in SASL — functional programming language
[REPT-66] N86-32154
Computing Services Software Library
[DE86-009491] N86-32340

SOIL EROSION
Geotechnical data inventory, southern California coastal zone, Cape San Martin (Monterey County) to Mexican border
[AD-A167734] N86-32075

SOIL MOISTURE
Activities report in remote sensing supervision
[ESA-86-97383] N86-31970

Moisture determinations in and under vegetation canopies
[FEL-1985-52] N86-31973

SOLAR ACTIVITY EFFECTS
Solar modulation of galactic cosmic rays: Contemporary observations and theories N86-32353

SOLAR ARRAYS
Evaluation of solar array flight experiment response during flight for extension/retraction phase
[NASA-TM-86551] N86-31606
Low frequency noise as a control test for space solar panels
[SNIAS-861-440-109] N86-31996
High power rigid solar array
[SNIAS-861-440-110] N86-31997

SOLAR BLANKETS
High Power Solar Array (HPSA) study --- shuttle launched mission
[FOK-TR-R-85-068] N86-31998

SOLAR CELLS
Space solar cell research: Problems and potential
[NASA-TM-88833] N86-31793
Photovoltaics: Electricity from sunlight, FY 1985 accomplishments
[DE86-004429] N86-31986

SOLAR COLLECTORS
Installation of a modular building block photovoltaic concentrator array field
[DE85-016032] N86-31985
Parabolic dish module experiment
[DE86-009819] N86-31987
Evaluation of heliostat field-receiver configurations
[DE86-009875] N86-31988

SOLAR CORONA
Boundary conditions for the paleoenvironment: Chemical and physical processes in the pre-solar nebula
[NASA-CR-176870] N86-32374

SOLAR COSMIC RAYS
Nuclide production in (very) small meteorites
N86-32349
Precompaction irradiation effects: Particles from an early active sun? N86-32351
Evolution of gas-rich meteorites: Clues from cosmogenic nuclides N86-32354

SOLAR ECLIPSES
Extreme limb profiles of the sun at far-infrared and submillimeter wavelengths
[NASA-TM-88251] N86-32375

SOLAR ENERGY
Inorganic compounds for passive solar energy storage: Solid-state dehydration materials and high specific heat materials
[DE86-010214] N86-31990

SOLAR ENERGY CONVERSION
Estimates of available solar radiation and photovoltaic energy production for various tilted and tracking surfaces throughout the US based on PVFORM, a computerized performance model
[DE86-009549] N86-32019

SOLAR FLARES
Reduction and analysis of data from experiment CAI on the IMP-8 mission
[NASA-CR-177891] N86-32381

SOLAR GENERATORS
Evaluation of heliostat field-receiver configurations
[DE86-009875] N86-31988

SOLAR LIMB
Extreme limb profiles of the sun at far-infrared and submillimeter wavelengths
[NASA-TM-88251] N86-32375

SOLAR MAGNETIC FIELD
Solar modulation of galactic cosmic rays: Contemporary observations and theories N86-32353

SOLAR RADIATION
Estimates of available solar radiation and photovoltaic energy production for various tilted and tracking surfaces throughout the US based on PVFORM, a computerized performance model
[DE86-009549] N86-32019
Pacific Northwest solar radiation data
[DE86-009635] N86-32020
Extreme limb profiles of the sun at far-infrared and submillimeter wavelengths
[NASA-TM-88251] N86-32375

SOLAR REFLECTORS
Evaluation of heliostat field-receiver configurations
[DE86-009875] N86-31988

SOLAR SENSORS
Problems of ARCADE-3 satellite attitude determination
[CNES-CT/DTI/MS/CD/122] N86-31615

SOLAR WIND
Hostile energetic particle radiation environments in Earth's outer magnetosphere
[DE86-008752] N86-32018
Solar modulation of galactic cosmic rays: Contemporary observations and theories N86-32353

SOLID ELECTROLYTES
Workshop on the Frontiers of Theoretical and Experimental Electrochemistry
[DE86-007188] N86-31684
Solid electrolyte for high energy density batteries
[DE86-009358] N86-31803
Interfacial electrochemical transport in batteries employing solid electrolytes
[DE86-010107] N86-31805
Characterization of illuminated semiconductor/solid-electrolyte junctions. Semiconductor redox polymer detector junctions
[AD-A167665] N86-32304
Semiconductor/solid electrolyte junctions for optical information storage. Electrochromic effects on Heptyl Viologen incorporated within a solid polymer electrolyte cell
[AD-A167666] N86-32305
Semiconductor/solid electrolyte junctions for optical information storage. Solid-state electrochromic cell using lutecium diphthalocyanine
[AD-A167669] N86-32307

SOLID LUBRICANTS
Lubrication handbook for the space industry. Part A: Solid lubricants. Part B: Liquid lubricants
[NASA-TM-86556] N86-31730

SOLID PROPELLANT COMBUSTION
An experimental investigation of various metallic/polymer fuels in a two-dimensional solid fuel ramjet
[AD-A167889] N86-31747

SOLID PROPELLANT ROCKET ENGINES
Determination of Solid Rocket Motor (SRM) case segment growth
[NASA-TM-86557] N86-31653
Solid rocket motor with nozzle containing aromatic amide fibers
[AD-D012250] N86-31655
Dome restraint assembly for rocket motors
[AD-D012278] N86-31656
Study on algorithms for prediction of solid propellant rocket motor performance
[AD-A167842] N86-31657
In-situ solid-propellant burn-rate measurements using flash cineradiography
[AD-A167637] N86-31683

SOLID ROCKET BINDERS
An experimental investigation of various metallic/polymer fuels in a two-dimensional solid fuel ramjet
[AD-A167889] N86-31747

SOLID ROCKET PROPELLANTS
Solid rocket motor with nozzle containing aromatic amide fibers
[AD-D012250] N86-31655
Dome restraint assembly for rocket motors
[AD-D012278] N86-31656
In-situ solid-propellant burn-rate measurements using flash cineradiography
[AD-A167637] N86-31683

SOLID STATE
Solid state transformations in Fe-Ni alloys from meteorites in powder form
[DE86-701936] N86-32388

SOLID STATE DEVICES
A 32-bit microprocessor based solid state data recorder for space based applications
[AD-A167887] N86-32116
Unclassified publications of Lincoln Laboratory. Volume 2: Report bibliography
[AD-A167987] N86-32337

SOLID STATE LASERS
Chinese Journal of Lasers (selected articles)
[AD-A167846] N86-31862
Current German laser and quantum optics research reviewed at the 50th Annual Meeting of the Physikalische Gesellschaft
[AD-A167895] N86-32275

SOLIDIFICATION
Modeling directional solidification furnaces
[NASA-CR-177148] N86-31617
Study on effects of powder and flake chemistry and morphology on the properties of Al-Cu-Mg-X-X-X powder metallurgy advanced aluminum alloys
[NASA-CR-178145] N86-31698
Laser processing of ceramics
[DE86-011954] N86-31797

SOLIDS
Moisture measurement in solids
[BMFT-FB-T-85-174] N86-31693

SOLITARY WAVES
Solitary and periodic waves in swirling flow
[AD-A167538] N86-31833
Integrable systems in the description of waves in straits and channels of variable width and depth --- solitary waves
[PREPRINT-493] N86-31855

SOOT
Aromatics oxidation and soot formation in flames
[DE86-010565] N86-31690

SOUND PROPAGATION
Sound propagation over uneven ground and irregular topography
[NASA-CR-179673] N86-32248

SOUND TRANSMISSION
Acoustic description of south Atlantic Ocean warm core eddy
[AD-A166323] N86-32074

SOUND WAVES
Experimental investigation of noise generated by turbulence in a pipe flow behind a discontinuous area enlargement
[DFVLR-FB-86-06] N86-31853
Measurement and extraction of recurring waveforms: For applications to active transmissions, flow-noise, and helicopter-radiated noise problems
[AD-A167400] N86-32249

SOUTH KOREA
Camp Page, South Korea limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167656] N86-32053
Kwang Ju AB, South Korea limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167659] N86-32055

SOUTHERN CALIFORNIA
Determination of the atmospheric aerosol distribution by multi-channel remote sensing techniques
[AD-A167885] N86-32014
Geotechnical data inventory, southern California coastal zone, Cape San Martin (Monterey County) to Mexican border
[AD-A167734] N86-32075

SPACE FLIGHT
Special features of surgical intervention under conditions of weightlessness
[AD-A167916] N86-32092

SPACE FLIGHT FEEDING
NASA Facts: Space Shuttle food systems
[NF-150/1-86] N86-32102

SPACE MANUFACTURING
The use of manned space flight
[ESA-86-97412] N86-31608

SPACE MECHANICS
The MSTN software. Trigonometric series manipulator
[CNES-CT/DTI/MS/MN/262] N86-32167

SPACE MISSIONS
STS (Space Transportation System) experiment support structure needs assessment
[AD-A167859] N86-31624

SPACE OBSERVATIONS (FROM EARTH)
Activities report in astronomy
[ISSN-0531-4496] N86-32380

SPACE PLATFORMS
Photovoltaic solar generators: From satellites to a space station
[SNIAS-861-440-112] N86-31993

SPACE POWER REACTORS
Space Nuclear Safety Program
[DE86-008579] N86-32260

SPACE PSYCHOLOGY
USSR Space Life Sciences Digest, issue 7
[NASA-CR-3922(08)] N86-32083

SPACE RATIONS
NASA Facts: Space Shuttle food systems
[NF-150/1-86] N86-32102

SPACE SHUTTLE MAIN ENGINE
SSME main combustion chamber and nozzle flowfield analysis
[NASA-CR-178893] N86-31654

SPACE SHUTTLE PAYLOADS
Feasibility study of surveillance avoidance during the deployment of Soviet payloads of military interest into orbit from a Soviet shuttle
[AD-A167661] N86-31607
STS (Space Transportation System) experiment support structure needs assessment
[AD-A167859] N86-31624
Phase 3 study of selected tether applications in space, mid-term review
[NASA-CR 178900] N86-31632
A densitometric analysis of HaO film flown aboard the space shuttle transportation system STS-3, STS-8, and STS-7
[NASA-CR-176864] N86-31858
High Power Solar Array (HPSA) study --- shuttle launched mission
[FOK-TR-R-85-068] N86-31998

SPACE SHUTTLES
Hypersonic aerodynamic coefficients and convection flow estimation in a Hermes type project
[SNIAS-861-422-108] N86-31540
Study of the fixation of Hermes vehicle on the Ariane 5 launch vehicle
[SNIAS-861-422-121] N86-31623
Design of spacecraft
[ISBN-2-225-80732-9] N86-31629
NASA Facts: Space Shuttle food systems
[NF-150/1-86] N86-32102
SPACE STATION POWER SUPPLIES
Parametric and cycle tests of a 40-A-hr bipolar nickel-hydrogen battery
[NASA-TM-88793] N86-31979
SPACE STATION PROPULSION
Space station propulsion technology
[NASA-CR-178897] N86-31647
SPACE TRANSPORTATION SYSTEM
STS (Space Transportation System) experiment support structure needs assessment
[AD-A167859] N86-31624
Phase 3 study of selected tether applications in space, mid-term review
[NASA-CR-178900] N86-31632
SPACE WEAPONS
Space and defense — antimissile defense
[ESA-86-97272] N86-31605
SPACEBORNE EXPERIMENTS
Evaluation of solar array flight experiment response during flight for extension/retraction phase
[NASA-TM-86551] N86-31606
The use of manned space flight
[ESA-86-97412] N86-31608
Scientific data requirements
[ADL-C-89230] N86-32007
A procedure for space SDR prioritization N86-32009
SPACEBORNE LASERS
Time and space resolved spectroscopy of X-ray laser experiments
[DE86-009403] N86-31885
SPACEBORNE TELESCOPES
Gas flowmeter for a space cryostat — Infrared Space Observatory
[SEP-TS/SE/BT/10.289/85] N86-31878
The photopolarimeter of the infrared space telescope GIRL: Mechanical and electrical components for cryovacuum
[BMFT-FB-W-85-026] N86-32379
SPACECRAFT COMMUNICATION
Numerical fusion of redundant telemetry sources
[SNIAS-861-422-113] N86-31627
Spacecraft multibeam antenna system for 30/20 GHz
[NASA-CR-174654] N86-31760
A kernel decision support system for Canadian military satellite communications system planning
[AD-A167122] N86-31765
Optical fiber transmission on satellites and orbital stations
[SNIAS-861-440-108] N86-31786
SPACECRAFT COMPONENTS
Pyrotechnic valves and miniature devices
[SNIAS-861-422-112] N86-31754
SPACECRAFT CONSTRUCTION MATERIALS
New aluminum alloys for satellite structures
[SNIAS-861-440-111] N86-31641
ICAN: A versatile code for predicting composite properties
[NASA-TM-87334] N86-31664
Damping characteristics of metal matrix composites
[AD-A167792] N86-31668
Contribution of carbon fibers to the improvement of the performance of composite containers
[SNIAS-861-430-115] N86-31677
SPACECRAFT CONTROL
Control theoretic analysis of human operator mediated rendezvous and docking
[NLR-MP-85020-U] N86-32106
Control loops with human operators in space operations. Part 3: Rendezvous and docking operations and model analysis of performance with human-in-the-loop
[NLR-TR-84116-L-PT-3] N86-32108
Control loops with human operators in space operations. Part 4: Research requirements for human-in-the-loop space teleoperator development
[NLR-TR-84116-L-PT-4] N86-32109
Control loops with human operators in space operations. Part 5: Executive summary
[NLR-TR-84116-L-PT-5] N86-32110
SPACECRAFT DESIGN
Design of spacecraft
[ISBN-2-225-80732-9] N86-31629
Phase 3 study of selected tether applications in space, mid-term review
[NASA-CR-178900] N86-31632
Thermal control in telecommunication and direct television satellites
[SNIAS-861-440-102] N86-31635
Prediction of the high frequency response of satellites to diffuse acoustic environments
[SNIAS-861-422-122] N86-31638
Use of MoS2 applied by Physical Vapor Deposition (PVD) on space mechanisms
[SNIAS-861-440-101] N86-31639
Design and test of a space deployable radiator
[SNIAS-861-440-103] N86-31640
New aluminum alloys for satellite structures
[SNIAS-861-440-111] N86-31641
Space station propulsion technology
[NASA-CR-178897] N86-31647
Specific need for composite structures in aerospace applications
[SNIAS-861-422-111] N86-31678
Pyrotechnic valves and miniature devices
[SNIAS-861-422-112] N86-31754
Semiactive magnetic bearings for space application
[SNIAS-861-422-120] N86-31910
Photovoltaic solar generators: From satellites to a space station
[SNIAS-861-440-112] N86-31993
High power rigid solar array
[SNIAS-861-440-110] N86-31997
Control loops with human operators in space operations. Part 1: Human engineering analysis, synthesis and evaluation techniques
[NLR-TR-84116-L-PT-1] N86-32107
Second generation meteosat: Infrared atmospheric sounder design
[CNES-T-85/CT/DRT/TIT/IO-046] N86-32283
Second generation Meteosat imager design
[CNES-T-85/052-DRT/TIT/IO] N86-32284
SPACECRAFT DOCKING
Control theoretic analysis of human operator mediated rendezvous and docking
[NLR-MP-85020-U] N86-32106
Control loops with human operators in space operations. Part 3: Rendezvous and docking operations and model analysis of performance with human-in-the-loop
[NLR-TR-84116-L-PT-3] N86-32108
SPACECRAFT ENVIRONMENTS
Hostile energetic particle radiation environments in Earth's outer magnetosphere
[DE86-008752] N86-32018
SPACECRAFT LAUNCHING
NASA to launch NOAA-G weather satellite
[NASA-TM-89245] N86-31633
SPACECRAFT LUBRICATION
Use of MoS2 applied by Physical Vapor Deposition (PVD) on space mechanisms
[SNIAS-861-440-101] N86-31639
SPACECRAFT POWER SUPPLIES
Space solar cell research: Problems and potential
[NASA-TM-88833] N86-31793
Parametric and cycle tests of a 40-A-hr bipolar nickel-hydrogen battery
[NASA-TM-88793] N86-31979
Photovoltaic solar generators: From satellites to a space station
[SNIAS-861-440-112] N86-31993
Low frequency noise as a control test for space solar panels
[SNIAS-861-440-109] N86-31996
High power rigid solar array
[SNIAS-861-440-110] N86-31997
High Power Solar Array (HPSA) study — shuttle launched mission
[FOK-TR-R-85-068] N86-31998
Space Nuclear Safety Program
[DE86-008579] N86-32260
SPACECRAFT PROPULSION
Design of spacecraft
[ISBN-2-225-80732-9] N86-31629
Performance characteristics of ring-cusp thrusters with xenon propellant
[NASA-TM-87338] N86-31650
SPACECRAFT RADIATORS
Effect of an oxygen plasma on the physical and chemical properties of several fluids for the liquid droplet radiator
[NASA-TM-88839] N86-31634
Design and test of a space deployable radiator
[SNIAS-861-440-103] N86-31640
Analysis of the Gas Particle Radiator (GPR)
[NASA-TM-88786] N86-31652
Vapor Controlled Heat Pipe (VCHP) telecommunications panel. Performances evolution after four years of life testing
[SNIAS-861-440-106] N86-31822
SPACECRAFT STABILITY
Design of spacecraft
[ISBN-2-225-80732-9] N86-31629
SPACECRAFT STRUCTURES
Design of spacecraft
[ISBN-2-225-80732-9] N86-31629
Design of adhesive bonded structures for spacecraft
[SNIAS-861-430-114] N86-31741
High power rigid solar array
[SNIAS-861-440-110] N86-31997
SPACECRAFT TRAJECTORIES
Feasibility study of surveillance avoidance during the deployment of Soviet payloads of military interest into orbit from a Soviet shuttle
[AD-A167661] N86-31607
SPACECREWS
Air Force technical objective document, Aerospace Medical Division, FY 1987
[AD-A167422] N86-32090
SPALLATION
Simulation of cosmic irradiation conditions in thick target arrangements N86-32370
SPARK GAPS
Multiple pseudospark switch (MUPS)
[ISL-R-110/85] N86-31819
SPECIFICATIONS
Accessibility of applications specific integrated circuits
[DE86-009561] N86-31800
Automated valve expertise capture
[DE86-004127] N86-31897
SPECTRAL LINE WIDTH
A new way of organizing spectral line ratio fluctuations — plasma spectra
[KGI-PREPRINT-084] N86-31692
SPECTRAL RECONNAISSANCE
Earth resources: A continuing bibliography with indexes, issue 50
[NASA-SP-7041(50)] N86-31940
SPECTRAL REFLECTANCE
COVER Project and Earth resources research transition
[NASA-CR-177176] N86-31941
SPECTRAL RESOLUTION
Remote gas analysis with lasers. Analytic laboratory investigations in the 3.4 to 4.2 microns range
[BMFT-FB-W-85-020] N86-31694
SPECTROMETERS
Radial velocity spectrometers. What they measure
[AD-A167986] N86-31863
SPECTROPHOTOMETERS
Fiber optic modification of a diode array spectrophotometer
[DE86-009572] N86-32278
SPECTROSCOPIC ANALYSIS
Workshop on the Frontiers of Theoretical and Experimental Electrochemistry
[DE86-007188] N86-31684
A new way of organizing spectral line ratio fluctuations — plasma spectra
[KGI-PREPRINT-084] N86-31692
SPECTROSCOPY
Exploration of advanced characterization techniques for molecular composites
[AD-A168102] N86-31733
Fourier transform infrared spectroscopic study of aging in commercial polyurethane
[AD-A167418] N86-31798
Time and space resolved spectroscopy of X-ray laser experiments
[DE86-009403] N86-31885
SPECTRUM ANALYSIS
Wide spectrum microwave pulse measurement
[DE86-006662] N86-31770
SPEECH RECOGNITION
Automatic speech recognition for large vocabularies
[BMFT-FB-DV-85-003] N86-31779
Longterm speech spectra of nonstationary autoregressive models
[FUB-8-1985] N86-31788
Speech analysis based on a model of the auditory system
[AD-A167426] N86-32096
SPEED CONTROL
Summary of NASA/DOE Aileron-Control Development Program for Wind Turbines
[NASA-TM-88811] N86-31983
SPHERICAL COORDINATES
Eulerian transport in general orthogonal curvilinear coordinates
[DE86-010266] N86-31840
Finite difference methods for polar coordinate systems
[AD-A167512] N86-32194
SPIN STABILIZATION
Standard calibration procedure for pencil beam infrared sensors on spinning satellites, volume 1
[REPT-209-DT-54-VOL-1] N86-31644

Standard calibration procedure for pencil beam infrared sensors on spinning satellites. Volume 2: Applicable software and user manuals
[REPT-209-DT-55-VOL-2] N86-31645

SPIRAL ANTENNAS
Scattering from a planar equiangular spiral antenna
[AD-A167068] N86-31764

SPLINE FUNCTIONS
History of the Wilson-Fowler spline
[DE86-010264] N86-32143
The computational cost of simplex spline functions
[AD-A167513] N86-32195
Minimal support for bivariate splines
[AD-A167519] N86-32196
Truncated cardinal spline functions
[ESA-86-97284] N86-32205
Spline functions with form conditions
[ESA-86-97286] N86-32207

SPLINES
The evaluation of inner products of multivariate simplex splines
[AD-A167486] N86-32190

SPOILERS
Theoretical study of the Bernard-Karman vortex path. Application to the experimental study of the flow around a thick obstacle
[ISL-R-105/85] N86-31544
Application of an inviscid multivortex model to the calculation of the vortex flow behind an airfoil profile with spoiler
[ISL-R-133/84] N86-31545

SPOT (FRENCH SATELLITE)
Semiactive magnetic bearings for space application
[SNIAS-861-422-120] N86-31910

SPRAY NOZZLES
Turbulent dispersion of the icing cloud from spray nozzles used in icing tunnels
[NASA-TM-87316] N86-31588

SPRAYED COATINGS
The low cycle fatigue behavior of a plasma-sprayed coating material
[NASA-TM-87318] N86-31699

STABILITY
Characterization of the redox behavior and stability of conducting oxides
[DE86-009871] N86-31804
Predictability of Rayleigh-Taylor instability
[DE86-009932] N86-31839
Stability analysis of intermediate boundary conditions in approximate factorization schemes
[NASA-CR-178126] N86-32189
Optical distance measuring instrument
[NASA-CASE-GSC-12761-1] N86-32266

STAGE SEPARATION
Pyrotechnic valves and miniature devices
[SNIAS-861-422-112] N86-31754

STANDARDIZATION
Workshop on Standards for Photonic Streak Camera Characterization
[DE86-002430] N86-31866
ESPRIT project 322: Computer Aided Design (CAD) design interfaces
[KFK-PFT-121] N86-32166

STANDARDS
Topographic-cartographic data base in standardization
N86-31949

STATISTICAL ANALYSIS
Investigations in landing process of aircraft by means of the Monte-Carlo method
[ESA-TT-951] N86-31578
Intermittency and conditional velocities in premixed conical turbulent flames
[DE86-009363] N86-31687
Cumulative sum charts — statistical quality control
[ARW-03-THE-BDK/ORS/84/13] N86-31916
Composite structural reliability calculation by finite element and statistical strength theory
[AD-A167890] N86-31924
Statistical analysis of nonhomogeneous Poisson processes. Statistical treatment of a particle multidetector — crystal structure, neutron diffraction
[ESA-86-97281] N86-32221
Statistical analysis of nonhomogeneous Poisson processes N86-32222
On the statistical evaluation of inconsistent measurement results illustrated on the example of the Sr 90 half life
[ECN-179] N86-32252

STATISTICAL DISTRIBUTIONS
An analytical methodology for predicting repair time distributions of advanced technology aircraft
[AD-A167149] N86-31529
Measurement of the wind field. Simultaneous wind velocity measurements at different altitudes with high time resolution for the specification of wind energy converters
[BMFT-FB-T-85-141] N86-32063

STATISTICAL MECHANICS
Foundations of statistical crack mechanics
[DE86-000764] N86-31929

STATISTICAL TESTS
Statistical analysis of nonhomogeneous Poisson processes. Statistical treatment of a particle multidetector — crystal structure, neutron diffraction
[ESA-86-97281] N86-32221
Statistical analysis of nonhomogeneous Poisson processes N86-32222
Statistical treatment of a particle multidetector — crystal structure, neutron diffraction N86-32223
Methods for the detection and estimation of multiphase regression models
[ESA-86-97282] N86-32227

STATISTICAL WEATHER FORECASTING
Effects of storm-related parameters on the accuracy of the nested tropical cyclone model
[AD-A167809] N86-32058

STEADY FLOW
A computer program for calculating the steady and oscillatory supersonic flow over thin wings
[AD-A167451] N86-31538
Inflow boundary conditions for steady flows of viscoelastic fluids with differential constitutive laws
[AD-A167452] N86-31829

STEADY STATE
Model for the steady-state rotational stimulated Raman gain coefficients in the atmosphere
[AD-A167469] N86-32013
Steady-state problems of nonlinear electro-magneto-thermo-elasticity
[AD-A167454] N86-32243

STEADY STATE CREEP
The variation of the dislocation density in aluminum deformed to large steady-state creep strains
[AD-A167715] N86-31708

STEEL STRUCTURES
Masts for small wind turbines
[B-85-583] N86-31919

STEELS
Ion damage microstructures in a Fe-10Cr-6Mo-0.5Nb
[DE86-008530] N86-31717
Postirradiation tensile behavior of nickel-doped ferritic steels
[DE86-009502] N86-31721
Surface fatigue and failure characteristics of hot forged powder metal AISI 4620, AISI 4640, and machined AISI 4340 steel spur gears
[NASA-TM-87330] N86-31889
Thermal history of HT-9 weldment heat-affected zones during welding
[DE86-010684] N86-31906

STELLAR ATMOSPHERES
Definition and empirical structure of the range of stellar chromospheres-coronae across the H-R diagram: Cool stars
[NASA-CR-176863] N86-32377

STELLAR COMPOSITION
Boundary conditions for the paleoenvironment: Chemical and physical processes in the pre-solar nebula
[NASA-CR-176870] N86-32374

STELLAR CORONAS
Definition and empirical structure of the range of stellar chromospheres-coronae across the H-R diagram: Cool stars
[NASA-CR-176863] N86-32377

STELLAR LUMINOSITY
A SIRTF interdisciplinary scientist proposal
[NASA-CR-176862] N86-32382

STELLAR MAGNETIC FIELDS
Definition and empirical structure of the range of stellar chromospheres-coronae across the H-R diagram: Cool stars
[NASA-CR-176863] N86-32377

STELLAR MASS EJECTION
Ultraviolet observations of astronomical phenomena
[NASA-CR-176859] N86-32376

STELLAR RADIATION
Definition and empirical structure of the range of stellar chromospheres-coronae across the H-R diagram: Cool stars
[NASA-CR-176863] N86-32377

STELLAR STRUCTURE
Boundary conditions for the paleoenvironment: Chemical and physical processes in the pre-solar nebula
[NASA-CR-176870] N86-32374

STEREOPHOTOGRAPHY
Three-dimensional views of cartograms in digital raster mode N86-31961
Real time math model for infrared
[AD-A168133] N86-32276

STIFFENING
An investigation into the tripping behavior of longitudinally T-stiffened rectangular flat plates loaded statically and impulsively
[AD-A167718] N86-31923

STIFFNESS
Strongback baseline design: Mechanical properties of composite facesheets
[DE86-011913] N86-31875
Measurement of the glass transition temperature (Tg) of the Z-14.203 material (parasol C-212)
[I-111/85] N86-31742

STIFFNESS MATRIX
Some experiments with numerical pivoting in a code for solving large sparse stiff systems of odes
[DE86-010305] N86-32201

STIMULATION
Model for the steady-state rotational stimulated Raman gain coefficients in the atmosphere
[AD-A167469] N86-32013

STIRLING CYCLE
Stirling machines: Adiabatic to isothermal
[DE86-005407] N86-31903

STOCHASTIC PROCESSES
An algorithm for the evaluation of performance measures in a CP-terminal system
[MEMO-COSOR-84-07] N86-32212
Why the straightforward method of antithetic variates is so disappointing in practice — systems simulation
[ESA-86-97694] N86-32216
Statistical analysis of nonhomogeneous Poisson processes. Statistical treatment of a particle multidetector — crystal structure, neutron diffraction
[ESA-86-97281] N86-32221
Statistical analysis of nonhomogeneous Poisson processes N86-32222
Estimating problems in stationary time series with missing data
[ESA-86-97287] N86-32228
On the stability of the problem of target tracking with the FLIR
[AD-A167721] N86-32273

STONY METEORITES
The exposure history of Jilin and production rates of cosmogenic nuclides N86-32355
Production of radionuclides in artificial meteorites irradiated isotropically with 600 MeV protons
N86-32360
Compilation of cosmogenic radionuclides in meteorites
N86-32362
Neutron capture production rates of cosmogenic 60Co, 59Ni and 36Cl in stony meteorites N86-32369

STORAGE TANKS
Advanced hydrogen storage: Modified vanadium hydrides
[DE86-009916] N86-31748

STORMS
A linear stability analysis of the rapid development of an extratropical cyclone
[AD-A167808] N86-32057
Effects of storm-related parameters on the accuracy of the nested tropical cyclone model
[AD-A167809] N86-32058
Coast of California storm and tidal waves study: Nearshore bathymetric survey report, San Diego region
[AD-A168119] N86-32076

STORMS (METEOROLOGY)
Design wind analysis
[AD-A167576] N86-32045

STRAIN GAGES
Current status in development of averaging laser strainometer and testing system
[DE86-006727] N86-31882

STRAIN MEASUREMENT
Ion beam channeling in superlattices
[DE86-010094] N86-32312

STRAIN RATE
The variation of the dislocation density in aluminum deformed to large steady-state creep strains
[AD-A167715] N86-31708
SNLL materials testing compression facility
[DE86-009984] N86-31928

STRAITS
Integrable systems in the description of waves in straits and channels of variable width and depth — solitary waves
[PREPRINT-493] N86-31855
Preliminary report on the hydrological measurements carried out in the southern Tyrrhenian sea and in the Messina strait
[PREPRINT-489] N86-32081

STRANGENESS
Inclusive phi meson production, the parton fusion model and strange quark structure functions
[NIKHEF-H/86-3] N86-32254

STRATEGY
Airport noise control strategies
[AD-A167977] N86-31602
STRATOCUMULUS CLOUDS
Physical properties of stratiform clouds and their parametrization N86-32029
Modeling and observations of the stratocumulus-topped atmospheric boundary layer N86-32033
The structure of a stratus-topped planetary boundary layer as seen through a large-eddy simulation N86-32034
Notes on modeling the cloud topped boundary layer N86-32036
STREAK CAMERAS
Workshop on Standards for Photonic Streak Camera Characterization
[DE86-002430] N86-31866
STREAK PHOTOGRAPHY
Workshop on Standards for Photonic Streak Camera Characterization
[DE86-002430] N86-31866
STREAMS
Finite element, stream function-vorticity solution of secondary flow in the cross-plane of noncircular channels
[ECN-175] N86-31856
STRESS (PSYCHOLOGY)
Use of artificial intelligence and psychology in the analysis of command and control --- military commanders
[STC-TM-749] N86-32095
The psychology of decision making --- military commanders N86-32096
STRESS ANALYSIS
ICAN: A versatile code for predicting composite properties
[NASA-TM-87334] N86-31664
Temperature dependent nonlinear metal matrix laminae behavior
[NASA-CR-4016] N86-31666
The variation of the dislocation density in aluminum deformed to large steady-state creep strains
[AD-A167715] N86-31708
Use of a special finite element for the static analysis of normal interfacial stresses
[SNIAS-861-422-109] N86-31936
Stresses in the region of rounded corners
[WTHD-174] N86-31938
Research related to improved computer aided design software package --- comparative efficiency of finite, boundary, and hybrid element methods in elastostatics
[NASA-CR-179668] N86-32133
STRESS CONCENTRATION
Finite element analysis to evaluate the stress distribution and the energy release rate at the cracking front of a fracture mechanics specimen for linear and nonlinear material behavior
[GKSS-85/E/54] N86-31934
Stresses in the region of rounded corners
[WTHD-174] N86-31938
STRESS FUNCTIONS
Separation of supposed stress-time functions by filtering with variable critical frequency
[LBF-TB-174] N86-32214
STRESS INTENSITY FACTORS
Insights into the fracture toughness of martensitic stainless steels using stereoscopic fractographic measurements
[DE86-009415] N86-31719
STRESS MEASUREMENT
Investigation of ultrasonic methods for residual stress measurement
[DE86-009614] N86-31927
Fiber optic pressure sensors in skin-friction measurements
[NASA-CR-176861] N86-32269
STRESS PROPAGATION
Damage assessment by acousto-ultrasonic techniques in composites
[AD-A168097] N86-31672
STRING THEORY
Theories at 10 sup (-17) and 10 sup (-33) cm
[DE86-006870] N86-32320
Gauge anomalies, gravitational anomalies and superstrings
[DE86-005489] N86-32383
STRINGERS
Preloaded space structural coupling joints
[NASA-CASE-LAR-13489-1] N86-31630
STRONTIUM 90
On the statistical evaluation of inconsistent measurement results illustrated on the example of the Sr 90 half life
[ECN-179] N86-32252
STRUCTURAL ANALYSIS
Fiber composite sandwich thermostructural behavior: Computational simulation
[NASA-TM-86787] N86-31663
Composite structural reliability calculation by finite element and statistical strength theory
[AD-A167890] N86-31924
Aeroelastic effects in the structural dynamic analysis of vertical axis wind turbines
[DE86-009542] N86-31989
Research related to improved computer aided design software package --- comparative efficiency of finite, boundary, and hybrid element methods in elastostatics
[NASA-CR-179668] N86-32133
STRUCTURAL BASINS
Geotechnical data inventory, southern California coastal zone, Cape San Martin (Monterey County) to Mexican border
[AD-A167734] N86-32075
STRUCTURAL DESIGN
Modeling directional solidification furnaces
[NASA-CR-177148] N86-31617
Prediction of the high frequency response of satellites to diffuse acoustic environments
[SNIAS-861-422-122] N86-31638
Composite structural materials
[NASA-CR-179659] N86-31665
Mechanical testing of graphite-epoxy composite tubes
[DE86-009608] N86-31674
Development and application of energy absorbing composite devices in crash-worthy structures
[ESA-86-97253] N86-31676
Specific need for composite structures in aerospace applications
[SNIAS-861-422-111] N86-31678
Leakage flow-induced vibrations for variations of a tube-in-tube slip joint
[DE86-010765] N86-31907
STRUCTURAL DESIGN CRITERIA
Advisory Circular: Design considerations to protect fuel systems during a wheels-up landing
[FAA-AC/25.994-1] N86-31564
STRUCTURAL FAILURE
Surface fatigue and failure characteristics of hot forged powder metal AISI 4620, AISI 4640, and machined AISI 4340 steel spur gears
[NASA-TM-87330] N86-31889
Large deformation dynamic bending of composite beams
[NASA-CR-4006] N86-31921
STRUCTURAL PROPERTIES (GEOLOGY)
Digital processing of Landsat TM images for lineament occurrence and spatial frequency in sedimentary rocks
[DE86-009834] N86-31968
STRUCTURAL RELIABILITY
Composite structural reliability calculation by finite element and statistical strength theory
[AD-A167890] N86-31924
STRUCTURAL STABILITY
Strongback baseline design: Mechanical properties of composite facesheets
[DE86-011913] N86-31675
Aeroelastic effects in the structural dynamic analysis of vertical axis wind turbines
[DE86-009542] N86-31989
A linear stability analysis of the rapid development of an extratropical cyclone
[AD-A167808] N86-32057
STRUCTURAL VIBRATION
Dynamic analysis: Correlation of theory with experiment --- MSC/NASTRAN analysis of Westland 30 G-BGHF
[FP661] N86-31917
Influence of third-degree geometric nonlinearities on the vibration and stability of pretwisted, preconed, rotating blades
[NASA-TM-87307] N86-31920
SUBMILLIMETER WAVES
Extreme limb profiles of the sun at far-infrared and submillimeter wavelengths
[NASA-TM-88251] N86-32375
SUBROUTINES
Optimal implementation of differentiation arithmetic
[AD-A167494] N86-32193
SUBSONIC FLOW
Computations of separated subsonic and transonic flow about airfoils in unsteady motion
[NLR-MP-84094-U] N86-31541
SUBSONIC SPEED
The application of energy techniques to propeller-driven airplanes
[AD-A167113] N86-31569
SUBSONIC WIND TUNNELS
Quality determination of the Heat and Flow Theory Department (WS) subsonic wind tunnel and experiments using laser Doppler velocity measurement
[ESA-86-97355] N86-31603
SUBSTITUTES
Preparation and characterization of nickel substituted Fe5C2
[AD-A167410] N86-31707
SUBSTRATES
Non-contact polishing
[AD-D012210] N86-31755
An improved model of thin film growth
[AD-A167147] N86-32302
Deposition of crystalline semiconductor layers on amorphous substrates (Graphoepitaxy)
[BMFT-FB-T-85-160] N86-32313
SULFUR DIOXIDES
Investigations of depth-resolved laser remote measurement of NO2 and SO2 in the visible and UV spectral domains --- atmospheric pollution
[GKSS-85/E/48] N86-32002
SUMMARIES
Misawa AB, Japan limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167655] N86-32052
Kwang Ju AB, South Korea limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167659] N86-32055
Patrick AFB, Florida limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167660] N86-32056
SUMMER
Continentality: Its estimation and physical significance
[AD-A167111] N86-32044
SUMS
Equivalence between the methods involving Fourier series and the Poisson's summation formula and evaluation of a class of lattice sums in arbitrary dimensions
[DE86-701919] N86-32202
SUN
Extreme limb profiles of the sun at far-infrared and submillimeter wavelengths
[NASA-TM-88251] N86-32375
SUPERCONDUCTORS
Magnetic properties in the paramagnetic area of two ferromagnetic superconductors
[ESA-86-97377] N86-32317
Investigation of three ferromagnetic superconductors in the milli-Kelvin area
[ESA-86-97380] N86-32318
SUPERCRITICAL FLOW
Aerodynamic design methods for modern transport aircraft
[ESA-TT-923] N86-31543
SUPERCRITICAL WINGS
Computations of separated subsonic and transonic flow about airfoils in unsteady motion
[NLR-MP-84094-U] N86-31541
SUPERGRAVITY
Theories at 10 sup (-17) and 10 sup (-33) cm
[DE86-006870] N86-32320
Some features of SUSY breaking in N=2 supergravity
[DE85-703196] N86-32321
SUPERHIGH FREQUENCIES
Design and cold testing of a high peak power X-band gyroklystron
[DE86-006898] N86-31799
SUPERLATTICES
Ion beam channeling in superlattices
[DE86-010094] N86-32312
SUPERPOSITION (MATHEMATICS)
Separation of supposed stress-time functions by filtering with variable critical frequency
[LBF-TB-174] N86-32214
SUPERSONIC FLOW
A computer program for calculating the steady and oscillatory supersonic flow over thin wings
[AD-A167451] N86-31538
High speed viscous flow calculations about complex configurations
[NASA-TM-88237] N86-31827
SUPERSYMMETRY
Theories at 10 sup (-17) and 10 sup (-33) cm
[DE86-006870] N86-32320
Gauge anomalies, gravitational anomalies and superstrings
[DE86-005489] N86-32383
SUPPORT SYSTEMS
A kernel decision support system for Canadian military satellite communications system planning
[AD-A167122] N86-31765
SUPPORTS
Airfoil flutter model suspension system
[NASA-CASE-LAR-13522-1] N86-31594
SURFACE FINISHING
Certification of the Zirshot Z-600 and Z-150 ceramic shot
[I-112/85] N86-31743

Optical profiling instrument for the measurement of the figure and finish of optical quality surfaces
[DE86-009433] N86-31868

SURFACE LAYERS
Characterization of ion implanted and laser processed wear surfaces
[AD-A167878] N86-31709
Characterization of ion implanted and laser processed wear surfaces
[AD-A167878] N86-31709
Optical profiling instrument for the measurement of the figure and finish of optical quality surfaces
[DE86-009433] N86-31868
Extreme ultraviolet multilayer reflectors
[DE86-010194] N86-32280

SURFACE REACTIONS
Process for producing carbide coatings
[AD-D012202] N86-31667

SURFACE ROUGHNESS
Mechanical interactions of rough surfaces
[DE86-009161] N86-31898
Sound propagation over uneven ground and irregular topography
[NASA-CR-179673] N86-32248

SURFACE STABILITY
Stability of a rubber half-space, part 2
[WTHD-176-PT-2] N86-31939

SURFACE TEMPERATURE
Applications of infrared thermography in convective heat transfer
[AD-A167872] N86-31599

SURFACE WATER
Observations of surface water temperature in the Netherlands from 1860: Description of the data file
[KNMI-TR-75] N86-32070
Observations of surface water temperature in the Netherlands from 1860: The temperature regime and the changes in it
[KNMI-WR-85-6] N86-32071

SURFACE WAVES
Hydrodynamic instabilities and surface waves in a flow over an impedance wall
[NLR-MP-85053-U] N86-31848

SURGERY
Special features of surgical intervention under conditions of weightlessness
[AD-A167916] N86-32092

SURVEILLANCE
Feasibility study of surveillance avoidance during the deployment of Soviet payloads of military interest into orbit from a Soviet shuttle
[AD-A167861] N86-31607

SURVEYS
Application of multiple lines of position for hydrography
[AD-A167884] N86-31966
Activities report in aerospace survey and space sciences
[ESA-86-98042] N86-31976

SUSPENDING (HANGING)
Airfoil flutter model suspension system
[NASA-CASE-LAR-13522-1] N86-31594

SWEEP EFFECT
Design of a basic profile for a slightly swept wing. Part 2: Experimental investigation on the airfoil DFVLR-W1 in the Brunswick Transonic Wind Tunnel (TWB)
[ESA-TT-916-PT-2] N86-31542

SWELLING
Effect of helium on swelling and microstructural evolution in ion-irradiated V-15Cr-5Ti alloy
[DE86-010510] N86-31723

SWEPT FORWARD WINGS
Low-speed aerodynamic characteristics of a 1/8-scale X-29A airplane model at high angles of attack and sideslip
[NASA-TM-87722] N86-31532

SWIRLING
Solitary and periodic waves in swirling flow
[AD-A167538] N86-31833

SYMBOLIC PROGRAMMING
The MSTN software. Trigonometric series manipulator
[CNES-CT/DTI/MS/MN/262] N86-32167

SYMBOLS
Absolute judgment versus absolute magnitude estimation to convey information through symbol magnitude changes in CRT displays
[AD-A167059] N86-32103

SYMMETRY
Elementary symmetric polynomials of increasing order
[CWI-MS-R8601] N86-32220
Structure of supersymmetric theories --- field theories
[NIKHEF-H/86-8] N86-32323

SYMPHONIE SATELLITES
Time synchronization via SYMPHONIE High Accuracy Low Cost (HALO)
[BMFT-FB-W-85-021] N86-31781

SYNCHRONISM
Time synchronization via SYMPHONIE High Accuracy Low Cost (HALO)
[BMFT-FB-W-85-021] N86-31781

SYNCHRONOUS SATELLITES
Spacebus: Multimission communication satellites
[SNIAS-861-422-119] N86-31637

SYNTAX
The cooperation test: A syntax-directed verification method --- distributed message passing
[REPT-62] N86-32151

SYNTHESIS (CHEMISTRY)
Chemical reactions and properties of organosilicon compounds related to new materials
[AD-A166338] N86-31660

SYNTHETIC APERTURE RADAR
Simulation study synthetic aperture radar imagery (SIMSAR)
[ESA-86-97554] N86-31761
SIMSAR study, section 1 N86-31762
SIMSAR study, section 2 N86-31763
Feasibility study for a SAR test monitor
[BMFT-FB-W-85-013] N86-31780
High voltage technology for a Traveling Wave Tube Electronic Power Conditioner (TWT-EPC) for a Synthetic Aperture Radar (SAR)
[BMFT-FB-W-85-015] N86-31813
The USGS (US Geological Survey) X-, C-, and L- band SAR data collection program
[AD-A168173] N86-31967

SYSTEM EFFECTIVENESS
An analytical methodology for predicting repair time distributions of advanced technology aircraft
[AD-A167149] N86-31529
Interdiffusion in binary salt melting under weightlessness
[BMFT-FB-W-85-017] N86-31609
High voltage technology for a Traveling Wave Tube Electronic Power Conditioner (TWT-EPC) for a Synthetic Aperture Radar (SAR)
[BMFT-FB-W-85-015] N86-31813
Methodology for Generating Efficiency and Effectiveness Measures (MGEEM): A guide for commanders, managers and supervisors
[AD-A167503] N86-32325

SYSTEM IDENTIFICATION
Dynamics of flexible spacecraft: An analysis of approaches towards mathematical model order reduction
[NLR-TR-85068-U] N86-31643

SYSTEMS ANALYSIS
A cost/performance analysis of hybrid inertial/externally referenced positioning/orientation systems
[AD-A167685] N86-31553
An analysis of the Centaur Ground Processing System at the Kennedy Space Center/Cape Canaveral AFS
[AD-A167123] N86-31618
Text understanding: Interestingness as a basis for the variation of the analysis depth --- artificial intelligence
[BMFT-FB-ID-85-001] N86-32124
Text understanding: Interestingness as a basis for the variation of the analysis depth --- artificial intelligence N86-32126
Discovery systems
[AD-A167852] N86-32176

SYSTEMS ENGINEERING
System design and integration of the large-scale advanced prop-fan
[NASA-CR-174789] N86-31536
Development of a data acquisition system to aid in the aerodynamic study of various helicopter configurations
[AD-A167717] N86-31539
Aeropropulsion opportunities for the 21st century
[NASA-TM-88817] N86-31585
Photovoltaic power system design for telecommunications
[ESA-86-97255] N86-31992
A quantitative approach to computer systems engineering
[FUB-5-1985] N86-32169
The simple plant location problem. A plea for Balinski's conjecture
[ESA-86-97304] N86-32184

SYSTEMS INTEGRATION
Text and graphics at Los Alamos: A system viewpoint
[DE86-010169] N86-32141

SYSTEMS SIMULATION
Simulation study synthetic aperture radar imagery (SIMSAR)
[ESA-86-97554] N86-31761
SIMSAR study, section 1 N86-31762
SIMSAR study, section 2 N86-31763
Measurement of the wind field. Simultaneous wind velocity measurements at different altitudes with high time resolution for the specification of wind energy converters
[BMFT-FB-T-85-141] N86-32063
Artificial intelligence and the Rule Oriented System Simulation (ROSS) language --- military commanders N86-32097
System semantics and formal circuit description --- programming languages
[REPT-69] N86-32158
Why the straightforward method of antithetic variates is so disappointing in practice --- systems simulation
[ESA-86-97694] N86-32216
Development of models for the simulation of the temperature behavior of MOSFETS in analog and digital circuits in the temperature range between minus 55 deg C to plus 150 deg C
[BMFT-FB-T-85-167] N86-32314

T

TAIL ASSEMBLIES
Development of a data acquisition system to aid in the aerodynamic study of various helicopter configurations
[AD-A167717] N86-31539

TAKEOFF
Development of a takeoff performance monitoring system
[NASA-TM-89001] N86-31591

TANTALUM
Mechanical properties testing of several 800 MeV proton irradiated BCC metals and alloys
[DE86-007372] N86-31714
Development of humidity sensors in tantalum thin film technology
[BMFT-FB-T-85-175] N86-32315

TARGET RECOGNITION
Aerial combat
[ESA-86-97271] N86-31561

TARGETS
Optical distance measuring instrument
[NASA-CASE-GSC-12761-1] N86-32266

TDR SATELLITES
Study of a homotopy continuation method for early orbit determination with the Tracking and Data Relay Satellite System (TDRSS)
[NASA-TM-86230] N86-31610

TECHNICAL WRITING
Standard generalized markup language: A technique for document interchange
[DE86-011504] N86-31777

TECHNOLOGICAL FORECASTING
Identification of Air Force emerging technologies and militarily significant emerging technologies
[AD-A167088] N86-32345

TECHNOLOGY ASSESSMENT
Technology demonstration for investigation of the new possibilities of amphibious flying boats, phase 2
[BMFT-FB-W-85-022] N86-31577
An overview of the Small Engine Component Technology (SECT) studies
[NASA-TM-88796] N86-31587
Gas cooled fuel cell systems technology development
[NASA-CR-175047] N86-31984
System study of the utilization of space for carbon dioxide research
[NASA-CR-3923] N86-32005
Multisensor systems seen from different points of view
[FVI-86-02] N86-32185
Identification of Air Force emerging technologies and militarily significant emerging technologies
[AD-A167088] N86-32345

TECHNOLOGY UTILIZATION
Prospects for small and marginal farmers in Trichy district (Tamil Nadu, India) to use water pumping windmills for irrigation
[ESA-86-97721] N86-31978
Photovoltaic power system design for telecommunications
[ESA-86-97255] N86-31992

TELECOMMUNICATION
ACTS Experiments Program
[NASA-TM-88820] N86-31625
Rome Air Development Center Air Force technical objective document fiscal year 1987
[AD-A167425] N86-31767
Photovoltaic power system design for telecommunications
[ESA-86-97255] N86-31992
Unclassified publications of Lincoln Laboratory Volume 2: Report bibliography
[AD-A167987] N86-32337

TELEMETRY
Telemetry system for very high acceleration
[ISL-CO-214/85] N86-31626

Numerical fusion of redundant telemetry sources
[SNIAS-861-422-113] N86-31627
TELEOPERATORS
Control loops with human operators in space operations. Part 1: Human engineering analysis, synthesis and evaluation techniques
[NLR-TR-84116-L-PT-1] N86-32107
TELESCOPES
Radial velocity spectrometers. What they measure
[AD-A167966] N86-31863
TEMPERATURE
Acoustic description of south Atlantic Ocean warm core eddy
[AD-A166323] N86-32074
TEMPERATURE CONTROL
Thermal control in telecommunication and direct television satellites
[SNIAS-861-440-102] N86-31835
Vapor Controlled Heat Pipe (VCHP) telecommunications panel. Performances evolution after four years of life testing
[SNIAS-861-440-106] N86-31822
TEMPERATURE DEPENDENCE
Temperature dependent nonlinear metal matrix laminae behavior
[NASA-CR-4016] N86-31666
The low cycle fatigue behavior of a plasma-sprayed coating material
[NASA-TM-87318] N86-31699
Development of models for the simulation of the temperature behavior of MOSFETS in analog and digital circuits in the temperature range between minus 55 deg C to plus 150 deg C
[BMFT-FB-T-85-167] N86-32314
TEMPERATURE EFFECTS
Ambient temperature liquefaction using liquid clathrates
[DE86-010361] N86-31689
In-vacuum cyclic fatigue behavior of Vanstar-7 at elevated temperatures
[DE86-007322] N86-31713
Radiation-induced segregation and precipitation in molybdenum-rhenium alloys
[DE86-007521] N86-31715
Effect of heat treatment and impurity concentration on some mechanical properties V-15Cr-5Ti alloy
[DE86-010498] N86-31722
High temperature adhesives
[SNIAS-861-422-118] N86-31739
Measurement of the glass transition temperature (Tg) of the Z-14.203 material (parasol C-212)
[I-111/85] N86-31742
Thermal history of HT-9 weldment heat-affected zones during welding
[DE86-010684] N86-31906
The behavior of nonrotational striations in silicon
[BMFT-FB-W-85-014] N86-32316
TEMPERATURE MEASUREMENT
Multichannel automatic device for measuring ultralow temperatures
[DE86-701438] N86-31867
Observations of surface water temperature in the Netherlands from 1860: The temperature regime and the changes in it
[KNMI-WR-85-6] N86-32071
Ion temperature in TORTUR 3 — tokamak
[REPT-85-162] N86-32295
Optimization study for ion temperature measurements by means of Rutherford scattering — tokamak experiments
[REPT-85-164] N86-32296
TEMPERATURE PROBES
Multiple thermocouple testing device
[AD-D012276] N86-31860
TEMPERATURE PROFILES
An analysis of measurements of atmospheric trace gas infrared emissions
[BMFT-FB-W-85-016] N86-32003
TEMPERATURE SENSORS
Nonlinear optical interactions in semiconductors
[AD-A166182] N86-31880
TEMPERING
Mechanical property development in Hot Isostatic Pressed (HIP) low alloy steel powder
[AD-A166666] N86-31703
TENSILE PROPERTIES
Mechanical property development in Hot Isostatic Pressed (HIP) low alloy steel powder
[AD-A166666] N86-31703
Effect of neutron irradiation on the tensile properties and microstructure of several vanadium alloys
[DE86-008234] N86-31716
Influence of radiation-induced segregation on ductility of a nickel-silicon alloy
[DE86-009500] N86-31720
Postirradiation tensile behavior of nickel-doped ferritic steels
[DE86-009502] N86-31721
TERMINOLOGY
Local jargon in weather reports
[KIT-18] N86-32064
TERNARY SYSTEMS
Estimated heats of fusion of fluoride salt mixtures suitable for thermal energy storage applications
[NASA-TM-87320] N86-31982
Investigation of three ferromagnetic superconductors in the milli-Kelvin area
[ESA-86-97360] N86-32316
TERRAIN
Simulation evaluation of display/FLIR concepts for low-altitude, terrain-following helicopter operations
[NASA-TM-86779] N86-31551
TERRAIN ANALYSIS
Automatic interpolation of isolines from an irregular waterline digital terrain model (DGM) through triangulation network N86-31952
TEST FACILITIES
Study of test bench dangers in Vulcan engine turbopump tests. (A component of Ariane 5 launcher)
[ESA-86-97632] N86-31868
SNLL materials testing compression facility
[DE86-009964] N86-31928
TEST STANDS
Design of a vertical thrust stand for a remotely piloted model helicopter
[AD-A167811] N86-31598
TESTING TIME
Novel macromolecular structures and composites
[AD-A166243] N86-31731
TETHERED SATELLITES
The investigation of tethered satellite system dynamics
[NASA-CR-178895] N86-31631
TETHERING
Phase 3 study of selected tether applications in space, mid-term review
[NASA-CR-178900] N86-31632
TEXTS
Standard generalized markup language: A technique for document interchange
[DE86-011504] N86-31777
Text understanding: Interestingness as a basis for the variation of the analysis depth — artificial intelligence N86-32126
The temporal aspect of text representation — formal representation N86-32129
Text and graphics at Los Alamos: A system viewpoint
[DE86-010169] N86-32141
TEXTURES
Study and implementation of an image synthesizer based on a modular architecture
[ESA-86-97295] N86-32282
THALLIUM
Infrared attenuation of thallium bromo-iodide fibers
[NASA-TM-86817] N86-32268
THEMATIC MAPPING
Utilizing remote sensing of Thematic Mapper data to improve our understanding of estuarine processes and their influence on the productivity of estuarine-dependent fisheries
[NASA-CR-177177] N86-31943
THEOREMS
The Neumann problem for nonlinear second order singular perturbation problems
[AD-A167456] N86-32235
THEORETICAL PHYSICS
International Centre for Theoretical Physics: Scientific activities in 1984
[DE86-701454] N86-32245
THERMAL ANALYSIS
High temperature adhesives
[SNIAS-861-422-118] N86-31739
THERMAL CONDUCTIVITY
Development of advanced thermal insulation for appliances
[DE86-011357] N86-31843
Pointwise a-priori bounds for strongly coupled semilinear parabolic systems
[AD-A167539] N86-32198
THERMAL EXPANSION
Fiber composite sandwich thermostructural behavior: Computational simulation
[NASA-TM-88787] N86-31663
Strongback baseline design: Mechanical properties of composite facesheets
[DE86-011913] N86-31675
THERMAL INSULATION
Calculation of heat flux through a wall containing a cavity: Comparison of several models
[DE86-010348] N86-31841
Development of advanced thermal insulation for appliances
[DE86-011357] N86-31843
THERMAL PROTECTION
Process for preparing highly optically transparent/colorless aromatic polyimide film
[NASA-CASE-LAR-13351-1] N86-31727
THERMAL STABILITY
Strongback baseline design: Mechanical properties of composite facesheets
[DE86-011913] N86-31675
THERMAL STRESSES
Temperature dependent nonlinear metal matrix laminae behavior
[NASA-CR-4016] N86-31666
THERMISTORS
Multichannel automatic device for measuring ultralow temperatures
[DE86-701438] N86-31867
THERMOCOUPLES
Multiple thermocouple testing device
[AD-D012276] N86-31860
THERMODYNAMIC PROPERTIES
Advanced hydrogen storage: Modified vanadium hydrides
[DE86-009916] N86-31748
Thermal history of HT-9 weldment heat-affected zones during welding
[DE86-010684] N86-31906
THERMOELASTICITY
Steady-state problems of nonlinear electro-magneto-thermo-elasticity
[AD-A167454] N86-32243
THERMOELECTRIC MATERIALS
Optimization of the thermoelectric figure of merit of fine-grained semiconductor materials based upon lead telluride
[AD-A167647] N86-32303
THERMOGRAVIMETRY
High temperature adhesives
[SNIAS-861-422-118] N86-31739
THERMOPHYSICAL PROPERTIES
Modeling directional solidification furnaces
[NASA-CR-177148] N86-31617
THERMOPLASTIC RESINS
Determination of the wear of thermoplastic journal bearings in the initial strain
[OEFZS-4345] N86-31908
THESAURI
Carbon Dioxide Information Center thesaurus
[DE86-009013] N86-32339
THIN AIRFOILS
System design and integration of the large-scale advanced prop-fan
[NASA-CR-174789] N86-31536
THIN FILMS
Light emission from metal-insulator-metal structures biased near breakdown voltages
[DE86-008505] N86-31802
An improved model of thin film growth
[AD-A167147] N86-32302
Optoelectronic devices and related physical phenomena in thin film semiconductor configurations
[AD-A167983] N86-32306
Development of humidity sensors in tantalum thin film technology
[BMFT-FB-T-85-175] N86-32315
THIN WINGS
A computer program for calculating the steady and oscillatory supersonic flow over thin wings
[AD-A167451] N86-31538
THREAT EVALUATION
Airborne intruder detection considerations
[DE86-006462] N86-31576
THREE DIMENSIONAL BODIES
Formulation of numerical methods used in the XYZ Three-Dimensional Potential Flow Program
[AD-A168167] N86-31836
THREE DIMENSIONAL MOTION
Coherent structures in turbulent shear layers and relation to mixing reaction and combustion
[AD-A167042] N86-31681
THRESHOLD GATES
High power high voltage linear amplifier apparatus
[AD-D012244] N86-31796
THRUST
The application of energy techniques to propeller-driven airplanes
[AD-A167113] N86-31569
Design of a vertical thrust stand for a remotely piloted model helicopter
[AD-A167811] N86-31598
THRUST CHAMBERS
Test program to provide confidence in liquid oxygen cooling of hydrocarbon fueled rocket thrust chambers
[NASA-TM-88816] N86-31646

THRUST LOADS
Centaur engine gimbal friction characteristics under simulated thrust load
[NASA-TM-87335] N86-31621
THRUST MEASUREMENT
In-situ solid-propellant burn-rate measurements using flash cineradiography
[AD-A167637] N86-31663
THRUST VECTOR CONTROL
Applications of infrared thermography in convective heat transfer
[AD-A167872] N86-31599
Centaur engine gimbal friction characteristics under simulated thrust load
[NASA-TM-87335] N86-31621
TIDAL FLATS
Automatic interpolation of isolines from an irregular waterline digital terrain model (DGM) through triangulation network N86-31952
Calculation and representations of elevation changes in a tidal flat area from digital terrain models N86-31956
TIDAL WAVES
Coast of California storm and tidal waves study: Nearshore bathymetric survey report, San Diego region
[AD-A168119] N86-32076
TILT ROTOR AIRCRAFT
A trade-off study of tilt rotor aircraft versus helicopters using VASCOMP 2 and HESCOMP
[AD-A167719] N86-31575
TIME
Comparison of the domain and frequency domain state feedbacks
[DE86-009429] N86-32180
TIME DEPENDENCE
The temporal aspect of text representation — formal representation N86-32129
Optimal control for parabolic-hyperbolic system with time delay
[DE86-701709] N86-32182
Functional temporal calculus versus temporal logic: An engineering approach
[REPT-59] N86-32217
TIME LAG
On control concept for in-flight simulation including actuator nonlinearities and time delays
[ESA-TT-948] N86-31593
TIME MEASUREMENT
Time synchronization via SYMPHONIE High Accuracy Low Cost (HALO)
[BMFT-FB-W-85-021] N86-31781
TIME SERIES ANALYSIS
Estimating problems in stationary time series with missing data
[ESA-86-97287] N86-32228
TIME SIGNALS
Time synchronization via SYMPHONIE High Accuracy Low Cost (HALO)
[BMFT-FB-W-85-021] N86-31781
TITANIUM ALLOYS
Process for producing carbide coatings
[AD-D012202] N86-31667
Damping characteristics of metal matrix composites
[AD-A167792] N86-31668
Wear improvement in titanium alloys by ion implantation
[AD-D012203] N86-31704
Effect of heat treatment and impurity concentration on some mechanical properties V-15Cr-5Ti alloy
[DE86-010498] N86-31722
Effect of helium on swelling and microstructural evolution in ion-irradiated V-15Cr-5Ti alloy
[DE86-010510] N86-31723
Correlation between microstructure and forging conditions of Combined Die-Forged (CDF) Ti-6Al-4V powder
[ESA-TT-952] N86-31725
TITANIUM OXIDES
Microcrystalline growth studies in model oxide by dynamic laser-light scattering methods
[DE86-007300] N86-32310
TOKAMAK DEVICES
Ion temperature in TORTUR 3 — tokamak
[REPT-85-162] N86-32295
Optimization study for ion temperature measurements by means of Rutherford scattering — tokamak experiments
[REPT-86-164] N86-32296
TOLERANCES (PHYSIOLOGY)
A chinchilla restraint system
[AD-A167408] N86-32064
TOLLMIEN-SCHLICHTING WAVES
Numerical simulation of the active control of laminar-turbulent transition in the flat-plate boundary layer
[DFVLR-FB-86-05] N86-31852
TOPOGRAPHY
Topographic-cartographic data base in standardization N86-31949
CAPIR/DEM: A collection system for geographically based digital elevation data
[AD-A167471] N86-31963
Integration of the topography in teledetection image data processing
[ESA-86-97652] N86-31972
Sound propagation over uneven ground and irregular topography
[NASA-CR-179673] N86-32248
TOPOLOGY
PAOLA: Topological optimization system for Programmable Logical Arrays (PLA)
[ESA-86-97294] N86-32148
Flow and cycle covering in graphs and matroids
[ESA-86-97285] N86-32206
Mappings with closed range and finite dimensional linear spaces
[DE85-703172] N86-32238
TORPEDOES
Kalman filter real time tracking using microprocessors and a new language for military software
[AD-A167871] N86-32138
TORQUE
Redundancy resolution of manipulators through torque optimization
[AD-A167851] N86-31895
TORSION
Influence of third-degree geometric nonlinearities on the vibration and stability of pretwisted, preconed, rotating blades
[NASA-TM-87307] N86-31920
Elastoplastic torsion of a cylindrical beam, described by variational inequalities
[ESA-86-97704] N86-31937
TORSIONAL STRESS
Solution of the problem of elastoplastic torsion with a finite element method
[ESA-86-97546] N86-31935
TRACING
Balloon tracer for atmospheric pollutants
[DE86-007144] N86-31999
TRACKING FILTERS
Kalman filter real time tracking using microprocessors and a new language for military software
[AD-A167871] N86-32138
TRACKING PROBLEM
On the stability of the problem of target tracking with the FLIR
[AD-A167721] N86-32273
TRADEOFFS
A trade-off study of tilt rotor aircraft versus helicopters using VASCOMP 2 and HESCOMP
[AD-A167719] N86-31575
The trade-off module: An aid to balance logistically related costs
[BDK/KBS/84-06] N86-32331
TRAILING EDGE FLAPS
Summary of NASA/DOE Aileron-Control Development Program for Wind Turbines
[NASA-TM-88811] N86-31963
TRAJECTORY ANALYSIS
Point-mass simulation tool (PMAST) user's manual
[DE86-009547] N86-31611
TRAJECTORY OPTIMIZATION
Start solution for interplanetary low thrust trajectory optimization and model refinement, volume 1
[ESA-CR(P)-2175-VOL-1] N86-31612
Start solution for interplanetary low thrust trajectory optimisation and model refinement. Volume 2: User's guide to the software for low thrust orbit optimization for interplanetary missions using a linear model
[ESA-CR(P)-2175-VOL-2] N86-31613
Start solution for interplanetary low thrust trajectory optimization and model refinement. Volume 3: Low thrust orbit optimization for interplanetary missions using a Pontryagin/Lambert approach
[ESA-CR(P)-2175-VOL-3] N86-31614
TRANSFER FUNCTIONS
Vibration damping in externally pressurized gas bearings
[DE86-003470] N86-31902
Analysis of the FELIX experiments with cantilevered beams and hollow cylinders
[DE86-010528] N86-31933
Comparison of the domain and frequency domain state feedbacks
[DE86-009429] N86-32180
Measurement techniques using ultrashort optical pulses
[DE86-009691] N86-32279
Space plasma research
[NASA-CR-178898] N86-32289
TRANSISTOR AMPLIFIERS
High power high voltage linear amplifier apparatus
[AD-D012244] N86-31796
TRANSITION TEMPERATURE
Measurement of the glass transition temperature (Tg) of the Z-14.203 material (parasol C-212)
[I-111/85] N86-31742
TRANSONIC FLOW
User's manual for XTRAN2L (version 1.2): A program for solving the general-frequency unsteady transonic small-disturbance equation
[NASA-TM-87737] N86-31533
ATRAN3S: An unsteady transonic code for clean wings
[NASA-TM-86783] N86-31535
Computations of separated subsonic and transonic flow about airfoils in unsteady motion
[NLR-MP-84094-U] N86-31541
Least squares finite element simulation of transonic flows
[NASA-CR-178121] N86-32188
Stability analysis of intermediate boundary conditions in approximate factorization schemes
[NASA-CR-178126] N86-32189
Chimera: A grid-embedding technique
[NASA-TM-89246] N86-32242
TRANSONIC FLUTTER
Flight test of passive wing/store flutter suppression
[NASA-TM-87766] N86-31566
TRANSONIC WIND TUNNELS
Design of a basic profile for a slightly swept wing. Part 2: Experimental investigation on the airfoil DFVLR-W1 in the Brunswick Transonic Wind Tunnel (TWB)
[ESA-TT-916-PT-2] N86-31542
Operating envelope charts for the Langley 0.3-meter transonic cryogenic wind tunnel
[NASA-TM-89008] N86-31595
TRANSPARENCE
Process for preparing highly optically transparent/colorless aromatic polyimide film
[NASA-CASE-LAR-13351-1] N86-31727
TRANSPORT AIRCRAFT
International Aviation (selected articles)
[AD-A166298] N86-31529
Aerodynamic design methods for modern transport aircraft
[ESA-TT-923] N86-31543
TRANSPORT PROPERTIES
Overview of transport mechanisms in beta-lithium/aluminum
[DE86-010522] N86-31724
TRANSVERSE OSCILLATION
The investigation of tethered satellite system dynamics
[NASA-CR-178895] N86-31631
TRAVELING WAVE TUBES
High voltage technology for a Traveling Wave Tube Electronic Power Conditioner (TWT-EPC) for a Synthetic Aperture Radar (SAR)
[BMFT-FB-W-85-015] N86-31813
TRAVELING WAVES
Traveling waves in a one-dimensional chain with nonharmonic reciprocity
[ESA-86-97379] N86-31782
On travelling-wave solutions to systems of conservation laws with singular viscosity
[AD-A167518] N86-31830
TREES (MATHEMATICS)
Tree-structured classification via generalized discriminant analysis
[AD-A167453] N86-32134
TRENDS
Advantages and limitations of liquid propellant rocket engines
[ESA-86-97631] N86-31659
TRIANGULATION
Automatic interpolation of isolines from an irregular waterline digital terrain model (DGM) through triangulation network N86-31952
The evaluation of inner products of multivariate simplex splines
[AD-A167485] N86-32190
TRIGONOMETRIC FUNCTIONS
The MSTN software. Trigonometric series manipulator
[CNES-CT/DTI/MS/MN/262] N86-32167
TRISONIC WIND TUNNELS
Investigation on reduction of flow noise of the 0.6m x 0.6m trisonic wind tunnels
[AD-A166302] N86-31597
TROPICAL METEOROLOGY
Monsoons
[WMO-613] N86-32066
TROPICAL STORMS
Effects of storm-related parameters on the accuracy of the nested tropical cyclone model
[AD-A167809] N86-32058

TROPOSPHERE
Theory and operation of the Gould 32/27 programs ABLE-2A and EBLE for the tropospheric air motion measurement system
[NASA-CR-176856] N86-32011
Balance of the tropospheric ozone and its relation to stratospheric intrusions indicated by cosmogenic radionuclides, part 13
[DE85-015560] N86-32016
TRUSSES
Preloaded space structural coupling joints
[NASA-CASE-LAR-13489-1] N86-31630
TURBINE BLADES
System design and integration of the large-scale advanced prop-fan
[NASA-CR-174789] N86-31536
Summary of NASA/DOE Aileron-Control Development Program for Wind Turbines
[NASA-TM-88611] N86-31983
TURBINE ENGINES
Improvement of the corrosion resistance of turbine engine bearings
[AD-A167355] N86-31893
TURBINE PUMPS
Evaluation of a hybrid hydrostatic bearing for cryogenic turbopump application
[NASA-TM-87255] N86-31649
Study of test bench dangers in Vulcan engine turbopump tests. (A component of Ariane 5 launcher)
[ESA-86-97632] N86-31888
TURBOFAN ENGINES
An overview of the Small Engine Component Technology (SECT) studies
[NASA-TM-88796] N86-31587
Multiple thermocouple testing device
[AD-D012276] N86-31680
TURBOPROP ENGINES
System design and integration of the large-scale advanced prop-fan
[NASA-CR-174789] N86-31536
An overview of the Small Engine Component Technology (SECT) studies
[NASA-TM-88796] N86-31587
TURBORAMJET ENGINES
A parametric study of a gas-generator airturbo ramjet (ATR)
[NASA-TM-88808] N86-31586
TURBULENCE
Intermittency and conditional velocities in premixed conical turbulent flames
[DE86-009363] N86-31687
Numerical simulation of boundary layers. Part 2: Ribbon-induced transition in Blasius flow
[NASA-TM-88221] N86-31823
Contributions to large-eddy simulation, part 1
[DE86-009710] N86-32021
TURBULENT BOUNDARY LAYER
Effects of variable properties in film cooled turbulent boundary layers
[AD-A167716] N86-31835
TURBULENT FLOW
Turbulent dispersion of the icing cloud from spray nozzles used in icing tunnels
[NASA-TM-87316] N86-31558
Coherent structures in turbulent shear layers and relation to mixing reaction and combustion
[AD-A167042] N86-31681
High speed viscous flow calculations about complex configurations
[NASA-TM-88237] N86-31827
Laser velocimeter measurements and analysis in turbulent flows with combustion. Part 4: Two-component cold-flow measurements
[AD-A167554] N86-31834
Conditioned hot-wire anemometer measurements and structural analysis of a turbulent spot in a laminar boundary layer
[MEAH-63] N86-31850
Experimental investigation of noise generated by turbulence in a pipe flow behind a discontinuous area enlargement
[DFVLR-FB-86-06] N86-31853
Turbulence modeling for incompressible flows: A report on the Euromech 180 Colloquium
[KU-SFB-210/T/22] N86-31854
Mixing length and turbulent diffusion coefficient in atmospheric simulation models
[REPT-25] N86-32024
TURBULENT JETS
Investigation of density gradient fluctuations in a turbulent jet by means of the laser Schlieren crossed-beam method
[ESA-TT-942] N86-31849
TURBULENT MIXING
Coherent structures in turbulent shear layers and relation to mixing reaction and combustion
[AD-A167042] N86-31681
TURBULENT WAKES
Coherent vortex structures in the wake of a rigid and an externally driven disk
[DFVLR-FB-86-04] N86-31851
TURING MACHINES
The second machine class 2: An encyclopedic view of the parallel computation thesis
[FVI-85-14] N86-32119
TWO DIMENSIONAL FLOW
Effect of aspect ratio on sidewall boundary-layer influence in two-dimensional airfoil testing
[NASA-CR-4008] N86-31534
Calculations of the stability of some axisymmetric flows proposed as a model of vortex breakdown
[NASA-CR-178124] N86-31825
TWO PHASE FLOW
Modeling of zero gravity venting: Studies of two phase heat transfer under reduced gravity
[NASA-CR-179662] N86-31826
TYPHOONS
Effects of storm-related parameters on the accuracy of the nested tropical cyclone model
[AD-A167809] N86-32058

U

U.S.S.R.
USSR Space Life Sciences Digest, issue 7
[NASA-CR-3922(08)] N86-32083
ULLAGE
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 3: On-Board Inert Gas Generator System (OBIGGS) studies. Part 2: Fuel scrubbing and oxygen evolution tests
[AD-A167445] N86-31573
ULTRALOW TEMPERATURES
Multichannel automatic device for measuring ultralow temperatures
[DE86-701438] N86-31867
Investigation of three ferromagnetic superconductors in the milli-Kelvin area
[ESA-86-97360] N86-32318
ULTRASONIC FLAW DETECTION
Factors that affect reliability of nondestructive detection of flaws in structural ceramics
[NASA-TM-87348] N86-31912
Quantitative void characterization in structural ceramics using scanning laser acoustic microscopy
[NASA-TM-88797] N86-31913
Ultrasonic inspection of partially completed welds using pattern recognition techniques
[DE86-003227] N86-31915
ULTRASONIC TESTS
Factors that affect reliability of nondestructive detection of flaws in structural ceramics
[NASA-TM-87348] N86-31912
ULTRASONICS
Investigation of ultrasonic methods for residual stress measurement
[DE86-009614] N86-31927
ULTRAVIOLET RADIATION
Extreme ultraviolet multilayer reflectors
[DE86-010194] N86-32280
ULTRAVIOLET SPECTRA
Investigations of depth-resolved laser remote measurement of NO2 and SO2 in the visible and UV spectral domains — atmospheric pollution
[GKSS-85/E/48] N86-32002
UNDERGROUND STRUCTURES
On the global behavior of a cylindrical salt dome with a HLW repository
[ECN-180] N86-32264
UNDERGROUND TRANSMISSION LINES
A conservative rating procedure for cyclically loaded, buried cables
[S/T-REPT-VOL-3-NO-9] N86-31821
UNDERWATER ACOUSTICS
Acoustic description of south Atlantic Ocean warm core eddy
[AD-A166323] N86-32074
UNDERWATER EXPLOSIONS
An investigation into the tripping behavior of longitudinally T-stiffened rectangular flat plates loaded statically and impulsively
[AD-A167718] N86-31923
UNIFIED FIELD THEORY
Theories at 10 sup (-17) and 10 sup (-33) cm
[DE86-006870] N86-32320
UNIONS (CONNECTORS)
Preloaded space structural coupling joints
[NASA-CASE-LAR-13489-1] N86-31630
UNSTEADY FLOW
ATRAN3S: An unsteady transonic code for clean wings
[NASA-TM-86783] N86-31535
A computer program for calculating the steady and oscillatory supersonic flow over thin wings
[AD-A167451] N86-31538
Theoretical study of the Bernard-Karman vortex path. Application to the experimental study of the flow around a thick obstacle
[ISL-R-105/85] N86-31544
UPPER STAGE ROCKET ENGINES
Centaur engine gimbal friction characteristics under simulated thrust load
[NASA-TM-87335] N86-31821
URANIUM OXIDES
Carbon monoxide formation in UO2 kerneled HTR fuel particles containing oxygen getters
[OEFZS-4348] N86-32261
URANUS ATMOSPHERE
Activities of the Department of Astronomy and McDonald Observatory of the University of Texas at Austin
[NASA-CR-179667] N86-32378
URBAN PLANNING
A proposal for the development of a large-scale topographic-cartographic data base taking the planimetric data of automated cadastral map (ALK) system into account N86-31950
USER MANUALS (COMPUTER PROGRAMS)
User's manual for XTRAN2L (version 1.2): A program for solving the general-frequency unsteady transonic small-disturbance equation
[NASA-TM-87737] N86-31533
ATRAN3S: An unsteady transonic code for clean wings
[NASA-TM-86783] N86-31535
Point-mass simulation tool (PMAST) user's manual
[DE86-009547] N86-31611
Start solution for interplanetary low thrust trajectory optimization and model refinement. Volume 2: User's guide to the software for low thrust orbit optimization for interplanetary missions using a linear model
[ESA-CR(P)-2175-VOL-2] N86-31613
Start solution for interplanetary low thrust trajectory optimization and model refinement. Volume 3: Low thrust orbit optimization for interplanetary missions using a Pontryagin/Lambert approach
[ESA-CR(P)-2175-VOL-3] N86-31614
The MSTN software. Trigonometric series manipulator
[CNES-CT/DTI/MS/MN/262] N86-32167
USER REQUIREMENTS
A kernel decision support system for Canadian military satellite communications system planning
[AD-A167122] N86-31765
Scientific data requirements
[ADL-C-89230] N86-32007
Striving for natural usage
[DE86-009402] N86-32105

V

VACUUM
Photodesorption cleaning of silicon with vacuum ultraviolet irradiation
[AD-A167420] N86-31682
VACUUM TESTS
In-vacuum cyclic fatigue behavior of Vanstar-7 at elevated temperatures
[DE86-007322] N86-31713
VALVES
Pyrotechnic valves and miniature devices
[SNIAS-861-422-112] N86-31754
Automated valve expertise capture
[DE86-004127] N86-31897
VANADIUM ALLOYS
Effect of neutron irradiation on the tensile properties and microstructure of several vanadium alloys
[DE86-008234] N86-31716
Advanced hydrogen storage: Modified vanadium hydrides
[DE86-009916] N86-31748
VAPOR DEPOSITION
An improved model of thin film growth
[AD-A167147] N86-32302
VAPOR PHASES
Use of MoS2 applied by Physical Vapor Deposition (PVD) on space mechanisms
[SNIAS-861-440-101] N86-31839
VAPORIZING
Laser processing of ceramics
[DE86-011954] N86-31737
VARIABILITY
Effects of variable properties in film cooled turbulent boundary layers
[AD-A167716] N86-31835

READEX FICHE best copy available

VARIATIONAL PRINCIPLES
Elastoplastic torsion of a cylindrical beam, described by variational inequalities
[ESA-86-97704] N86-31937
VARIATIONS
The variation of the dislocation density in aluminum deformed to large steady-state creep strains
[AD-A167715] N86-31706
Experimental investigations of the role of laser field fluctuations in non-linear optical absorption processes
[DE86-006919] N86-31863
Balancing production level variations and inventory variations in complex production systems
[THE/BDK/84] N86-32329
VEGETATION
The USGS (US Geological Survey) X-, C-, and L- band SAR data collection program
[AD-A168173] N86-31967
VELOCITY
Intermittency and conditional velocities in premixed conical turbulent flames
[DE86-009363] N86-31687
A linear stability analysis of the rapid development of an extratropical cyclone
[AD-A167808] N86-32057
VELOCITY DISTRIBUTION
Solitary and periodic waves in swirling flow
[AD-A167538] N86-31833
VELOCITY MEASUREMENT
Laser velocimeter measurements and analysis in turbulent flows with combustion. Part 4: Two-component cold-flow measurements
[AD-A167554] N86-31834
VENTING
Modeling of zero gravity venting: Studies of two-phase heat transfer under reduced gravity
[NASA-CR-179662] N86-31826
VERTICAL ORIENTATION
A linear stability analysis of the rapid development of an extratropical cyclone
[AD-A167808] N86-32057
Vertical directionality of ambient noise: 150-300 Hz
[AD-A167421] N86-32250
VERTICAL TAKEOFF AIRCRAFT
A trade-off study of tilt rotor aircraft versus helicopters using VASCOMP 2 and HESCOMP
[AD-A167719] N86-31575
Design of a vertical thrust stand for a remotely piloted model helicopter
[AD-A167811] N86-31598
VERY LARGE SCALE INTEGRATION
The functional test of complex integrated circuits — very large scale integration
[ESA-86-97269] N86-31807
VIBRATION
Leakage flow-induced vibrations for variations of a tube-in-tube slip joint
[DE86-010765] N86-31907
Zero and negative masses in finite element vibration and transient analysis
[AD-A167489] N86-31922
Compendium of methods for applying measured data to vibration and acoustic problems
[AD-A168174] N86-32251
European Science Notes, volume 40, number 6
[AD-A167501] N86-32346
VIBRATION DAMPING
Flight test of passive wing/store flutter suppression
[NASA-TM-87786] N86-31568
The investigation of tethered satellite system dynamics
[NASA-CR-178895] N86-31631
Vibration damping in externally pressurized gas bearings
[DE86-003470] N86-31902
VIBRATION MEASUREMENT
Advanced optical measuring systems for measuring the properties of fluids and structures
[NASA-TM-88829] N86-31859
Compendium of methods for applying measured data to vibration and acoustic problems
[AD-A168174] N86-32251
VIBRATION TESTS
Dynamic analysis: Correlation of theory with experiment — MSC/NASTRAN analysis of Westland 30 G-BGHF
[RP861] N86-31917
VIDEO COMMUNICATION
Optical fiber transmission on satellites and orbital stations
[SNIAS-861-440-108] N86-31786
VIDEO EQUIPMENT
An introduction to the optical heterodyne receiver
[NPL-QU-77] N86-31759
Solid state image sensor with an amorphous photoconversion layer
[BMFT-FB-T-85-164] N86-31869
VISCOELASTICITY
Inflow boundary conditions for steady flows of viscoelastic fluids with differential constitutive laws
[AD-A167452] N86-31829
VISCOSITY
On traveling-wave solutions to systems of conservation laws with singular viscosity
[AD-A167516] N86-31830
Diffusion of gases in porous solids: Simulation and measurement
[DE86-005380] N86-31837
Hamilton-jacobi equations in infinite dimensions, part 3
[AD-A167521] N86-32236
VISCOUS DAMPING
Damping force exerted by a viscous medium upon an oscillating cylinder
[ESA-86-97374] N86-31844
VISCOUS FLOW
High speed viscous flow calculations about complex configurations
[NASA-TM-88237] N86-31827
Quasi-simultaneous calculation of strongly interacting viscous flow
[NLR-MP-84095-U] N86-31848
Intraplate deformation due to continental collisions: A numerical study of deformation in a thin viscous sheet
[NASA-TM-86235] N86-32012
VISIBILITY
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: CAstle AFB, California
[AD-A167857] N86-32054
VISIBLE SPECTRUM
Investigations of depth-resolved laser remote measurement of NO2 and SO2 in the visible and UV spectral domains — atmospheric pollution
[GKSS-85/E/48] N86-32002
VISUAL AIDS
Aiding computer application programmers and users with the tools of the visual interface
[AD-A167886] N86-32139
VISUAL DISCRIMINATION
Speed of work and error rate: Analyses of individual differences in a choice reaction series with a cognitive component
[ESA-TT-944] N86-32099
VISUAL STIMULI
Auditory versus visual selective-attention tasks
[IZF-1985-19] N86-32100
VISUAL TASKS
Auditory versus visual selective-attention tasks
[IZF-1985-19] N86-32100
VITREOUS MATERIALS
Microscopic image analysis of slow crack growth in vitreous materials
[DE86-009650] N86-31931
VOICE COMMUNICATION
Longterm speech spectra of nonstationary autoregressive models
[FUB-8-1985] N86-31788
Physical significance of least mean squares criterion in nonstationary lattice predictors — voice communication
[FUB-9-1985] N86-31789
VOICE DATA PROCESSING
Physical significance of least mean squares criterion in nonstationary lattice predictors — voice communication
[FUB-9-1985] N86-31789
VOIDS
Factors that affect reliability of nondestructive detection of flaws in structural ceramics
[NASA-TM-87348] N86-31912
Quantitative void characterization in structural ceramics using scanning laser acoustic microscopy
[NASA-TM-88797] N86-31913
VOLTAGE AMPLIFIERS
High power high voltage linear amplifier apparatus
[AD-D012244] N86-31796
VORTEX BREAKDOWN
Theoretical and experimental investigation of vortex breakdown
[NASA-CR-178853] N86-31530
Calculations of the stability of some axisymmetric flows proposed as a model of vortex breakdown
[NASA-CR-178124] N86-31825
Solitary and periodic waves in swirling flow
[AD-A167538] N86-31833
VORTICES
Theoretical and experimental investigation of vortex breakdown
[NASA-CR-178853] N86-31530
Theoretical study of the Bernard-Karman vortex path. Application to the experimental study of the flow around a thick obstacle
[ISL-R-105/85] N86-31544
Coherent structures in turbulent shear layers and relation to mixing reaction and combustion
[AD-A167042] N86-31681
Coherent vortex structures in the wake of a rigid and an externally driven disk
[DFVLR-FB-86-04] N86-31951
VORTICITY EQUATIONS
Finite element, stream function-vorticity solution of secondary flow in the cross-plane of noncircular channels
[ECN-175] N86-31856

W

WAFERS
Apparatus and method for aligning a mask and wafer in the fabrication of integrated circuits
[AD-D012208] N86-31795
WAKES
Theoretical study of the Bernard-Karman vortex path. Application to the experimental study of the flow around a thick obstacle
[ISL-R-105/85] N86-31544
WALL FLOW
Effect of aspect ratio on sidewall boundary-layer influence in two-dimensional airfoil testing
[NASA-CR-4008] N86-31534
WALLS
Calculation of heat flux through a wall containing a cavity: Comparison of several models
[DE86-010348] N86-31841
Thermal history of HT-9 weldment heat-affected zones during welding
[DE86-010684] N86-31906
WARFARE
Use of artificial intelligence and psychology in the analysis of command and control — military commanders
[STC-TM-749] N86-32095
The psychology of decision making — military commanders N86-32096
Artificial intelligence and the Rule Oriented System Simulation (ROSS) language — military commanders N86-32097
WASTE DISPOSAL
The CTD data from the Madeira Abyssal Plain, Charles Darwin cruise 1/85 — conductivity-temperature-depth (CTD)
[IOS-217] N86-32078
On the global behavior of a cylindrical salt dome with a HLW repository
[ECN-190] N86-32264
WATER COOLED REACTORS
Corrosion behaviour of aluminium plates in aqueous medium
[DE86-701575] N86-31711
WATER DEPTH
Level and discharge measurements under difficult conditions — hydrology
[WMO-650] N86-31969
WATER FLOW
Level and discharge measurements under difficult conditions — hydrology
[WMO-650] N86-31969
WATER POLLUTION
Application of a geographic information system in the study of acidic deposition
[DE86-008220] N86-32000
WATER TAKEOFF AND LANDING AIRCRAFT
Technology demonstration for investigation of the new possibilities of amphibious flying boats, phase 2
[BMFT-FB-W-85-022] N86-31577
WATER TEMPERATURE
Observations of surface water temperature in the Netherlands from 1860: Description of the data file
[KNMI-TR-75] N86-32070
Observations of surface water temperature in the Netherlands from 1860: The temperature regime and the changes in it
[KNMI-WR-85-6] N86-32071
WATER VAPOR
Diffusion of water vapor in CFRP. Measurement of the diffusion coefficient under influence of concentration
[ESA-TT-911] N86-31740
Satellite-Earth range measurements. Part 1: Correction of the excess path length due to atmospheric water vapor by ground based microwave radiometry
[CTH-RR-147-PT-1] N86-32022
WATER WAVES
Evaluation of wave calculations using the model GONO, in the period October 1983 - April 1984 — water waves
[KNMI-TR-56] N86-32079

Time sequence of the Royal Dutch Meteorlogical Institute's operational wave model GONO, October 1983 - April 1984. Supplement
[KNMI-TR-56-SUPPL] N86-32080

WATERSHEDS
Application of a geographic information system in the study of acidic deposition
[DE86-008230] N86-32000

WAVE ATTENUATION
Infrared attenuation of thallium bromo-iodide fibers
[NASA-TM-86817] N86-32266

WAVE DISPERSION
Light scattering from a deep metallic grating
[AD-A166319] N86-32270

WAVE DRAG
On wings and keels (2)
[NLR-MP-85048-U] N86-31847

WAVE EQUATIONS
Investigation of the moving finite element method as proposed by A.J. Wathen
[DE86-009685] N86-32200

WAVE FRONT RECONSTRUCTION
Aerodynamic design methods for modern transport aircraft
[ESA-TT-923] N86-31543

WAVE FUNCTIONS
Experimental and theoretical research on open resonators --- precipitation measurement
[ESA-TT-931] N86-31816

WAVE PROPAGATION
Propagation of long, high-power microwave pulses through the air
[DE86-009619] N86-31771
Numerics for the simulation of electromagnetic-field propagation in nonionized and plasma media
[DE86-009796] N86-31776
Effect of triangular element orientation on finite element solutions of the Helmholtz equation
[NASA-TM-87351] N86-32247

WAVEFORMS
Measurement and extraction of recurring waveforms: For applications to active transmissions, flow-noise, and helicopter-radiated noise problems
[AD-A167400] N86-32249

WAVEGUIDE FILTERS
Direct-coupled cavity filters with irises of arbitrary thickness
[ESA-TT-938] N86-31817

WAVEGUIDE LASERS
Competition noise in an optical divider
[ESA-86-97538] N86-31886

WAVEGUIDE WINDOWS
Analysis of high power RF windows for gyrotrons
[AD-A167424] N86-31861

WEAK INTERACTIONS (FIELD THEORY)
Scheme to unify gravity and electro-weak interactions
[DE86-701921] N86-32322

WEAPON SYSTEM MANAGEMENT
Development of flight control systems for maneuverable missile weapon systems. Example of operation organization
[MBB-UA-329/85] N86-31622

WEAPON SYSTEMS
An analytical methodology for predicting repair time distributions of advanced technology aircraft
[AD-A167149] N86-31529
Space and defense --- antimissile defense
[ESA-86-97272] N86-31605

WEAR
Wear improvement in titanium alloys by ion implantation
[AD-D012209] N86-31704
Determination of the wear of thermoplastic journal bearings in the initial strain
[OEFZS-4345] N86-31906

WEAR TESTS
Evaluation of a hybrid hydrostatic bearing for cryogenic turbopump application
[NASA-TM-87255] N86-31649
Characterization of ion implanted and laser processed wear surfaces
[AD-A167878] N86-31709

WEATHER
Estimates of available solar radiation and photovoltaic energy production for various tilted and tracking surfaces throughout the US based on PVFORM, a computerized performance model
[DE86-009549] N86-32019
Koln Bonn, West Germany limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167649] N86-32046
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Peterson AFB, Colorado Springs, Colorado
[AD-A167650] N86-32047
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Macdill AFB, Florida
[AD-A167651] N86-32048
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Cape Newenham, Alaska
[AD-A167652] N86-32049
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: George AFB, California
[AD-A167653] N86-32050
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: White Sands MR, New Mexico
[AD-A167654] N86-32051
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: CAstle AFB, California
[AD-A167657] N86-32054
Guide to standard weather summaries and climatic services
[AD-A168099] N86-32060

WEATHER FORECASTING
Projecting the climatic effects of increasing carbon dioxide
[DE86-008810] N86-32061
Local jargon in weather reports
[KIT-18] N86-32064
Meteorological work station METIS: A glance at the future
[KNMI-TR-74] N86-32069
National Climate Program: Early achievements and future directions
[NASA-CR-177153] N86-32073

WEATHER STATIONS
Misawa AB, Japan limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167655] N86-32052
Camp Page, South Korea limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167656] N86-32053
Kwang Ju AB, South Korea limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167659] N86-32055
Patrick AFB, Florida limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167660] N86-32056
Meteorological work station METIS: A glance at the future
[KNMI-TR-74] N86-32069
Observations of surface water temperature in the Netherlands from 1860: Description of the data file
[KNMI-TR-75] N86-32070

WEIBULL DENSITY FUNCTIONS
A comparison of plotting positions on Weibull probability paper for small randomly censored samples
[ESA-86-97695] N86-32229

WEIGHT ANALYSIS
Weight estimation techniques for composite airplanes in general aviation industry
[NASA-CR-178163] N86-31531

WEIGHT MEASUREMENT
Studies for the application of a flexible weight and balance (W/B) measuring facility for commercial aircraft
[BMFT-FB-W-85-029] N86-31604

WEIGHT REDUCTION
New aluminum alloys for satellite structures
[SNIAS-861-440-111] N86-31641
Contribution of carbon fibers to the improvement of the performance of composite containers
[SNIAS-861-430-115] N86-31677

WEIGHTING FUNCTIONS
Least squares finite element simulation of transonic flows
[NASA-CR-178121] N86-32188

WEIGHTLESSNESS
Special features of surgical intervention under conditions of weightlessness
[AD-A167916] N86-32092
The behavior of nonrotational striations in silicon
[BMFT-FB-W-85-014] N86-32316

WEIGHTLESSNESS SIMULATION
Interdiffusion in binary salt melting under weightlessness
[BMFT-FB-W-85-017] N86-31609
Influence of gravity on structure and behavior of Paramecium caudatum
[ESA-TT-963] N86-32087

WELDABILITY
Analysis of heat-affected zone cracking in Ni3Al alloys
[DE86-009449] N86-31712

WELDED JOINTS
Design of tough ferritic steels for cryogenic use
[DE86-009361] N86-31718
Finite-element modeling of pinch welds
[DE86-009573] N86-31900
Thermal history of HT-9 weldment heat-affected zones during welding
[DE86-010684] N86-31906
Ultrasonic inspection of partially completed welds using pattern recognition techniques
[DE86-003227] N86-31915

WELDING
Finite-element modeling of pinch welds
[DE86-009573] N86-31900
Ultrasonic inspection of partially completed welds using pattern recognition techniques
[DE86-003227] N86-31915
European Science Notes, volume 40, number 6
[AD-A167501] N86-32346

WEST GERMANY
Research activities report of the German Federal Government
[ISSN-0722-8333] N86-32344

WETLANDS
Utilizing remote sensing of Thematic Mapper data to improve our understanding of estuarine processes and their influence on the productivity of estuarine-dependent fisheries
[NASA-CR-177177] N86-31943

WIENER FILTERING
Linear filter theory
[ESA-86-97391] N86-31811

WIND DIRECTION
Measurement of the wind field. Simultaneous wind velocity measurements at different altitudes with high time resolution for the specification of wind energy converters
[BMFT-FB-T-85-141] N86-32063
Time sequence of the Royal Dutch Meteorlogical Institute's operational wave model GONO, October 1983 - April 1984. Supplement
[KNMI-TR-56-SUPPL] N86-32080

WIND EFFECTS
Aeroelastic effects in the structural dynamic analysis of vertical axis wind turbines
[DE86-009542] N86-31989

WIND PRESSURE
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Cape Newenham, Alaska
[AD-A167652] N86-32049
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: CAstle AFB, California
[AD-A167657] N86-32054

WIND PROFILES
Design wind analysis
[AD-A167576] N86-32045
Measurement of the wind field. Simultaneous wind velocity measurements at different altitudes with high time resolution for the specification of wind energy converters
[BMFT-FB-T-85-141] N86-32063

WIND TUNNEL APPARATUS
Comparison of analytical and experimental performance of a wind-tunnel diffuser section
[NASA-TM-88795] N86-31537
Airfoil flutter model suspension system
[NASA-CASE-LAR-13522-1] N86-31594
Fiber optic pressure sensors in skin-friction measurements
[NASA-CR-176861] N86-32269

WIND TUNNEL MODELS
Low-speed aerodynamic characteristics of a 1/8-scale X-29A airplane model at high angles of attack and sideslip
[NASA-TM-87722] N86-31532
Airfoil flutter model suspension system
[NASA-CASE-LAR-13522-1] N86-31594

WIND TUNNEL TESTS
Effect of aspect ratio on sidewall boundary-layer influence in two-dimensional airfoil testing
[NASA-CR-4008] N86-31534
Development of a data acquisition system to aid in the aerodynamic study of various helicopter configurations
[AD-A167717] N86-31539
Design of a basic profile for a slightly swept wing. Part 2: Experimental investigation on the airfoil DFVLR-W1 in the Brunswick Transonic Wind Tunnel (TWB)
[ESA-TT-916-PT-2] N86-31542
Wall shear stress measurements on a prolate spheroid at zero incidence in the German-Netherlands Wind (DNW) Tunnel --- boundary layer transition
[DFVLR-MITT-86-06] N86-31547
The A-320 aerodynamics. The turboreactor air inlet
[NOTE-427.021/86] N86-31567
Turbulent dispersion of the icing cloud from spray nozzles used in icing tunnels
[NASA-TM-87316] N86-31568

Quality determination of the Heat and Flow Theory Department (WS) subsonic wind tunnel and experiments using laser Doppler velocity measurement
[ESA-86-97355] N86-31603
Conditioned hot-wire anemometer measurements and structural analysis of a turbulent spot in a laminar boundary layer
[MEAH-63] N86-31850
Summary of NASA/DOE Aileron-Control Development Program for Wind Turbines
[NASA-TM-88811] N86-31983

WIND TUNNEL WALLS
Investigation on reduction of flow noise of the 0.6m x 0.6m trisonic wind tunnels
[AD-A166302] N86-31597

WIND TUNNELS
Comparison of analytical and experimental performance of a wind-tunnel diffuser section
[NASA-TM-88795] N86-31537

WIND TURBINES
The dynamic behavior of wind turbine masts (in the framework of wind turbine design criteria)
[B-85-324] N86-31918
Masts for small wind turbines
[B-85-583] N86-31919
Summary of NASA/DOE Aileron-Control Development Program for Wind Turbines
[NASA-TM-88811] N86-31983
Aeroelastic effects in the structural dynamic analysis of vertical axis wind turbines
[DE86-009542] N86-31989
Rotor aerodynamics of horizontal axis wind turbines. Summary of lectures and discussions. Presentation of results of calculation methods
[THD-IW-R505] N86-31994

WIND VELOCITY
Development of a variational SEASAT data analysis technique
[NASA-CR-177175] N86-31942

WIND VELOCITY MEASUREMENT
Measurement of the wind field. Simultaneous wind velocity measurements at different altitudes with high time resolution for the specification of wind energy converters
[BMFT-FB-T-85-141] N86-32063
Time sequence of the Royal Dutch Meteorlogical Institute's operational wave model GONO, October 1983 - April 1984. Supplement
[KNMI-TR-56-SUPPL] N86-32080

WINDOWS (APERTURES)
Parametric study of beam refraction problems across laser anemometer windows
[NASA-TM-87350] N86-31857

WINDPOWER UTILIZATION
The dynamic behavior of wind turbine masts (in the framework of wind turbine design criteria)
[B-85-324] N86-31918
Measurement of the wind field. Simultaneous wind velocity measurements at different altitudes with high time resolution for the specification of wind energy converters
[BMFT-FB-T-85-141] N86-32063

WINDPOWERED PUMPS
Prospects for small and marginal farmers in Trichy district (Tamil Nadu, India) to use water pumping windmills for irrigation
[ESA-86-97721] N86-31978

WING TIP VORTICES
Application of an inviscid multivortex model to the calculation of the vortex flow behind an airfoil profile with spoiler
[ISL-R-133/84] N86-31545

WING-FUSELAGE STORES
SWAY85: A computer program for calculating lug and sway brace loads
[DE86-009550] N86-31926

WINGLETS
International Aviation (selected articles)
[AD-A166298] N86-31528

WINGS
ATRAN3S: An unsteady transonic code for clean wings
[NASA-TM-86783] N86-31535
In-flight photogrammetric measurement of wing ice accretions
[NASA-TM-87191] N86-31562

WINTER
Continentality: Its estimation and physical significance
[AD-A167111] N86-32044

WIRING
Floor planning and net assignment in layout compilation
[ESA-86-97530] N86-31818

WORDS (LANGUAGE)
Longterm speech spectra of nonstationary autoregressive models
[FUB-8-1985] N86-31788

WORKING FLUIDS
Effect of an oxygen plasma on the physical and chemical properties of several fluids for the liquid droplet radiator
[NASA-TM-88839] N86-31634

X

X RAY ANALYSIS
X-ray line profile analysis of shock-modified compounds
[DE86-003454] N86-31932

X RAY ASTRONOMY
Activities report of the Institute of Extraterrestrial Physics
[MPE-194] N86-32372

X RAY DENSITY MEASUREMENT
Correlation of processing and sintering variables with the strength and radiography of silicon nitride
[NASA-TM-87251] N86-31729

X RAY DIFFRACTION
Exploration of advanced characterization techniques for molecular composites
[AD-A166102] N86-31733

X RAY INSPECTION
Factors that affect reliability of nondestructive detection of flaws in structural ceramics
[NASA-TM-87348] N86-31912

X RAY LASERS
Time and space resolved spectroscopy of X-ray laser experiments
[DE86-009403] N86-31885

X-29 AIRCRAFT
Low-speed aerodynamic characteristics of a 1/8-scale X-29A airplane model at high angles of attack and sideslip
[NASA-TM-87722] N86-31532

XENON
Performance characteristics of ring-cusp thrusters with xenon propellant
[NASA-TM-87338] N86-31650

XENON ISOTOPES
Production rates of neon xenon isotopes by energetic neutrons N86-32358

XENON 129
Live 129I-129Xe dating N86-32359

Y

YAG LASERS
Interferometric holographic cinematography
[ISL-CO-219/85] N86-31872

YIELD STRENGTH
Study on effects of powder and flake chemistry and morphology on the properties of Al-Cu-Mg-X-X-X powder metallurgy advanced aluminum alloys
[NASA-CR-178145] N86-31698
Mechanical property development in Hot Isostatic Pressed (HIP) low alloy steel powder
[AD-A166666] N86-31703

Z

ZIRCONIUM
In-vacuum cyclic fatigue behavior of Vanstar-7 at elevated temperatures
[DE86-007322] N86-31713

ZIRCONIUM ALLOYS
Evidence for the formation of a metastable crystalline phase during crystallization of Zr-Ni metallic glasses of approximately 57 to 63.2 at. % Zr
[DE86-005031] N86-31734

ZIRCONIUM COMPOUNDS
Certification of the Zirshot Z-600 and Z-150 ceramic shot
[I-112/85] N86-31743

PERSONAL AUTHOR INDEX

Typical Personal Author Index Listing

PERSONAL AUTHOR

BROOKS, D. E. N86-10136

NASA ACCESSION NUMBER

Listings in this index are arranged alphabetically by personal author. The NASA accession number denotes the number by which the citation is identified.

Typical Corporate Source Index Listing

Listings in this index are arranged alphabetically by corporate source. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The NASA accession number denotes the number by which the citation is identified. The titles are arranged under each corporate source in ascending accession number order.

A

ADVANCED RESEARCH AND APPLICATIONS CORP., SUNNYVALE, CALIF.
A new radiographic corrosion inspection capability
[AD-A167270] N86-31914

ADVISORY GROUP FOR AEROSPACE RESEARCH AND DEVELOPMENT, NEUILLY-SUR-SEINE (FRANCE).
Calendar of selected aeronautical and space meetings
[AGARD-CAL-86/1] N86-32324

AEG-TELEFUNKEN, BACKNANG (WEST GERMANY).
High voltage technology for a Traveling Wave Tube Electronic Power Conditioner (TWT-EPC) for a Synthetic Aperture Radar (SAR)
[BMFT-FB-W-85-015] N86-31813

AEG-TELEFUNKEN, FRANKFURT AM MAIN (WEST GERMANY).
Optoelectronic current transducer
[BMFT-FB-T-85-165] N86-31870

AERONAUTICAL RESEARCH LABS., MELBOURNE (AUSTRALIA).
A computer program for calculating the steady and oscillatory supersonic flow over thin wings
[AD-A167451] N86-31538
Analysis of a mirror deck landing aid
[AD-A167988] N86-31556

AEROSPACE CORP., EL SEGUNDO, CALIF.
Photodesorption cleaning of silicon with vacuum ultraviolet irradiation
[AD-A167420] N86-31682
Fields in the focal region of paraboloid and offset paraboloid reflectors
[AD-A167419] N86-31766
Fourier transform infrared spectroscopic study of aging in commercial polyurethane
[AD-A167418] N86-31798
Hostile energetic particle radiation environments in Earth's outer magnetosphere
[DE86-008752] N86-32018

AEROSPACE MEDICAL DIV., BROOKS AFB, TEX.
Air Force technical objective document, Aerospace Medical Division, FY 1987
[AD-A167422] N86-32090

AIR COMMAND AND STAFF COLL., MAXWELL AFB, ALA.
STS (Space Transportation System) experiment support structure needs assessment
[AD-A167859] N86-31624
Secular climatic patterns of the North Central Great Plains and the continental US
[AD-A166743] N86-32043

AIR FORCE ENVIRONMENTAL TECHNICAL APPLICATIONS CENTER, SCOTT AFB, ILL.
Design wind analysis
[AD-A167576] N86-32045
Koln Bonn, West Germany limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167649] N86-32046
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Peterson AFB, Colorado Springs, Colorado
[AD-A167650] N86-32047
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Macdill AFB, Florida
[AD-A167651] N86-32048
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: Cape Lisburne, Alaska
[AD-A167652] N86-32049
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: George AFB, California
[AD-A167653] N86-32050
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: White Sands MR, New Mexico
[AD-A167654] N86-32051
Misawa AB, Japan limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167655] N86-32052
Camp Page, South Korea limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167656] N86-32053
Revised Uniform Summary of Surface Weather Observations (RUSSWO). Parts A-F: CAstle AFB, California
[AD-A167657] N86-32054
Kwang Ju AB, South Korea limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167659] N86-32055
Patrick AFB, Florida limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167660] N86-32056

AIR FORCE INST. OF TECH., WRIGHT-PATTERSON AFB, OHIO.
An analytical methodology for predicting repair time distributions of advanced technology aircraft
[AD-A167149] N86-31529
The application of energy techniques to propeller-driven airplanes
[AD-A167113] N86-31569
On the handling qualities of flight vehicles through variable flight conditions
[AD-A167727] N86-31592
Feasibility study of surveillance avoidance during the deployment of Soviet payloads of military interest into orbit from a Soviet shuttle
[AD-A167661] N86-31607
An analysis of the Centaur Ground Processing System at the Kennedy Space Center/Cape Canaveral AFS
[AD-A167123] N86-31618
Scattering from a planar equiangular spiral antenna
[AD-A167066] N86-31764
A kernel decision support system for Canadian military satellite communications system planning
[AD-A167122] N86-31765
On the evolution of precipitation associated with a wintertime east coast cyclone: A GALE preliminary study
[AD-A166375] N86-32042
Continentality: Its estimation and physical significance
[AD-A167111] N86-32044
Absolute judgment versus absolute magnitude estimation to convey information through symbol magnitude changes in CRT displays
[AD-A167059] N86-32103
An improved model of thin film growth
[AD-A167147] N86-32302
An analysis of the defense spacecraft market
[AD-A167602] N86-32326

AIR FORCE SYSTEMS COMMAND, BOLLING AFB, WASHINGTON, D.C.
Guide to Canadian aerospace related industries
[AD-A167794] N86-32327

AIR FORCE SYSTEMS COMMAND, WRIGHT-PATTERSON AFB, OHIO.
International Aviation (selected articles)
[AD-A166298] N86-31528
Investigation on reduction of flow noise of the 0.6m x 0.6m trisonic wind tunnels
[AD-A166302] N86-31597
A visit to China's first domestic made fighter flight simulator
[AD-A167898] N86-31600
Study on algorithms for prediction of solid propellant rocket motor performance
[AD-A167842] N86-31657
Chinese Journal of Lasers (selected articles)
[AD-A167846] N86-31862
Special features of surgical intervention under conditions of weightlessness
[AD-A167916] N86-32092

AIR FORCE WRIGHT AERONAUTICAL LABS., WRIGHT-PATTERSON AFB, OHIO.
Performance analysis of a microcomputer-based single-loop digital control system
[AD-A167914] N86-32177

ALABAMA UNIV., HUNTSVILLE.
Modeling directional solidification furnaces
[NASA-CR-177148] N86-31617
Space plasma research
[NASA-CR-178698] N86-32289

ALABAMA UNIV., UNIVERSITY.
Ambient temperature liquefaction using liquid clathrates
[DE86-010361] N86-31689

ALLIED BENDIX CORP., KANSAS CITY, MO.
Evaluation of high temperature accelerated aging tests used on integrated circuits
[DE86-009615] N86-31801
Investigation of ultrasonic methods for residual stress measurement
[DE86-009614] N86-31927

ALLIED CORP., MORRISTOWN, N.J.
Advanced hydrogen storage: Modified vanadium hydrides
[DE86-009916] N86-31748

ALLIED-SIGNAL, INC., MORRISTOWN, N.J.
Uniformly-doped Cr, Nd:GGG crystals
[DE86-009692] N86-32311

AMSTERDAM UNIV. (NETHERLANDS).
The second machine class 2: An encyclopedic view of the parallel computation thesis
[FVI-85-14] N86-32119
The algebra of communicating processes with empty process
[FVI-86-01] N86-32158
Multisensor systems seen from different points of view
[FVI-86-02] N86-32185
Ready trace semantics for process algebra with priority operator
[FVI-85-15] N86-32218
A study of the interactions of high energy electron-neutrinos
[ESA-85-98072] N86-32257

APPLIED PHYSICS, INC., ALBUQUERQUE, N. MEX.
Radar cross-section of damped cylinders and anisotropic cylinders
[AD-A167773] N86-31769

ARGONNE NATIONAL LAB., ILL.
Radiation-induced segregation and precipitation in molybdenum-rhenium alloys
[DE86-007521] N86-31715
Effect of heat treatment and impurity concentration on some mechanical properties V-15Cr-5Ti alloy
[DE86-010498] N86-31722
Effect of helium on swelling and microstructural evolution in ion-irradiated V-15Cr-5Ti alloy
[DE86-010510] N86-31723
Overview of transport mechanisms in beta-lithium/aluminum
[DE86-010522] N86-31724
Leakage flow-induced vibrations for variations of a tube-in-tube slip joint
[DE86-010765] N86-31907

SOURCE

Analysis of the FELIX experiments with cantilevered beams and hollow cylinders
[DE86-010528] N86-31933
Performance modelling of large-grained parallelism
[DE86-009664] N86-32171
Computing Services Software Library
[DE86-009491] N86-32340

ARINC RESEARCH CORP., ANNAPOLIS, MD.
Evaluation of alternatives for an Army precision landing system
[AD-A167780] N86-31554

ARIZONA UNIV., TUCSON.
Radionuclide measurements by accelerator mass spectrometry at Arizona N86-32356
A direct time series comparison between the La Jolla and Belfast radiocarbon records N86-32368
Interiors of the giant planets
[NASA-CR-177154] N86-32386

ARMY ARMAMENT RESEARCH AND DEVELOPMENT COMMAND, WATERVLIET, N. Y.
Mechanical property development in Hot Isostatic Pressed (HIP) low alloy steel powder
[AD-A166666] N86-31703

ARMY AVIATION ENGINEERING FLIGHT ACTIVITY, EDWARDS AFB, CALIF.
Aerial refueling evaluation of the CH-47D helicopter
[AD-A167575] N86-31574

ARMY AVIATION SYSTEMS COMMAND, ST. LOUIS, MO.
Full-scale crash test (T-41) of the YAH-63 attack helicopter
[AD-A167813] N86-31550

ARMY ENGINEER DISTRICT, LOS ANGELES, CALIF.
Geotechnical data inventory, southern California coastal zone, Cape San Martin (Monterey County) to Mexican border
[AD-A167734] N86-32075

ARMY ENGINEER TOPOGRAPHIC LABS., FORT BELVOIR, VA.
A cost/performance analysis of hybrid inertial/externally referenced positioning/orientation systems
[AD-A167685] N86-31553
CAPIR/DEM: A collection system for geographically based digital elevation data
[AD-A167471] N86-31963

ARMY ENGINEER WATERWAYS EXPERIMENT STATION, VICKSBURG, MISS.
Field performance of fiber-reinforced concrete airfield pavements
[FAA/PM-86/26] N86-31596

ARMY NIGHT VISION LAB., FORT BELVOIR, VA.
On the stability of the problem of target tracking with the FLIR
[AD-A167721] N86-32273

ARMY RESEARCH AND DEVELOPMENT COMMAND, DOVER, N.J.
Optical profiling instrument for the measurement of the figure and finish of optical quality surfaces
[DE86-009433] N86-31868

ARMY RESEARCH INST. OF ENVIRONMENTAL MEDICINE, NATICK, MASS.
Altitude acclimatization (ventilation and chemoresponsiveness) during wakefulness and sleep
[AD-A167738] N86-32091
A portable subject controlled night vision adaptometer
[AD-A167848] N86-32274

ARNOLD ENGINEERING DEVELOPMENT CENTER, ARNOLD AIR FORCE STATION, TENN.
In-situ solid-propellant burn-rate measurements using flash cineradiography
[AD-A167637] N86-31663
Development of an imaging Fourier transform spectrometer
[AD-A168172] N86-31864
Chimera: A grid-embedding technique
[NASA-TM-89246] N86-32242

AUBURN UNIV., ALA.
Semiconductor alloy theory
[AD-A166995] N86-32300

B

B-K DYNAMICS, INC., ROCKVILLE, MD.
Identification of Air Force emerging technologies and militarily significant emerging technologies
[AD-A167088] N86-32345

BABCOCK AND WILCOX CO., LYNCHBURG, VA.
Degradation of materials in combustion environments
[DE86-011771] N86-31691

BALL AEROSPACE SYSTEMS DIV., BOULDER, COLO.
Phase 3 study of selected tether applications in space, mid-term review
[NASA-CR-178900] N86-31632
Subsystem fact sheets for NASA CO2 Project, revision 3 N86-32010

BATTELLE INST., FRANKFURT AM MAIN (WEST GERMANY).
Remote gas analysis with lasers. Analytic laboratory investigations in the 3.4 to 4.2 microns range
[BMFT-FB-W-85-020] N86-31694

BEGELEIDINGSCOMMISSIE REMOTE SENSING, DELFT (NETHERLANDS).
Activities report in remote sensing supervision
[ESA-86-97383] N86-31970

BOEING MILITARY AIRPLANE DEVELOPMENT, SEATTLE, WASH.
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 2: Aircraft engine nacelle fire test programs. Part 1: Fire detection, fire extinguishment and surface ignition studies
[AD-A167356] N86-31570
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 1: Executive summary
[AD-A167443] N86-31571
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 2: Aircraft engine nacelle fire test programs. Part 2: Small scale testing of dry chemical fire extinguishants
[AD-A167444] N86-31572
Vulnerability methodology and protective measures for aircraft fire and explosion hazards. Volume 3: On-Board Inert Gas Generator System (OBIGGS) studies. Part 2: Fuel scrubbing and oxygen evolution tests
[AD-A167445] N86-31573

BONN UNIV. (WEST GERMANY).
Development of a receiver concept for geodetic application of the NAVSTAR Global Positioning System (GPS) satellite navigation system
[BMFT-FB-W-85-036] N86-31557

BRITISH PETROLEUM CO. LTD., SUNBURY-ON-THAMES (ENGLAND).
Development and application of energy absorbing composite devices in crash-worthy structures
[ESA-86-97253] N86-31676
Molecular weight distributions of Durham polyacetylene precursor polymers
[ESA-86-97254] N86-31738
Photovoltaic power system design for telecommunications
[ESA-86-97255] N86-31992
Petrophysical quantities from high resolution gamma-ray spectra arising from energetic neutron bombardment
[ESA-86-97256] N86-32262

BROOKHAVEN NATIONAL LAB., UPTON, N. Y.
Microwave undulator
[DE86-009910] N86-31773
Optical profiling instrument for the measurement of the figure and finish of optical quality surfaces
[DE86-009433] N86-31868
Comparison of the domain and frequency domain state feedbacks
[DE86-009429] N86-32180
Zero models and pole models for multivariable systems
[DE86-009442] N86-32181
Single-crystal neutron diffraction study of the distribution and thermal motion of silver ions in alpha- and beta-Ag SI
[DE86-005056] N86-32309

BROWN UNIV., PROVIDENCE, R. I.
Preparation and characterization of nickel substituted Fe5C2
[AD-A167410] N86-31707

BUNDESMINISTERIUM FUER FORSCHUNG UND TECHNOLOGIE, BONN (WEST GERMANY).
Research activities report of the German Federal Government
[ISSN-0722-8333] N86-32344

C

CALIFORNIA INST. OF TECH., PASADENA.
Optoelectronic devices and related physical phenomena in thin film semiconductor configurations
[AD-A167983] N86-32308
Reduction and analysis of data from experiment CAI on the IMP-8 mission
[NASA-CR-177891] N86-32381

CALIFORNIA UNIV., BERKELEY.
Coherent structures in turbulent shear layers and relation to mixing reaction and combustion
[AD-A167042] N86-31681
Intermittency and conditional velocities in premixed conical turbulent flames
[DE86-009363] N86-31687
Role of the radical pool in combustion
[DE86-010159] N86-31688
Diffusion of gases in porous solids: Simulation and measurement
[DE86-005380] N86-31837
Vibration damping in externally pressurized gas bearings
[DE86-003470] N86-31902

CALIFORNIA UNIV., BERKELEY. LAWRENCE BERKELEY LAB.
Intermittency and conditional velocities in premixed conical turbulent flames
[DE86-009363] N86-31687
Design of tough ferritic steels for cryogenic use
[DE86-009361] N86-31718
Solid electrolyte for high energy density batteries
[DE86-009358] N86-31803

CALIFORNIA UNIV., LOS ANGELES.
Theories at 10 sup (-17) and 10 sup (-33) cm
[DE86-006870] N86-32320
A SIRTF interdiciplinary scientist proposal
[NASA-CR-176862] N86-32362

CALIFORNIA UNIV., SAN DIEGO.
Nuclide production in (very) small meteorites N86-32349
Compilation of cosmogenic radionuclides in meteorites N86-32362

CALIFORNIA UNIV., SAN DIEGO, LA JOLLA.
Live 129I-129Xe dating N86-32359

CALIFORNIA UNIV., SANTA BARBARA.
COVER Project and Earth resources research transition
[NASA-CR-177176] N86-31941

CAMBRIDGE COLLABORATIVE, INC., MASS.
Compendium of methods for applying measured data to vibration and acoustic problems
[AD-A168174] N86-32251

CENTER FOR MATHEMATICS AND COMPUTER SCIENCE, AMSTERDAM (NETHERLANDS).
CWI Newsletter, no. 8
[CWI-NEWSLETTER-ISSUE-8] N86-32121
A recent algorithm for the factorization of polynomials N86-32123
Transition systems, metric spaces and ready sets in the semantics of uniform concurrency
[CWI-CS-R8601] N86-32159
Pattern representation
[CWI-CS-R8602] N86-32160
Contrasting themes in the semantics of imperative concurrency

CONTRACT NUMBER INDEX

Typical Contract Number Index Listing

DE-AC06-77RL-01030 ..... N86-10633

CONTRACT NUMBER — NASA ACCESSION NUMBER

Listings in this index are arranged alphanumerically by contract number. Under each contract number the NASA accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order. The NASA accession number denotes the number by which the citation is identified.

REPORT/ACCESSION NUMBER INDEX

Typical Report Number Index Listing

Listings in this index are arranged alphanumerically by report number. The NASA accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

WHAT YOU CAN DO FOR *STAR*

All users of this abstract service are urged to forward reports to be considered for announcement in *STAR*. This will aid NASA in its efforts to provide the fullest possible coverage of all scientific and technical publications that might support aeronautics and space research and development. If you have prepared relevant reports (other than those that you will transmit to NASA, DoD, or DOE through the usual contract- or grant-reporting channels), please send them for consideration to the NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Maryland 21240.

Reprints of journal articles, book chapters, and conference papers are also welcome. These will be considered for announcement in *STAR's* companion journal, *International Aerospace Abstracts*.

You may specify a particular source to be included in a report announcement if you wish; otherwise the report will be placed on public sale at the National Technical Information Service. Copyrighted publications will be announced but not distributed or sold.

PURCHASE OF *STAR*

The semimonthly issues are available for sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

PUBLISHED BY:

UNITED STATES GOVERNMENT
NATIONAL AERONAUTICS AND SPACE ADMINISTRATION
SCIENTIFIC AND TECHNICAL INFORMATION BRANCH
Scientific and Technical Aerospace Reports, Volume 24, is prepared by the NASA Scientific and Technical Information Facility operated for the National Aeronautics and Space Administration by RMS Associates.

The Administrator of the National Aeronautics and Space Administration has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Agency. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through March 22, 1988.

US ISSN 0036-8741

INTRODUCTION

Scientific and Technical Aerospace Reports (STAR) is a major component of a comprehensive National Aeronautics and Space Administration information system covering aeronautics, space, and supporting disciplines. *STAR* is issued on the 8th and 23rd of each month and announces current publications of the following types:

- NASA, NASA contractor, and NASA grantee reports
- Reports issued by other U.S. Government agencies, domestic and foreign institutions, universities, and private firms
- Translations in report form
- NASA-owned patents and patent applications
- Dissertations and theses

Cumulative index volumes are published annually.

Journal, book, and conference literature, cover-to-cover journal translations, and certain foreign dissertations are announced in a companion journal, *International Aerospace Abstracts (IAA)*, available on subscription from the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

SUBJECT SCOPE

Subject scope of *STAR*, and *IAA* includes all aspects of aeronautics and space research and development, supporting basic and applied research, and applications. Aerospace aspects of earth resources, energy development, conservation, oceanography, environmental protection, urban transportation, and other topics of high national priority are also covered.

OTHER NASA PUBLICATIONS

Other NASA publications and information services are described in the publication, *The NASA Scientific and Technical Information System ... and How to Use It*, available without charge from the NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Maryland 21240.

HOW TO USE *STAR* SUBJECT CATEGORIES

STAR is categorized by 10 major subject divisions divided into 74 specific subject categories and one general category/division. The major subject divisions are listed in the Table of Contents, together with a note for each that defines its scope and provides any cross-references. For example:

AERONAUTICS

Includes aeronautics (general); aerodynamics; air transportation and safety; aircraft communications and navigation; aircraft design, testing and performance; aircraft instrumentation; aircraft propulsion and power; aircraft stability and control; and research and support facilities (air).

For related information see also *Astronautics*.

Each major division is further divided into as many as nine specific categories, which are identified by category numbers.

Abstracts in *STAR* are grouped by specific category, the categories appearing in sequential order. Category breaks in the abstract section are identified by the category number and title, and a scope note. Cross-references to other categories are provided as appropriate. For example:

02 AERODYNAMICS

Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.

For related information see also *34 Fluid Mechanics and Heat Transfer*.

CROSS-REFERENCES

Individual *STAR* abstracts are not ordinarily cross-referenced, except for certain conference reports or book translations that have had separate abstracts written for their component papers or chapters. Citations and abstracts of the components follow immediately after those of the parent document. When the subject content of a component differs sufficiently from the general content of the parent, a cross-reference citation also is printed at the end of the category to which it normally would have been assigned if it were independent.

DOCUMENTS ON MICROFICHE

Documents on microfiche[1] are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

AVAILABILITIES

One or more sources from which a document announced in *STAR* is available to the public is given in each citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code following the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, as indicated above, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Adminstration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its' Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this Introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: US Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of $1.50 each, postage free. (See discussion of NASA patents and patent applications below.)

Avail: ESDU. Pricing information on specific data, computer programs, and details on ESDU topic categories can be obtained from ESDU International Ltd. Requesters in North America should use the Virginia address while all other requesters should use the London address.

Avail: (US Sales Only). These foreign documents are available to users within the United States from the National Technical Information Service (NTIS). They are available to users outside the United States through the International Nuclear Information Service (INIS) representative in their country, or by applying directly to the issuing organization.

NASA PATENTS AND PATENT APPLICATIONS

Patents and patent applications owned by NASA are announced in *STAR* under appropriate subject categories and are referenced in the *STAR* indexes. In the Report/Accession Number Index, patents are indexed by the NASA Case Number (which appears in lieu of the report number in other indexes), the U.S. Patent Number, the U.S. Patent Application Serial Number, and the U.S. Patent Class. Patent applications for which patents have not yet been issued are indexed by the NASA Case Number and the U.S. Patent Application Serial Number.

NASA *patent application specifications* are sold in paper copy by the National Technical Information Service at price code A02. Microfiche are sold at price code A01. The US-Patent-Appl-SN- number should be used in ordering either paper copy or microfiche from NTIS. Printed copies of *patents* (which are not microfiched) are available for purchase at $1.50 per copy from:

Commissioner of Patents and Trademarks
U.S. Patent and Trademark Office
Washington, D.C. 20231

When ordering patents, the U.S. Patent Number should be used, and payment must be remitted in advance, preferably by money order or check payable to the Commissioner of Patents and Trademarks. Prepaid purchase coupons for ordering are also available from the Patent and Trademark Office. The patents and patent applications announced in *STAR* are owned by NASA and are available for royalty-free licensing. Requests for licensing terms and further information should be addressed to:

Assistant General Counsel for Patent Matters/Code GP
National Aeronautics and Space Administration
Washington, D.C. 20546

ELIGIBILITY AND REGISTRATION FOR NASA INFORMATION PRODUCTS AND SERVICES

A variety of services is available to organizations of the following types that have registered with NASA to receive specific services or products:

1. NASA offices, research centers, contractors, subcontractors, grantees, and consultants;
2. Other U.S. Government agencies and their contractors;
3. Libraries in the United States that have arrangements with NASA to maintain collections of NASA documents for public reference;
4. Other organizations in the United States having a need for NASA documents in work related to aeronautics and space research;
5. Organizations abroad that have established reciprocal document exchange arrangements with NASA.

Only the central service points or central points of document acquisition and control within qualified organizations are eligible to register for NASA products and services. Domestic organizations that may be eligible to receive various classes of NASA publications and services should address their requests for registration or for further information to:

NASA Scientific and Technical Information Facility
ATTN: Registration Activity
P.O. Box 8757
B.W.I. Airport, Maryland 21240

Organizations abroad should direct requests to the same address, but to the attention of: International Exchange Program.

AVAILABILITY OF *STAR* ABSTRACTS ON MICROFICHE

Microfiche of the abstract sections of this issue and other issues of *STAR* are available on annual subscription from NTIS, Attn: Subscriptions, 5285 Port Royal Road, Springfield, Virginia 22161. Annual subscription rates are $70.00 North America; $140.00 foreign. Abstract sections for previous years retroactive to 1964 are available at the current rates. Microfiche for individual *STAR* issue abstract sections are not available.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC: NASA and NASA-sponsored documents and a large number of aerospace publications are available to the public for reference purposes at the library maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN: An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England for public access. The British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy or microfiche of NASA and NASA-sponsored documents, those identified by both the symbols # and * from ESA - Information Retrieval Service European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

FEDERAL DEPOSITORY LIBRARY PROGRAM

In order to provide the general public with greater access to U.S. Government publications, Congress established the Federal Depository Library Program under the Government Printing Office (GPO), with 50 regional depositories responsible for permanent retention of material, inter-library loan, and reference services. At least one copy of nearly every NASA and NASA-sponsored publication, either in printed or microfiche format, is received and retained by the 50 regional depositories. A list of the regional GPO libraries, arranged alphabetically by state, appears on the inside back cover. These libraries are *not* sales outlets. A local library can contact a Regional Depository to help locate specific reports, or direct contact may be made by an individual.

VOLUME 24 NUMBER 24 / DECEMBER 23, 1986

TABLE OF CONTENTS

AERONAUTICS

Includes aeronautics (general); aerodynamics; air transportation and safety; aircraft communications and navigation; aircraft design, testing and performance; aircraft instrumentation; aircraft propulsion and power; aircraft stability and control; and research and support facilities (air).

For related information see also *Astronautics*.

01 AERONAUTICS (GENERAL) 3681

02 AERODYNAMICS 3681

Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.

For related information see also *34 Fluid Mechanics and Heat Transfer*

03 AIR TRANSPORTATION AND SAFETY 3684

Includes passenger and cargo air transport operations; and aircraft accidents.

For related information see also *16 Space Transportation* and *85 Urban Technology and Transportation*.

04 AIRCRAFT COMMUNICATIONS AND NAVIGATION 3685

Includes digital and voice communication with aircraft; air navigation systems (satellite and ground based); and air traffic control.

For related information see also *17 Spacecraft Communications, Command and Tracking* and *32 Communications*.

05 AIRCRAFT DESIGN, TESTING AND PERFORMANCE 3686

Includes aircraft simulation technology.

For related information see also *18 Spacecraft Design, Testing and Performance* and *39 Structural Mechanics*.

06 AIRCRAFT INSTRUMENTATION 3687

Includes cockpit and cabin display devices; and flight instruments.

For related information see also *19 Spacecraft Instrumentation* and *35 Instrumentation and Photography*.

07 AIRCRAFT PROPULSION AND POWER 3687

Includes prime propulsion systems and systems components, e.g., gas turbine engines and compressors; and on-board auxiliary power plants for aircraft.

For related information see also *20 Spacecraft Propulsion and Power, 28 Propellants and Fuels*, and *44 Energy Production and Conversion*.

08 AIRCRAFT STABILITY AND CONTROL 3688

Includes aircraft handling qualities; piloting; flight controls; and autopilots.

09 RESEARCH AND SUPPORT FACILITIES (AIR) 3690

Includes airports, hangars and runways; aircraft repair and overhaul facilities; wind tunnels; shock tube facilities; and engine test blocks.

For related information see also *14 Ground Support Systems and Facilities (Space)*.

ASTRONAUTICS

Includes astronautics (general); astrodynamics; ground support systems and facilities (space); launch vehicles and space vehicles; space transportation; spacecraft communications, command and tracking; spacecraft design, testing and performance; spacecraft instrumentation; and spacecraft propulsion and power.

For related information see also *Aeronautics*

12 ASTRONAUTICS (GENERAL) 3690

For extraterrestrial exploration see *91 Lunar and Planetary Exploration*.

13 ASTRODYNAMICS 3696

Includes powered and free-flight trajectories; and orbit and launching dynamics.

14 GROUND SUPPORT SYSTEMS AND FACILITIES (SPACE) 3698

Includes launch complexes, research and production facilities; ground support equipment, e.g., mobile transporters; and simulators.

For related information see also *09 Research and Support Facilities (Air)*.

15 LAUNCH VEHICLES AND SPACE VEHICLES 3699

Includes boosters; manned orbital laboratories; reusable vehicles; and space stations.

16 SPACE TRANSPORTATION 3699

Includes passenger and cargo space transportation, e.g., shuttle operations; and rescue techniques.

For related information see also *03 Air Transportation and Safety* and *85 Urban Technology and Transportation*.

17 SPACECRAFT COMMUNICATION, COMMAND AND TRACKING 3699

Includes telemetry; space communications networks; astronavigation; and radio blackout.

For related information see also *04 Aircraft Communications and Navigation* and *32 Communications*.

18 SPACECRAFT DESIGN, TESTING AND PERFORMANCE 3700

Includes spacecraft thermal and environmental control; and attitude control.

For life support systems see *54 Man/System Technology and Life Support*. For related information see also *05 Aircraft Design, Testing and Performance* and *39 Structural Mechanics*.

19 SPACECRAFT INSTRUMENTATION 3701

For related information see also *06 Aircraft Instrumentation* and *35 Instrumentation and Photography*.

20 SPACECRAFT PROPULSION AND POWER 3702

Includes main propulsion systems and components, e.g., rocket engines; and spacecraft auxiliary power sources.

For related information see also *07 Aircraft Propulsion and Power, 28 Propellants and Fuels*, and *44 Energy Production and Conversion*.

CHEMISTRY AND MATERIALS

Includes chemistry and materials (general); composite materials; inorganic and physical chemistry; metallic materials; nonmetallic materials; and propellants and fuels.

23 CHEMISTRY AND MATERIALS (GENERAL) **3703**
Includes biochemistry and organic chemistry.

24 COMPOSITE MATERIALS **3703**
Includes laminates.

25 INORGANIC AND PHYSICAL CHEMISTRY **3705**
Includes chemical analysis, e.g., chromatography; combustion theory; electrochemistry; and photochemistry.
For related information see also *77 Thermodynamics and Statistical Physics.*

26 METALLIC MATERIALS **3707**
Includes physical, chemical, and mechanical properties of metals, e.g., corrosion; and metallurgy.

27 NONMETALLIC MATERIALS **3710**
Includes physical, chemical, and mechanical properties of plastics, elastomers, lubricants, polymers, textiles, adhesives, and ceramic materials.

28 PROPELLANTS AND FUELS **3712**
Includes rocket propellants, igniters, and oxidizers; storage and handling; and aircraft fuels.
For related information see also *07 Aircraft Propulsion and Power, 20 Spacecraft Propulsion and Power,* and *44 Energy Production and Conversion.*

ENGINEERING

Includes engineering (general); communications; electronics and electrical engineering; fluid mechanics and heat transfer; instrumentation and photography; lasers and masers; mechanical engineering; quality assurance and reliability; and structural mechanics.
For related information see also *Physics.*

31 ENGINEERING (GENERAL) **3712**
Includes vacuum technology; control engineering; display engineering; and cryogenics.

32 COMMUNICATIONS **3714**
Includes land and global communications; communications theory; and optical communications.
For related information see also *04 Aircraft Communications and Navigation* and *17 Spacecraft Communications, Command and Tracking.*

33 ELECTRONICS AND ELECTRICAL ENGINEERING **3718**
Includes test equipment and maintainability; components, e.g., tunnel diodes and transistors; microminiaturization; and integrated circuity.
For related information see also *60 Computer Operations and Hardware* and *76 Solid-State Physics.*

34 FLUID MECHANICS AND HEAT TRANSFER **3724**
Includes boundary layers; hydrodynamics; fluidics; mass transfer; and ablation cooling.
For related information see also *02 Aerodynamics* and *77 Thermodynamics and Statistical Physics.*

35 INSTRUMENTATION AND PHOTOGRAPHY **3729**
Includes remote sensors; measuring instruments and gages; detectors; cameras and photographic supplies; and holography.
For aerial photography see *43 Earth Resources.* For related information see also *06 Aircraft Instrumentation* and *19 Spacecraft Instrumentation.*

36 LASERS AND MASERS **3732**
Includes parametric amplifiers.

37 MECHANICAL ENGINEERING **3735**
Includes auxiliary systems (non-power); machine elements and processes; and mechanical equipment.

38 QUALITY ASSURANCE AND RELIABILITY **3739**
Includes product sampling procedures and techniques; and quality control.

39 STRUCTURAL MECHANICS **3739**
Includes structural element design and weight analysis; fatigue; and thermal stress.
For applications see *05 Aircraft Design, Testing and Performance* and *18 Spacecraft Design, Testing and Performance.*

GEOSCIENCES

Includes geosciences (general); earth resources; energy production and conversion; environment pollution; geophysics; meteorology and climatology; and oceanography.
For related information see also *Space Sciences.*

42 GEOSCIENCES (GENERAL) **3742**

43 EARTH RESOURCES **3747**
Includes remote sensing of earth resources by aircraft and spacecraft; photogrammetry; and aerial photography.
For instrumentation see *35 Instrumentation and Photography.*

44 ENERGY PRODUCTION AND CONVERSION **3753**
Includes specific energy conversion systems, e.g., fuel cells and batteries; global sources of energy; fossil fuels; geophysical conversion; hydroelectric power; and wind power.
For related information see also *07 Aircraft Propulsion and Power, 20 Spacecraft Propulsion and Power, 28 Propellants and Fuels,* and *85 Urban Technology and Transportation.*

45 ENVIRONMENT POLLUTION **3755**
Includes air, noise, thermal and water pollution; environment monitoring; and contamination control.

46 GEOPHYSICS **3755**
Includes aeronomy; upper and lower atmosphere studies; ionospheric and magnetospheric physics; and geomagnetism.
For space radiation see *93 Space Radiation*.

47 METEOROLOGY AND CLIMATOLOGY **3760**
Includes weather forecasting and modification.

48 OCEANOGRAPHY **3764**
Includes biological, dynamic and physical oceanography; and marine resources.

LIFE SCIENCES

Includes sciences (general); aerospace medicine; behavioral sciences; man/system technology and life support; and planetary biology.

51 LIFE SCIENCES (GENERAL) **3765**
Includes genetics.

52 AEROSPACE MEDICINE **3766**
Includes physiological factors; biological effects of radiation; and weightlessness.

53 BEHAVIORAL SCIENCES **3769**
Includes psychological factors; individual and group behavior; crew training and evaluation; and psychiatric research.

54 MAN/SYSTEM TECHNOLOGY AND LIFE SUPPORT **3770**
Includes human engineering; biotechnology; and space suits and protective clothing.

55 PLANETARY BIOLOGY **N.A.**
Includes exobiology; and extraterrestrial life.

MATHEMATICAL AND COMPUTER SCIENCES

Includes mathematical and computer sciences (general); computer operations and hardware; computer programming and software; computer systems; cybernetics; numerical analysis; statistics and probability; systems analysis; and theoretical mathematics.

59 MATHEMATICAL AND COMPUTER SCIENCES (GENERAL) **3779**

60 COMPUTER OPERATIONS AND HARDWARE **3779**
Includes computer graphics and data processing.
For components see *33 Electronics and Electrical Engineering*.

61 COMPUTER PROGRAMMING AND SOFTWARE **3780**
Includes computer programs, routines, and algorithms.

62 COMPUTER SYSTEMS **3784**
Includes computer networks.

63 CYBERNETICS **3785**
Includes feedback and control theory.
For related information see also *54 Man/System Technology and Life Support*.

64 NUMERICAL ANALYSIS **3787**
Includes iteration, difference equations, and numerical approximation.

65 STATISTICS AND PROBABILITY **3791**
Includes data sampling and smoothing; Monte Carlo method; and stochastic processes.

66 SYSTEMS ANALYSIS **N.A.**
Includes mathematical modeling; network analysis; and operations research.

67 THEORETICAL MATHEMATICS **3791**
Includes topology and number theory.

PHYSICS

Includes physics (general); acoustics; atomic and molecular physics; nuclear and high-energy physics; optics; plasma physics; solid-state physics; and thermodynamics and statistical physics.
For related information see also *Engineering*.

70 PHYSICS (GENERAL) **3792**
For geophysics see *46 Geophysics*. For astrophysics see *90 Astrophysics*. For solar physics see *92 Solar Physics*.

71 ACOUSTICS **3792**
Includes sound generation, transmission, and attenuation.
For noise pollution see *45 Environment Pollution*.

72 ATOMIC AND MOLECULAR PHYSICS **3793**
Includes atomic structure and molecular spectra.

73 NUCLEAR AND HIGH-ENERGY PHYSICS **N.A.**
Includes elementary and nuclear particles; and reactor theory.
For space radiation see *93 Space Radiation*.

74 OPTICS **3794**
Includes light phenomena.

75 PLASMA PHYSICS **3797**
Includes magnetohydrodynamics and plasma fusion.
For ionospheric plasmas see *46 Geophysics*. For space plasmas see *90 Astrophysics*.

76 SOLID-STATE PHYSICS **3800**
Includes superconductivity.
For related information see also *33 Electronics and Electrical Engineering* and *36 Lasers and Masers*.

77 THERMODYNAMICS AND STATISTICAL PHYSICS **3802**
Includes quantum mechanics; and Bose and Fermi statistics.
For related information see also *25 Inorganic and Physical Chemistry* and *34 Fluid Mechanics and Heat Transfer*.

SOCIAL SCIENCES

Includes social sciences (general); administration and management; documentation and information science; economics and cost analysis; law and political science; and urban technology and transportation.

80 SOCIAL SCIENCES (GENERAL) **3802**
Includes educational matters.

81 ADMINISTRATION AND MANAGEMENT **3803**
Includes management planning and research.

82 DOCUMENTATION AND INFORMATION SCIENCE **3803**
Includes information storage and retrieval technology; micrography; and library science.
For computer documentation see *61 Computer Programming and Software*.

83 ECONOMICS AND COST ANALYSIS **N.A.**
Includes cost effectiveness studies.

84 LAW AND POLITICAL SCIENCE **N.A.**
Includes space law; international law; international cooperation; and patent policy.

85 URBAN TECHNOLOGY AND TRANSPORTATION **3805**
Includes applications of space technology to urban problems; technology transfer; technology assessment; and surface and mass transportation.
For related information see *03 Air Transportation and Safety, 16 Space Transportation,* and *44 Energy Production and Conversion.*

SPACE SCIENCES

Includes space sciences (general); astronomy; astrophysics; lunar and planetary exploration; solar physics; and space radiation.
For related information see also *Geosciences*.

88 SPACE SCIENCES (GENERAL) **3806**

89 ASTRONOMY **3810**
Includes radio and gamma-ray astronomy; celestial mechanics; and astrometry.

90 ASTROPHYSICS **3810**
Includes cosmology; and interstellar and interplanetary gases and dust.

91 LUNAR AND PLANETARY EXPLORATION **3813**
Includes planetology; and manned and unmanned flights.
For spacecraft design see *18 Spacecraft Design, Testing and Performance*. For space stations see *15 Launch Vehicles and Space Vehicles*.

92 SOLAR PHYSICS **N.A.**
Includes solar activity, solar flares, solar radiation and sunspots.

93 SPACE RADIATION **3814**
Includes cosmic radiation; and inner and outer earth's radiation belts.
For biological effects of radiation see *52 Aerospace Medicine*. For theory see *73 Nuclear and High-Energy Physics*.

COSATI CODE

A recently developed multiple scale turbulence model is used for the numerical prediction of isothermal, confined turbulent swirling flows. Because of the streamline curvature and nonequilibrium spectral energy transfer nature of the swirling flow, the utilized multiple scale turbulence model includes a different set of response equations for each of the large scale energetic eddies and the small scale transfer eddies. Predictions are made of a confined coaxial swirling jet in a sudden expansion and comparisons are made with experimental data and with the conventional single scale two equation model. The multiple scale model shows significant improvement of predictions of swirling flows over the single scale k epsilon model. The sensitivity study of the effect of prescribed inlet turbulence levels on the flow fields is also included.

ASPECT RATIO EFFECTS ON WINGS AT LOW REYNOLDS NUMBERS Ph.D. Thesis
Ali A. Abtahi 1985 194 p
Avail: Univ. Microfilms Order No. DA8600358

The effect of the aspect ratio on the performance of wings at chord based Reynolds numbers in the range from 50,000 to 500,000 was studied. The methods used for measurement were the strain gauge method, the momentum deficit method, and the surface pressure integration method. A computer program for the solution of flow over a 2-D airfoil was used to computationally determine lift, drag, and pitching moment behavior. This program uses a panel method calculation to determine the inviscid flowfield which serves as an input for a boundary layer circulation. After the displacement thickness is determined by the boundary layer calculations it is added to the airfoil shape to give new displacement body and the procedure is repeated. The computational results for lift agree well with the experimental data as long as a high Reynolds number was chosen. This indicated that the theoretical model is inadequate to cope with the phenomena occurring at low Reynolds. Agreement was adequate for drag results but pitching moment results showed poor agreement with experimental data. Dissert. Abstr.

THE STRUCTURE OF SEPARATED FLOW REGIONS OCCURRING NEAR THE LEADING EDGE OF AIRFOILS INCLUDING TRANSITION Semiannual Status Report. Feb. - Jul. 1986
Thomas J. Mueller Jul. 1986 37 p
(Grant NsG-1419)
(NASA-CR-176857; NAS 1.26:176857) Avail: NTIS HC A03/MF A01 CSCL 01A

A semi-empirical method for predicting separation bubble characteristics was evaluated using low Reynolds number test data. On the basis of this data, several observations were made. First, a sizable growth in the momentum thickness can occur in the laminar portion of a separation bubble. This is in direct contrast to the theory and is apparently due to low Reynolds number effects. Secondly, the transition Reynolds number (R sub l sub 1) which governs the extent of a bubble's laminar region, was found to be much lower than that used in the method. At present, there does not seem to be any evidence supporting a single value for R sub l sub 1. Apparently, R sub l sub 1 is affected by the freestream disturbance environment, and airfoil's pressure distribution, and possibly the chord Reynolds number as well. Thirdly, the growth in momentum thickness over a bubble's turbulent region was predicted reasonably well by the method, provided that Roberts' suggested value for the mean dissipation coefficient was used. Finally, the present data does not substantiate the universality of the velocity profile at reattachment. However, measurement error may be responsible for this result. Author

TRANSONIC NAVIER-STOKES WING SOLUTIONS USING A ZONAL APPROACH. PART 2: HIGH ANGLE-OF-ATTACK SIMULATION
Neal M. Chaderjian Apr. 1986 12 p
(NASA-TM-88248-PT-2; A-86222; NAS 1.15:88248-PT-2) Avail: NTIS HC A02/MF A01 CSCL 01A

A computer code is under development whereby the thin-layer Reynolds-averaged Navier-Stokes equations are to be applied to realistic fighter-aircraft configurations. This transonic Navier-Stokes code (TNS) utilizes a zonal approach in order to treat complex geometries and satisfy in-core computer memory constraints. The zonal approach has been applied to isolated wing geometries in order to facilitate code development. Part 1 of this paper addresses the TNS finite-difference algorithm, zonal methodology, and code validation with experimental data. Part 2 of this paper addresses some numerical issues such as code robustness, efficiency, and accuracy at high angles of attack. Special free-stream-preserving metrics proved an effective way to treat H-mesh singularities over a large range of severe flow conditions, including strong leading-edge flow gradients, massive shock-induced separation, and stall. Furthermore, lift and drag coefficients have been computed for a wing up through CLmax. Numerical oil flow patterns and particle trajectories are presented both for subcritical and transonic flow. These flow simulations are rich with complex separated flow physics and demonstrate the efficiency and robustness of the zonal approach. Author

A LOW SPEED TUNNEL SEMI-FREE DYNAMIC FLYING STUDY OF THE HIGH ANGLE OF ATTACK PITCH DERIVATIVES OF

HF-24 USING MLE PROCEDURE
S. Balakrishna, T. Niranjana, and S. R. Rajan Aug. 1983 57 p
(NAL-TRM-SE-8603) Avail: NTIS HC A04/MF A01

The high angle of attack pitch stability and control derivatives of a 1/13 model of the HF-24 are generated using a semi-free flying technique. The model is similarity scaled and is flown in a single degree of freedom with a pitch gimble at its center of gravity. The fully instrumented model with its servoed elevator is initially trimmed to the desired angle of attack and is disturbed by a doublet elevator pulse. The model responses are analyzed using a Maximum Likelihood parameter estimation procedure. The results indicate that the semi-free dynamic flying and analysis of the associated motion responses using inertial sensors can provide derivative data which compare well with derivatives generated by traditional methods in wind tunnels. Static stability, pitch damping, control derivatives with the trim data are presented a functions of angle of attack from -10 deg to +25 deg with flaps set at -10, 0, 10, 20 and 30 deg and side slip settings of -10, 0 and 10 deg. The capability of semi-free flying to generate high angle of attack pitch derivatives is demonstrated. Author

COMPUTATION OF PLANE JET IMPINGEMENT ON A PLATE
R. Ravi and M. D. Deshpande May 1986 52 p
(NAL-TM-FM-8602) Avail: NTIS HC A04/MF A01

The problem of normal impingement of a laminar plane jet on a plate has been studied by solving the Navier-Stokes equations numerically. The study was undertaken to make a comparative study between the plane and axisymmetric jet impingements. The computer program available for axisymmetric cases was extended for the present case. Computations have been done keeping the jet exit plane above the target plate at a distance of two channelwidths and for several values of Reynolds number (Re). The presence of a pair of line eddies on either side of the jet exit at low Re was similar to the presence of a toroidal eddy in the case of an axisymmetric jet impingement. Quantitative differences were observed between the present results and those for an axisymmetric case even though there were qualitative similarities in the two cases. Author

AXISYMMETRIC TURBULENT BOUNDARY LAYER ON THE CYLINDRICAL PORTION OF AN AFTERBODY TEST MODEL
V. Krishnan Sep. 1985 63 p
(NAL-TM-FM-8505) Avail: NTIS HC A04/MF A01

Experiments were conducted to study the characteristics and the growth of an axisymmetric turbulent boundary layer on the central cylindrical portion of a model in the presence of a circular arc forebody, an afterbody and a high pressure cold air jet issuing from the base. An 80mm Max. dia model was tested at the freestream velocities of 12.8 and 21.5 m/sec and at jet pressure ratios of 1.0 (jet-off), 1.26 and 1.54. The results of the experimental study are described. WALL INTERFERENCE STUDIES IN 3-D FLOWS
R. Gopinath Dec. 1985 52 p
(NAL-TM-AE-8508) Avail: NTIS HC A04/MF A01

A study of Wall Interference in 3-D flows at compressible speeds is made. Two methods, one due to Mokry and the other to Capelier, Chevallier and Bouniol (CCB) are chosen to evaluate the corrections due to wall interference from pressure measurements on a control surface. The former is applicable to tunnels whose test sections are either square, circular, or octagonal in cross section and the latter to rectangular test sections having solid side walls. Codes have been developed to evaluate the corrections and are validated against a test case for which both exact and numerical solutions are available. Listings and sample input/outputs for the two codes are appended. Author

REVIEW OF THEORETICAL AND EXPERIMENTAL APPROACHES TO PROBLEMS OF AUTOMOBILE EXTERNAL AERODYNAMICS [REVUE DES APPROCHES THEORIQUES ET EXPERIMENTALES DES PROBLEMES D'AERODYNAMIQUE AUTOMOBILE EXTERNE]
F. Chometon and J. Laurent *In* Von Karman Inst. for Fluid Dynamics Vehicle Aerodynamics 1986 34 p In FRENCH (For primary document see N86-32397 24-02)
Avail: NTIS HC A21/MF A01

Experimental techniques used in automobile design to reduce energy consumption and to improve acoustic qualities and ride through better aerodynamics are described. Wind tunnels, aerodynamic balances, wake analysis, and flow visualization are introduced. Results from tests on simple bodies and on simplified vehicle shapes are given. Theoretical studies involving the solution of the Navier-Stokes and Euler equations, and potential flow are introduced. ESA

N86-32399# Technische Hochschule, Aachen (West Germany).
WIND TUNNEL TEST IN VEHICLE AERODYNAMICS
Carl Kramer *In* Von Karman Inst. for Fluid Dynamics Vehicle Aerodynamics 1986 48 p (For primary document see N86-32397 24-02)
Avail: NTIS HC A21/MF A01

The design of vehicle aerodynamic wind tunnels is discussed. The smallest possible cross section and therefore the most economical wind tunnel for car aerodynamics is a wind tunnel with an open jet test section. The length of the test section, the dimensions of the plenum surrounding the open jet, and the corresponding collector dimensions can be estimated by the open jet calculation of Regenscheit (1981). Open jet stability for large models and asymmetric flow conditions are determined by the intake radius of the collector. A radius too large, however, causes a static pressure increase at the test section end. If such an optimal open jet test section is compared with other test sections it has the smallest possible cross section and is therefore the most economical wind tunnel for aerodynamic testing. ESA

A COMPUTATIONAL METHOD FOR THE DETERMINATION OF THE FLOW FIELD AROUND VEHICLES
D. Laurence *In* Von Karman Inst. for Fluid Dynamics Vehicle Aerodynamics 1986 40 p (For primary document see N86-32397

24-02)
Avail: NTIS HC A21/MF A01

A numerical code for solving fluid dynamics equations (Navier Stokes), including an elaborate turbulence model, was applied to the simulation of air flows around three cars. Computations give qualitative results with sufficient accuracy to allow comparison between different models and thus reduce the number of experiments to a small set of versions from which the less efficient ones are excluded. By giving a global view of the flow they help the designer to modify the shape to obtain an optimum between aerodynamics, aesthetics, and cost. Finer grids are required to improve the results, but computational power is wasted with rectangular grids since extra nodes are also added in distant regions where they are not required. Alternative approaches which permit sprinkling precision only where it is needed can be found by including vortex methods, or changing to curvilinear 3D meshes or finite elements. ESA

THEORETICAL AND EXPERIMENTAL METHODS IN GROUND VEHICLE AERODYNAMICS
S. R. Ahmed *In* Von Karman Inst. for Fluid Dynamics Vehicle Aerodynamics 1986 97 p (For primary document see N86-32397 24-02)
Avail: NTIS HC A21/MF A01

Inviscid flow methods, coupled inviscid flow - boundary layer methods, and methods based on the solution of the Navier-Stokes equations for studying ground vehicle aerodynamics are introduced. Wind tunnel tests and flow visualization are described. ESA

N86-32403# Sardou R.D.I., Montreuil (France).
MOVING GROUND EFFECT AND SPEED (UP TO 50 m/sec) INTERACTION ON SEDAN AND STATION WAGON CARS (23 CONFIGURATIONS RANGING BETWEEN Cd=0.19 AND 0.35) AND ON RACING CAR (1 CONFIGURATION Cd=0.39; Cl=2.15)
M. Sardou *In* Von Karman Inst. for Fluid Dynamics Vehicle Aerodynamics 1986 80 p (For primary document see N86-32397 24-02)
Avail: NTIS HC A21/MF A01

Ground motion effect and Reynolds effect; reptation between wind and ground speed; and stability derivatives in heaving, pitching, and yawing on 24 car configurations were studied in a moving belt wind tunnel. There is no simple correlation between belt on and belt off results, nor between results obtained below (25 m/sec) and over (50 m/sec) the critic Reynolds speed. There is a consistent difference between belt on, top speed, and other testing solution; stability derivatives also depend strongly on testing conditions. Reptation tests suggest that in-line wind on the real road does not just add or substract its speed to the speed of the vehicle, it changes the Cd, Cl, and Clr coefficients values, and probably Cyf and Cyr values too. If this is confirmed it means that relative longitudinal wind is important for stability analyses. Ground motion effect and Reynolds effect; reptation between wind and ground speed; and stability derivatives in heaving, pitching and yawing on 24 car configurations were studied in a moving belt wind tunnel. There is no simple correlation between belt on and belt off results, nor beweeen results obtained below (25 m/sec) and over (50 m/sec) the critical Reynolds speed. There is a consistent difference between belt on, top speed, and other testing solution; stability derivatives also depend strongly on testing conditions. Reptation tests suggest that in-line wind on the real road does not just add to or subtract its speed from the speed of the vehicle, it changes the Cd, C1, and C1r coefficients values, and probably Cyf and Cyr values too. If this is confirmed it means that relative longitudinal wind is important for stability analysis. ESA

WIND INDUCED INTERIOR AND FAR FIELD RADIATED EXTERIOR NOISE FROM AUTOMOBILES c71
Werner Dobrzynski *In* Von Karman Inst. for Fluid Dynamics Vehicle Aerodynamics 1986 34 p (For primary document see N86-32397 24-02)
Avail: NTIS HC A21/MF A01

Aerodynamically induced interior noise in passenger cars was investigated. Surface pressure and resulting interior noise were measured on a full-scale automobile in wind tunnel tests. Both quantities are interrelated theoretically; corresponding interior noise predictions are compared to measured data. Results show that high surface-pressure originating even from highly localized flow separations on the car-body tend to dominate interior noise. Far field noise radiation from exterior flow/car-body interaction is predicted and compared to measured data. ESA

THEORETICAL AND EXPERIMENTAL OPTIMIZATION OF THE ROAD-VEHICLE INTERNAL FLOW c34
Jochen Wiedemann *In* Von Karman Inst. for Fluid Dynamics Vehicle Aerodynamics 1986 8 p (For primary document see N86-32397 24-02)
Avail: NTIS HC A21/MF A01

By applying the conservation equations for mass, momentum, and energy a simple theory for optimization of radiator flow is obtained. It can be seen that for any given radiator with the total-pressure-loss-coefficient JR there is an optimal value for the ratio of exit to radiator area (AE/AR) where the aerodynamic down-force attains a maximum. If internal flows have to be studied experimentally on small scale models this can be done easily with radiator simulators by adjusting the parameter J bar R = JR(AE/AR) sq derived from the theory. PRELIMINARY WIND TUNNEL TESTS ON THE INFLUENCE OF GROUND BOARD LENGTH ON THE AERODYNAMIC DRAG OF SIMPLE COMMERCIAL VEHICLE MODELS
K. P. Garry Jun. 1986 73 p
(CAR-8619; ISBN-0-947767-47-9) Avail: NTIS HC A04/MF A01

Preliminary results are presented following a series of tests in a closed working section, open return wind tunnel on eight simple rectangular block models mounted above a full span ground board. Measurements of body axis drag, sideforce and yawing moment were made on each vehicle in the yaw angle range 6 to + 20 degrees. The ground board is fitted with removable sections such that its overall length, and consequently, the position of its trailing edge downstream of the model base, can be varied. Tests were carried out with ground board trailing edge positions in the range 3.2 to 0.2 w downstream, where w is the width of the body under test. Variations in drag coefficient are considered with respect to changes in model geometry, yaw angle, and ground board length. Explanations of the influence of ground board length on the flowfield and the mechanisms involved are limited by the data available from these simple tests. It is however, apparent that ground board length can have a considerable effect on measured aerodynamic drag and recommendations are made for further tests. Author

AERODYNAMICS OF AIRCRAFT AFTERBODY: REPORT OF THE WORKING GROUP ON AERODYNAMICS OF AIRCRAFT AFTERBODY
1986 348 p
(AGARD-AR-226) Avail: NTIS HC A15/MF A01

Aircraft afterbody design is still one of the most critical problems for industry, especially in fighter aircraft development. The flow around the rear part of the fuselage is characterized by the simultaneous occurrence of interfering physical phenomena such as thick turbulent boundary layers, viscous flow separation, hot jet interference at the base and the boat tail, and jet plume expansion in three-dimensional transonic and supersonic flow. Even experimental techniques hardly fulfill requirements for correct wind tunnel simulation of all effects. Drag prediction and drag minimization procedures for complex configurations are strongly dependent on the reliability of numerical and experimental flowfield simulation. This publication reports on the progress which has been made by AGARD-FDP Working Croup WG08, established to evaluate the state-of-the-art in experimental and computational techniques for aircraft afterbodies. INVESTIGATION OF A MACH 1.4 COMPRESSOR CASCADE WITH VARIABLE BACK PRESSURE USING FLOW VISUALIZATION M.S. Thesis
Michael G. Hegland Mar. 1986 115 p
(AD-A168647) Avail: NTIS HC A06/MF A01 CSCL 20/4

Flow through a transonic compressor cascade model was investigated at M = 1.4 using flow visualization and pressure measurements. Shock patterns for two different blade incidences were documented at increasing back pressures. Data were taken up to a maximum pressure ratio of 1.53 at estimated minimum loss incidence conditions. An oblique shock system persisted, producing large flow turning (6.8 deg) and a slightly supersonic exit Mach number (1.02). Losses and blade pressure loading were calculated using a combination of test data and computational approximations. Failure of blade retaining tabs occurred with both aluminum and steel cascade blades. Failures were attributed to fatigue from high oscillatory stress levels and redesigned blade mounts were proposed. Author (GRA)

INVESTIGATIONS ON A SUPERCRITICAL AIRFOIL WITH BOUNDARY LAYER SUCTION THROUGH A PERFORATED STRIP IN THE SHOCK REGION
Paul Krogmann Sep. 1985 55 p Original language document was announced as N86-10025
(ESA-TT-940; DFVLR-FB-85-15; ETN-86-97577) Avail: NTIS HC A04/MF A01; original German version available from DFVLR, Cologne, West Germany DM 16.50

The effect of local boundary layer suction through a perforated strip on the flow development and aerodynamic characteristics of a transonic airfoil was investigated in a 1m x 1m transonic wind tunnel. In comparison with reference measurements on the same model with a solid surface, the results show that, aside from the improvements due to suction, the flow development in the nonsuction case is most favorably affected by the arrangement of the perforation and cavity, caused by the strong adverse pressure gradients occurring at higher angles of attack; the shock location as well as the flow field downstream of the shock are affected. Thus, considerable gain in maximum lift and drag reductions can be achieved. ESA

THEORETICAL AND EXPERIMENTAL INVESTIGATION OF THE SHOCK REFLECTION IN THREE-DIMENSIONAL STEADY, CONICAL SUPERSONIC FLOWS Ph.D. Thesis - Karlsruhe University, West Germany
Reinhard Niehuis Dec. 1985 127 p In GERMAN; ENGLISH summary
(DFVLR-FB-86-07; ISSN-0171-1342; ETN-86-97817) Avail: NTIS HC A07/MF A01; DFVLR, Cologne, West Germany, DM 34

Transition from regular to Mach reflection of shock waves for a three-dimensional, steady, conical, supersonic flow is investigated. For corner flows it is shown that transition is described by the von Neumann criterion as in two-dimensional steady flows, if the shock waves are sufficiently strong. Only Mach reflections were observed in corner flows. Applying the criterion, corner configurations in which the conditions for the occurrence of regular shock reflections are fulfilled were found. Experiments verify this, but indicate that the shock reflection is influenced by the downstream boundary condition, if it is not sufficiently free. The shock structure in the corner was determined by optical and tomographical techniques allowing nonintrusive measurements. ESA

PRELIMINARY DESIGN OF AN AUTOMATED AIR TRAFFIC CONTROL (ATC) RADAR EVALUATION SYSTEM [VOORONTWERP VOOR EEN GEAUTOMATISEERD ATC-RADAR EVALUATIE SYSTEEM]
J. vanKasteel 27 Apr. 1984 21 p In DUTCH
(Contract RB-RLD-1984-3.1)
(NPL-VG-84-009-L; ETN-86-97779) Avail: Issuing Activity
An automated system to support regular evaluations of radar systems of the government aviation service is presented. The system provides the quality parameters for the combination of sensor and extractor and for the tracker. It determines these parameters from plot and track information and from external reference information if necessary. Simulated plot information can also be used for tracker evaluation. The system consists of subsystems for radar data recording and selection, path reconstruction, sensor/extractor evaluation, and tracker evaluation. The definitions of the quality parameters to be calculated are given.

GLOBAL RADIO NAVIGATION SYSTEM (GRANAS) SIMULATION Final Report, Apr. 1985
Helmut Euler, Karl Kohler, Ger Ploeger, and Kurt Taenzer Bonn, West Germany Bundesministerium fuer Forschung und Technologie Dec. 1985 107 p In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-W-85-028; ISSN-0170-1339; ETN-86-97470) Avail: NTIS HC A06/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 22.50
The accuracy of the satellite position, of the clock synchronization and of the user's position are calculated using statistical evaluation procedures to simulate GRANAS navigation principles and operation. The satellite position is determined by numerical tests and parameters derived from a Kalman filter. The satellite motion is simulated using physical boundary conditions. The quartz clock inaccuracy is assessed and included in the one-way remote measurement inaccuracy. A nonlinear Kalman filter is produced to determine the user's dynamic behavior. The simulation shows a

position inaccuracy of Circular Error Probability (CEP) < 14 m during a uniform motion and of CEP < 30 m in the acceleration phase. The 3D errors amount to spherical error probability < 17 m or 36 m. The method can be further optimized. ESA

EVALUATION OF FULL-SCALE HOVERCRAFT LIFT SYSTEMS Final Report
David D. Moran, R. T. Waters, and Alan N. Jennings Mar. 1986 24 p
(AD-A167939; DTNSRDC-86/016) Avail: NTIS HC A02/MF A01 CSCL 01/3

Design of a hovercraft lift system is normally based upon fairly simple hydraulic models of the lift system components. Lift system loss coefficients and fan efficiencies are determined from prior experience, empirical data bases and components or system model studies. Prediction of full-scale performance is complicated by the difficulty of establishing correspondence between model-scale and full-scale values of Reynolds number, Mach number and Euler number. Full-scale verification of the lift system design process is an essential part of hovercraft development. This paper presents results of a full-scale evaluation of the performance of a hovercraft lift system, and performance characteristics are compared with model-scale results. Comparisons of lift system loss coefficients show good correlation, but lift system efficiencies are shown to be significantly higher in full-scale results than from model-scale predictions. Three lift-fan designs are discussed and an increase in lift system efficiency of 10% to 15% is observed for a mixed-flow fan over a centrifugal-flow fan design. GRA

SURVIVABILITY CONSIDERATIONS DURING AIRCRAFT CONCEPTUAL DESIGN M.S. Thesis
Robert J. Gilman Mar. 1986 100 p
(AD-A168555) Avail: NTIS HC A05/MF A01 CSCL 01/3

Survivability, capability, maintainability, and reliability will establish the effectiveness of a combat aircraft. Considerations for the ilities must take place during the conceptual design phase. Retrofit of survivability enhancement has historically increased weight, drag, and cost, while decreasing capability and performance. Proper application of the six susceptibility reduction concepts and the six vulnerability reduction concepts must take place before the design is established to maximize effectiveness and minimize penalties. In this thesis, the application of survivability enhancement techniques to the conceptual design is presented in general and also specifically applied to the design of a long range Strike Fighter aircraft. General guidelines for susceptibility and vulnerability reduction for any aircraft are also presented.

DYNAMIC IDENTIFICATION PROCEDURE AND LIFT CERTIFICATION OF LIGHT AIRCRAFT AND GLIDERS Final Report [PROCEDURE D'IDENTIFICATION DYNAMIQUE ET DE CERTIFICATION AU FLOTTEMENT DES AVIONS LEGERS ET PLANEURS]
G. Piazzoli Jan. 1986 37 p In FRENCH
(Contract STPA-83-95-019)
(ONERA-RT-12/1677-RY-090-R; ETN-86-97641) Avail: NTIS HC A03/MF A01

The problems found in certification testing of light aircraft are examined in order to make choices compatible with time and cost constraints. The description of test procedures includes experimental methods to characterize the modal behavior of the structure in the presence of weak nonlinear effects, mixed methods to compute the dynamic behavior of the flight controls, and numerical methods to determine the aeroelastic coupling and the critical velocities. It is shown that a detailed analysis is required and that the described procedures allow a fast, low cost, and safe characterization. ESA

Methods developed for measuring blade and rotor-shaft system response include optical systems, transient instruments, and special digital data processing equipment. Optical methods offer some distinct benefits for blade vibration measurement. Transient and steady state measurements of the response of rotor-shaft systems strongly affect analytical methods development. Digital computing systems allow processing of large volumes of high speed data from rotating blade sets. Also, digital systems develop useful vibration response signatures from randomly excited systems. Research facilities include the spin rig facility and the transient rotor response lab. Author

In order to improve the performance of aircraft, it is required that the power plant have good technical specifications such as high ratio of thrust to weight, high efficiency, long service life, etc. Therefore, new progress should be made in the research of power plant; that is, on the one hand, paying attention to improving the quality of parts and components and to improving the match between them; on the other hand, solving the technical problems of the systematic control of the power systems. In order to achieve these goals, the scope of research should delve further enlarged, and the content of research should be deepened into the fields of interdisciplinary science and technology. GRA

CONCEPT FOR THE QUALITY ASSURANCE OF COMPONENTS OF THE CERAMIC GAS TURBINE BY NONDESTRUCTIVE TESTING
K. Goebbels, H. Reiter, W. Arnold, and S. Hirsekorn 1986 55 p Prepared in cooperation with Fraunhofer-Gesellschaft zur Foerderung der Angewandten Forschung e.V., Saarbruecken (West Germany)
(Contract DE-AC05-84OR-21400)
(DE86-011474; ORNL/tr-86/19) Avail: NTIS HC A04/MF A01

This work to develop nondestructive testing (NDT) methods for components made from high temperature and high strength ceramics was sponsored during the years 1977 to 1983 by the BMFT in a ceramic gas turbine program. The central task was to make available NDT methods for the detection of defects with linear dimensions between 10 and 100 microns. The presented final report demonstrates the elaborated concept for the quality assurance. For the surface and volume defects and the structure and stress measurement three methods are well to the fore: high resolution radiography, filmless with microfocal X-ray tubes and projection technique. This kind of testing is accomplished by cross section images of the computer tomography with reduced resolution; ultrasonic testing and ultrasonic microscopy with frequencies between 5 and 200 MHz: structure characterization (homogeneity) and stress measurement by low frequency (less than or equal to 20 MHz) velocity measurements. Detection of surface defects with surface waves. A detection and characterization of volume defects is possible with high frequency ultrasound; and vibration analysis (resonance frequency) for large sample series, qualitative and integral characterization of components. TURBISTAN: A STANDARD LOAD SEQUENCE FOR AIRCRAFT ENGINE DISKS
A. J. A. Mom, W. J. Evans, and A. A. tenHave 19 Mar. 1985 15 p Presented at AGARD Structures and Materials Specialists' Meeting on Damage Tolerance Concepts for Critical Engine Components, San Antonio, Tex., Apr. 1985
(NLR-MP-85033-U; B8665117; ETN-86-97676) Avail: NTIS HC A02/MF A01

The development of TURBISTAN, an international loading standard representative for fighter engine disk usage is described. The compilation of operational flight data, their analysis, and the generation of a preliminary TURBISTAN sequence for cold compressor disks are outlined. The sequence contains 8000 cycles which represent 100 flights. A materials testing program to assess the effectiveness of the standard and to explore the validity of the assumptions made in its derivation is discussed. ESA

RECENT DEVELOPMENTS IN PROPULSION AERODYNAMICS
W. B. deWolf 29 Mar. 1985 13 p in DUTCH; ENGLISH summary Presented at the NVvL-VSV Symposium on Recent Developments in Aerodynamics, Delft, Netherlands, 26 Apr. 1986
(NLR-MP-85031-U; B8664743; ETN-86-97675) Avail: NTIS HC A02/MF A01

Developments in propulsion aerodynamics relevant to the aerodynamic design of civil aircraft are discussed. The striving for fuel economy resulted for turbofan engines in refinement of the nacelle configuration, including the exhaust nozzle system and the lowest possible interference drag. As a fuel saving alternative to the turbufan engine, the advanced propeller for cruise Mach numbers between 0.7 and 0.8 was investigated; fuel savings between 20% and 30% seem feasible. The conventional propeller was improved with respect to aerodynamics (blade airfoils), acoustics, and weight (composite materials). ESA

AN APPROACH TO INTEGRATED AEROSERVOELASTIC TAILORING FOR STABILITY Ph.D. Thesis
Thomas A. Zeiler 1985 123 p
Avail: Univ. Microfilms Order No. DA8529352

A fundamental study of the problem of combined structural and control design for aeroelastic behavioral objectives, called integrated aeroservoelastic tailoring, is conducted. First, behavioral characteristics of two idealized aeroservoelastic models are studied. These models are a 3 degree-of-freedom airfoil and a 4 degree-of-freedom aircraft idealization, the latter incorporating the 3 degree-of-freedom airfoil elastically attached to a fuselage with freedom in body pitch. Structural design parameters are the shear center and airfoil position, control synthesis is accomplished with optimal steady-state linear quadratic regulator theory. Control design parameters include the control design speed and elements of the output weighting matrix in the quadratic cost function used in the control synthesis. Second, aeroservoelastic tailoring is posed as a multi-disciplinary optimization problem to which is applied multilevel linear decomposition, breaking the aeroservoelastic system down into structural and control subsystems. For the present study, the design objective is a maximized stable airspeed envelope with the subsystem designs constrained to be optimal in some way. The control subsystem is the optimal steady-state linear quadratic regulator. The structural subsystem is not modeled in detail. An iterative design technique is then applied to the two models. Results show that the technique yields optimally controlled configurations with superior stability boundaries. The technique also provides a rational means for determining changes in structural and control design parameters to effect desired changes in system performance. Dissert. Abstr.

PRELIMINARY CONTROL LAW AND HARDWARE DESIGNS FOR A RIDE QUALITY AUGMENTATION SYSTEM FOR COMMUTER AIRCRAFT. PHASE 2
Donald J. Davis, Dennis J. Linse, Reiner Suikat, and David P. Entz Sep. 1986 261 p
(Grant NAG1-345)
(NASA-CR-4014; NAS 1.26:4014; KU-FRL-6132-2) Avail: NTIS HC A12/MF A01 CSCL 01C

The continued investigation of the design of Ride Quality Augmentation Systems (RQAS) for commuter aircraft is described. The purpose of these RQAS is the reduction of the vertical and lateral acceleration response of the aircraft due to atmospheric turbulence by the application of active control. The current investigations include the refinement of the sample data feedback control laws based on the control-rate-weighting and output-weighting optimal control design techniqes. These control designs were evaluated using aircraft time simulations driven by Dryden spectra turbulence. Fixed gain controllers were tested throughout the aircrft operating envelope. The preliminary design of the hardware modifications necessary to implement and test the RQAS on a commuter aircraft is included. These include a separate surface elevator and the flap modifications to provide

both direct lift and roll control. A preliminary failure mode investigation was made for the proposed configuration. The results indicate that vertical acceleration reductions of 45% and lateral reductions of more than 50% are possible. A fixed gain controller appears to be feasible with only minor response degradation.

CENTRIFUGALLY OPERATED MOVING-MASS ROLL CONTROL SYSTEM Patent
Daniel H. Piatus, inventor (to Air Force) Issued 25 Mar. 1986 5 p
(AD-D012272; US-Patent-4,577,812; US-Patent-Appl-SN-398281; US-Patent-Class-244-3.21) Avail: US Patent and Trademark Office CSCL 16/3

This patent discloses a roll control system for a reentry vehicle having the pay load positioned within the vehicle so as to offset the center of gravity from the aerodynamic axis of the vehicle. A radial mass unbalance is created in the aft end of the vehicle to create a trim angle of attack dependent upon the vehicle roll rate which provides a source of roll torque with the out-of-plane radial center of mass offset. With the use of a mass and spring arrangement, the mass unbalance is controlled by centrifugal force to terminate the roll torque at the prescribed design rate. GRA

INVESTIGATION OF AN ASYMPTOTIC EXPANSION TECHNIQUE TO ANALYZE LIMIT CYCLE RESPONSE OF AERODYNAMIC SURFACES WITH STRUCTURAL NONLINEARITIES Final Report, 13 Sep. 1984 - 13 Jul. 1985
Anthony J. Hauenstein, Robert M. Laurenson, and John L. Gubser 8 Jul. 1985 56 p
(Contract F49620-84-C-0123)
(AD-A168491; AFOSR-86-0288TR) Avail: NTIS HC A04/MF A01 CSCL 20/4

Defining the flutter and divergence characteristics of aerodynamic surfaces is a basic requirement in assuring structural and performance integrity of a given design for its operational environment. Divergence and flutter phenomena are unstable motions with increasing amplitude. For systems containing structural nonlinearities, another mode of aeroelastic response limit cycle oscillation may be present. The potential of limit cycle response is important since these oscillations may occur within the aerodynamic surface flutter and divergence flight envelope and may lead to fatigue damage of the system even through aeroelastic instability is not encountered. The objective of this thesis is to evaluate, on a comparative basis, different numerical simulation approaches for predicting limit cycle response of aerodynamic surfaces containing discrete structural nonlinearities. Results from such simulations are needed to compare and evaluate approximate solutions for the limit cycle response of nonlinear systems. In addition, these simulation results provide information concerning the nature of the nonlinear system response which may be used to aid in understanding the mechanism of the aerodynamic surface dynamics and in understanding the response of nonlinear systems in general. The numerical integration techniques selected for evaluation were: fourth-order Runge-Kutta, eighth-order Shanks, and fourth-order Adams-Moulton predictor-corrector. Results of the three simulation techniques compare well with each other. GRA

NLR EXPERIENCE IN THE APPLICATION OF ACTIVE FLUTTER SUPPRESSION AND GUST LOAD ALLEVIATION, APPLIED TO A WIND TUNNEL MODEL
P. A. vanGelder 19 Mar. 1985 14 p Presented at the 2nd International Symposium on Aeroelasticity and Structural Dynamics, Aachen, West Germany, 1-3 Apr. 1985 Sponsored by Netherlands Agency for Aerospace Programs and NLR
(NLR-MP-85027-U; B8664359; ETN-86-97673) Avail: NTIS HC A02/MF A01

Control laws for flutter suppression and gust load alleviation systems were developed and tested using an aeroelastic wind tunnel model in a subsonic wind tunnel with the capability to simulate discrete or random gusts. Flutter suppression up to the maximum wind-tunnel speed (1.4 Vf) is achieved, while the gust load alleviation system reduces the wing root bending moment by 25% at 0.9 Vf for simulated gusts with a Dryden spectrum. IDENTIFICATION OF GUST INPUT AND GUST RESPONSE CHARACTERISTICS FROM DO 28 TNT FLIGHT TEST DATA
Detlef Rohlf Dec. 1985 65 p Transl. into ENGLISH from "Ermittlung der Boe und des Boeenstoerverhaltens aus Flugversuchsdaten am Beispiel Do 28 TNT" Brunswick, West Germany Original report in German previously announced as N85-27881
(ESA-TT-919; DFVLR-FB-84-48; ETN-86-98075) Avail: NTIS HC A04/MF A01; original German version available. from DFVLR, Cologne, West Germany DM.21

A method to determine gust response characteristics and simultaneously estimate the discrete gust input from flight test data using system identification techniques is presented. The method is restricted to longitudinal motion of aircraft with separated wing and tail surfaces at low Mach numbers. The applicability of the method is demonstrated by analyzing free flight catapult tests and dynamic wind-tunnel tests with models of the Do 28 TNT aircraft. A good fit of the measured and identified time histories is achieved by considering the dynamic terms which are important for angles of attack varying rapidly due to gusts. ESA

SERVO-ACTUATOR FOR SAMPLED-DATA FEEDBACK DISTURBANCE REJECTION Ph.D. Thesis - Ruhr University
Josef Petry Jan. 1986 199 p In GERMAN; ENGLISH summary
(DFVLR-FB-86-08; ISSN-0171-1342; ETN-86-97818) Avail: NTIS HC A09/MF A01; DFVLR, Cologne, West Germany DM 57.50

Based on a helicopter it is demonstrated why discrete feedback control for disturbance rejection using a pulse-amplitude-modulated control signal can cause undesired disturbing effects. This analysis is done in the frequency domain by frequency responses, and by spectral decompositions of the signals concerned. The results provide recommendations for a controller design. A continuous minor-loop feedback control which allows the continuous plant to be appropriately adjusted to the characteristics of discrete disturbance rejection is proposed. The efficiency of this approach is confirmed by design examples and simulations. ESA

SIMULATOR SCENE DISPLAY EVALUATION DEVICE Patent
Richard F. Haines, inventor (to NASA) Issued 12 Aug. 1986 8 p Filed 22 Dec. 1983 Supersedes N84-16221 (22 - 07, p 960
(NASA-Case-ARC-11504-1; US-Patent-4,605,303; US-Patent-Appl-SN-565481; US-Patent-Class-356-73) Avail: US Patent and Trademark Office CSCL 14B

An apparatus for aligning and calibrating scene displays in an aircraft simulator has a base on which all of the instruments for the aligning and calibrating are mounted. Laser directs beam at double right prism which is attached to pivoting support on base. The pivot point of the prism is located at the design eye point (DEP) of simulator during the aligning and calibrating. The objective lens in the base is movable on a track to follow the laser beam at different angles within the field of vision at the DEP. An eyepiece and a precision diopter are movable into a position behind the prism during the scene evaluation. A photometer or illuminometer is pivotable about the pivot into and out of position behind the eyepiece. NASA

(MS-8025; BR96992; ETN-86-96555) Copyright. Avail: Issuing Activity

A large compound lens to be used to collimate the scene displayed on a 26in diagonal television monitor was developed. The development was undertaken for a flight simulator but is applicable in other areas whenever collimation of a relatively wide angle scene is required. A field of view of nominally 47 deg horizontally by 36 deg vertically is available with an eye relief of 560mm (22in). The prototype lens shows the design to be totally free of any chromatic abberations. Geometric distortions are acceptable for most applications. ESA

NUMERICAL METHODS FOR ADAPTING WIND TUNNEL WALLS
Rainer Rebstock 1984 23 p Presented at the Euromech Coloquium 187 on Adaptive Wall Wind Tunnels and Wall Interference Correction Methods, Goettingen, West Germany, 15-17 Oct. 1984
(ILR-Mitt-144(1984)) Avail: NTIS HC A02/MF A01

The numerical methods that have been developed for the TU-Berlin 3D-adaptive wall test section are discussed. Particular emphasis is placed on the description of a recently established method to calculate the adapted wall shape in one step, i.e., by using the measured velocity components from only one tunnel run. In this context a new design-program to solve the inverse problem for the exterior flow field is presented. A comparison between pressure distributions calculated with the TSP and the Panel method for prescribed wall contours confirms the applicability of the latter scheme for high subsonic Mach numbers. Reasons for selecting Halley's Comet for a flyby mission are outlined. Halley is the most outstanding target for a cometary mission as it is the only comet that has a well-known orbit and a high gas and dust production rate, comparable to that of new

comets. A mission to Halley requires very little launch energy and the comet can also be observed from the Earth during the flybys. Because of its predictability and brightness Halley is also the most famous comet. ESA

The Giotto Mission to Halley's Comet is a fast flyby at 00 UT on 14 March 1986, 4 weeks after the comet's perihelion passage, when it is most active. The scientific payload is made up of 10 experiments with a total mass of 60 kg: a camera for imaging the comet nucleus, 3 mass spectrometers for analyzing the elemental and isotopic composition of the cometary dust and gas environment, dust impact detectors, a photopolarimeter for measuring the coma's brightness, and a set of plasma instruments for studying the solar-wind/comet interaction. In view of the high flyby velocity of 68 km/sec, the active experiment time is very short (of the order of 4 hr) and all data are transmitted back to Earth in real time, at a rate of 40 kbit/sec. The Giotto spacecraft is spin-stabilized and has a despun, high-gain parabolic dish antenna inclined at 44.3 deg which points towards Earth during the cometary encounter. A shield protects the front end of the spacecraft from being destroyed by hypervelocity dust impacts. The Giotto spacecraft passes the nucleus 50 km on the sunward side. ESA

THE ASTRO-1 MISSION
J. C. Brandt and M. B. Niedner *In* ESA Space Missions to Halley's Comet Mar. 1986 p 117-127 (For primary document see N86-32452 24-12)
Avail: NTIS HC A12/MF A01; ESA, Paris, France, FF 200 member states, AU, CN and NO (+20% others)

The Astro-1 mission was to be launched in March 1986 for an effective duration of 7 days, chosen to overlap spacecraft encounters with Halley's Comet, i.e., Vega-2 (on 9 March) and Giotto (on 13/14 March). The ultraviolet instrument complement while not designed with cometary research as the prime objective, was well suited to the study of comets. The opportunity of an extended mission during the time of the spacecraft encounters of Halley's Comet offered an extraordinary opportunity for a synergistic interaction between the intercept spacecraft, the Earth-orbital Astro-1 mission, and ground-based observations.

The addition of visual-wavelength, wide-field cameras would enhance the scientific return of the mission. Loss of Challenger cancelled the mission. ESA

INTERNATIONAL ULTRAVIOLET EXPLORER (IUE) OBSERVATION OF HALLEY'S COMET
Y. Kondo and J. C. Brandt *In* ESA Space Missions to Halley's Comet Mar. 1986 p 129-133 (For primary document see N86-32452 24-12)
Avail: NTIS HC A12/MF A01; ESA, Paris, France, FF 200 member states, AU, CN and NO (+20% others)

The main objectives of the IUE Halley's Comet program are: study of the physical and chemical properties of a comet clearly different from those observed previously with IUE; study of the long-term evolution of the gas and dust coma and the ion and dust tails, by combining IUE data with UV and in-situ observations obtained by other spacecraft; and assessment of the gas and dust environment of Halley in terms of its possible impact on the trajectories of the flyby spacecraft. Another program investigates the CS scale length, and the rotational profile of CS in order to test and calibrate dynamic-flow models of comets. These observations will begin in August 1985 when the heliocentric distance of the comet is 2.8 AU and its total visual magnitude + 13. They will continue into the ninth IUE observing period, through mid-1986. ESA

OBSERVATIONS OF HALLEY'S COMET BY THE SOLAR MAXIMUM MISSION (SMM) **c89**
M. B. Niedner *In* ESA Space Missions to Halley's Comet Mar. 1986 p 135-143 (For primary document see N86-32452 24-12)
Avail: NTIS HC A12/MF A01; ESA, Paris, France, FF 200 member states, AU, CN and NO (+20% others)

Solar Maximum Mission coronagraph/polarimeter observations of large scale phenomena in Halley's Comet are discussed. Observations of the hydrogen coma with the UV spectrometer are considered. It is concluded that coronograph/polarimeter observations of the disconnection event, in which the entire plasma tail uproots itself from the head of the comet, is convected away in the solar wind at speeds in the 50 to 100 km/sec range (relative to the head), and is replaced by a plasma tail constructed from folding ion-tail rays, are the most interesting. THE SPARTAN MISSION
C. A. Barth, S. A. Stern, and A. Stewart *In* ESA Space Missions to Halley's Comet Mar. 1986 p 145-150 (For primary document see N86-32452 24-12)
Avail: NTIS HC A12/MF A01; ESA, Paris, France, FF 200 member states, AU, CN and NO (+20% others)

The Spartan mission was intended to make observations of the ultraviolet spectrum of Comet Halley from Earth orbit in January 1986, near the time of perihelion, when the comet activity was high. The scientific objectives of the Spartan Halley mission were: to observe the ultraviolet spectrum of the coma and tail in the wavelength region 1280 to 3400 A, at a resolution of 2 A; to determine the amount of hydroxyl radicals and atomic oxygen in the coma and relate the production of these species to the photodissociation of water; and to search for carbon atoms and carbon-containing molecules, and sulfur atoms and sulfur-containing molecules. Spartan was on Challenger when the latter exploded. ESA

A dust model for the ambient Halley coma assuming homogeneous dust emission from the nucleus surface, including the proper mathematical description of all known major effects was derived. The model was based on 1910 observations of Halley's Comet, updated with observational data from the 1986 appearance. The dust-model computer program was distributed to scientists and spacecraft engineers, while dust-model tables for the Giotto, Vega-1, Vega-2 and Suisei flyby times/distances were distributed to the flight projects to calculate survival probabilities and optimal apertures. Based on the model it was suggested that the Suisei spacecraft, which carries no dust protection shield, could be safely

targeted to pass the comet nucleus at a distance of less than 200 000 km and still avoid dust impacts completely. ESA

HISTORICAL DATA AND ANALYSIS FOR THE FIRST FIVE YEARS OF KSC STS PAYLOAD PROCESSING
James M. Ragusa Sep. 1986 124 p
(NASA-TM-83105; NAS 1.15:83105) Avail: NTIS HC A06/MF A01 CSCL 22A

General and specific quantitative and qualitative results were identified from a study of actual operational experience while processing 186 science, applications, and commercial payloads for the first 5 years of Space Transportation System (STS) operations at the National Aeronautics and Space Administration's (NASA) John F. Kennedy Space Center (KSC). All non-Department of Defense payloads from STS-2 through STS-33 were part of the study. Historical data and cumulative program experiences from key personnel were used extensively. Emphasis was placed on various program planning and events that affected KSC processing, payload experiences and improvements, payload hardware condition after arrival, services to customers, and the impact of STS operations and delays. From these initial considerations, operational drivers were identified, data for selected processing parameters collected and analyzed, processing criteria and options determined, and STS payload results and conclusions reached. The study showed a significant reduction in time and effort needed by STS customers and KSC to process a wide variety of payload configurations. Also of significance is the fact that even the simplest payloads required more processing resources than were initially assumed. The success to date of payload integration, testing, and mission operations, however, indicates the soundness of the approach taken and the methods used. Author

STUDIES OF THE ULTRAVIOLET SPECTRA OF ASTRONOMICAL SOURCES Semiannual Progress Report, 1 Feb. - 31 Jul. 1986
Jul. 1986 4 p
(Grant NsG-5393)
(NASA-CR-176865; NAS 1.26:176865) Avail: NTIS HC A02/MF A01 CSCL 22A

An intensive program of observations of the Comet Halley during the week of the Vega 2 and Giotto encounters was carried out by the International Ultraviolet Explorer (IUE) satellite observatory. The IUE Fine Error Sensor, normally used for target acquisition and tracking, was used in a photometer mode to provide nealy continuous light curves over an 8 hour observing shift, a unique capability relative to ground-bases observers. The ultraviolet data can be used to derive an estimate of the total gas production rate even though the models generally used for this purpose assume a steady-state gas production which is clearly not the case for Halley. Additionally, the IUE data provide column abundances of carbon, oxygen, sulfur, OH, CO, CS, C2, and CO2 to compare with the in-situ measurements of these species by Vega 2 and Giotto. B.G.

The Giotto mission to Halley's Comet is a fast flyby in March 1986, 4 weeks after the comet's perihelion passage, when it is most active. The scientific payload consists of a camera for imaging the comet nucleus, three mass spectrometers for analysis of the elemental and isotopic composition of the cometary gas and dust environment, dust impact detectors, a photopolarimeter for measurements of the coma brightness, and plasma instruments for studies of the solar-wind/comet interaction. In view of the high flyby velocity of 68 km/sec, the experiment active time is only 4 hr and all data are transmitted back to Earth in real time at a rate of 40 kbit/sec. The spacecraft in spin-stabilized with a despun, high-gain parabolic dish antenna inclines to point at the Earth during the encounter. A shield protects the forward end of the spacecraft from being destroyed by hypervelocity dust impacts. The spacecraft is targeted to pass the comet nucleus 500 km on the sunward side. ESA

THE GIOTTO MAGNETIC-FIELD INVESTIGATION
F. M. Neubauer (Cologne Univ., West Germany), M. H. Acuna, L. F. Burlaga, B. Franke (Technische Univ., Brunswick, West Germany), B. Gramkow, F. Mariani (Rome Univ., Italy), G. Musmann (Technische Univ., Brunswick, West Germany), N. F. Ness, H. U. Schmidt (Max-Planck-Inst. fuer Physik und Astrophysik, Garching, West Germany), T. Terenzi (Consiglio Nazionale delle Ricerche, Frascati, Italy) et al *In* ESA The Giotto Mission: Its Scientific Investigations Mar. 1986 p 1-14 (For primary document see N86-32473 24-12)
Avail: NTIS HC A10/MF A01; ESA, Paris, France, FF 200 Member States, AU, CN, and NO (+20% others)

The objectives of the Giotto magnetometer experiment are the investigation of the interaction between Comet Halley and the

solar wind 0.9 AU from the Sun, to within 500 km of the cometary nucleus, and the study of the interplanetary magnetic field. The instrumentation consists of a triaxial and a separate biaxial system of fluxgate sensors of the ring-core type, the associated analog electronics and a digital processor. The measuring ranges of + or 1 16 up to + or - 65536 nT are digitized by a 12-bit analog-to-digital converter. Memory modes allow the bridging of gaps in telemetry coverage of up to 10 days. Because of the dust hazard near closest approach, a magnetometer boom could not be included in the spacecraft design. The magnetic contamination problem was attacked by the use of two magnetometers and by a magnetic-cleanliness program. In-flight results show that the instrument is working flawlessly, though magnetic-contamination problems remain. ESA

A. Johnstone, J. A. Bowles, A. J. Coates, A. J. Coker, S. J. Kellock, J. Raymont, B. Wilken (Max-Planck-Inst. fuer Aeronomie, Katlenburg-Lindau West Germany), W. Studemann, W. Weiss, R. Cerulli-Irelli (Consiglio Nazionale delle Ricerche, Frascati, Italy) et al *In* ESA The Giotto Mission: Its Scientific Investigations Mar. 1986 p 15-32 Sponsored by UK Science and Engineering Research Council, Max-Planck Gesellschaft zur Forderung der Wissenschaften, Swedish Board for Space Activities, and CNR (For primary document see N86-32473 24-12)
(Contract NAS5-27442; Grant BMFT-01-OF-112-4)
Avail: NTIS HC A10/MF A01; ESA, Paris, France, FF 200 Member States, AU, CN, and NO (+20% others)

An instrument to measure the three-dimensional energy distribution of positive ions in order to study the interaction between the solar wind and ionized Halley cometary particles was designed. Two sensors measure the distribution from 10 eV to 20 keV once per spacecraft spin and the distribution from 90 eV to 90 keV, with coarse mass discrimination, once every 32 spins. The instrument was turned on on 8 September 1985. The performance throughout all testing was nominal. The spacecraft was greater than 10 million km from the Earth in the solar wind. The only population identified is the solar wind. The Fast Ion Sensor follows solar wind variations with its autoranging capability. The Implanted Ion Sensor identifies higher mass ions such as O(6+) and O(5+) in the solar wind. ESA

Anderson (California Univ., Berkeley) et al *In* ESA The Giotto Mission: Its Scientific Investigations Mar. 1986 p 33-52 Original contains color illustrations (For primary document see N86-32473 24-12)
(Contract NASw-3575; Grants CNES-1212; BMFT-01-OF-052)
Avail: NTIS HC A10/MF A01; ESA, Paris, France, FF 200 Member States, AU, CN, and NO (+20% others)

The RPS-Copernic plasma experiment for the Giotto mission consists of the RPA1-EESA spectrometer and the RPA2-PICCA electrostatic mass analyzer. The RPA1-EESA measures the three-dimensional distributions of electrons between 10 eV and 30 keV. The electron measurements should contribute to defining the properties of the cometary plasma and its interaction with the solar wind. The RPA2-PICCA is designed to measure the composition and the distribution of thermal cometary positive ion, including clathrate hydrates in the mass range 10 to 203 amu. This instrument should probe the interaction processes producing these ions, and provide information on the spatial distribution and chemical composition of the solid, gas, and plasma components of the cometary environment. Such information should allow identification of parent molecule and hence give knowledge of the composition of the cometary nucleus. ESA

Melrose (Sydney Univ., Australia), and K.-P. Wenzel (European Space Agency. European Space Research and Technology Center, ESTEC, Noordwijk, Netherlands) *In* ESA The Giotto Mission: Its Scientific Investigations Mar. 1986 p 53-65 Original contains color illustrations (For primary document see N86-32473 24-12)
Avail: NTIS HC A10/MF A01; ESA, Paris, France, FF 200 Member States, AU, CN, and NO (+20% others)

The Energetic Particle Experiment (EPA) onboard Giotto will measure the energy distribution of electrons, protons, and heavier nuclei (E is greater than 20 keV) during the cruise phase and in the cometary environment during the Halley encounter. The detector system consists of three particle telescopes each incorporating totally depleted silicon surface barrier layer detectors, and employing active and passive background shielding. In-situ measurements will be made of the flux and spatial distribution of energetic electrons and cometary ions in the Halley environment. Particle acceleration due to magnetic-field-line reconnection processes will, if present, be detected. The occurrence of a solar-particle event during the encounter would provide special opportunities to study the comet/solar-wind interaction and dust distribution around the comet, while the EPA would act as a reference for onboard instruments that are sensitive to particle radiation. Cruise-phase studies provide interplanetary particle flux levels since switch-on, and flare-related particle enhancements are detected. ESA

N86-32479# Max-Planck-Inst. fuer Kernphysik, Heidelberg (West Germany).
THE GIOTTO PARTICULATE IMPACT ANALYZER c19
J. Kissel *In* ESA The Giotto Mission: Its Scientific Investigations Mar. 1986 p 67-83 Original contains color illustrations (For primary document see N86-32473 24-12)
(Grants BMFT-01-OF-021-4; BMFT-01-OF-022-5; BMFT-01-OF-850-70)
Avail: NTIS HC A10/MF A01; ESA, Paris, France, FF 200 Member States, AU, CN, and NO (+20% others)

The Giotto Particulate Impact Analyzer will provide information on the composition of individual dust particles and the average composition and mass distribution of cometary matter released by Comet Halley. Knowledge of the material's composition and isotopic ratios will significantly increase understanding of the status and the genesis of comets. The instrument is derived from the dust experiment flown onboard the Helios-1 and 2 satellites, but mass resolution was improved to separate adjacent mass lines over the complete mass range of 1 to 110 mu. Variations in particle type or mean composition as a function of distance from the comet will yield information on the release mechaniam. The instument is sensitive to particles ranging in size from 3 times 10 to the minus 16th to 5 times 10 to the minus 10th power g, with impact rates of up to 100/sec. Data on 1000 to 5000 cometary particles should be gathered. The instrument is performing flawlessly. ESA

Avail: NTIS HC A10/MF A01; ESA, Paris, France, FF 200 Member States, AU, CN, and NO (+20% others)

The Giotto neutral mass spectrometer experiment consists of a double-focusing mass spectrometer and an electrostatic energy analyzers, covering a mass range up to 36 amu and an energy range up to 2180 eV (corresponding to 86 amu mass equivalent for thermal species) respectively. Both analyzers have focal-plane configurations allowing simultaneous measurements of a mass and energy range to cope with the high flyby velocity. The detectors, which employ microchannel plates and multiple discrete electron collectors, have a dynamic range of 10 to the 12th power. Coma gases are ionized by electron impact using two different electron energies. Autonomous control of the measurement program ensures optimum time sharing of gas and ion measurements, with a capability for adaption to the densities being measured. ESA

The Giotto Ion Mass Spectrometer (IMS) consists of two sensors: one optimized for the outer and the other for the inner coma, with each obtaining complementary information in the region for which it is not optimized. The outer coma is characterized by the interaction between solar wind and comentary plasmas, the inner coma by the outflow of cometary neutrals and their ionization products. Both sensors feature mass imaging characteristics, permitting simultaneous measurements of several ion species by multidetector arrays. Resultant mass-per-charge resolution is greater than or = 20. Energy per charge, and the elevation and aximuth of incident ions are measured. Calibration and in-flight solar-wind data show that the IMS will meet its scientific goals for the Halley encounter. ESA

Avail: NTIS HC A10/MF A01; ESA, Paris, France, FF 200 Member States, AU, CN, and NO (+20% others)

The Halley Multicolor Camera (HMC) is a Ritchey-Chretien type Cassegrain telescope (1000 mm focal length) with CCD imagers in the focal plane. It is suspended in a revolving mount so that the center of its field of view can be moved freely in a half plane that contains the spin axis of the spacecraft. Together with the spinning motion of the spacecraft, this mobility enables the HMC to image any part of the whole 4 pi solid angle of the sky. The line-scan imaging technique uses the spacecraft/s spin for one dimension and the length of the line for the other dimension of the image. Four line sensors with filters of different color bands take images almost simultaneously. Onboard electronics controlled by three microprocessors operate the camera almost autonomously. The image of the comet will be sought at the beginning of the encounter operations. Having found it, the camera will switch to the imaging mode. The contents of the images are to be telemetered to ground in sections and at the same time used onboard to update the parameters that describe the spacecraft/s trajectory relative to the cometary nucleus. With this information, the HMC/s field of view will be able to track the center of the comet/s image. ESA

Avail: NTIS HC A10/MF A01; ESA, Paris, France, FF 200 Member States, AU, CN, and NO (+20% others)

The scientific objectives of the Giotto Radio Science Experiment (GRE) are to determine the columnar electron content of Comet Halley/s ionosphere and the cometary mass fluence from atmospheric drag by using the radio signals from Giotto during the Halley encounter. The radio science data (S and X-band Doppler and range measurements) will be collected at NASA/s deep-space 64 m tracking antenna at Tidbinbilla near Canberra, in Australia. In order to separate the effects of the terrestrial ionosphere and the interplanetary plasma, S-band Doppler measurements will also be taken at Tidbinbilla along the line-of-sight of Japan/s cometary probe Sakigake during the Giotto-Halley Encounter. The measurements of cometary electron content and mass fluence will be inverted to derive the spatial distribution of the electron and mass (dust and gas) density within Halley/s coma. The GRE is the only experiment on Giotto capable of measuring the low-energy (10 eV) electron bulk population of Halley/s ionosphere and the total cometary mass flow impacting upon the spacecraft. THE DEVELOPMENT OF SPACE SCIENCE AND TECHNOLOGY IN CHINA
Yung-An Liu 22 May 1986 23 p
(AD-A168368; FTD-ID(RS)T-0282-86) Avail: NTIS HC A02/MF A01 CSCL 22/2

Since satellites can be used for communication, electronic detecting, resource exploration, navigation and orientation and collecting meteorological information, most of the countries in the world have invested intensively in the development of satellites so that they can be used as military reconnaissance satellites as well as offensive and defensive weapons. After the People's Republic of China took over the mainland, it founded the Academia Sinica and the other research institutes for the research and development in advanced science and technology. In 1968, the Research Institute of Space Science was founded in order to accelerate research and development in space technology. The first satellite of China was launched successfully on April 24, 1970. Since then 16 satellites have been launched. It is important for us to investigate space program development in China. GRA

Life support conditions required by small plants and animals living in orbiting facilities for long periods of time, and methods to preserve specimens for study on Earth are defined. It is stressed that perspex, particularly perspex glues (di or trichloromethane) are highly toxic to plants; RTV silicone compounds until fully cured are liable to give off cyclohexylamine, which is toxic to animals (including humans) and plants. When fully cured it is not harmful. Phthalene plasticizers are reported to be toxic to plants. They are used in so many materials that it may prove necessary to check all plastic materials to be flown on a mission for possible harm to plants. Sterilizing polystyrene containers by ethylene oxide prevents the growth of any plants in them. Sterilization by gamma radiation for 2 hr at 40 Gray/min produces no hindrance to plant growth. ESA

OPTIMAL, IMPULSIVE, DIRECT ASCENT, TIME-FIXED ORBITAL INTERCEPTION Ph.D. Thesis
William Gary Heckathorn 1985 113 p
Avail: Univ. Microfilms Order No. DA8600206

A method of determining optimal impulsive trajectories is applied to minimum fuel, direct ascent, time-fixed intercept trajectories. The optimal trajectory is obtained by satisfying Lawden's necessary conditions expressed in terms of the primer vector. The vehicle is initially at rest on the surface of a spherical planet and the target is assumed to be in a circular, equatorial orbit around the planet. Results are presented and compared for two planetary models: a non-rotating planet, and one rotating with an angular velocity approximating that of the Earth. Each model is investigated for transfers in which the launch point is in the same plane as the target orbit (coplanar) and in which the launch point is not in the target orbit plane (noncoplanar). Parameters varied during the analysis include transfer time, target radius, initial position of the target in relation to the launch point, and the direction of the transfer trajectory, i.e., posigrade or retrograde. Cost comparisons are made between the various cases, and generalizations indicated. Dissert. Abstr.

N86-32489 Michigan Univ., Ann Arbor.
OPTIMAL AEROASSISTED ORBITAL TRANSFER INVOLVING ELLIPTICAL ORBITS Ph.D. Thesis
Jennie Rae Freeland Johannesen 1985 168 p
Avail: Univ. Microfilms Order No. DA8600465

Minimum-fuel orbital transfer between elliptical orbits is studied by first analyzing separately the three phases of aeroassisted orbital transfer (deorbit, atmospheric fly-through and post atmospheric maneuvers). For the atmospheric fly-through of a ballistic vehicle, second-order analytical solutions for the altitude and flight path angle are obtained using Poincare's method of small parameters. Expressions for the speed, time of flight, longitudinal deceleration, and critical entry angle are also derived. For a vehicle whose coefficient of drag can be modulated between a maximum and a minimum value, an explicit self-correcting guidance law is derived to achieve the targeted exit speed with small flight path angle. For a vehicle with lifting capability, a near optimal control with constant normalized lift coefficient and explicit bank modulation is obtained to maximize the atmospheric plane change. The influence of maximum lift-to-drag ratio on the atmospheric plane change is also assessed. Regions of optimality for deorbit to a prescribed entry angle are obtained and the post atmospheric maneuvers necessary to achieve the target final orbit are derived. The problem of transfer between coplanar elliptic orbits is studied. The two impulse transfer is obtained by solving three equations for three unknowns. Dissert. Abstr.

COMPARISON OF RECENT EMPIRICAL MODELS OF THE THERMOSPHERE c46
G. W. Proelss and P. W. Blum *In* ESA Proceedings of an ESA Workshop on Reentry of Space Debris 1986 p 3-11 (For primary document see N86-32490 24-13)
Avail: NTIS HC A05/MF A01

To evaluate the accuracy of thermospheric models, predictions of the C and MSIS-83 models were compared. The local time and seasonal variation of the predicted N2 density were subjected to a Fourier analysis, and the amplitude and phase coefficients of the first four terms were represented as a function of latitude. A separate comparison of the model predictions was performed for each of these coefficients. Large differences of up to several

100% were observed, especially for the higher harmonics. However, these large discrepancies lead to only moderate uncertainties in the predicted N2 density. Maximum deviations are of the order of 12% to 33%, depending on the components considered. ESA

SATELLITE OBSERVATIONS WITH A SINGLE RADAR TRACKING STATION **c32**
D. Mehrhoiz *In* ESA Proceedings of an ESA Workshop on Reentry of Space Debris 1986 p 19-24 (For primary document see N86-32490 24-13)
Avail: NTIS HC A05/MF A01

Handicaps in observations due to the relative motion between a satellite and the radar station are highlighted. It is shown that decaying high-risk space objects can be observed by a single radar tracking station. But less than 10% of an orbit and 50% of all orbits per day are within line-of-sight of the radar station. Breaks of 14 hr between 2 consecutive passages are possible. This can cause total target loss because of outdated orbit data. Cooperation with observation stations in other parts of the world is therefore desirable. In order to fit the observation requirements the radar should deliver angular direction, range, and at least echo amplitude measurements. ESA

LIFETIME PREDICTIONS FOR THE RAE TABLE OF SATELLITES
D. M. C. Walker and D. G. King-Hele *In* ESA Proceedings of an ESA Workshop on Reentry of Space Debris 1986 p 29-37 (For primary document see N86-32490 24-13)
Avail: NTIS HC A05/MF A01

After studies of Earth satellites in 1955 to 1956, we operated the UK satellite prediction service in 1958 and began a Table of satellites in response to requests. This has now grown to the 770-page RAE Table of Earth Satellites 1957 to 1982, which includes lifetime estimates for all satellites still in orbit, excluding fragments. We have made about 10,000 such lifetime predictions and in this paper we describe the methods of calculation. For most low-eccentricity satellites decaying under the influence of air drag, we use a simple graphical method, and an accuracy of + or - 10% is about the best that can be achieved because of the unpredictable variations in air density. For high-eccentricity satellites we have a graphical method for transfer orbits at inclinations between 0 and 30 deg and otherwise we rely on two computer programs, PROD and PTDEC, where the limits are on computer time and cost. LONGTERM ANALYTICAL ORBIT DECAY AND REENTRY PREDICTION
H. H. Klinkrad *In* ESA Proceedings of an ESA Workshop on Reentry of Space Debris 1986 p 39-48 (For primary document see N86-32490 24-13)
Avail: NTIS HC A05/MF A01

An analytical approach to the prediction of close-Earth satellite orbits of moderate eccentricities is outlined. Based on the method of general averaging and on the principle of separation of perturbations, known results for the averaged time rates of change of the mean orbital elements due to J2, J3, and J4 are superimposed with results of the averaged air drag perturbation equations to obtain the total rates, which are then used to propagate the mean Kepler state in step-sizes of 1 to 15 orbits. The improved air drag model incorporates, in an analytically integrable representation, a rotating atmosphere, a variable aerodynamically effective satellite cross section, and a state-of-the-art MSIS'77 derived air density model as function of all major atmospheric parameters. Avail: NTIS HC A05/MF A01

The lifetime of the decaying satellite Cosmos 954 was predicted

using the graphical version of King-Hele's method, chosen because it is very easy to use and needs no computer assistance. The results are very good. For the short-time predictions (on the order of a few days) the accuracy is better than 10% of the remaining lifetime, a limit given by King-Hele. However, since a graphical procedure can cause uncertainties and reading a graph is tiring, the equations on which the graphical method is based were used to write a computer program for the King-Hele method. COSPAS-SARSAT SATELLITE ORBIT PREDICTOR, VOLUME 7
Morton L. Friedman Apr. 1986 124 p
(NASA-TM-85015-VOL-7; NAS 1.15:85015-VOL-7) Avail: NTIS HC A06/MF A01 CSCL 03C

The satellite orbit predictor, a graphical aid for determining the relationship between the satellite (SARSAT or COSPAS) orbit, antenna coverage of the spacecraft and coverage of the local user terminals (LUT), is discussed. The predictor allows the user to quickly visualize if a selected position will probably be detected and is composed of a base map and a satellite track overlay for each satellite. Additionally, a table of equator crossings for each satellite is included. In order for a LUT to receive emergency locator transmitter (ELT)/emergency position indicating radio beacon (EPIRB) information from a satellite, mutual visibility between the satellite, LUT and ELT/EPIRB must occur. Mutual visibility requires two simultaneous conditions: (1) the satellite subtrack or ground track must lie within a LUT coverage circle for a least 4 minutes; and (2) and the suspected ELT/EPIRB must lie within the satellite antenna coverage swath during the 4 minute period. The base map is a polar stereographic projection of the Northern Hemisphere. The LUT coverage circles are based on the LUT seeing the satellite at the horizon. On projections of this type, equal increments of latitude are not equidistant. Therefore, the map includes a dot matrix in the ocean area with dots printed as a one degree latitude by one degree longitude field. Another property of the projection is that the center of the LUT coverage does not coincide with the actual geographical position of the LUT. Author

(Contract NAS10-11165)
(NASA-CR-179705; NAS 1.26:179705) Avail: NTIS HC A03/MF A01 CSCL 22D

All manpower numbers, number of heads (by skill), serial time and manhours have been accumulated and compiled on a per subtask basis in spreadsheet format for both the ground based and the space based data flows. To aid in identifying the facility resources required to process the Ground Based Orbital Transfer Vehicle (GBOTV) and/or the space based orbital transfer vehicle (SBOTV) through the ground facilities at Kennedy Space Center (KSC), a software application package was developed using a general purpose data base management system known as Data Flex. The facility requirements are used as the basic input to this software application. The resources of the KSC facility that could be used by orbital transfer vehicle program were digitized in the same format used to identify facility requirements. The facility capabilities were digitized in this format for subsequent, automated comparative analyses. Composite facility requirements are compared to each of the baseline facility capabilities and the system generates a relative score that indicates how each facility weighs against the composite requirements in relation to the other facilities in the set. LETHALITY TEST SYSTEM
W. M. Parsons, J. R. Sims, and J. V. Parker 1986 5 p Presented

at the 3rd Symposium on Electromagnetic Launch Technology, Austin, Tex., 20 Apr. 1986
(Contract W-7405-eng-36)
(DE86-008733; LA-UR-86-922; CONF-8604147-5) Avail: NTIS HC A02/MF A01

The Lethality Test System (LTS), presently under construction at Los Alamos, is an electromagnetic launcher facility designed to perform impact experiments at velocities up to 15 km/s. The launcher is a 25 mm round bore, plasma armature railgun extending 22 m in length. Preinjection is accomplished with a two-stage gas gun capable of 7 km/s. The railgun power supply utilizes traction motors, vacuum interrupters, and pulse transformers. An assembly of 28 traction motors, equipped with flywheels, stores approximately 80 MJ at 92% of full speed and energizes the primary windings of three pulse transformers at a current of 50 kA. At peak current an array of vacuum interrupters disconnects the transformer primary windings and forces the current to flow in the secondary windings. The secondary windings are connected to the railgun, and by staging the vacuum interrupter openings, a 1 MA to 1.3 MA ramped current waveform will be delivered to the railgun. DOE

SYSTEM IMPACTS OF SOLAR DYNAMIC AND GROWTH POWER SYSTEMS ON SPACE STATION
J. T. Farmer, W. F. Cuddihy, U. M. Lovelace, and D. M. Badi Jul. 1986 47 p
(NASA-TM-87667; NAS 1.15:87667) Avail: NTIS HC A03/MF A01 CSCL 22B

Concepts for the 1990's space station envision an initial operational capability with electrical power output requirements of approximately 75 kW and growth power requirements in the range of 300 kW over a period of a few years. Photovoltaic and solar dynamic power generation techniques are contenders for supplying this power to the space station. A study was performed to identify growth power subsystem impacts on other space station subsystems. Subsystem interactions that might suggest early design changes for the space station were emphasized. Quantitative analyses of the effects of power subsystem mass and projected area on space station controllability and reboost requirements were conducted for a range of growth station configurations. Impacts on space station structural dynamics as a function of power subsystem growth were also considered. Author

ASCENT TRAJECTORY DISPERSION ANALYSIS FOR WTR HEADS-UP SPACE SHUTTLE TRAJECTORY Final Technical Report
May 1986 158 p
(Contract NAS8-36196)
(NASA-CR-178894; TR-86-MSFC-36196-059; NAS 1.26:178894) Avail: NTIS HC A08/MF A01 CSCL 22A

The results of a Space Transportation System ascent trajectory dispersion analysis are discussed. The purpose is to provide critical trajectory parameter values for assessing the Space Shuttle in a heads-up configuration launched from the Western Test Range (STR). This analysis was conducted using a trajectory profile based on a launch from the WTR in December. The analysis consisted of the following steps: (1) nominal trajectories were simulated under the conditions as specified by baseline reference mission guidelines; (2) dispersion trajectories were simulated using predetermined parametric variations; (3) requirements for a system-related composite trajectory were determined by a root-sum-square (RSS) analysis of the positive deviations between values of the aerodynamic heating indicator (AHI) generated by the dispersion and nominal trajectories; (4) using the RSS assessment as a guideline, the system related composite trajectory was simulated by combinations of dispersion parameters which represented major contributors; (5) an assessment of environmental perturbations via a RSS analysis was made by the combination of plus or minus 2 sigma atmospheric density variation and 95% directional design wind dispersions; (6) maximum aerodynamic heating trajectories were simulated by variation of dispersion parameters which would emulate the summation of the system-related RSS and environmental RSS values of AHI. The maximum aerodynamic heating trajectories were simulated consistent with the directional winds used in the environmental analysis. Author

ANALYTICAL INVESTIGATION OF THE DYNAMICS OF TETHERED CONSTELLATIONS IN EARTH ORBIT, PHASE 2
Enrico C. Lorenzini Jul. 1986 59 p
(Contract NAS8-36606)
(NASA-CR-178901; NAS 1.26:178901; QR-5) Avail: NTIS HC A04/MF A01 CSCL 22A

The analytical model and software implementation of n-mass, three dimensional tethered systems are discussed. The newly developed computer code is then used for simulating the 3-dimensional dynamics of a 4-mass tethered system. The 4-mass tethered system is designed in order to provide a micro-g environment on board the space station while variable-g experiments are performed on a laboratory moving along the upward tether segment. Extensive simulation runs illustrate both the undamped, free response and the damped dynamics response of the system. Passive longitudinal dampers and subsequently active damping algorithms, effective against the in-plane dynamics, are added to the system. Their separate effects upon the various vibrational modes are clearly shown by relevant simulation runs. Author

STUDY OF INFORMATION DISSEMINATION BY SATELLITE, RIDER 2: CULTURAL SATELLITE CONSORTIUM: WIDENING THE SCOPE Final Report
Brian G. Champness Paris ESA Aug. 1985 54 p
(Contract ESA-5820/84-NL-DG)
(ESA-CR(P)-2171-Vol-2; ETN-86-97489-Vol-2) Avail: NTIS HC A04/MF A01

The need for a European Cultural Satellite Consortium to manage the participation of educational and cultural organizations in ESA's Olympus satellite program was established. The feasibility of widening its scope, by bringing in medical, health and other public service bodies was examined. Guidelines for its planning and development, drawing on the experience of the Public Service Satellite Consortium, Washington, were drawn up. Ways of strengthening its economic and entrepreneurial base were considered. A set of objectives, a list of major functions, a suggested structure, and suggestions for its management are given. ESA

INFLUENCE OF STRUCTURAL PARAMETER UNCERTAINTIES ON FLEXIBLE SPACE STRUCTURAL CONTROL PERFORMANCES
L. Passeron 1986 29 p Presented at American Control Conference Workshop on Identification and Control of Flexible Space Structures, San Diego, Calif., 4-8 Jun. 1984
(SNIAS-861-440-104; ETN-86-97613) Avail: NTIS HC A03/MF A01

A geometric approach to check controllability and observability properties of light flexible space structures is presented. A matrix model of general autonomous linear systems is described. The system properties are decoupled on each characteristic subspace of the respective matrices. Straightforward criteria expressions are given. A quantitative analysis of the system properties versus parametric uncertainties is given. The results are applied to large flexible space structures. It is shown that the method enables a thorough investigation of structural parameter uncertainties on observability and controllability properties. ESA

ESABASE EXTENSION TO SPACECRAFT CHARGING Final Report
M. Frezet Paris ESA 17 Jun. 1986 125 p
(Contract ESTEC-3-5632/83-NL-PP)
(MATRA-CMT-TS101/RT/16.85; ESA-CR(P)-2191; ETN-86-97792)
Avail: NTIS HC A06/MF A01

A system level tool, ESABASE/CHARGING, to simulate spacecraft charging in space conditions (geosynchronous) and test tank environment is described. The software results from the coupling of NASCAP with ESABASE/MATVIEW. It offers an integrated framework with automatic file management. Up to 30 different files are generated during a typical simulation. A high-level input langauge is automatically interpreted to generate the rigid NASCAP inputs. A 3-D preprocessor sets up the NASCAP model. A fully 3-D postprocessor allows the visualization of user-defined parameters for a selected cycle on the spacecraft. The 3-D postprocessor is easy to use and fast. Improved NASCAP auxiliary codes plot colored equipotentials or various graphics with UDISP. ESA

STANDARD CALIBRATION PROCEDURE FOR IR SENSORS ON SPINNING SATELLITES. VOLUME 3: OTS AND GEOS-2 IN FLIGHT DATA ANALYSIS Final Report
Roberta Baldassini Fontana and Lido Cecconi Paris, France ESA Jun. 1981 344 p
(Contract ESTEC-3843/79-NL-DG(SC))
(Rept-209-DT-58-Vol-3; ESA-CR(CP)-2155-Vol-3; ETN-86-97488)
Avail: NTIS HC A15/MF A01

An Earth radiance seasonal model derived from an infrared experiment flown on the ESRO 4 satellite in 1974 was verified using flight data from OTS and GEOS-2 satellites. The model, deduced by analysis of in flight measurements is compared with the NASA model based upon experiments and theoretical studies. The comparison between in flight and simulated data does not reveal a best model, but forms a basis for qualifying both IR Earth radiance representations for describing the long term variations which may affect IR pencil beam measurements. The tests show that visualizing the flight residuals is a very useful check for validating the in flight attitude estimate. Anomalies in the preflight calibration can be detected a posteriori. ESA

ELECTRICAL POWER SYSTEM FOR THE U.S. SPACE STATION
Donald L. Nored and George J. Hallinan (Rockwell International Corp., Canoga Park, Calif.) 1986 12 p Presented at the 37th Congress of the International Astronautical Federation, Innsbruck, Austria, 4-11 Oct. 1986
(NASA-TM-88856; E-3249; NAS 1.15:88856; IAF-86-37) Avail: NTIS HC A02/MF A01 CSCL 04O

The Space Station Electrical Power System presents many interesting challenges. It will be much larger than previous space power systems, and it must be designed for on-orbit maintenance and replacement, along with having a growth capability. The power generation, energy storage, and power management and distribution (PMAD) subsystems comprise the primary elements of the overall system. Each was analyzed by NASA Lewis Research Center and its two contractors -- Rocketdyne and TRW -- in the definition studies of the program to determine the optimum approach to minimize initial costs and life cycle costs. For the PMAD subsystem, a ring bus architecture operating at 440 V, 20 kHz, single phase, was selected. Photovoltaic and solar dynamic power generation subsystems were both studied. Major tradeoffs were made for each subsystem and for the overall system, and a hybrid system (both photovoltaic and solar dynamic) was selected. Author

THE SPACE STATION POWER SYSTEM
Cosmo R. Baraona 1986 12 p Presented at the Fifth Conference on Photovoltaic Generators in Space, Noordwijk, Netherlands, 30 Sep. - 4 Oct. 1986; sponsored by ESA
(NASA-TM-88847; E-3237; NAS 1.15:88847) Avail: NTIS HC A02/MF A01 CSCL 22B

The manned space station is the next major NASA program. It presents many challenges to the power system designers. The power system in turn is a major driver on the overall configuration. In this paper, the major requirements and guidelines that affect the station configuration and the power system are explained. The evolution of the space station power system from the NASA program development-feasibility phase through the current preliminary design phase is described. Several early station concepts, both fanciful and feasible, are described and linked to the present concept. The recently completed Phase B trade study selections of photovoltaic system technologies are described in detail. A summary of the present solar dynamic and power management and distribution systems is also given for completeness. Author

PROVEN, LONG-LIFE HYDROGEN/OXYGEN THRUST CHAMBERS FOR SPACE STATION PROPULSION
G. Paul Richter and Harold G. Price 1986 20 p Presented at the 1986 JANNAF Propulsion Meeting, New Orleans, La., 26-28 Aug. 1986; sponsored by JANNAF Interagency Propulsion Committee
(NASA-TM-88822; E-3171; NAS 1.15:88822) Avail: NTIS HC A02/MF A01 CSCL 21H

The development of the manned space station has necessitated the development of technology related to an onboard auxiliary propulsion system (APS) required to provide for various space station attitude contr orbit positioning, and docking maneuvers. A key componen of this onboard APS is the thrust chamber design. To develop the required thrust chamber technology to support the Space Station Program, the NASA Lewis Research Center has sponsored development programs under contracts with Aerojet TechSystems Company and with Bell Aerospace Textron Division of Textron, Inc. During the NASA Lewis sponsored program with Aerojet TechSystems, a 25 lb sub f hydrogen/oxygen thruster has been developed and proven as a viable candidate to meet the needs of the Space Station Program. Likewise, during the development program with Bell Aerospace, a 50 lb sub f hydrogen/oxygen Thrust Chamber has been developed and has demonstrated reliable, long-life expectancy at anticipated space station operating conditions. Both these thrust chambers were based on design criteria developed in previous thruster programs and successfully verified in experimental test programs. Extensive thermal analyses and models were used to design the thrusters to achieve total impulse goals of 2 x 10 to the 6th power lb sub f-sec. Test data for each thruster will be compared to the analytical predictions for the performance and heat transfer characteristics. Also, the results of thrust chamber life verification tests will be presented. Author

HEAT TRANSFER MODELLING OF THRUST VECTOR CONTROL SYSTEMS M.S. Thesis
Alp Yukselen Mar. 1986 199 p
(AD-A167933) Avail: NTIS HC A09/MF A01 CSCL 20/13

A model of heat transfer phenomenon in thrust vector control systems is presented, using the PHOENICS computer code. To simplify the problem of heat transfer to solid objects in rocket exhaust, simple wedge bodies have been examined in supersonic gas flow for both turbulent and laminar flow cases. The study gives an estimate of skin friction coefficient, surface heat flux, heat transfer coefficient, Stanton number distributions, and computer run times. GRA

SOLID FUEL BURN ENHANCER Patent Application
Nagy, inventor (to Air Force) Filed 17 Mar. 1986 20 p
(AD-D012331; US-Patent-Appl-SN-840619) Avail: NTIS
HC A02/MF A01 CSCL 21/9

This patent application relates generally to solid fuel ramjet engines, and more specifically to a solid rocket motor construction which allows the burn rate to be controlled by variations in the oxidizer content. A solid rocket motor grain construction is disclosed for use in a ramjet to improve performance. The solid fuel burn enhancer adds oxidizer for burn rate control. Two constructions are disclosed. The inlaid approach places cores of solid low-oxidizer fuel within solid unoxidized fuel and the integrated approach provides shells of low-oxidizer around the solid unoxidized fuel. The low-oxidizer fuel has a faster burn rate and smaller burn area requirements than the unoxidized fuel. During initial ramjet operation, when the burn area is constrained, the low oxidizer fuel burns initially with its smaller burn area requirements. Subsequently, the conventional unoxidized fuel burns when larger burn areas are available. GRA

POLYARYLENE ETHERS WITH IMPROVED PROPERTIES Patent Application
Paul M. Hergenrother, inventor (to NASA), Brian J. Jensen, inventor (to NASA), and Stephen J. Havens, inventor (to NASA) (PRC Kentron, Inc., Hampton, Va.) 5 Jun. 1986 18 p
(NASA-Case-LAR-13555-1; US-Patent-Appl-SN-871207) Avail: NTIS HC A02/MF A01 CSCL 07A

This invention relates to novel polyarylene ethers which possess the combination of high strength, toughness, and high use temperature with ease of extrusion and formation into complex objects. These polyarylene ethers are suitable for use in adhesives, coatings, films, membranes, and composite matrices. The polyarylene ethers of this invention are the polycondensation products from the reaction of either 1,3-bis (4-chloro or fluorobenzoyl) benzene with any one of the following bisphenolic compounds: bis (3-hydroxyphenyl) methane; bis (4-hydroxyphenyl) methane; 1,1-dimethyl-bis (4-hydroxyphenyl)methane, or 9,9-bis (4-hydroxyphenyl) fluorene. Random and block copolymers are also comprehended. NASA

24 COMPOSITE MATERIALS

Includes laminates.

N86-32527 Purdue Univ., West Lafayette, Ind.
IMPACT DAMAGE CHARACTERIZATION IN LAMINATED COMPOSITES Ph.D. Thesis
Shiv Prakash Joshi 1985 159 p
Avail: Univ. Microfilms Order No. DA8529286

Comprehensive studies of impact induced fracture in laminated composites are lacking, largely because of the complexity of the problem. An effort is made to provide a starting point for a simple working model for an impact induced fracture. An interactive study which uses a finite element numerical analysis together with experimental observations is done. A three layer cross ply graphite epoxy laminate is initially chosen for both experimental and numerical studies. The studies done on cross ply laminates are extended to quasi isotropic laminates. Experimental data for the three dimensional problem of impact of a flat strip by a spherical impactor are presented and interpreted qualitatively by comparison with a plane strain numerical analysis of an infinitely wide plate impacted by a cylindrical impactor. The role of transverse shear stress and flexural stress in damage initiation is established. A detailed presentation of damage is provided with exact delamination zones. Strain responses, using a plate finite element, are correlated with the experimental observations to provide a simple model for damage initiation in laminated composites. The results established that the crack in the distal ply (opposite to the impact side) is produced when the transverse flexural strain in the ply reaches 9000 micro strain in the impact zone. Dissert. Abstr.

EFFECTS OF EXTERNAL ENVIRONMENTS ON THE SHORT BEAM SHEAR STRENGTH OF FILAMENT WOUND GRAPHITE/EPOXY Center Director's Discretionary Fund Final Report
B. G. Penn and J. M. Clemons Jul. 1986 14 p
(NASA-TM-86553; NAS 1.15:86553) Avail: NTIS
HC A02/MF A01 CSCL 11D

Filament wound graphite/epoxy samples were immersed in seawater, deionized water, and toluene at room temperature and 80 deg C for 5, 15, and 43 days, and in methanol at room temperature for 15 and 43 days. The percent weight gains and short beam shear strengths were determined after environmental exposure. Samples immersed in deionized water and seawater had higher percent weight gains than those immersed in toluene at room temperature and 80 deg C. The percent weight gains for samples immersed in methanol at room temperature were comparable to those of deionized water and seawater immersed samples. A comparison of percent decreases in short beam shear strengths could not be made due to a large scatter in data. This may indicate defects in samples due to machining or variations in material properties due to processing. Author

FRACTURE MECHANICS OF MATRIX CRACKING AND DELAMINATION IN GLASS/EPOXY LAMINATES
M. Caslini, C. Zanotti, and T. K. OBrien Sep. 1986 42 p Prepared in cooperation with Army Aviation Systems Command, St. Louis, Mo.
(DA Proj. 1L1-61102-8-H45)

(NASA-TM-89007; NAS 1.15:89007; AVSCOM-TR-86-B-3) Avail: NTIS HC A03/MF A01 CSCL 11D

This study focused on characterizing matrix cracking and delamination behavior in multidirectional laminates. Static tension and tension-tension fatigue tests were conducted on two different layups. Damage onset, accumulation, and residual properties were measured. Matrix cracking was shown to have a considerable influence on residual stiffness of glass epoxy laminates, and could be predicted reasonably well for cracks in 90 deg piles using a simple shear lag analysis. A fracture mechanics analysis for the strain energy release rate associated with 90 deg ply-matrix crack formation was developed and was shown to correlate the onset of 90 deg ply cracks in different laminates. The linear degradation of laminate modulus with delamination area, previously observed for graphite epoxy laminates, was predicted for glass epoxy laminates using a simple rule of mixtures analysis. The strain energy release rate associated with edge delamination formation under static and cyclic loading was difficult to analyze because of the presence of several contemporary damage phenomena. THERMAL ANALYSIS OF VARIOUS EPOXY MIXTURES Final Report
Bernard R. LaLiberte and Robert E. Sacher Mar. 1986 16 p
(AD-A167609; MTL-TR-86-8) Avail: NTIS HC A02/MF A01 CSCL 11/9

There are three distinct types of epoxides in the SP-250 system. The epoxides were individually mixed with monuron. Also, three-component mixtures, epoxide + Dicy/Monuron, were prepared with dicyandiamide. The mixtures were cured by differential scanning calorimetry. It was found that the isothermal heat of reactions of the two- and three-component systems were in reasonable agreement with the respective dynamic reactions, consequently, the extent of isothermal cures could be determined from the two heating modes. The synergistic effect of dicyandiamide and monuron, on the curing process, was simulated by the isothermal reaction of two mixtures. A type of reaction kinetics having the dimensions of temperature per time was evaluated i. this report. GRA

TENSILE AND FATIGUE BEHAVIOR OF ALUMINA FIBER REINFORCED MAGNESIUM COMPOSITES
John Nunes, Ernest S. C. Chin, John M. Slepetz, and Nikolaos Tsangarakis Mar. 1986 33 p
(AD-A167725; MTL-TR-86-7) Avail: NTIS HC A03/MF A01 CSCL 11/4

Tensile and fatigue properties of as-cast polycrystalline alumina fiber reinforced magnesium (ZE41A) composites were determined as a function of fiber orientation and fiber content. Fiber dominant properties were studied on four fiber volume fractions of 35, 40, 45 and 55 percent at 24 C and 200 C testing temperatures. Off-axis, matrix dominant properties were investigated at a constant fiber volume fraction (55 percent) at 24 C. An attempt was also made to identify the effects of the fiber/matrix interface, matrix chemistry and residual stresses on the resultant mechanical behavior of these composites. GRA

Emphasis of this work is to develop finite element micromechanics models to predict the thermomechanical material properties for unidirectional carbon-carbon composite materials. These properties are then used to define the fiber bundle properties in a finite element minimechanics analysis of a three-dimensional rectangular weave carbon-carbon unit cell. The objective of the present work was to analytically model a three-dimensionally reinforced carbon-carbon composite material in order to better understand previously obtained experimental results. Analysis of carbon-carbon materials may be conducted at three geometric levels, typically referred to as micromechanics, minimechanics, and macromechanics. Features of these analyses include capabilities to model nonlinear temperature-dependent constituent material behavior and procedures to predict damage initiation and crack propagation. GRA

EFFECT OF TIME-TEMPERATURE PATH OF CURE ON THE WATER ABSORPTION OF HIGH T SUB g EPOXY RESINS Technical Report, 1 Jul. 1984 - 1 May 1986
M. T. Aronhime, John K. Gillham, and R. D. Small May 1986 88 p Prepared in cooperation with AT and T Technologies, Princeton, N. J.
(Contract N00014-84-K-0021)
(AD-A168106; TR-8) Avail: NTIS HC A05/MF A01 CSCL 11/9

The effect of different time-temperature paths of cure on the water absorption of high t sub g epoxy resins has been investigated. The resins were cured isothermally at elevated temperatures for different times, with the following results: as extent of cure increased, the glass transition temperature (t sub g) increased, the room temperature (RT) modulus decreased, the RT density decreased, the RT diffusion coefficient appeared to decrease, and RT equilibrium absorption of water increased. The decrease in RT density is related to an increase in volume, which controls the amount of water absorbed. A qualitative model accounts for the increase in RT volume with increasing cure. The model is based on a restricted decrease of free volume on cure due to rigid molecular segments in the cured resin systems. A thermodynamic approach, independent of the absorption mocel, can correlate sorption data at different temperatures. The diglycidyl resin was also cured for extended times at three temperatures in an effort to achieve full cure at each temperature. Their equilibrium water absorption increased with increasing cure temperature, consistent with the decrease in RT density. The systems studies were a diglycidyl ether of bisphenol A cured with an aromatic tetrafunctional diamine, trimethylene glycol di-p-aminobenzoate (T sub g infinity = 156 C), and a triglycidyl ether of tris(hydroxyphenyl)methane cured with the same amine (T sub g infinity = 268 C). IMPROVEMENT AND OPTIMIZATION OF INTERNAL DAMPING IN FIBER REINFORCED COMPOSITE MATERIALS Final Report, Jun. 1983 - Nov. 1985
R. F. Gibson and S. A. Suarez 3 Mar. 1986 225 p
(Grant AF-AFOSR-0156-83)
(AD-A168576; AFOSR-86-0330TR) Avail: NTIS HC A10/MF A01 CSCL 11/4

The objective of this research were to study the effects of such parameters as fiber aspect ratio, fiber orientation and fiber/matrix properties on damping in fiber reinforced polymer composites. These objectives were to be met by using both experimental and analytical approaches. The development of improved techniques for fabrication and testing of specimens and the development of relatively simple design equations for prediction of damping were desirable goals which were also met. Two new computer-aided testing techniques based on the impulse frequency response approach were developed. Specimens of graphite/epoxy, boron/epoxy and Kevlar aramid/epoxy were fabricated by using an autoclave-style press cure which was developed specifically for this program. Although a number of parameters were studied, the emphasis was on the influence of fiber length, fiber orientation and fiber material on damping of polymer composites. The experimental results show that, as predicted, very low fiber aspect ratios are required to produce significant improvements in damping. Of the three fiber types tested, the Kevlar aramid fiber composite was found to have much better damping than graphite or boron fiber composites. Measurements and predictions also indicate that the control of fiber orientation in a continuous fiber reinforced

laminate may be a better approach to the improvement of damping than the control of fiber aspect ratio. GRA

FIBER COATINGS FOR THE FABRICATION OF GRAPHITE-REINFORCED MAGNESIUM COMPOSITES
Howard A. Katzman 15 May 1986 29 p
(Contract F04701-85-C-0086)
(AD-A168805; TR-0086(6935-14)-2; SD-TR-86-23) Avail: NTIS HC A03/MF A01 CSCL 11/3

A new fabrication technique for graphite-fiber-reinforced magnesium is presented. An air-stable silicon-dioxide coating is deposited on the fiber surfaces from an organometallic precursor solution. The fibers are passed through this solution followed by hydrolysis or pyrolysis of the organometallic compound to form silicon dioxide on the fiber surfaces. The silicon-dioxide coating facilitates wetting and bonding when the fibers are immersed in molten magnesium. A modification of this coating technique was developed for coating fibers with amorphous carbon, which was found to improve the adhesion between the graphite fibers and the silicon-dioxide coating. Composites containing either T300, P55, or P100 graphite fibers in pure magnesium - 1% silicon, and magnesium alloy AZ91 have been fabricated. Preliminary mechanical property data are presented. GRA

A method of exchanging rare-isotope oxygen for common-isotope oxygen in the top several layers of an oxide-containing catalyst is disclosed. A sample of an oxide-containing catalyst is exposed to a flowing stream of reducing gas in an inert carrier gas at a temperature suitable for the removal of the reactive common-isotope oxygen atoms from the surface layer or layers of the catalyst without damaging the catalyst structure. The reduction temperature must be higher than any at which the catalyst will subsequently operate. Sufficient reducing gas is used to allow removal of all of the reactive common-isotope oxygen atoms in the top several layers of the catalyst. The catalyst is then reoxidized with the desired rare-isotope oxygen in sufficient quantity to replace all of the common-isotope oxygen that was removed. NASA

(NASA-Case-LAR-13540-1; US-Patent-Appl-SN-874320) Avail: NTIS HC A02/MF A01 CSCL 07D

A pretreatment and reactivation process for enhancing the recombination activity of an oxide-containing catalyst is disclosed. Pretreatment is achieved by first exposing the catalyst to a flowing stream of a reducing agent in an inert carrier gas while the catalyst is heated to a temperature greater than its operating temperature. The catalyst is then exposed to a flowing stream of the inert carrier gas in pure form at the same temperature. Finally, the catalyst is cooled to its operating temperature in a flowing stream of the inert carrier gas in pure form. Reactivation is achieved by merely reheating the catalyst, in the presence of CO-containing recombining gases, to a temperature greater than its operating temperature and then recooling the catalyst to its operating temperature. SINGLE-SHOT H(2) CARS SPECTROSCOPY OF PROPELLANT IGNITION AND COMBUSTION UNDER PRESSURE Final Report, Oct. 1984 - Oct. 1985
T. E. Haw, S. Darrah, and L. E. Harris May 1986 37 p
(Contracts DAAK10-81-C-0265; DAAA21-85-C-0139)
(AD-A168054; ARAED-TR-85006) Avail: NTIS HC A03/MF A01 CSCL 21/2

A single-shot H(2) CARS spectrometer was developed, and experimental considerations for accurate thermometry were examined. The spectrometer is capable of synchronization with external events such as laser-initiated propellant ignition or ballistic compression, given an inherent delay time of 250 microseconds and a predetermined diagnostic time window approaching 1 second. Additional capability to operate in a double Q-switched mode (two diagnostic probes 60 to 90 microseconds apart) has been demonstrated, with inherent delay time of 190 microseconds. Application to static samples of H(2) and to an H(2)/0(2) flame reveal unreferrence errors approaching 10% or more in temperature determination, and indicate the necessity for simultaneous standardization in accurate thermometry. Intensity determination in an unreferrenced fashion reveals fluctuations of 30%, with contributions from YAG and dye laser intensity and phase fluctuations. Q-branch lines from the first vibrational state (beta = 1) of hydrogen were observed for the first time in the H(2)/0(2) flame using this apparatus. Facilities have been established with which to perform single-shot H(2) CARS diagnostics on propellant ignition and flame under pressure. Preliminary experiments indicate the choice of background gas, flow rates through the pressure cell, YAG laser fluence, and dye laser spectral width are critical factors in the development of a working protocol. NEAR- AND SUPER-CRITICAL DROPLET COMBUSTION
R. H. Rangel, A. C. Fernandez-Pello, and A. K. Oppenheim Nov. 1985 24 p
(Contracts DE-AC03-76SF-00098; DAAED7-85-C-R025)
(DE86-009215; LBL-20711) Avail: NTIS HC A02/MF A01

A review is presented of theoretical and experimental studies carried out over the last 25 years on the problem of droplet heating, vaporization, and combustion at near- and super-critical conditions. Following a detailed description of the classical quasi-steady theory, particular attention is given to major departures from it, that must be considered in a super-critical droplet combustion model. This includes unsteady heating and gas-phase diffusion, as well as the influence of ambient conditions, fuel-vapor accumulations, convective heat transfer and gas solubility. DOE

IGNITION AND COMBUSTION OF FUEL DROPLETS AND THE IGNITION OF PREMIXED FUELS BY HOT CYLINDRICAL SURFACES
R. H. Rangel, A. C. Fernandez-Pello, and A. K. Oppenheim Nov. 1985 131 p
(Contract DE-AC03-76SF-00098)
(DE86-009262; LBL-20712) Avail: NTIS HC A07/MF A01

Two types of combustion problems relevant to the gasification, ignition and combustion of fuels in combustion chambers using sprays are theoretically analyzed using mathematical and numerical techniques. The problem of the vaporization, ignition and subsequent combustion of a fuel droplet in a hot convective flow at atmospheric or moderately elevated pressures is analyzed using boundary layer theory around a spherical fuel droplet. The preliminary stages leading to the onset of ignition are treated as a perturbation of the boundary-layer non-reacting flow using the method of matched asymptotic expansions. The quasi-steady laminar combustion regime of the fuel droplet is analyzed using the flame-sheet approximation. The internal circulation of the liquid phase is also included in the analysis. The results show that ignition occurs towards the rear of the droplet where the residence time is longer. The droplet burning rate, however, is maximum at the forward stagnation point where the boundary layer is thinner. Liquid internal motion has only a minor influence on the burning characteristics of the droplet. A second group of problems studied is the quasi-steady thermal ignition of a premixed combustible gas flowing in mixed-convective conditions past a hot cylindrical, inert or catalytic, surface. The laminar boundary-layer equations including finite-rate kinetics are solved and the location of the ignition region is determined using the method of matched asymptotic expansions for large activation energies. Ignition is shown to occur very close to the surface where the temperatures are higher and downstream of the forward stagnation point where the heat losses are smaller. DOE

USE OF GAS IMAGING AS A MEANS OF LOCATING LEAKS AND TRACKING GAS CLOUDS
T. McRae and J. Stahovec Apr. 1986 20 p Presented at the American Institute of Chemical Engineers Spring National Meeting, New Orleans, La., 6 Apr. 1986 Prepared in cooperation with Naval Sea Systems Command, Washington, D.C.
(Contract W-7405-eng-48)
(DE86-010786; UCRL-93783; CONF-860447-4) Avail: NTIS HC A02/MF A01

A new concept for the detection and tracking of toxic or flammable gases resulting from accidental spills or leaks is presented. The Backscatter/Absorption Gas Imaging (BAGI) technique is based on the optical radiation augmentation of the field of view of an imaging device by laser radiation corresponding to an absorption line of the gas species to be detected. The laser power requirements are greatly reduced by synchronizing the unexpanded laser beam with the raster-like, scanning field of view of a flying-spot imaging system. Several different configurations of possible BAGI systems are presented. In addition, a list of detectability limits for toxic and flammable materials that absorb carbon dioxide (CO) laser radiation is included. The current status and future plans of the NAVSEA BAGI development program are explained. DOE

SAMPLING MANIFOLD FOR GAS ANALYSIS Final Report
E. N. Fuller May 1986 18 p
(Contract DE-AC04-76DP-00613)
(DE86-010775; BDX-613-3426) Avail: NTIS HC A02/MF A01

A design concept for a sampling manifold system for gas analysis has been developed and tested. The design provides for elimination of repeated manual cylinder-to-instrument connections and for concurrent testing with multiple instruments without interference or cross-contamination. A prototype manifold incorporating these design features has been built and performance tested. The manifold, while not a complete system, represents a major building block in a complete system. The tests and actual operating experience demonstrate that the approach is a valid one which allows the instruments used in gas analysis to be incorporated into a unified system achieving increased ease of analysis and a substantial reduction in labor. DOE

INVESTIGATION OF CERTAIN CHARACTERISTICS OF ACOUSTIC EMISSION DURING DEFORMATION OF MATERIALS
V. I. Petrov, V. V. Kazakov, and N. A. Chelyshev 1986 4 p Transl. into ENGLISH from Izv. VUZ Chernaya Metall. (USSR), no. 2, 1986 p 151-152
(BLL-M-Trans-36869-(5828.4)) Avail: British Library Lending Div., Boston Spa, Engl.

The data obtained from experimental research provide the conclusion that it is important to study the amplitude distributions of the acoustic emission signals as well as the frequency with which they are selected. Specific deformation mechanisms obviously give rise to the occurrence of acoustic emission signals with characteristic frequencies peculiar to these mechanisms. It is also pointed out that for detailed examination of this question the results obtained by methods employing the recording of audible emission signals must be correlated with the metallographic changes taking place in the structure of the material during deformation. ION-BEAM NITRIDING OF STEELS Patent Application
Joshua Salik, inventor (to NASA) and Theodore E. Hubbell, Jr., inventor (to NASA) Filed 29 Jan. 1986 11 p
(NASA-Case-LEW-14104-2; US-Patent-Appl-SN-823713) Avail: NTIS HC A02/MF A01 CSCL 11F

A surface of a steel substrate is nitrided without external heating by exposing it to a beam of nitrogen ions under a low pressure. The pressure is much lower than that employed for ion-nitriding, and an ion source is used instead of a glow discharge. Both of these features reduce the introduction of impurities into the substrate surface. NASA

N86-32557*# National Aeronautics and Space Administration. Lewis Research Center, Cleveland, Ohio.
CREEP PROPERTIES OF PWC-11 BASE METAL AND WELDMENTS AS AFFECTED BY HEAT TREATMENT
R. H. Titran, T. J. Moore, and T. L. Grobstein 1986 19 p Presented at the 115th TMS Annual Meeting, New Orleans, La., 2-6 Mar. 1986; sponsored by AIME
(NASA-TM-88842; E-3227; NAS 1.15:88842) Avail: NTIS HC A02/MF A01 CSCL 11F

In a preliminary study using single specimens for each condition, PWC-11 (a niobium-base alloy with a nominal composition of Nb-1%Zr-0.1%C) was creep tested at 1350 K and 40 MPa. Base metal specimens and specimens with transverse electron beam welds were tested with and without a 1000 hr, 1350 K aging treatment prior to testing. In the annealed condition (1 hr at 1755 K + 2 hr at 1475 K), the base metal exhibited superior creep strength compared to the nonaged condition, reaching 1 percent strain in 3480 hr. A 1000 hr, 1350 K aging treatment prior to creep testing had a severe detrimental effect on creep strength of the base metal and transverse electron beam weldments, reducing the time to attain 1 percent strain by an order of magnitude. Extrapolated temperature compensated creep rates indicate that the present heat of PWC-11 may be four times as creep resistant as similarly tested Nb-1%Zr. The extrapolated stress to achieve 1 percent creep strain in 7 yr at 1350 K is 2.7 MPa for annealed Nb-1%Zr and 12 MPa for annealed and aged PWC-11 base metal with and without a transverse electron beam weld. VARIATIONS IN THE MICROSTRUCTURE OF NICKEL-BASED ALLOY COATINGS WITH THE METALLOIDS BORON AND SILICON AS A FUNCTION OF DEPOSITION PARAMETERS IN A DUAL BEAM ION SYSTEM
J. K. G. Panitz 1986 18 p Presented at the International Conference on Metallurgical Coatings, San Diego, Calif., 7 Apr. 1986
(Contract DE-AC04-76DP-00789)
(DE86-009283; SAND-86-0763C; CONF-860495-4) Avail: NTIS HC A02/MF A01

Coatings have been deposited using a dual beam ion source system with two different targets as sputtering sources: (1) a predominantly amorphous Ni sub 63.5 Cr sub 12.3 Fe sub 3.5 Si sub 7.9 B sub 12.8 foil, and (2) a crystalline Ni sub 55.3 Cr sub 16.9 Si sub 7.2 B sub 21.6 slab from a casting. Amorphous coatings were produced by the foil for all conditions studied. The coatings that were deposited from the slab target that were less than 400 nm in thickness which were deposited at rates from 8 to 50 nm/min appeared to be amorphous. The thicker (greater than 400 nm) coatings and the extremely low deposition rate (2 nm/min) coatings produced by the slab comprised both partially polycrystalline and amorphous material. All of the coatings studied exhibited inferior wear and erosion resistance properties compared to iron-based amorphous metal coatings containing Ti, C, or N. However, the corrosion resistance to 4 N HCl is good, ranging from less than 0.01 mm/y to 0.22 mm/y as a function of deposition rate, concurrent ion bombardment conditions and coating thickness. DOE

SOLUTE SEGREGATION AND MICROSTRUCTURAL EVOLUTION IN ION-IRRADIATED VANADIUM-BASE ALLOYS
B. A. Loomis, B. J. Kestel, and S. B. Gerber Feb. 1986 26 p Presented at the 13th International Symposium on the Effects of Radiation on Materials, Seattle, Wash., 23 Jun. 1986
(Contract W-31-109-eng-38)
(DE86-007513; CONF-860605-8) Avail: NTIS HC A03/MF A01

The microstructural evolution in V+14.7 a/o Cr, V+2.5 a/o Mo, V+2.5 a/o W, V+8.0 a/o Ni, V+5.3 a/o Ti, V+14.7 a/o Cr + 5.2 a/o Ti, V+9.6 a/o Cr + 3.1 a/o Fe+0.7 a/o Zr, and V+3.2 a/o Ti + 1.8 a/o Si alloys, and unalloyed V was determined from observations of specimens by TEM following 4.0-MeV (51)V(++) ion irradiation at 900 to 970 K to 50 dpa. The RIS of solutes in the ion-irradiated alloys was investigated by AES, EDXS, and EELS analyses. The RIS of solutes and microstructural evolution in the irradiated alloys were correlated with the solute diffusivity and the relative chemical affinity of the substitutional solutes for oxygen. DOE

STRAIN ANALYSIS FOR EXTRUSION OF POWDER METALS
D. G. Berghaus, R. J. Primas, and H. B. Peacock 1986 27 p Presented at the SEM Spring Conference on Experimental Mechanics, New Orleans, La., 8 Jun. 1986 Prepared in cooperation with Du Pont de Nemours (E.I.) and Co., Aiken, S.C.
(Contract DE-AC09-76SR-00001)
(DE86-007167; DP-MS-85-130; CONF-860682-1) Avail: NTIS HC A03/MF A01

This paper describes an experimental-numerical method for determining the strain distribution during axisymmetric extrusion of

powder metals (P/M). The visioplastic method is modified to include variable density. The method is applied to extrusion of a powder aluminum billet. It was found that the smoothed-spline approximation functions did not permit sufficiently good fits adjacent to the boundaries of the approximation intervals due to the prescribed zero values of the second derivatives at the spline boundaries. The smoothed-spline was modified to permit specified boundary second derivatives. DOE

COMPLEMENTARY AES AND AEM OF GRAIN BOUNDARY REGIONS IN IRRADIATED GAMMA-STRENGTHENED ALLOYS
K. Farrell, N. Kishimoto, R. E. Clausing, L. Heatherly, and G. L. Lehman 1986 18 p Presented at the 2nd International Conference on Fusion Reactor Materials (ICFRM-2), Chicago, Ill., 13 Apr. 1986 Prepared in cooperation with National Research Inst. for Metals, Ibaraki, Japan
(Contract DE-AC05-84OR-21400)
(DE86-010397; CONF-860421-33) Avail: NTIS HC A02/MF A01

Two microchemical analysis techniques are used to measure solute segregation at grain boundaries in two gamma'-strengthened, fcc Fe-Ni-Cr alloys that display radiation-induced intergranular fracture. Scanning Auger electron spectroscopy (AES) of grain boundary fracture surfaces and analytical electron microscopy (AEM) of intact grain boundaries using energy-dispersive x-ray spectroscopy show good agreement on the nature and extent of segregation. The elements Ni, Si, Ti, and Mo are found to accumulate in G, Laves and gamma' phases on the grain boundaries. Segregation of P is detected by AES. The complementary features of the two analytical techniques are discussed briefly. DOE

WELDABILITY, MICROSTRUCTURE AND PROPERTIES OF PRECIPITATION STRENGHTENED MARTENSITIC STAINLESS STEELS
J. A. Brooks, W. R. Cieslak, and W. M. Garrison, Jr. 1986 25 p Presented at the ASM International Trends in Welding Research Meeting, Gatlinburg, Tenn., 18 May 1986
(Contract DE-AC04-76DP-00789)
(DE86-010955; SAND-85-2521C; CONF-860594-2) Avail: NTIS HC A02/MF A01

The influence of welding on the mechanical properties and corrosion resistance of two precipitation strengthened martensitic stainless steels: Custom 450 and PH 13-8 Mo are investigated. The two alloys exhibited very good weld cracking resistance, although the formation of a low melting NbC eutectic constituent did cause some solidification cracking in Custom 450. The effects of aging temperature on tensile and impact properties were similar in the base metal and Gas-Tungsten-Arc (GTA) weldment for both alloys. The similarity of weld and base metal properties is attributed to the uniform precipitate distribution throughout the weld, as shown by Transmission Electron Microscopy (TEM) and electron microprobe analyses. The susceptibility to pitting corrosion was not impaired by aging or by welding, with the possible exception of a narrow band in the heat-affected zone (HAZ), and both materials were more resistant than 304 stainless steel. The narrow band is identified by electrochemical reactivation testing as a region of increased matrix activity likely caused by localized Cr and/or Mo depletion. DOE

MICROSTRUCTURAL EFFECTS ON THE FATIGUE BEHAVIOR OF Fe-C-X ALLOYS Summary Progress Report
G. J. Shiflet Apr. 1986 68 p
(Contract DE-FG05-85ER-45181)
(DE86-010918; DOE/ER-45181/2; UVA-527315/MS86/101) Avail: NTIS HC A04/MF A01

This document reports on an Fe-C-Mn steel similar to the one examined by Suzuki and McEvily. This alloy was used to investigate the interaction between phase continuity and deformation behavior, with special interest on dislocation interactions. The microstructural variations examined were also used to test the model of fatigue crack growth rates developed by Chakrabortty. Two Fe-C-Mo alloys are also reported on. In these steels the relationship between ferrite, martensite and carbides is carefully controlled. As Mo has a large negative Wagner interaction parameter, copious amounts of MoC carbides in conjunction with ferrite are produced. By controlling temperature, the carbide morphology in these alloys can be altered and by controlling composition, the density of Mo2C can be changed. DOE

MECHANICAL BEHAVIOR OF SUPERALLOYS
S. Floreen Apr. 1986 37 p
(Contract DE-AC12-76SN-00052)
(DE86-010353; KAPL-4192) Avail: NTIS HC A03/MF A01

Recent developments affecting the mechanical behavior of superalloys over three ranges of operating temperatures are reviewed. At lower temperatures, activity has been focused on stress corrosion cracking susceptibility in light water reactor and sour gas well environments. The susceptibility to intergranular crack growth is critically dependent upon the grain boundary chemistry, and a method of minimizing the sensitivity of the boundaries to attack has been pursued. At intermediate temperatures, considerable effort has been directed toward increasing the tensile and fatigue strengths. The higher strength materials, however, show increased fracture sensitivity. In particular, embrittlement due to diffusion into the grain boundaries of aggressive species, such as oxygen or sulfur from the environments, becomes a problem. Minor element alloying additions of boron, zirconium, magnesium, etc., are helpful in retarding the degradation caused by the environment. At higher temperatures, the major thrust is toward improving the creep strength. The weak link in the materials, which is the transverse grain boundaries, has been eliminated by the use of specialized processing steps to produce either directionally solidified materials with minimum transverse grain boundaries, or single crystal materials. Single crystal materials permit alloying and heat treating modifications that further enhance the creep strength. The materials are very anisotropic in properties, but are successfully used in turbine blades and could be useful in other special applications. DOE

METAL-BINDING PROTEINS FOR STRATEGIC METAL RECOVERY AND METAL DETOXIFICATION
T. K. Leib, T. M. Su, and D. S. Holmes 1986 11 p
(Contract DE-FG02-84ER-13278)
(DE86-010776; DOE/ER-13278/2) Avail: NTIS HC A02/MF A01

Some naturally occurring proteins bind metals with remarkable specificity and affinity. These properties could be useful for recovering valuable metals from dilute solution or for removal of toxic metals from waste-water. We discuss the chemical syntheses and properties of several model peptides which are based on the sequence of metal-binding protein metallothionein. Also, we describe novel techniques for determining the metal-binding properties of these synthetic peptides. These techniques are also applicable to the evaluation of naturally occurring metal-binding proteins. DOE

STUDY OF THE THERMAL EVOLUTION OF CHROME-TUNGSTEN DEPOSITS ON SILICON MONOCRYSTALS Ph.D. Thesis [ETUDE DE LEVOLUTION THERMIQUE DE DEPOTS CHROME/TU NGSTENE SUR SILICIUM MONOCRIST-ALLIN]
Pascale Garcin Jan. 1986 204 p In FRENCH
(ENST-86E004; ISSN-0751-1353; ETN-86-97870) Avail: NTIS HC A10/MF A01

The thermal evolution of double metallic layers (chrome and tungsten) deposited on silicon monocrystals was studied to determine the effects of the temperature and the concentration of impurities in the metallic or interface layer. The procedure has a potential to improve the performance of VLSI circuits by reducing the interconnection length. A transmission electron microscope was used to measure the morphology and crystalographic evolution of the interfaces. Models of interaction at the layer interfaces are proposed. A model describing the typical crystal defects of the Si2Cr formed at the interface is also presented. ESA

CELLULAR THERMOSETTING FLUOROPOLYMERS AND PROCESS FOR MAKING THEM Patent Application
Sheng Yen Lee Filed 29 May 1986 12 p
(NASA-Case-GSC-13008-1; US-Patent-Appl-SN-867987) Avail: NTIS HC A02/MF A01 CSCL 11B

Thermosetting fluoropolymer foams are made by mixing fluid form thermosetting fluoropolymer components having a substantial fluorine content, placing the mixture in a pressure tight chamber, filling the chamber with a gas, at relatively low pressure, that is unreactive with the fluoropolymer components, allowing the mixture to gel, removing the gelled fluoropolymer from the chamber and thereafter heating the fluoropolymer at a relatively low temperature to simultaneously cure and foam the fluoropolymer. The resulting fluoropolymer product is closed celled with the cells storing the gas employed for foaming. The fluoropolymer resins employed may be any thermosetting fluoropolymer including fluoroepoxies, fluoropolyurethanes and fluoroacrylates. NASA

HIGH PRESSURE STUDIES ON MAGNETIC AND NONMAGNETIC METALLIC GLASSES
T. G. Ramesh and V. Shubha Aug. 1986 15 p
(NAL-TM-MT-8609) Avail: NTIS HC A02/MF A01

The effect of pressure on the transport properties viz. thermopower and resistivity of magnetic and non-magnetic metallic glasses is discussed. The absolute thermo-power (TEP) of Fe sub 80 B sub 20, a ferromagnetic metallic glass, has been measured as a function of temperature between 300 K and 1000 K upto 30 Kbar pressure. A previous study on this system at ambient pressure revealed no change in TEP at the crystallization temperature, T sub x, while the resistivity showed a sudden decrease at the same temperature. The present experimental work which employs the differential method for TEP measurement shows a distinct anomaly at T sub x even at ambient pressure and this anomaly gets enhanced under pressure. High pressure studies on the non-magnetic Ti sub 50 Be sub 40 40 Zr sub 10 system indicate that while TEP exhibits marked anomalies near the glass transition temperature and the two crystallization temperatures, the resistivity shows no perceptible anomaly near the second crystallization temperature. These experimental results have been analyzed on the basis of some current theoretical models for electron transport in glassy metals. Author

THE MILLING OF PRISTINE AND BROMINATED P-100 GRAPHITE FIBERS
Michael E. Dillehay (Cleveland State Univ., Ohio) and James R. Gaier Sep. 1986 12 p
(NASA-TM-88828; E-3203; NAS 1.15:88828) Avail: NTIS HC A02/MF A01 CSCL 11G

Techniques were developed for the ball milling of pristine and brominated P-100 graphite fibers. Because of the lubrication properties of graphite, large ball loads (50 percent by volume) were required. Use of 2-propanol as a milling medium enhanced the efficiency of the process. Milled brominated P-100 fibers had resistivities which were indistinguishable from milled pristine P-100 fibers. Apparent loss of bromine from the brominated fibers suggests that bromine would not be the intercalate of choice in applications where milled fibers of this type are required. Other intercalates which do not degas may be more appropriate for a

milled fiber application. These same results, however, do provide evidence that bromine molecules leave the fiber surface when removed from overpressure of bromine. While exploring possible solvent media for milling purposes, it was found that brominated fibers are stable in a wide variety of organic solvents. Author

POLYMER BLENDS FOR USE IN PHOTOELECTROCHEMICAL CELLS FOR CONVERSION OF SOLAR ENERGY TO ELECTRICITY Patent
Terje Skotheim, inventor (to Air Force) Issued 29 Apr. 1986 6 p
(AD-D012350; US-Patent-4,585,581; US-Patent-Appl-SN-655489; US-Patent-Class-252-518) Avail: US Patent and Trademark Office CSCL 11/9

In the patent applications, there is provided a device having a first layer of semiconductive material having a first gap; and a second layer of material having a different band gap; a layer of dry solid polymer electrolyte between said first and second layers; and a layer of a polymer blend of a highly conductive polymer and a solid polymer electrolyte between said dry solid polymer electrolyte and said semiconductor layer. There is also provided a thin film which contributes improved electric charge transfer across said film. This film is comprised of a polymer blend of a highly conductive polymer and a solid polymer electrolyte, said blend being the major component of said film at one face thereof, and a dry solid polymer electrolyte being the major component of said film at another face thereof. The parent applications describe in at least one embodiment photovoltaic cells having a dry solid polymer electrolyte and adjacent semiconductor layer. In this embodiment in the parent applications there is described, in one aspect, an improved contact between said solid polymer electrolyte and the semiconductor. This improved contact uses a polymer blend of a highly conductive polymer, preferably polypyrrole, and a solid polymer electrolyte, preferably polyethylene oxide complexed with potassium iodide. GRA

IMPROVED ADHESION OF THIN CONFORMAL FILMS TO METAL SURFACES
Kevin R. Steward, George M. Whitesides, Herman P. Godfried, and Isaac F. Silvera May 1986 15 p
(Contract N00014-83-K-0142)
(AD-A168616; TR-85-3) Avail: NTIS HC A02/MF A01 CSCL 11/1

A technique is described for attaching thin, conformal, pin-hole free electrically insulating polyethylene films to flat gold surfaces (previously modified by adsorption of a monolayer of an organic disulfide) by plasma polymerization. These polyethylene films are tough enough to support the attachment of gold electrodes. The adhesion of plasma polymerized polyethylene (PPE) thin films to a gold surface can be dramatically improved by coupling the synthesis of the FPE thin film with the prior assembly of an organic monolayer chemisorbed to the metal surface. These thin film assemblies have good physical characteristics and are stable to the ambient environment for long intervals. This method should be applicable to other systems with appropriate modifications. GRA

CERAMIC TRIBOLOGY: ASSESSMENT OF NEEDS IN MEASUREMENT METHODS AND STANDARDS
C. S. Yust, S. M. Hsu, and T. M. Levinson Feb. 1986 81 p
(Contract DE-AC05-84OR-21400)
(DE86-008948; ORNL/TM-9921) Avail: NTIS HC A05/MF A01

This report is a summary of discussions held at the Workshop on Tribological Test Devices and Procedures for Ceramics, which was convened to review ceramic wear test practices and to assess the prospects for agreement on standardized wear test methods and test machines. The workshop was held within a framework of six presentations intended to focus the discussion on specific wear testing issues. Wide-ranging views on wear testing and standardized wear tests were expressed and are presented in this report. Both positive and negative aspects of wear test standardization were discussed. By the close of the discussion a consensus developed that recognized the need for a feasibility of standardized wear tests but that also recognized a continued necessity for the use of nonstandard tests and test systems for research on fundamental wear mechanisms. The nonstandard test arrangements, however, should be well defined and the test conditions closely controlled. The suggestion was made that a small group initiate efforts to prepare test procedures and standards for review by the wear community. DOE

MIGRATION OF GRAIN BOUNDARIES IN CERAMIC MATERIALS WITH PARTICULAR REFERENCE TO THE SINTERING PROCESS Progress Report, 1 Oct. 1985 - 30 Apr. 1986
C. B. Carter 30 Apr. 1986 18 p
(Contract DE-FG02-84ER-45092)
(DE86-011710; DOE/ER-45092/T2) Avail: NTIS HC A02/MF A01

The progress made during the past 7 months of a program to study the migration of grain boundaries in ceramic oxides is reported. Results of the program are presented which relate to the structure of grain boundaries in alpha-Al2O3, with important new information discussed for grain boundaries in spinels and

germanium. Attention is focused on the analysis of grain boundaries in polycrystalline alpha-Al2O3 compacts, with particular attention being paid to questions relating to the identification of amorphous thin films along interfaces in these materials. It has been found that the techniques used in the past to identify and characterize such films may give misleading or ambiguous results. Analysis of the first-order (sigma = 3) twin interface in spinel have been extended with the development of models for the computer simulation of high resolution transmission electron microscopy (TEM) images of these interfaces. Grain boundaries in covalent materials are also discussed. The characterization of surface structures using both imaging and diffraction techniques in the TEM alpha-Al2O3. DOE

STATISTICAL MECHANICS OF POLYMER SYSTEMS Progress Report, 1 Sep. 1985 - 31 Aug. 1986
J. Kovac 1 May 1986 6 p
(Contract DE-FG05-84ER-45114)
(DE86-010292; DOE/ER-45114/2) Avail: NTIS HC A02/MF A01

In the original proposal, three areas of research were outlined: (1) development of reasonable, but mathematically tractable models for isolated polymer chain dynamics using projection operator techniques; (2) study of the effect of entanglements on the dynamics of polymer chains by means of computer simulation; and (3) nonequilibrium thermodynamic and statistical mechanical theories of the glass transition. In the second year of the grant we have again focussed almost all our efforts on the computer simulation work. This effort has been rewarded by a major advance, the inclusion of nearest neighbor interactions in the dynamic simulation algorithm. This has allowed us to study solvent effects on single chain dynamics. A wide range of interestig problems in concentrated polymer systems, such as mutual diffusion, polymer-polymer welding and phase separation in block copolymers can be studied using this model. Results of the computer simulation studies of the previous year are summarized. DOE

FUNDAMENTAL STUDIES OF ELASTOMERS Annual Progress Report, 15 Jun. 1985 - 21 Mar. 1986
B. E. Eichinger 1986 9 p
(Contract DE-FG06-84ER-45123)
(DE86-010438; DOE/ER-45123/2) Avail: NTIS HC A02/MF A01

The progress report for the first year of this grant described computer simulations on random networks, shape distributions, synthesis of chelation networks, and coordination polymers. Work has continued in all four of these areas in the past year. Highlighted here is the work that we have been doing on computer simulations of random cross-linking, wherein radiation damage is a very important feature of the chemical reactions that occur. Furthermore, we have made a coordination compound which looks quite encouraging at the present time. Our efforts on chelation networks are proceeding and we are developing very promising methods for creating the polymers that we need for these studies. DOE

BEHAVIOR OF LUBRICANT GREASES AT HIGH TEMPERATURES: THIN FILM AND LIQUID CHROMATOGRAPHY TECHNIQUES [COMPORTAMIENTO DE GRASAS LUBRICANTES A ALTA TEMPERATURA. ENSAYO DE PELICULA FINA - CROMATOGRAFIA LIQUIDA]
L. M. Peloche, M. C. Utierrez, and L. Aliste 25 Nov. 1985 16 p In SPANISH
(ETN-86-97810) Avail: NTIS HC A02/MF A01

A laboratory study on five commercial greases combined with three kinds of additives was made. Each test was performed keeping a thin grease film at 125 C for 250 hr and determining weight loss, chromatographic analysis before and after the thermal treatment, and complementary infrared spectrum analysis. It is shown that this combination of methods is efficient to evaluate greases and additives behavior. ESA

IMPROVED HIGH-TEMPERATURE PERCUSSION PRIMER
N. A. Durand, R. R. Weinmaster, T. M. Massis, and W. Fleming 1986 16 p Presented at the 11th International Pyrotechnics Seminar, Vail, Colo., 7 Jul. 1986 Prepared in cooperation with Unidynamics, Phoenix, Ariz.
(Contract DE-AC04-76DP-00789)
(DE86-009855; CONF-860739-1) Avail: NTIS HC A02/MF A01

A study was conducted to develop a percussion primer mix that would be capable of functioning after a 20-hour exposure at 200 C. A total of 16 mixes were studied, of whihc 6 were chosen for basic thermal and chemical properties. All mixtures were thermally evaluated with the differential scanning calorimeter (DSC) and showed no exothermic activity below 250 C. The mixtures were further evaluated by impact and friction sensitivity. Two of the candidate mixtures were selected for further development of a high-temperature, hermetically sealed percussion primer. These were KClO /Sb S /CaSi and KClO /Sb S /CaSi /HNS. The primer mixes were loaded into conventional hardware and subjected to ball-drop sensitivity testing. These two mixes have similar mean sensitivity of approximately 30 in. oz. which are well within the design requirements of 60 in. oz. The hermetically sealed primer that is being developed uses a stainless steel cup, anvil, and sealing ring with a glass-to-metal seal in the output hole. This primer has no reconsolidation requirements, and the sensitivity of this percussion primer is comparable with other commercial primers which are not hermetically sealed. DOE

A very thin layer of highly textured carbon is applied to a copper surface by a triode sputtering process. A carbon target and a copper substrate are simultaneously exposed to an argon plasma in a vacuum chamber. The resulting carbon surface is characterized by a dense, random array of needle like spires or peaks which extend perpendicularly from the copper surface. The coated copper is especially useful for electrode plates in multistage depressed collectors. NASA

REMOTELY CONTROLLABLE MIXING SYSTEM Patent Application
Robert R. Belew, inventor (to NASA) Filed 18 Jun. 1986 19 p
(NASA-Case-MFS-28153-1; US-Patent-Appl-SN-875891) Avail: NTIS HC A02/MF A01 CSCL 13H

This invention relates to a remotely controllable mixing system in which a plurality of mixing assemblies are arranged in an annular configuration, and wherein each assembly employs a central chamber and two outer, upper and lower chambers. Valves are positioned between chambers, and these valves for a given mixing assembly are operated by upper and lower control rotors, which in turn are driven by upper and lower drive rotors. Additionally, a hoop is compressed around upper control rotors and a hoop is compressed around lower control rotors to thus insure constant frictional engagement between all control rotors and drive rotors. The drive rollers are driven by a motor. NASA

ON THE PREDICTION OF OIL LAYER DAMPING ON PLATES
L. C. Chow and R. J. Pinnington May 1986 125 p
(ISVR-TR-137) Avail: NTIS HC A06/MF A01

High damping of machinery panels can be achieved using a sandwich construction consisting of an attached plate sandwiching a layer of fluid filled porous material. The vibration of the plate pumps the fluid laterally at high velocities, resulting in energy loss due to the fluid viscosity. Loss factors greater than 0.1 can be achieved with this layered configuration. However, if the gap is filled with the high viscosity fluid alone, the losses are very low. The ratio of the fluid dynamic viscosity and its density is the controlling parameter on the level of the losses. High loss factors are possible only if the fluid viscosity can be increased by many orders of magnitude for liquids. The damping over the whole frequency range above and below the excited plate critical frequency is measured and compared with prediction. The agreement in results is good. The layered configurations are so strongly coupled that the loss factor measured on both the excited and the attached plates are the same. Author

OPTIMIZING HEADER STRENGTH UTILIZING FINITE ELEMENT ANALYSES
S. N. Burchett 1986 22 p Presented at the 11th International Pyrotechnics Seminar, Vail, Colo., 7 Jul. 1986
(Contract DE-AC04-76DP-00789)
(DE86-010476; SAND-86-2075C; CONF-860739-5) Avail: NTIS HC A02/MF A01

Finite element techniques have been successfully applied as a design tool in the optimization of high strength headers for pyrotechnic-driven actuators. These techniques have been applied to three aspects of the design process of a high strength header. The design process was a joint effort of experts from several disciplines including design engineers, material scientists, test engineers, manufacturing engineers, and structural analysts. Following material selection, finite element techniques were applied to evaluate the residual stresses due to manufacturing which were developed in the high strength glass ceramic-to-metal seal headers. Results from these finite element analyses were used to identify header designs which were manufacturable and had a minimum residual stress state. Finite element techniques were than applied to obtain the response of the header due to pyrotechnic burn. The results provided realistic upper bounds on the pressure containment ability of various preliminary header designs and provided a quick and inexpensive method of strengthening and refining the designs. Since testing of the headers was difficult and sometimes destructive, results of the analyses were also used to interpret test results and identify failure modes. In this paper, details of the finite element element techniques including the models used, material properties, material failure models, and loading will be presented. Results from the analyses showing the header failure process will also be presented. This paper will show that significant gains in capability and understanding can result when finite element techniques are included as an integral part of the design process of complicated high strength headers. INFLUENCE OF THE EDGE EFFECTS ON THE INITIAL VELOCITY OF FRAGMENTS FROM A WARHEAD
E. Hennequin 1986 10 p
(SNIAS-861-320-104; ETN-86-97594) Avail: NTIS HC A02/MF A01

Warhead explosion computer simulations were carried out using the Hemp code, a two dimensional finite difference model. Several parameters were studied, including length to diameter ratio, metal/explosive weight ratio and the weight of closures. Each simulation provided information on isochrones, velocity of casing points versus radial displacement and the distribution of velocities along a warhead generatrix at casing rupture. A comparison with experimental results is given. The model predicts accurately the distribution of velocities of the fragments from a cylindrical warhead. An improvement of the Randers-Pherson model is proposed, as

well as a further application to a warhead having closing plates at the ends. ESA

THE MEASUREMENT OF LARGE VALUES OF AIRBORNE SOUND INSULATION
R. Walker Aug. 1986 18 p
(BBC-RD-1986/8) Avail: BBC, Kingswood Warren, Tadworth, Surrey, Engl.

The requirements for and the measurement of airborne sound insulation between areas in a broadcasting center are discussed. In particular, the high values of insulation required in some cases and the difficulties of measurement are described. One method which has been used for such measurements, using explosive charges, has been investigated in detail. Some of the results obtained in the past using this method have been questionable and the possible reasons for errors are reported. It is concluded that the high peak level of sound pressure generated by the explosion, measured at 160 dB re 20 uPa at a distance of 6 m from the explosion, has been responsible for overloading the measuring instrumentation. In recovering from this short-lived but serious overloading, the instrumentation has sometimes given erroneous results. The non-linearity of sound propagation at these sound pressure levels may also be theoretically significant although, in practice, no such effects have been positively identified. An alternative method of measuring high values of sound insulation without requiring such high sound pressure levels is described and the results of an evaluation are given. This method however, in exchanging high sound pressure levels for measurement duration, may take much longer to carry out than the older method. Author

HDTV MOTION ADAPTIVE BANDWIDTH REDUCTION USING DATV
R. Storey Jun. 1986 12 p
(BBC-RD-1986/5) Avail: BBC, Kingswood Warren, Tadworth, Surrey, Engl.

High Definition Television (HDTV) brings with it the problems of an equally high signal bandwidth. This bandwidth will cause problems for all methods of signal dissemination, so some form of bandwidth reduction is required. Some years ago the BBC successfully developed sub-Nyquist sampling bandwidth reduction techniques. More recently, some promising bandwidth reduction schemes using adaptive filtering followed by sub-sampling were proposed by other. The results of an investigation into the likely performance of such schemes when fully developed are presented. It appears that some of the inevitable impairments caused by bandwidth reduction, although not initially significant, will become more noticable as the performances of sources and displays improve. A logical progression is proposed which, by way of a transmitted digital control channel, allows the performance of a 4:1 bandwidth reduced television system to be improved through a series of compatible steps. This Digitally Assisted Television (DATV) progression begins with an interlaced system and finishes with a system which offers all the advantages of a sequential source and display. Author

In some applications, the wires used to construct the grids are plated over with highly conducting materials such as gold or silver. In those cases, depending on the frequency of operation, the coating may not be thick enough to prevent currents from flowing in the substrate. The conjugate gradient method, in conjunction with the fast Fourier transform is employed to solve the problem of scattering from such rectangular grids. An internal impedance is utilized to account for the effects of the substrate conductivity on the induced current densities. Calculated values of the reflection coefficient and induced currents from different coating thicknesses, angles of incidence and polarizations are presented and discussed. Author

HC A02/MF A01 CSCL 20N

In a dual reflector antenna, the spillover from the subreflector is important in determining the accuracy of near-field measurements. This is especially so when some of the feed elements are placed far away from the focus. In this paper, we present a high-frequency GTD analysis of the spillover field over a plane just behind the subreflector. Special attention is given to the field near the incident shadow boundary and the role played by the slope diffraction term. Our computations are in excellent agreement with experimental results. LEAST SQUARES SOLUTIONS IN SIGNAL PROCESSING USING THE SINGULAR VALUE DECOMPOSITION
John L. Mather Jan. 1986 81 p
(RSRE-Memo-3864; BR98993; ETN-86-98003) Avail: Issuing Activity

Antenna array and time series signal processing techniques which utilize singular value decomposition, or may be profitably interpreted in terms of it are compared. Computer simulations of these techniques acting on spatiotemporal data from linear, conformal circular, and focal plane arrays are presented. Means of introducing prior knowledge are described, and lead to the suggestion of a computationally efficient processing approach. It is shown that extensive use of a sequential processing strategy for multiple domain data potentially allows detection and classification of additional emitters. ESA

A HIGH FREQUENCY ANALYSIS OF ELECTROMAGNETIC PLANE WAVE SCATTERING BY PERFECTLY-CONDUCTING SEMI-INFINITE PARALLEL PLATE AND RECTANGULAR WAVEGUIDES WITH ABSORBER COATED INNER WALLS
Hoon Myung Noh and Prabhakar H. Pathak Sep. 1986 218 p

(Grant NAG3-476)
(NASA-CR-179759; NAS 1.26:179759; TR-715723-1) Avail: NTIS HC A10/MF A01 CSCL 20N

An approximate but sufficiently accurate high frequency solution which combines the uniform geometrical theory of diffraction (UTD) and the aperture integration (AI) method is developed for analyzing the problem of electromagnetic (EM) plane wave scattering by an open-ended, perfectly-conducting, semi-infinite hollow rectangular waveguide (or duct) with a thin, uniform layer of lossy or absorbing material on its inner wall, and with a planar termination inside. In addition, a high frequency solution for the EM scattering by a two dimensional (2-D), semi-infinite parallel plate waveguide with a absorber coating on the inner walls is also developed as a first step before analyzing the open-ended semi-infinite three dimensional (3-D) rectangular waveguide geometry. The total field scattered by the semi-infinite waveguide consists firstly of the fields scattered from the edges of the aperture at the open-end, and secondly of the fields which are coupled into the waveguide from the open-end and then reflected back from the interior termination to radiate out of the open-end. The first contribution to the scattered field can be found directly via the UTD ray method. The second contribution is found via the AI method which employs rays to describe the fields in the aperture that arrive there after reflecting from the interior termination. It is assumed that the direction of the incident plane wave and the direction of observation lie well inside the forward half space tht exists outside the half space containing the semi-infinite waveguide geometry. Also, the medium exterior to the waveguide is assumed to be free space.

THE RELATIONSHIP OF STORM SEVERITY TO DIRECTIONALLY RESOLVED RADIO EMISSIONS Final Report
R. L. Johnson 30 Apr. 1986 25 p
(Contract NAS8-33371)
(NASA-CR-178916; NAS 1.26:178916) Avail: NTIS HC A02/MF A01 CSCL 20N

The objective was to provide continuous observation of atmospheric electrical activity occurring in association with tropical storms in the Gulf of Mexico. The observations were to include the location of all detected intracloud and cloud-to-ground lightning activity occurring in the storm. To provide synoptic scale coverage, a phase linear interferometer high frequency direction finder (HFDF) system was constructed and developed at Marshall Space Flight Center (MSFC). This was used in concert with the existing HFDF interferometer at the southwest research institute to provide lightning location data through triangulation. Atmospheric electrical events were synchronized through the use of satellite receivers at each site. The intent of the data analysis was to correlate the location of electrical centers of activity with radar and satellite imagry to identify areas of intense convection within the tropical storm system. Analysis of the hurricane Alicia data indicate a center of atmospheric electrical activity associated with the vortex of the storm. The center appears to rotate from the Northern side of the vortex to the Southern side during the period of observation. An analysis of the atmospheric electrical burst rates associated with hurrican Alicia indicates that the electrical activity appears to maximize at the time of greatest storm intensity, i.e., maximum winds and lowest central pressure.

PARALLEL PROCESSOR CONFIGURATION FOR ADAPTIVE ANTENNA ARRAYS Patent
Alan I. Wiener, inventor (to Air Force) Issued 11 Mar. 1986 21 p Supersedes AD-D011347
(AD-D012253; US-Patent-4,575,724; US-Patent-Appl-SN-640904; US-Patent-Class-343-383) Avail: US Patent and Trademark Office CSCL 09/5

A signal processing system, which operates in parallel with the outputs of sensors of an adaptive array, for quickly nulling multiple jammers is described. The processing system includes a set of parallel combiners and an apparatus for updating a signal weight which is applied to sensor outputs. The parallel combiners mix a weighing function with each sensor output and provide a resultant output signal which has been cleared of interference from jamming. Part of the resultant signal is fed to the apparatus for updating the signal weighing function for further mixing with sensor outputs. The parallel operation of the combiners with each sensor output provides fast nulling effects.

SURVIVABLE LOCAL AREA NETWORK Patent
Joseph L. Katz, Edward C. Grund, Richard P. Cope, and Alvin L. Glick, inventors (to Air Force) Issued 11 Mar. 1986 9 p Supersedes AD-D011453
(AD-D012258; US-Patent-4,575,842; US-Patent-Appl-SN-610148; US-Patent-Class-370-16) Avail: US Patent and Trademark Office CSCL 17/2

Enhanced availability and survivability of communications between geographically remote locations with a minimum of redundancy of transmission facilities and media is provided by a survivable bus network capable of providing continued interprocessor or other communications in the event of multiple bus outages. It consists of multiple busses, bus isolation device (BIDs) and two types of network interface processors (NIPs). The BIDs electrically isolate bus segements on either side of a connection so that if a fault occurs only the segment containing the fault will be affected. The first type of NIP connects to one bus and performs the usual functions of providing an electrical and software interface between the network and one or more subscriber processors. The second type is a bridge which performs these same functions but connects to two busses and has the capability to transfer traffic as it appears on either bus to the other. The network provides increased survivability in the event of failed segments but does not entail the expense of a fully redundant system.

CORRECTION FOR PROBE-POSITION ERRORS IN PLANAR, NEAR-FIELD SCANNING M.S. Thesis
David R. Reddy Dec. 1985 67 p
(AD-A167072; AFIT/GE/ENG/85D-34) Avail: NTIS HC A04/MF A01 CSCL 14/2

In recent years, near-field antenna measurement techniques have gained a good deal of acceptance. There are several errors in the computed far-field patterns caused by measurement inaccuracies in the near-field data. This paper deals with deterministic errors introduced by probe-positioning errors in planar, near-field scanning. By utilizing basic near-field theory, as well as a knowledge of the positioning errors, it is possible to estimate the fields at the correct probe position. A computer program which lessens the effect of probe positioning errors by means of a truncated Taylor series expansion is used to demonstrate this improvement. To simulate inaccurate probe positioning, a database of calculated near-field values for a linearly polarized, uniformly illuminated, circular aperture was used. Next, the position correction program was applied to computer generated inaccurate data. Finally, far-field patterns were calculated, and compared using both the corrected and uncorrected data. Results of the comparisons are presented.

Limitations, and areas of application of this routine are discussed. GRA

NEW NON-LINEAR FM PULSE-COMPRESSION TECHNIQUE FOR RADAR APPLICATIONS5 M.S. Thesis
Ronald A. Booher Dec. 1985 63 p
(AD-A167110; AFIT-CI-NR-86-62T) Avail: NTIS HC A04/MF A01 CSCL 17/9

The development of pulsed type radar signals is examined, with a brief review of matched filtering. Gated RF, linear and nonlinear FM pulse-compression (chirp) and matched filtering of radar signals is reviewed in depth. Emphasis is given to identifying the desirable properties of each method. A new method of non-linear FM pulse-compression is introduced; it utilizes the Eigen Function (a form of the raised-cosine family of functions) as its modulating term. Its properties are then compared to those of the linear and nonlinear systems reviewed in the preceding sections. Design considerations for implementations on a surface acoustic wave device are presented. Author (GRA)

ACTIVE MATCHING TRANSMIT/RECEIVE MODULE Patent Application
Edward J. Jones, inventor (to Air Force) Filed 12 Mar. 1986 21 p
(AD-D012287; US-Patent-Appl-SN-838970) Avail: NTIS HC A02/MF A01 CSCL 17/9

A transmit/receive module is disclosed that provides selectable impedance matching between: a power amplifier and the antenna of a phased array when the radar is transmitting, and selectable impedance matching between the antenna and a low noise amplifier when the radar is receiving. The transmit/receive module replaces the conventional fixed impedance matching system with a microprocessor, a plurality of switches and sets of pairs of electrical capacitors, resistors, and inductors. Since the antenna impedance characteristics change with changes of beam angles, the microprocessor directs the switches to configure the electrical components into any one of a number of impedance matching circuits. The microprocessor selects an optimum impedance matching circuit for the power amplifier to maintain maximum power transfer for radar transmission and another optimum impedance matching circuit for the low noise amplifier for minimum noise upon radar signal reception. FLEXIBLE (MULTI-MODE) WAVEFORM GENERATOR Patent Application
Paul W. Goetz, inventor (to Air Force) Filed 12 Mar. 1986 20 p
(AD-D012297; US-Patent-Appl-SN-838855) Avail: NTIS HC A02/MF A01 CSCL 14/2

The present invention is a waveform generator for a radar system which produces a variety of waveforms by combining biphase modulation to a modulated signal from a single sideband (SSB) or other modulator. Waveform generation is accomplished using a digital computer connected through a random access memory (RAM), a digital-to-analog converter (DAC), a single sideband modulator (SSB-MOD), a times four multiplier, and a biphase modulator. The computer is also connected through a second random access memory (RAM) directly to the biphase modulator. The digital computer controls the waveform generator and is used to input the digital equivalent of selected waveforms into the first RAM. Upon a command from this computer, the first RAM outputs the digital equivalent signals to the DAC where desired analog waveforms are produced. These analog waveforms are used to modulate a carrier by the SSB modulator and produce a first modulated signal. GRA

A beam scanning antenna system that uses a small, rapidly rotatable feed antenna to illuminate a large, fixed secondary collimating device, such as a reflector or electromagnetic lens, which in turn illuminates a large, fixed primary collimating device is presented. The primary collimating device forms a narrow collimating beam that is reflected or transmitted into space. Rotation of the small feed antenna causes the beam to scan.Author (GRA)

THREE DIMENSIONAL, ORTHOGONAL DELAY LINE BOOTLACE LENS ANTENNA Patent
Pasquale A. Valentino, John J. Stangel, and Dwayne D. Donelin, inventors (to Navy) Issued 18 Feb. 1986 6 p Supersedes AD-D011020
(AD-D012315; US-Patent-4,571,591; US-Patent-Appl-SN-562336; US-Patent-Class-343-754) Avail: US Patent and Trademark Office CSCL 09/5

A bootlace microwave lens antenna has orthogonal delay lines for reducing quadratic phase errors to improve focusing capability. The collector and radiator elements consists of mutually orthogonal pairs of subelements with one of the subelements oriented radially and the other oriented tangentially on the respective collector and radiator surfaces. Individual delay lines interconnect corresponding radial and tangential subelements on each surface thus allowing for phase corrections in the axial planes parallel to and perpendicular to the plane of scan by the introduction of an appropriate phase delay in each delay line. MEDIUM PRF PULSE DOPPLER RADAR PROCESSOR FOR DENSE TARGET ENVIRONMENTS Patent
Edward L. Frost and Leslie Lawrence, inventors (to Air Force) Issued 22 Apr. 1986 8 p
(AD-D012344; US-Patent-4,584,579; US-Patent-Appl-SN-547609; US-Patent-Class-343-17.1) Avail: US Patent and Trademark Office CSCL 17/9

This patent is a modification to the ABC range correlators used in medium PRF radars. It extends the functioning of the range correlators to not only derive target unambiguous range

while suppressing detections of clutter discretes but also to reduce the occurrence of false target reports (range ghosts) and blanking of true targets that would otherwise occur when the radar is operated in dense target environments. The specific point of novelty in this design is the operation of two sets of correlators, designated ABC and A'B'C', each with a different M of N detection criterion. GRA

SATELLITE MOUNTED SYSTEM FOR TRANSFERRING INFORMATION USING MODULATED SUNLIGHT Patent
Gregory C. Mooradian, inventor (to Navy) Issued 25 Feb. 1986 7 p Supersedes AD-D008839
(AD-D012345; US-Patent-4,573,214; US-Patent-Appl-SN-234059; US-Patent-Class-455-605) Avail: US Patent and Trademark Office CSCL 17/2

A method and apparatus for broadcasting, transferring and disbursing information from space to Earth uses sunlight as the carrier. An orbiting platform receives sunlight and modulates it with electromagnetic signals carrying the information beamed up from an Earth station, communications satellite or aircraft. The modulated sunlight is directed to a designated area on Earth from the orbiting platform where it penetrates clouds as well as seawater to reach surface and submerged receiving stations including submarines. (Grant AF-AFOSR-0309-82)
(AD-A168484; AFOSR-86-0323TR) Avail: NTIS HC A06/MF A01 CSCL 17/2

In this report we present some additional results on the performance of carrier sense multiple access (CSMA) protocol for mobile packet radio networks (MPRNET). This is followed by a review of bandwidth efficient digital modulation for mobile radios and some results on a speech transmission scheme and an analysis of mismatched continuous phase FSK (CPFSK) receivers. Carrier sense multiple access protocol has been analyzed in detail for mobile radio channel. Throughput and delay expression are derived to include the effects of fading. The performance degradation due to hidden terminal problems is analyzed. This is followed by an evaluation of the performance of CSMA with collision detection (CSMA-CD) for FH-FSK spread spectrum mobile packet radio networks. A class of spectrally efficient modulation has been reviewed for application to mobile radio systems. A speech transmission scheme using DPCM coding and these spectrally efficient modulation is seen to compete with existing schemes. Mismatched CPFSK receivers have been analyzed to understand how time and phase synchronization errors influence the performance. A set of curves is provided to demonstrate the degradation due to imperfect carrier phase of symbol time synchronization error for both low and high SNR. GRA

We describe a research prototype software system named ASTA (Assistant for Science and Technology Analysis) that employs artificial intelligence technology to interpret radar signals and infer the probable nature of the radar system that produces them. Such analyses are of interest, for example, to engineers who wish to reverse-engineer an electronic system. Architecturally, ASTA is a multiple-process consulting expert system operating in a personal workstation environment. It comprises two principal components: an expert system that reasons using knowledge of electronic system design, radar physics, and signal analysis techniques, and a multiform-based user interface that maintains a separate database describing the complete state of interaction with the user, including a simplified user preference model, an interactive help subsystem, and a database of prior (completed or partial) analyses. These two processes are loosely coupled; that is, they operate in strictly separated namespaces, and they communicate using a mixture of synchronous (remote procedure call) and asynchronous (true) message passing. Message-based synchronization techniques are employed to assist in maintaining consistency between the two processes. GRA

MEASURED NOISE PERFORMANCE OF A POST-DETECTION LIMITER CIRCUIT IN THE RECEIVER OF A BINARY DATA TRANSMISSION SYSTEM M.S. Thesis
William J. Luk Mar. 1986 83 p
(AD-A168554) Avail: NTIS HC A05/MF A01 CSCL 17/2

Binary phase shift keying is a common modulation method for transmitting binary data because of its superior noise performance. A proposed alternative to the common BPSK receiver is use of three parallel post-detection circuits and majority decision logic to reduce errors, improving the overall performance of the BPSK system. The noise performance of each of two parallel circuits were measured and compared. The first circuit is a conventional BPSK receiver using an integrate and dump circuit. The second circuit incorporates a limiter after the demodulator and prior to the integrate and dump circuit. The conventional circuit is found to provide the same error probability at a 0.2 dB smaller signal to noise ratio. The probability density function of the voltage at various nodes in the post-detection circuits are measured and included in the report along with curves of probability of error versus SNR for the two post-detection circuits. GRA

LATTICE PARAMETER MODELING OF STOCHASTIC SIGNALS: SOME FUNDAMENTAL CONCEPTS
S. R. Parker 1986 54 p
(Contract W-7405-eng-48)
(DE86-010552; UCRL-15802) Avail: NTIS HC A04/MF A01

The literature on linear estimation of stationary random processes has undergone a vast expansion in the last decade. One of the foremost areas is that of lattice parameter modeling which has been used most successfully for the modeling of speech and various geophysical phenomena. One particular motivation for these new algorithms is the reduction in the number of numerical operations (from order N(3) to order N log N or possibly order N). In addition, these algorithms have provided some important insights into the physics of the process being modeled, and finally many of the algorithms have the potential of direct efficient implementation on VLSI chips. In this report, some of the basic theoretical aspects of lattice parameter theory are presented. As is often the case in an expanding area, the literature is vast and it is difficult to extract the essential ideas from all that is available. It is the purpose of this report to distill the basic concepts

of lattice modeling theory and provide the reader with some essential insight and background for approaching the literature which spans a variety of disciplines including time series analysis, signal processing, estimation theory, stochastic signals and processes, speech, geophysical data analysis, to name a few.

INTERACTIVE FULL CHANNEL TELETEXT SYSTEM FOR CABLE TELEVISION NETS [INTERAKTIEF FULL CHANNEL TELETEKSTSYSTEEM VOOR KABELTELEVISIENETTEN]
H. P. A. vandenBoom Aug. 1984 143 p In DUTCH
(ETN-86-97541) Avail: NTIS HC A07/MF A01

A demonstration set-up of an interactive full channel teletext (FCT) system for cable TV networks with two-way data communication possibilities was designed and realized. In FCT all image lines are used for teletext data lines. The FCT decoder was placed in the mini-star, and the FCT encoder which provides the FCT signal was placed in the local center. From the FCT signal a number of data lines are selected using an extra FCT decoder. They are placed on the image lines reserved for teletext so that a normal TV receiver equipped with a teletext decoder, can process the selected data lines. For texts not on hand in the FCT signal, a command can be sent to the local center via the data communication path. A cheap and simple system is offered in which the number of commanded pages or books is in principle unlimited, while the used waiting time and channel capacity is limited. ESA

OVERLOAD CONTROL FOR SWITCHES OF COMMUNICATION SYSTEMS: A TWO-PHASE MODEL FOR CALL REQUEST PROCESSING
R. K. Boel and J. H. vanSchuppen Jan. 1986 19 p Submitted for publication
(CWI-OS-R8601; B8664684; ETN-86-97763) Avail: NTIS HC A02/MF A01

The role of stochastic optimal control methods in designing a control gate in order to prevent congestion in a computer controlled telephone switch is shown. A model of the switch in which the delay in processing a call request is modelled by two phases is proposed. From this a simplified model consisting of a series connection of three random delays is deduced. The problem of overload control is then formulated as a stochastic control problem. The solution is a bang-bang control, meaning that a customer is either admitted or not admitted to the switch without randomization.

OFFSET UNFURLABLE ANTENNA, PHASE 1 Final Report
Paris ESA Mar. 1984 570 p Prepared in cooperation with TICRA Engineering Consultants
(Contract ESTEC-5206/82-NL-PB(SC))
(MBB-RX11; ESA-CR(P)-2180; ETN-86-97782) Avail: NTIS HC A24/MF A01

The configuration, technology requirements, development aspects, and experimental activities for satellite reflectors for fixed and mobile communications and television broadcasting are outlined. A 4.5 m antenna for 4 GHz, and an 8 m antenna for 1.6 GHz were studied, assuming an L-Sat type satellite. A radial rib concept with auxiliary adjustment ribs, and a three dimensional scissors concept (spatial framework) with mesh adjustment elements were compared concerning mass, stowage, volume, development risk, and reliability. For antennas of diameter from 3.6 to 12 m (12 GHz to 800 MHz) the radial rib reflector is preferred. Main advantages (with rib folding for larger reflector diameters) are: lower costs; less critical technology problems; lower development risks; high deployment reliability; lightweight intermediate ribs can adapt surface accuracy to higher frequency requirements (high application flexibility); and folded main ribs provide high package capability at larger diameters. The scissors concept is advantageous for applications requiring reflectors from 12 m diameter onwards.

TEMPERATURE SENSITIVE OSCILLATOR Patent
Leonard L. Kleinberg, inventor (to NASA) Issued 29 Jul. 1986 7 p Filed 25 Apr. 1985 Supersedes N85-30201 (23 - 19, p 3258) (NASA-Case-GSC-12958-1; US-Patent-4,603,306; US-Patent-Appl-SN-727035; US-Patent-Class-331-66; US-Patent-Class-331-108D; US-Patent-Class-331-116R; US-Patent-Class-374-183) Avail: US Patent and Trademark Office CSCL 09A

An oscillator circuit for sensing and indicating temperature by changing oscillator frequency with temperature comprises a programmable operational amplifier which is operated on the roll-off portion of its gain versus frequency curve and has its output directly connected to the inverting input to place the amplifier in a follower configuration. Its output is also connected to the non-inverting input by a capacitor with a crystal or other tuned circuit also being connected to the non-inverting input. A resistor is connected to the program input of the amplifier to produce a given set current at a given temperature, the set current varying with temperature. As the set current changes, the gain-bandwidth of the amplifier changes and, in turn, the reflected capacitance across the crystal changes, thereby providing the desired change in oscillator frequency by pulling the crystal. There is no requirement that a crystal employed with this circuit display either a linear frequency change with temperature or a substantial frequency change with temperature. M.G.

METHODS TO CHARACTERIZE CHARGING EFFECTS Thesis
Har Slots 10 Aug. 1984 46 p
(TR-KYES-84-178; ETN-86-97705) Copyright. Avail: Issuing Activity

Methods to characterize charging in insulating material under high voltage dc stress, leading to electrical breakdown, are reviewed. The behavior of the charges can be studied by ac loss angle measurements after application or removal of dc bias. Measurements were performed on oil-paper and oil-Mylar systems. The poor reproducibility of the measurements makes it impossible to draw more than qualitative conclusions about the charging effects. With an ultrasound pressure wave the electric field distribution in a material can be determined. An alternative derivation for the transient response of a system which elucidates the influence of several parameters in a simple way is given. ESA

ARC LAMP POWER SUPPLY Patent Application
Bradley D. Leighty, inventor (to NASA) Filed 26 Jun. 1986 11 p (NASA-Case-LAR-13202-1; US-Patent-Appl-SN-879758) Avail: NTIS HC A02/MF A01 CSCL 09A

A power supply is provided for an arc discharge lamp which includes a relatively low voltage high current power supply section and a high voltage starter circuit. The low voltage section includes a transformer, rectifier, variable resistor and a bank of capacitors, while the starter circuit comprises a plurality of diodes and capacitors connected as a Cockcroft-Walton multiplier. The starting circuit is effectively bypassed when the lamp arc is established and serves to automatically provide a high starting voltage to re-strike the lamp arc if the arc is extinguished by a power interruption. POTENTIAL HIGH EFFICIENCY SOLAR CELLS: APPLICATIONS FROM SPACE PHOTOVOLTAIC RESEARCH
Dennis J. Flood 1986 15 p Presented at the Winter Annual Meeting of the American Inst. of Chemical Engineers, Miami Beach, Fla., 2-7 Nov. 1986
(NASA-TM-88832; E-3194; NAS 1.15:88832) Avail: NTIS HC A02/MF A01 CSCL 09C

NASA involvement in photovoltaic energy conversion research development and applications spans over two decades of continuous progress. Solar cell research and development programs conducted by the Lewis Research Center's Photovoltaic Branch have produced a sound technology base not only for the space program, but for terrestrial applications as well. The fundamental goals which have guided the NASA photovoltaic program are to improve the efficiency and lifetime, and to reduce the mass and cost of photovoltaic energy conversion devices and arrays for use in space. The major efforts in the current Lewis program are on high efficiency, single crystal GaAs planar and concentrator cells, radiation hard InP cells, and superlattice solar cells. A brief historical perspective of accomplishments in high efficiency space solar cells will be given, and current work in all of the above categories will be described. The applicability of space cell research and technology to terrestrial photovoltaics will be discussed. Author

SECONDARY-ELECTRON-EMISSION LOSSES IN MULTISTAGE DEPRESSED COLLECTORS AND TRAVELING-WAVE-TUBE EFFICIENCY IMPROVEMENTS WITH CARBON COLLECTOR ELECTRODE SURFACES
Peter Ramins and Ben T. Ebihara Sep. 1986 23 p
(NASA-TP-2622; E-3062; NAS 1.60:2622) Avail: NTIS HC A02/MF A01 CSCL 09C

Secondary-electron-emission losses in multistage depressed collectors (MDC's) and their effects on overall traveling-wave-tube (TWT) efficiency were investigated. Two representative TWT's and several computer-modeled MDC's were used. The experimental techniques provide the measurement of both the TWT overall and the collector efficiencies. The TWT-MDC performance was optimized and measured over a wide range of operating conditions, with geometrically identical collectors, which utilized different electrode surface materials. Comparisons of the performance of copper electrodes to that of various forms of carbon, including pyrolytic and isotropic graphites, were stressed. The results indicate that: (1) a significant improvement in the TWT overall efficiency was obtained in all cases by the use of carbon, rather than copper electrodes, and (2) that the extent of this efficiency enhancement depended on the characteristics of the TWT, the TWT operating point, the MDC design, and collector voltages. Ion textured graphite was found to be particularly effective in minimizing the secondary-electron-emission losses. Experimental and analytical results, however, indicate that it is at least as important to provide a maximum amount of electrostatic suppression of secondary electrons by proper MDC design. Such suppression, which is obtained by ensuring that a substantial suppressing electric field exists over the regions of the electrodes where most of the current is incident, was found to be very effective. Experimental results indicate that, with proper MDC design and the use of electrode surfaces with low secondary-electron yield, degradation of the collector efficiency can be limited to a few percent. PSK MODULATION BY TEMPORARILY INCREASING FREQUENCY TO ACHIEVE PHASE CHANGE Patent
Joanne B. Dow, inventor (to Air Force) Issued 11 Mar. 1986 7 p Supersedes AD-D011119
(AD-D012254; US-Patent-4,575,858; US-Patent-Appl-SN-601198; US-Patent-Class-375-53) Avail: US Patent and Trademark Office CSCL 09/5

A phase modulation low power integrated circuit communications arrangement which employs a frequency shift oscillator is disclosed. The frequency shift oscillator operates normally at a first frequency and is keyed to a second frequency for brief intervals to introduce cumulative first frequency phase change in an output signal. Subquadrature and larger increments of phase shift, spurious frequency component rejection with wave filters, and low power amplification of the modulated signal are also disclosed. Specifically, transitions in either (or both) of a pair of binary input signals cause a 45-degree (or 90-degree) phase shift in the phase-modulated carrier, unlike standard DQPSK modulation.

BI-DIRECTIONAL CURRENT DIFFERENCER FOR COMPLEMENTARY CHARGE COUPLED DEVICE (CCD) OUTPUTS Patent
Kenneth J. Petrosky, inventor (to Air Force) Issued 25 Feb. 1986 7 p Supersedes AD-D010979
(AD-D012262; US-Patent-4,573,177; US-Patent-Appl-SN-577392; US-Patent-Class-377-60) Avail: US Patent and Trademark Office CSCL 09/5

D.C. reconstruction of sampled CCD output signals is achieved by subtracting the output current pulses of two CCDS (or subtracting parallel outputs of the same CCD) with a differencing circuit containing two biasing current mirrors, a current sink device and an output capacitor. The two current mirrors are used with each biasing the output of a complementary CCD to positive and acting to mirror the CCD output current. A third current mirror converts the output of one of the CCDs into a current sink. An output capacitor performs subtracting by converting all outputs to voltage and combining the positive biased output of one CCD with the current said output of the second CCD. Author (GRA)

LOW NOISE MULTIPLE CRYSTAL-CONTROLLED OSCILLATOR Patent
Michael M. Driscoll, inventor (to Air Force) Issued 11 Feb. 1986 9 p Supersedes AD-D011401
(AD-D012282; US-Patent-4,570,132; US-Patent-Appl-SN-645468; US-Patent-Class-331-56) Avail: US Patent and Trademark Office CSCL 09/5

An oscillator circuit utilizing multiple (two) quartz crystal resonators as the frequency controlling elements in a novel circuit arrangement is presented. The use of two crystal units increases the oscillator circuit signal transmission group delay by a factor of 2 to 3 and effects an estimated 6 dB reduction in oscillator output signal phase noise sideband level at carrier offset frequencies less than the resonator half-bandwidths. The degree of resonator tracking required is made practical with the use of temperature controlled SC-cut resonators. In addition, the oscillator circuit is configured so that equal, correlated output signal currents can be extracted from each resonator through individual load circuits, thereby increasing available oscillator output signal amplitude by 2:1 and reducing the net effect of uncorrelated load circuit additive noise by 3 dB. This invention relates to the fabrication of thermionic cathodes and to resultant cathode structures, and more particularly to the fabrication of themionic cathodes via sputtering technology. A thermionic cathode is fabricated by cosputtering alkaline earth oxide and metal powders under temperature and pressure conditions that ensure a metal particle size in a preferred range. GRA

TESTING METHODS FOR INTEGRATED CIRCUIT CHIPS M.S. Thesis
Zafer Betoner 27 Mar. 1986 84 p
(AD-A167932) Avail: NTIS HC A05/MF A01 CSCL 09/5

Provision for the functional testing of fabricated VLSI chips frequently involves as much design effort as the original chip design itself. Often the hardware requirements for testing involve a large expense. This research investigates the logical and functional requirements for chip testing. Available approaches are examined and their capabilities noted. Methods of communication between the test controller and the device under test are examined as well as logical structure of the test controller. Two candidate approaches are selected for comparison: (1) a standard general-purpose processor with standard bus interface serves as the test controller, and (2) a custom VLSI test controller interfacing directly to the device under test. As a result, a test system architecture is proposed. GRA

ULTRA-FAST FIELD EMITTER ARRAY VACUUM INTEGRATED CIRCUIT SWITCHING DEVICE Patent
Henry F. Gray and Richard F. Greene, inventors (to Navy) Issued 25 Mar. 1986 4 p Supersedes AD-D009746
(AD-D012317; US-Patent-4,578,614; US-Patent-Appl-SN-401277; US-Patent-Class-313-309) Avail: US Patent and Trademark Office CSCL 09/5

A field-emitter switching device wherein a positive pulse is applied to a gate (which is held at a bias potential V1 just below turn-on). A collector is held at a potential higher than the gate in order to collect emitted electrons from a field emitter source. As the voltage is applied to the gate, electrons are emitted immediately from the source and travel to the most positive potential at the collector. Because of the field emitter geometry, such electron transport is extremely fast. The ultra-fast switching speed is attained because the electrons reach near-maximum velocity within a few field tip diameters of the source. Author (GRA)

CONSTANT RISE AGC (AUTOMATIC GAIN CONTROL) DEVICE Patent
Robert A. Slack, inventor (to Navy) Issued 4 Mar. 1986 10 p Supersedes AD-D011744
(AD-D012327; US-Patent-4,574,252; US-Patent-Appl-SN-715992; US-Patent-Class-330-281) Avail: US Patent and Trademark Office CSCL 09/5

The invented device provides automatic gain control (AGC) of incoming signals over a large dynamic range of input levels with a constant rise time. The constant rise AGC device includes a primary AGC loop for receiving the incoming or input signal and splitting the input signal to input and output components of the primary AGC loop. The input signal to the input component is processed within the primary AGC loop to control the gain of the input signal at the output component of the primary AGC loop. The primary AGC loop has a slow detector. A secondary AGC loop is provided within the primary AGC loop, and this secondary AGC loop includes the aforementioned input component and has its output connected to the slow detector. The secondary AGC loop has a fast detector for preventing self-imposed saturation. With this arrangement the secondary AGC loop can be utilized to provide a constant AGC buildup signal for any input signal which is greater than a predetermined dB range, and the remainder of the primary AGC loop, which receives the constant AGC buildup signal from the secondary AGC loop, can be optimized for desired rise and fall times so that the latter's output signal can be relatively unaffected by interference bursts, signal gaps, and fading in the input signal. SWEPT ACQUISITION FOR PULSED RADIO FREQUENCY (RF) PHASE LOCK LOOP Patent Application
John T. Campbell, inventor (to Air Force) Filed 12 Mar. 1986 38 p
(AD-D012332; US-Patent-Appl-SN-838971) Avail: NTIS HC A03/MF A01 CSCL 09/5

Swept acquisition of reference signals, including pulsed radio frequency radar waveforms, is achieved using sample-and-hold circuitry to track and hold in-phase and quadrature error signals (E1 and Eq) from a voltage controlled oscillator which is swept by a sweep generator. This presents a constant in-phase error signal to the integrator is the loop so that the phase lock loop may be implemented by conventional means. The quadrature error signal is filtered and compared with a threshold to determine when frequency lock has been obtained when the voltage control oscillator is swept at high speed. Then the voltage controlled oscillator is swept at a lower speed to distinguish the center lobe of the reference signal and attain phase lock. Finally, the voltage controlled oscillator is swept only while sampling the reference signal by gating the sweep rate signal with a sampling signal. This method enables one to acquire a pulsed radio frequency signal with jittered pulse repetition intervals while preventing locking on before or after the center frequency of the main lobe of the reference signal. PHASE LOCK ACQUISITION SYSTEM HAVING FLL FOR COARSE TUNING AND PLL FOR FINE TUNING Patent
Stephen P. Caldwell, Martin J. Decker, and Robert A. Jelen, inventors (to Air Force) Issued 1 Apr. 1986 7 p Supersedes AD-D011804
(AD-D012340; US-Patent-4,580,107; US-Patent-Appl-SN-617668; US-Patent-Class-331-10) Avail: US Patent and Trademark Office CSCL 09/5

The acquisition of phase lock to a reference frequency by a signal acquisition system is accomplished using a voltage controlled oscillator, a wideband frequency discriminator, a prepositioning circuit, and a phase lock loop. The voltage controlled oscillator is prepositioned within a loop bandwidth of the reference frequency by the prepositioning circuit and the wide band frequency discriminator which provide coarse tuning. The voltage controlled oscillator achieves phase lock with the reference frequency when it receives the fine tune signal from the phase lock loop. Using both the discriminator and the phase lock loop allows fast acquisition without the need to calibrate the voltage controlled oscillator. Since the discriminator pull-in range is much larger than the phase-lock loop bandwidth, the number of bits can be much smaller than in acquisition circuit using a digital prepositioning circuit alone. CAPACITOR CHARGING FET SWITCHER WITH CONTROLLER TO ADJUST PULSE WIDTH Patent
Alex M. Mihalka, inventor (to Air Force) Issued 29 Apr. 1986 16 p
(AD-D012347; US-Patent-4,586,118; US-Patent-Appl-SN-617651; US-Patent-Class-363-17) Avail: US Patent and Trademark Office CSCL 10/2

A switching power supply includes an FET full bridge, a controller to drive the FETs, a programmable controller to dynamically control final output current by adjusting pulse width, and a variety of protective systems, including an overcurrent latch for current control. Power MOSFETS are switched at a variable frequency from 20 to 50 kHz to charge a capacitor load from 0 to 6 kV. A ferrite transformer steps up the dc input. The transformer primary is a full bridge configuration with the FET switches and the secondary is fed into a high voltage full wave rectifier whose output is connected directly to the energy storage capacitor. The

peak current is held constant by varying the pulse width using predetermined timing resistors and counting pulses. The pulse width is increased as the capacitor charges to maintain peak current. A digital ripple counter counts pulses, and after the desired number is reached, an up-counter is clocked. The up-counter output is decoded to choose among different resistors used to discharge a timing capacitor, thereby determining the pulse width. A current latch shuts down the supply on overcurrent due to either excessive pulse width causing transformer saturation or a major bridge fault, i.e., FET or transformer failure, or failure of the drive circuitry.

A dc SWITCHING REGULATED POWER SUPPLY FOR DRIVING AN INDUCTIVE LOAD Patent
George R. Dyer, inventor (to Air Force) Issued 29 Apr. 1986 8 p
(AD-D012349; US-Patent-4,585,986; US-Patent-Appl-SN-555915; US-Patent-Class-323-271) Avail: US Patent and Trademark Office CSCL 10/2

A power supply for driving an inductive load current from a dc power supply through a regulator circuit including a bridge arrangement of diodes and switching transistors controlled by a servo controller which regulates switching in response to the load current to maintain a selected load current. First and second opposite legs of the bridge are formed by first and second parallel-connected transistor arrays, respectively, while the third and fourth legs of the bridge are formed by appropriately connected first and second parallel connected diode arrays, respectively. The regulator may be operated in two stages or modes: (1) For current runup in the load, both first and second transistor switch arrays are turned on and current is supplied to the load through both transistor arrays. (2) When load current reaches the desired level, the first switch is turned off, and load current fly wheels through the second switch array and the fourth leg diode array connecting the second switch array in series with the load. EVALUATION OF EXTRINSIC GETTERING TECHNIQUES
J. W. Medernach, V. A. Wells, and L. Witherspoon 1985 6 p
Presented at the 169th Meeting of the Electrochemical Society, Boston, Mass., 4 May 1986 Prepared in cooperation with Sperry Univac, Eagan, Minn.; KMI Inc., Albuquerque, New Mex.
(Contract DE-AC04-76DP-00789)
(DE86-003583; SAND-85-1728C; CONF-860540-2) Avail: NTIS HC A02/MF A01

Nitride (N-EG); poly-nitride (PN-EG), and poly (P-EG) extrinsic gettering techniques were evaluated using a 3.0 micron P-well CMOS process with N/N+ substrates. The devices used for this evaluation were a 2K SRAM and a N+ to P-well test diode. All gettering was applied as a post-epitaxial process except the P-EG material. Results showed that the N-EG material had lower defect surface densities and superior diode characteristics when compared to the P-EG and epitaxial control Epi-C without gettering. Test diode characteristics showed the PN-EG and the N-EG samples having very low leakage currents compared to the P-EG and EPI-C samples. Similar findings also were obtained for the leakage current of the 2K SRAM. A graphical correlation between the leakage currents of the 2K SRAM and the test diode is established. This demonstrates how effective the N-EG and PN-EG gettering ability is for COMS processing. All devices receiving the nitride or the polynitride gettering showed improved device performance. DOE

EFFECT OF DEPTH OF DISCHARGE ON LEAD-ACID BATTERY OVERCHARGE REQUIREMENTS
W. H. DeLuca and A. F. Tummillo Feb. 1986 21 p
(Contract W-31-109-eng-38)
(DE86-008945; ANL-85-68) Avail: NTIS HC A02/MF A01

The develop an optimal charge procedure, the relation between battery available capacity, applied overcharge, and the depth-of-discharge (DOD) level prior to charging needed to be established. Therefore, a series of parametric tests was conducted to measure the charge acceptance of lead-acid batteries from initial DOD levels of 25, 50, 75, and 100%. Because the available capacity and charge acceptance of the lead-acid battery are dependent on operating temperature, all the charges and discharges were initiated at a fixed temperature. Also because of the typical variation in available capacity of the lead-acid battery with age, baseline performance measurements were periodically acquired for normalization of the charge acceptance test data. The results from these tests show that the amount of overcharge needed to obtain the maximum available capacity from an EV-3000 improved lead-acid battery (which uses electrolyte mixing) is greatly reduced from that needed for commercially available golf-car lead-acid batteries. This was true for all initial DOD levels. The overcharges needed by the EV-3000 battery was a function of the DOD level prior to charging, but the overcharge needed for the golf-car battery was independent of DOD level. The acquired data can be used to derive an optium charge algorithm that relates capacity, overcharge, and DOD level. Applying only the minimum overcharge level needed for full capacity offers advantages of: (1) reduced generation of gases, (2) reduced water consumption, (3) cleaner battery containers, (4) reduced maintenance, and (5) increased battery life. OPTIMIZATION OF A LASERTRON DOUBLE OUTPUT CAVITY
K. R. Eppley Feb. 1986 18 p
(Contract DE-AC03-76SF-00515)
(DE86-009176; SLAC/AP-48) Avail: NTIS HC A02/MF A01

Double output cavities have been used experimentally to increase the efficiency of high-power klystrons. We have used particle-in-cell simulations with the 2 + 1/2 dimensional code MASK to optimize the design of double output cavities for the lasertron under development at SLAC. We discuss design considerations for double output cavities (e.g., optimum choice of voltages and phases, efficiency, wall interception, breakdown). We describe how one calculates the cavity impedance matrix from the gap voltages and phases. Some results of the effect of varying voltage, perveance, and pulse are reported. DOE

PERFORMANCE OF ELECTRONIC BALLASTS AND OTHER NEW LIGHTING EQUIPMENT Final Report
R. R. Verderber and O. Morse Mar. 1986 73 p
(Contract DE-AC03-76SF-00096)
(DE86-009589; EPRI-EM-4510) Avail: NTIS HC A04/MF A01

This study discusses parameters for selecting the most suitable auxiliary lighting device to operate and control gas-discharge lamps. The devices tested in this study include solid-state fluorescent and high-intensity discharge (HID) ballasts; current limiters; and dynamic lighting controls. They have been evaluated in combination with the standard 40-W, F-40, T-12, rapid-start, cool-white fluorescent lamps. Solid-state ballast performance varied widely-from 68 to 79 lumens per watt (lm/W) in efficacy and from 0.83 to 0.98 in ballast factor. System efficacy was up to 26% higher than standard core-coil ballast efficacy. Current limiters used with standard core-coil ballast reduce light output and input power by 30 to 50% and may be suitable as retrofit devices to reduce light in overilluminated spaces. When operated at a constant lamp wall temperature, these devices either maintain or reduce system efficacy. DOE

COMPARISON OF TWO VOLTAGE DIVIDERS FOR THE MEASUREMENT OF TRANSIENT VOLTAGES IN CLOSED SWITCH GEAR [VERGELIJKING VAN TWEE SPANNINGSDELERS VOOR HET METEN VAN TRANSIENTE SPANNINGEN IN GESLOTEN SCHAKELMATERIAAL]
H. J. A. deVet Dec. 1984 75 p In DUTCH; ENGLISH summary
(EH-84-A-82; ETN-86-97528) Avail: NTIS HC A04/MF A01

Two measuring systems for the insulation coordination of high-voltage insulated substations were developed. One is based on the principle of consecutive differentiation and integration and has a frequency range up to 200 MHz. The high-voltage capacitance acts as differentiating part with a 50 Ohm resistor which terminates a long measuring cable; the voltage across the resistor is integrated. Measuring surface of this divider is connected to the measuring cable by a conducting cone to avoid stray capacitance and inductance. The other one is a capacitive divider with a frequency range up to 300 MHz. Attention was paid to the construction of the low voltage capacitance to avoid internal resonance and to obtain a constant divider ratio over a wide frequency range. ESA

SOME CONSIDERATIONS ON THE APPLICATION OF HYBRID CIRCUITS AT THE NLR
A. Monkel, F. H. vanVegten, and J. G. Koning 8 May 1985 12 p Presented at Centrum voor Micro-Elektron. Delft TNO Hybriede Schakelingen, Delft, Netherlands, 12 Jun. 1985
(NLR-MP-85046-U; B8664741; ETN-86-97678) Avail: NTIS HC A02/MF A01

Volume reduction of hybrid circuits used in aerospace applications is discussed. Examples show that nonstandard component assembly techniques are feasible, and often required, to accommodate the electronics in small lightweight assemblies. The quality obtained with hybrid circuits and with LCC's mounted on ceramic substrates can be as high as with packaging techniques normally used. When the series of hybrids or LCC's on substrates is large enough, these techniques may even be profitable from a cost point of view. With polyimide board material, high density LCC assemblies are possible. The thermal design however, can limit full profit, particularly with bipolar logic. With CMOS logic, full benefit of the possibilities is expected. ESA

ORDER AND CHAOS IN FLUID FLOWS

R. Narasimha Jun. 1986 44 p Presented at the 4th Raman Memorial Lecture, Bangalore, India, 3 Mar. 1986

(NAL-TM-DU-8602) Avail: NTIS HC A03/MF A01

This document is a slightly extended version of the fourth C V Raman Memorial Lecture given at the Indian Institute of Science on 3 March 1986. The chief aim of the Lecture was to discuss the role that order and chaos play in the dynamics of fluid motion. After briefly reviewing the major features of transitions from order to chaos and back that have emerged from observations over several decades, their possible relations with more recent work on dynamical systems exhibiting chaotic behavior is discussed. It is concluded that certain basic features characteristic of turbulence, such as the appearance of high frequency chaos during transition, the persistence of chaos as nonlinearity increases, and the strong influence of external perturbations on the onset of chaos, are not yet within the scope of the new theories. However, these recent developments have highlighted a significant and fascinating question, which is whether all transitions from order to chaos would follow only a finite number of possible fundamental modes. The answer to this question is not yet clear, but if it is yes, it certainly seems all possible modes have not yet been discovered. However, the question raised is extremely important and should be exciting and rewarding to pursue. Author

THE INFINITELY STRONG SHOCK

R. Narasimha and P. Das (Indian Inst. of Science, Bangalore) Aug. 1986 18 p Presented at the 15th International Symposium on Rarefield Gas Dynamics, Grado, Italy, 16-20 Jun. 1986

(NAL-TM-DU-8604) Avail: NTIS HC A02/MF A01

A scheme for obtaining an exact solution of the Boltzmann equation for an infinitely strong shock has been formulated, in terms of inner and outer limits in velocity space as Mach number tends to infinity. Using a complete expansion for the outer solution, an infinite set of ordinary nonlinear differential equations is obtained. A solution of the first seven equations of this set yields a shock thickness of 6.7 hot-side mean free paths, nearly 20 per cent higher than the value quoted by Sakurai for a hard sphere gas. Author

FINITE-DIFFERENCE AND FINITE-VOLUME METHODS FOR THE COMPUTATION OF COMPRESSIBLE VISCOUS FLOWS

Roger Peyret *In* Von Karman Inst. for Fluid Dynamics Computational Fluid Dynamics, Volume 1 1986 46 p (For primary document see N86-32666 24-34)

Avail: NTIS HC A12/MF A01

The basic principles of finite difference and finite-volume methods for solving the Navier-Stokes equations, and approximations of them are presented. Each approach is illustrated by applying it to two and three-dimensional flow examples. Only the laminar case is considered. ESA

N86-32668# Nice Univ. (France).
INTRODUCTION TO SPECTRAL METHODS WITH APPLICATION TO FLUID MECHANICS
R. Peyret *In* Von Karman Inst. for Fluid Dynamics Computational Fluid Dynamics, Volume 1 1986 46 p (For primary document see N86-32666 24-34)
Avail: NTIS HC A12/MF A01

The bases of spectral methods (weighted residuals, collocation) using Fourier and Chebyshev approximation are introduced. Applications to the solution of simple partial differential equations are described. Methods for solving the Navier-Stokes equations are presented. ESA

N86-32669# Nice Univ. (France). Dept. de Mathematiques.
STABILITY OF COLLOCATION-CHEBYSHEV SCHEMES WITH APPLICATION TO THE NAVIER-STOKES EQUATIONS
J. Ouazzani, R. Peyret, and A. Zakaria *In* Von Karman Inst. for Fluid Dynamics Computational Fluid Dynamics, Volume 1 1986 9 p Presented at Sixth GAMM Conference on Numerical Methods in Fluid Mechanics, Goettingen, West Germany, 25-27 Sep. 1985 (For primary document see N86-32666 24-34)
Avail: NTIS HC A12/MF A01

The stability of time-discretization schemes associated with the collocation-Chebyshev method is studied for the advection-diffusion equation. These schemes are applied to the Burgers equation and to the Navier-Stokes equations solved by psuedo-unsteady methods. Convergence and accuracy of finite difference, spectral, and hybrid methods are listed. The CPU time on a Cray-1 in seconds per time step for each scheme is tabulated. ESA

A PSEUDO-SPECTRAL SOLUTION OF BINARY MIXTURE FLOWS
J. Ouazzani and R. Peyret *In* Von Karman Inst. for Fluid Dynamics Computational Fluid Dynamics, Volume 1 1986 9 p Presented at Fifth GAMM Conference on Numerical Methods in Fluid Mechanics, Rome, Italy, 5-7 Oct. 1983 (For primary document see N86-32666 24-34)
Avail: NTIS HC A12/MF A01

A pseudo-spectral method for the calculation of steady binary gas mixture flows found in vapor crystal growth is presented. The method uses a pseudo-unsteady approach. The scheme is implicit for the diffusion terms and mainly explicit for the other terms. The spatial approximation uses Chebyshev polynomial expansions with a collocation technique. This reduces the computational effort to matrix-vector products and fast Fourier transforms. These operations are efficiently performed on a vector computer (Cray 1). ESA

N86-32671# Nice Univ. (France). Dept. de Mathematiques.
A PSEUDO-SPECTRAL SOLUTION OF VORTICITY-STREAM FUNCTION EQUATIONS USING THE INFLUENCE MATRIX TECHNIQUE
J. M. Vanel, R. Peyret, and P. Bontoux (Aix-Marseilles Univ., France) *In* Von Karman Inst. for Fluid Dynamics Computational Fluid Dynamics, Volume 1 1986 11 p Presented at Conference on Numerical Methods for Fluid Dynamics, Reading, England, 1-4 Apr. 1986 (For primary document see N86-32666 24-34)
Avail: NTIS HC A12/MF A01

A method for computing unsteady two dimensional incompressible flows, using the vorticity and the stream function as dependent variables approximated by Chebyshev polynomial expansions is presented. Boundary conditions for the vorticity are derived by the influence matrix technique. The theoretical and numerical difficulties associated with the two-dimensional formulation of the method are discussed. Numerical results illustrate the properties of the method. ESA

FINITE ELEMENT ANALYSIS OF THE INCOMPRESSIBLE NAVIER-STOKES EQUATIONS: A SYNOPSIS OF THE STREAM-LINE-UPWIND/PETROV-GALERKIN FORMULATION
Thomas J. R. Hughes *In* Von Karman Inst. for Fluid Dynamics Computational Fluid Dynamics, Volume 1 1986 11 p (For primary document see N86-32666 24-34)
Avail: NTIS HC A12/MF A01

Finite element procedures for the calculation of incompressible viscous flows are treated. The streamline-upwind/Petrov-Galerkin formulation for the incompressible Navier-Stokes equations is reviewed. Accurate and stable spatial discretization are embodied by this approach. ESA

N86-32673# Stanford Univ., Calif.
NEW FINITE ELEMENT METHODS FOR THE COMPRESSIBLE EULER AND NAVIER-STOKES EQUATIONS
Thomas J. R. Hughes, M. Mallet, and L. P. Franca *In* Von Karman Inst. for Fluid Dynamics Computational Fluid Dynamics, Volume 1 1986 22 p (For primary document see N86-32666 24-34)
Avail: NTIS HC A12/MF A01

Efforts in developing finite element methods for the compressible Euler and Navier-Stokes equations are reviewed. A class of Petrov-Galerkin methods for symmetric multidimensional advective-diffusive systems is described. The weighting functions for these methods involves a Galerkin term, generalized streamline term, and discontinuity-capturing term. It is shown that the compressible Navier-Stokes equations can be cast as a symmetric advective-diffusive system through the use of entropy variables. Numerical examples of high Mach number flows exhibit the good behavior of the method. ESA

A NUMERICAL STUDY OF SEPARATION ON A SPHEROID AT INCIDENCE
M. Rosenfeld, M. Israeli, and M. Wolfshtein Jul. 1986 36 p
(Contracts NAS1-17070; NAS1-18107)
(NASA-CR-178167; ICASE-86-49; NAS 1.26:178167) Avail: NTIS HC A03/MF A01 CSCL 20D

The three-dimensional incompressible, steady and laminar flow field around a prolate spheroid at incidence is considered. The parabolized Navier-Stokes equations are solved numerically. The method can handle vortex types as well as bubble type flow separation because the pressure is one of the dependent variables. Here, the distribution of the skin friction is reported for two test cases. The first test case is a prolate spheroid of aspect ratio of 4:1 at 6 degrees incidence and Reynolds number of 1 million (based on half the major axis). The second case is a spheroid with a 6:1 aspect ratio at 10 degrees incidence and Reynolds number of 0.8 x 1 million. The properties of the flow field near the body are discussed on the basis of the pattern of the skin friction lines, and the shape of the separation lines. Favorable agreement with experimental results is obtained. Author

VISCOUS-INVISCID INTERACTION WITH HIGHER-ORDER VISCOUS-FLOW EQUATIONS Technical Report, Sep. 1983 - Aug. 1986
Frederick Stern, Sungyul Yoo, and Virendra C. Patel Aug. 1986 151 p
(Contracts N00014-83-K-0136; NR Proj. 655-002)

(IIHR-304) Avail: NTIS HC A08/MF A01

The partially-parabolic, or parabolized, Navier-Stokes equations for laminar flow, and the corresponding Reynolds equations for turbulent flow, are coupled with an inviscid-flow solution procedure to develop a viscous-inviscid interaction method which can be used in three-dimensional flows which cannot be treated by means of the classical boundary-layer equations. Potential applications of such a higher-order matching procedure are, for example: thick boundary layers on ship sterns and bodies at incidence, interacting shear layers (wakes, wall jets), solid-solid and solid-fluid corners. FLOW VISUALIZATION AND VELOCITY MEASUREMENTS IN THE SEPARATED REGION OF AN APPENDAGE-FLAT PLATE JUNCTION

Stuart C. Dickinson Mar. 1986 16 p

(AD-A167611; DTNSRDC-86/020) Avail: NTIS HC A02/MF A01 CSCL 20/4

A root vortex forms at the junction of a flat plate and an appendage, creating a three-dimensional separated flow. Time dependent oil film and oil dot visualizations of this turbulent flow have revealed the vortex system and have provided quantitative information on the direction and the magnitude of the shear stress. Two-dimensional LDV (Laser Doppler Velocimetry) mean velocity measurements were made in the separated flow region around the leading edge of the appendage, and these measurements are compared here with the flow visualization results. LINEAR STABILITY OF PLANE COUETTE FLOW OF AN UPPER CONVECTED MAXWELL FLUID Summary Report

Michael Renardy and Yuriko Renardy Feb. 1986 14 p

(Contract DAAG29-80-C-0041; Grants NSF MCS-82-15064; NSF DMS-84-51761)

(AD-A167927; MRC-TSR-2911) Avail: NTIS HC A02/MF A01 CSCL 20/4

Investigated is the linear stability of plane Couette flow of an upper convected Maxwell fluid using a spectral method to compute the eigenvalues. No instabilities are found. This is in agreement with the results of Ho and Denn and Lee and Finlayson, but contradicts proofs of instability given by Gorodtsov and Leonov and Akbay and Frischmann. The errors in those arguments are pointed out. The authors also find that the numerical discretization can generate artificial instabilities. The qualitative behavior of the eigenvalue spectrum as well as the artificial instabilities is discussed. GRA

STUDIES ON TRANSONIC DOUBLE CIRCULAR ARC (DCA) PROFILES OF AXIAL FLOW COMPRESSOR CALCULATIONS OF PROFILE DESIGN

Y. Rugun and Q. Zhaoyan 19 May 1986 8 p Transl. into ENGLISH from Gongcheng Rewali Xuebao (China), v. 5, no. 4, Nov. 1984 p 342-344

(AD-A168638; FTD-ID(RS)T-0266-86) Avail: NTIS HC A02/MF A01 CSCL 20/4

In this paper, the concepts and methods for design of high-Mach-number airfoils of axial flow compressor are described. The correlation-equations of main parameters such as geometries of airfoil and cascade, stream parameters and wake characteristic parameters of compressor are provided. For obtaining the total pressure loss coefficients of cascade and adopting the simplified calculating method, several curves and charts are provided by authors. The testing results and calculating values are compared, and both the results are in better agreement. Author (GRA)

HYPERBOLIC STEFAN PROBLEM WITH DISCONTINUOUS TEMPERATURE

A. D. Solomon, V. Alexiades, D. G. Wilson, and J. Greenberg Mar. 1986 22 p Prepared in cooperation with Oak Ridge National Lab., Tenn.

(Contract DE-AC05-84OR-21400)

(DE86-010069; ORNL-6216) Avail: NTIS HC A02/MF A01

In an earlier paper a Stefan problem for hyperbolic heat transfer was formulated under the condition of continuity of the temperature at the moving front. In this paper this assumption is examined and an alternative model is presented in which continuity is not imposed. For this case, a problem with an explicit solution is presented, as are some qualitative properties of solutions to some similar problems. In addition, quasi-steady approximate solutions to certain other benchmark problems are derived. DOE

TRANSPORT AND RELAXATION PPOCESSES IN SUPERCRITICAL FLUIDS Final Technical Report, 1 Oct. 1982 - 31 Mar. 1986

J. Jonas 18 Mar. 1986 56 p

(Contract DE-FG22-82PC-50800)

(DE86-007930; DOE/PC-50800/T14) Avail: NTIS HC A04/MF A01

The main goal of the research supported by this grant has been the advancement of our fundamental understanding of transport and relaxation behavior of compressed supercritical fluids and binary supercritical fluid systems. An important aspect of our work was the development of new experimental techniques for the atomic and molecular level investigations of supercritical fluids. In our NMR studies we developed a novel in-situ NMR method for the measurements of solubilities of solids in compressed supercritical fluids. This method also yields phase information on the system. The solubility of solid naphthalene in supercritical carbon dioxide was measured. The P-T trace of the S-L-G phase lines was also determined. In the area of transport in supercritical fluids we developed NMR instrumentation using fixed field gradient spin-echo technique to measure self-diffusion coefficients in supercritical fluids. The self-diffusion in supercritical ethylene and supercritical toluene was measured. In addition to the NMR method, we also developed and evaluated an FTIR technique to measure solubil ities of solids in supercritical fluids. The system anthracene-carbon dioxide was investigated. Our preliminary lase Rayleigh and Raman experiments on collision induced scattering in supercritical fluids opened a new area of investigations of intermolecular interactions in supercritical fluids. The NO and CO fluids were studied. DOE

DESIGN STUDY OF PLASTIC FILM HEAT EXCHANGER Final Report

E. C. Guyer and D. L. Brownell 19 Feb. 1986 105 p

(Contract DE-AC07-84ID-12550)

(DE86-011040; DOE/ID-12550/1) Avail: NTIS HC A06/MF A01

This report presents the results of an effort to develop and design a unique thermoplastic film heat exchanger for use in an industrial heat pump evaporator system and other energy recovery applications. The concept for the exchanger is that of individual heat exchange elements formed by two adjoining and freely hanging plastic films. Liquid flows downward in a regulated fashion between the films due to the balance of hydrostatic and frictional forces. The fluid stream on the outside of film may be a free-falling liquid film, a condensing gas, or a noncondensing gas. The flow and structural principles are similar to those embodied in an earlier heat exchange system developed for use in waste water treatment systems (Sanderson). The design allows for high heat transfer rates while working within the thermal and structural limitations of thermoplastic materials. The potential of this new heat exchanger design lies in the relatively low cost of plastic film and the high inherent corrosion and fouling resistance. This report addresses the selection of materials, the potential heat transf er performance, the mechanical design and operation of a unit applied in a low pressure steam recovery system, and the expected selling price in comparison to conventional metallic shell and tube heat exchangers. THERMOPERVAPORATION SYSTEM
Takashi Kimura and Takeshi Nomura 1986 13 p Transl. into ENGLISH from Japanese Patent Application No. 5983-58,227,626
(Contract DE-AC05-84OS-21400)
(DE86-011152; Y/TR-86/5) Avail: NTIS HC A02/MF A01

This invention relates to the thermopervaporation system. Thermopervaporation has been generally known as a method of conducting a separate condensation of a liquid, in which the raw liquid or hot liquid to be processed. For example, hot sea water is allowed to pass through the primary side of a porous polymeric membrane that permits liquid vapor to permeate but does not allow the liquid itself to permeate. The vapor which was produced from the raw liquid is condensed and passes through the above-mentioned porous membrane in the secondary side by cooling. In this manner the raw liquid is condensed in the primary side and the condensed water is collected in the secondary side. Various systems have been also proposed in the past for such purposes. The purpose here is to offer a tube-type thermopervaporation system which has a greater effective membrane area per unit volume and offers an excellent process efficiency. DOE

SHELLSIDE FLOW-INDUCED TUBE VIBRATION IN TYPICAL HEAT EXCHANGER CONFIGURATIONS: OVERVIEW OF A RESEARCH PROGRAM
H. Halle, J. M. Chenoweth (Heat Transfer Research, Inc., Alhambra, Calif.), and M. W. Wambsganss 1986 27 p Presented at the ASME Pressure Vessel and Piping Conference and Exhibit, Chicago, Ill., 20 Jul. 1986 Prepared in cooperation with Heat Transfer Research, Inc., Alhambra, Calif.
(Contract W-31-109-eng-38)
(DE86-005549; CONF-860722-1) Avail: NTIS HC A03/MF A01

A comprehensive research program is being conducted to develop the necessary criteria to assist designers and operators of shell-and-tube heat exchangers to avoid detrimental flow-induced tube vibration. This paper presents an overview of the insights gained from shellside water-flow testing on a horizontal, industrial-sized test exchanger that can be configured in many ways using interchangeable tube bundles and replaceable nozzles. Nearly 50 different configurations have been tested representing various combinations of triangular, square, rotated-triangular, and rotated-square tubefield layouts; odd and even numbers of crosspasses; and both single- and double-segmental baffles with different cut sizes and orientations. The results are generally consistent with analytical relationships that predict tube vibration response by the combined reinforcing effect of the vibration mode shape and flow velocity distribution. An understanding of the vibration and instability performance is facilitated by recognizing that the excitation is induced by three separate, though sometimes interacting, flow conditions. These are the crossflows that generate classic fluidelastic instabilities in the interior of the tube bundle, the entrance and exit bundle flow from and into the shell nozzles, and the localized high velocity bypass and leakage stream flows. The implications to design and/or possible field remedies to avoid vibration problems are discussed. DOE

BLOCKAGE OF NATURAL CONVECTION BOUNDARY LAYER FLOW IN A MULTIZONE ENCLOSURE
D. Scott, R. Anderson, and R. S. Figliola Feb. 1986 9 p Presented at the 4th AIAA/ASME Thermophysics and Heat Transfer Conference, Boston, Mass., 2 Jun. 1986 Prepared in cooperation with Midwest Research Inst., Golden, Colo.
(Contract DE-AC02-83CH-10093)
(DE86-004430; SERI/TP-252-2847; CONF-860612-1) Avail: NTIS HC A02/MF A01

This paper reports the results of an experimental study that examines the transition between flow regimes, as a function of aperture size, in a two-zone enclosure with heated and cooled end walls. A constant heat flux boundary condition was maintained on one vertical end wall, and an isothermal cold temperature sink was maintained on the opposite vertical end wall. All of the remaining surfaces were highly insulated. The transition between the boundary layer driven regime and the bulk density driven regime was established as a function of the geometry of the aperture in the partition that separated the hot and cold zones. The results demonstrate that transition from the boundary layer driven regime to the bulk density driven regime is caused by blockage of the boundary layer flow, when the area of the flow aperture is reduced below a critical value. A simple flow model has been developed which predicts that the critical aperture area for the onset of flow blockage is directly proportional to the number of active heat transfer surfaces and inversely proportional to the Rayleigh number which characterizes the level of heating and cooling provided to the active heat transfer surfaces. DOE

MONTE CARLO SIMULATION OF FREE JET FLOW FROM A SLIT
J. B. Anderson, J. D. Foch, M. J. Shaw, R. C. Stern, and B. J. Wu Sep. 1985 24 p Presented at the 15th International Symposium on Rarefied Gas Dynamics, Grado, Italy, 16 Jun. 1986 Prepared in cooperation with Pennsylvania State Univ., University Park
(Contract W-7405-eng-48)
(DE86-006705; UCRL-93788; CONF-860636-1) Avail: NTIS HC A02/MF A01

The expansion of a free jet from a slit source into a vacuum has been simulated using the Monte Carlo procedures developed by Bird. The calculations were made for hard-sphere molecules ((GAMMA) = 5/3) at several densities to examine the departures from translational equilibrium in the flow field. Results are compared with the predictions of a method-of-characteristics calculation for continuum inviscid flow. The variations of the three components of the kinetic temperature are similar to those of a cylindrical source expansion. Molecular velocities perpendicular to the flow are found to depart from Maxwellian distributions at large distances from the slit. DOE

RESEARCH PROGRAM: THE INVESTIGATION OF HEAT TRANSFER AND FLUID FLOW AT LOW PRESSURE
M. S. El-Genk, J. S. Philbin, and F. C. Foushee 1986 20 p Presented at the 10th US TRIGA User's Conference, College Station, Tex., 7 Apr. 1986 Prepared in cooperation with Sandia National Labs., Albuquerque, N. Mex. and GA Technologies, Inc., San Diego, Calif.
(Contract DE-AC04-76DP-00789)
(DE86-009379; SAND-86-0255C; CONF-8604117-3) Avail: NTIS HC A02/MF A01

This paper gives an overview of a multiyear joint research program being conducted at the University of New Mexico (UNM) with support from Sandia National Laboratories and GA Technologies. This research focuses on heat removal and fluid dynamics in flow regimes characterized by low pressure and low Reynolds number. The program was motivated by a desire to characterize and analyze cooling in a broad class of TRIGA-type reactors under:

(1) typical operating conditions, (2) anticipated, new operating regimes, and (3) postulated accident conditions. It has also provided experimental verification of analytical tools used in design analysis. The paper includes descriptions of the UNM thermal-hydraulics test facility and the experimental test sections. During the first two years experiments were conducted using single, electrically heated rod in water and air annuli. This configuration provides an observable and serviceable simulation of a fuel rod and its coolant channel. DOE

MEASUREMENT OF PERFORMANCE LIMITS IN CRYOGENIC HEAT PIPES
F. Haug, F. C. Prenger, and R. H. Chrisman 1986 9 p Presented at the 4th AIAA/ASME Thermophysics and Heat Transfer Conference, Boston, Mass., 2 Jun. 1986 Prepared in cooperation with Astronautics Technology Center, Madison, Wis.
(Contract W-7405-eng-36)
(DE86-010208; LA-UR-86-1490; CONF-860612-5) Avail: NTIS HC A02/MF A01

This paper describes the results of an experimental study designed to investigate the fabrication and operation of gravity-assist cryogenic heat pipes. Two heat pipes were built, the first having no formal wick but a roughened internal surface, the second having spiral grooves machined with a specially developed tool. The wall material of the heat pipes was brass and hydrogen was used as the working fluid. The wicked heat pipe became operational over the entire temperature range from the triple-point to the critical point. The performance limitation depended on the operating temperature and the tilt angle. Axial heat flux densities of up to 50W/cm(2) were obtained. DOE

ERRORS FOR CALCULATIONS OF STRONG SHOCKS USING AN ARTIFICIAL VISCOSITY AND AN ARTIFICIAL HEAT FLUX
W. F. Noh Dec. 1985 68 p
(Contract W-7405-eng-48)
(DE86-010230; UCRL-53669) Avail: NTIS HC A04/MF A01

The artificial viscosity (Q) method of von Neumann-Richtmyer is a tremendously useful numerical technique for following shocks wherever and whenever they appear in the flow. We show that it must be used with some caution, however, as serious Q-induced errors (on the order of 100%) can occur in some strong shock calculations. Three types of Q errors are investigated: (1) Excess Q heating, of which there are two types: (a) excess wall heating on shock formation, and (b) shockless Q heating; (2) Q errors when shocks are propagated over a non-uniform mesh; and (3) Q error in propagating shocks in spherical geometry. As a basis of comparison the Lagrangian formulation of von Neumann-Richtmyer with Q = C0(2) rho l(2)(u sub x)(2) is used as the standard. Comparisons are made with other formulations. DOE

EXPERIMENTAL INVESTIGATION OF SECONDARY FLOW VORTICES IN A ROD CLUSTER
V. Vonka, J. Hoornstra, and P. Boersma Dec. 1985 119 p
(ECN-174; B8660551; ETN-86-97733) Avail: NTIS HC A06/MF A01

Secondary flow vortices were measured in 2 regular subchannels of a triangularly arranged bare rod bundle with pitch-to-diameter ratio = 1.3 at Reynolds numbers Re = 60,000 and 175,000. A laser Doppler anemometer measured total time average velocity vectors in the central subchannels of a four rod bundle. Results show that half the momentum transport in the circumferential direction is due to the secondary flow vortex convection. In nonisothermal situations the secondary vortices contribute to heat transport in radial and circumferential directions. In radial direction, the contribution can improve the heat transfer coefficient and contribute to better economy of heat transfer installations. In circumferential direction, the contribution helps to smooth out circumferential temperature differences, improves the heat removal from heated surfaces thus decreasing the maximum surface temperature, and contributes to passive safety of heat transfer installations. INSTATIONARY FLOW EFFECTS IN THE ROTOR OF A TURBINE Ph.D. Thesis - Technische Hochschule, Aachen, West Germany
Anton Binder Jan. 1986 160 p In GERMAN; ENGLISH summary
Report will also be announced as ESA-TT-1001
(DFVLR-FB-85-66; ISSN-0171-1342; ETN-86-97816) Avail: NTIS HC A08/MF A01; DFVLR, Cologne, West Germany, DM 51

Instationary turbine rotor flow effects caused by interactions between rotor and stator rows are analyzed. Measurements were carried out on a single-stage, high-pressure turbine, using conventional probes and the noninterfering laser-two-focus anemometer. The investigation of the instationary rotor flow begins with its source: the nonuniform stator exit flow. It is shown that the individual stator exit flow regions, such as the wakes and secondary vortices, are chopped up by the rotor. Because of this chopping, instationary flow phenomena appear in the rotor, leading to elevated turbulence levels and higher losses, and causing a transport of mass transverse to the flow direction. A fluidic sensor providing a differential pressure signal proportional to the angular velocity of a rotary input is described. In one embodiment the sensor includes a fluid pump having an impeller coupled to a rotary input. A housing forming a constricting fluid flow chamber is connected to the fluid input of the pump. The housing is provided with a fluid flow restrictive input to the flow chamber and a port communicating with the interior of the flow chamber. The differential pressure signal measured across the flow restrictive input is relatively noise free and proportional to the square of the angular velocity of the impeller. In an alternative embodiment, the flow chamber has a generally cylindrical configuration and plates having flow restrictive apertures are disposed within the chamber downstream from the housing port. In this embodiment, the differential pressure signal is found to be approximately linear with the angular velocity of the impeller. M.G.

US-Patent-Appl-SN-706681; US-Patent-Class-73-862.04;
US-Patent-Class-73-147; US-Patent-Class-73-862.61) Avail: US Patent and Trademark Office CSCL 14B

A skin friction force measuring device is described which is comprised of a first pivoted L shaped arm, a second arm pivoted on one end of the L shaped arm with a sensing element attached to an end of the second arm. In response to skin friction forces on the sensing element the arms are pivoted about the two pivots and two nulling means force the pivots back to their zero position. The outputs of the two nulling means are indicative of the skin friction forces along two perpendicular axes in the plane of the sensing element. NASA

US-Patent-Class-356-72; US-Patent-Class-356-73;
US-Patent-Class-434-4) Avail: US Patent and Trademark Office CSCL 14B

A method and apparatus for calibrating laser Doppler velocimeters having one or more intersecting beam pairs are described. These velocimeters measure fluid velocity by observing the light scattered by particles in the fluid stream. Moving fluid particulates are simulated by fine taut wires that are radially mounted on a disk that is rotated at a known velocity. The laser beam intersection locus is first aimed at the very center of the disk and then the disk is translated so that the locus is swept by the rotating wires. The radial distance traversed is precisely measured so that the velocity of the wires (pseudo particles) may be calculated. NASA

US-Patent-Class-324-238; US-Patent-Class-324-240;
US-Patent-Class-324-262; US-Patent-Class-73-37.5) Avail: US Patent and Trademark Office CSCL 14B

A method and apparatus for inspecting the surface of a ball bearing is disclosed which includes a base having a high friction non-abrasive base scanning surface. A holding device includes a cone-shaped cup recess in which a ball element is received. Air is introduced through a passage to relieve friction between the wall of the recess and the ball element and facilitate rolling of the ball over the high friction base surface. The holding device is moved over the base scanning surface in a predetermined pattern such that the entire surface of the ball element is inspected byan eddy current probe which detects any surface defects. PERFORMANCE PREDICTIONS FOR ROCKWELL INDENTERS
Jill G. Wood and June Cotter May 1985 42 p
(NPL-MOM-73; ISSN-0309-3069; ETN-86-97987) Copyright. Avail: Issuing Activity

The performance in Rockwell HRC, HRA, and HR30N scales of selected standardizing indenters is predicted from precision measurements of their geometric forms. The performances of standardizing indenters are established with respect to the ideal performance of a nominally dimensioned indenter. For commercially produced test indenters, errors in hardness corresponding to the tolerances for angle and radius are predicted over the full ranges of the three Rockwell scales. It is shown that a form of indenter with a flattened tip, typical of commercial production, can give a nominal performance in spite of having an average radius on the top limit of the permitted test tolerance. ULTRASONIC DEPTH GAUGE FOR LIQUIDS UNDER HIGH PRESSURE Patent Application
Allan J. Zuckerwar and David S. Mazel, inventors (to NASA) (Old Dominion Univ., Norfolk, Va.) Filed 13 Feb. 1986 11 p
(NASA-Case-LAR-13300-CU; NAS 1.71:LAR-13300-CU;
US-Patent-Appl-SN-829042) Avail: NTIS HC A02/MF A01 CSCL 14B

The invention relates to an ultrasonic depth gauge for liquids under high pressure and is particularly useful in the space industry where it is necessary to use a pressurized gas to transfer a liquid from one location to another. Conventional liquid depth gauges do not have the capability to operate under extreme high pressures (i.e.: exceeding 300 p.s.i.). An ultrasonic depth gauge capable of withstanding high pressure according to the present invention is comprised of a transducer assembly and a supporting electronics unit. The transducer assembly is mounted into the bottom wall of a storage vessel with its resonating surface directly exposed to the highly pressurized liquid in the vessel. In operation, the ultrasonic pulse propagates upward through the liquid to the liquid-gas interface in the storage vessel. When the ultrasonic echo returns from the liquid-gas interface, it re-excites the composite resonator into vibration. The supporting electronics unit measures the round-trip transmit time for the ultrasonic pulse and its return echo to traverse the depth of the highly pressurized liquid. The novelty of this invention resides in the use of a

conventional transducer rigidly bonded to the inside wall of a bored out conventional high-pressure plug to form a composite resonator capable of withstanding extremely high pressure. Author

RESEARCH INSTRUMENTATION FOR HOT SECTION COMPONENTS OF TURBINE ENGINES
David R. Englund 1986 22 p Presented at the Symposium on Propulsion Instrumentation, Jiangyou, China, 6-10 Oct. 1986; sponsored by NASA and Chinese Aeronautical Establishment (NASA-TM-88851; E-3241; NAS 1.15:88851) Avail: NTIS HC A02/MF A01 CSCL 02B

Programs to develop research instrumentation for use on hot section components of turbine engines are discussed. These programs can be separated into two categories: one category includes instruments which can measure the environment within the combustor and turbine components, the other includes instruments which measure the response of engine components to the imposed environment. Included in the first category are instruments to measure total heat flux and fluctuating gas temperature. High temperature strain measuring systems, thin film sensors (e.g., turbine blade thermocouples) and a system to view the interior of a combustor during engine operation are programs which comprise the second category. The paper will describe the state of development of these sensors and measuring systems and, in some cases, show examples of measurements made with this instrumentation. The discussion will cover work done at NASA Lewis and at various contractor facilities. Author

ADVANCED INSTRUMENTATION FOR AERONAUTICAL PROPULSION RESEARCH
Melvin J. Hartmann 1986 23 p Presented at the Symposium on Propulsion Instrumentation, Jiangyou, China, 6-10 Oct. 1986; sponsored by NASA and Chinese Aeronautical Establishment (NASA-TM-88853; E-3244; NAS 1.15:88853) Avail: NTIS HC A02/MF A01 CSCL 14B

The development and use of advanced instrumentation and measurement systems are key to extending the understanding of the physical phenomena that limit the advancement of aeropropulsion systems. The data collected by using these systems are necessary to verify numerical models and to increase the technologists' intuition into the physical phenomena. The systems must be versatile enough to allow their use with older technology measurement systems, with computer-based data reduction systems, and with existing test facilities. Researchers in all aeropropulsion fields contribute to the development of these systems. Author

AUTOMATIC LOADING OF COMPOSITE TAPE USING CASSETTES Patent Application
Samuel I. Hailey, inventor (to Air Force) Filed 3 Feb. 1986 21 p (AD-D012338; US-Patent-Appl-SN-825113) Avail: NTIS HC A02/MF A01 CSCL 14/3

This patent application relates generally to laminating and tape-laying systems, and more specifically to a system of automatically loading composite tape onto tape-laying machine using cassettes. Automated composite laminating work centers reduce manufacturing costs and provide for high rates of production. A system for the automatic and continuous loading of composite tape into a tape-laying machine is disclosed. The system provides composite tape from a plurality of cassettes which are held in the magazine of a tape loading system. The tape loading system has a tape drive which feeds tape from a cassette in an active position to the tape-laying system in controlled amounts. The tape loading system also has a cassette transfer system which pushes a full cassette from a standby position into the active position when the cassette in the active position exhausts its supply of tape. (AD-D012342; US-Patent-4,580,274; US-Patent-Appl-SN-657092; US-Patent-Class-375-10) Avail: US Patent and Trademark Office CSCL 14/2

This patent discloses a device for testing the digital waveforms in a special purpose multi-channel transceiver system designed to operate in a tactical environment. As selected waveforms are presented to the test device, they are randomized over a fixed time period creating a unique signature for comparison with a prestored signature at the end of period. Uniquely assigned light emitting diodes identify which, if any, of the sequentially examined waveforms are incorrect. Provisions are included for latching the light emitting diodes in their illuminated state in order to detect non-recurrent fault conditions. GRA

COMPUTATIONAL METHODS IN NEARFIELD ACOUSTIC HOLOGRAPHY (NAH), APPENDIX Ph.D. Thesis
William A. Veronesi May 1986 173 p
(Contract N00014-82-K-0610)
(AD-A168064) Avail: NTIS HC A08/MF A01 CSCL 20/1

The continuous integrals and integral equations which form the theory of Nearfield Acoustic Holography for planar and odd-shaped source boundary surfaces are reviewed, and the approximations and assumptions necessary to reduce these equations to a set of finite and discrete operations suitable for computation are developed. These equations represent the solution of the Helmholtz equation with specified boundary conditions by Green's function methods. Two computational methods for reconstructing planar source boundary fields from planar holograms are developed. The first method is an approximation of the continuous solution method which the convolution theorem of Fourier Transforms provides. As an alternative to this reconstruction method, a conjugate gradient descent method is developed based on the finite and discrete propagation method discussed. The reduction to finite and discrete form, by a Finite Element technique, of the relationship between the Dirichlet and Neumann boundary conditions for an odd shaped surface is reviewed. A technique for reconstructing the odd-shaped surface boundary conditions from a hologram of general two-dimensional shape is proposed. GRA

ANALYSIS OF ELASTIC-PLASTIC RESISTANCE MATERIAL RESPONSE FOR STRESS GAGE DESIGN
R. B. Stout Apr. 1986 45 p
(Contract W-7405-eng-48)
(DE86-010777; UCID-20760) Avail: NTIS HC A03/MF A01

A deformation dependent model is developed for the resistivity changes of materials. The resistance response is represented as a functional that depends on measures of relative deformation between atoms and on dislocation density. Deformation dependent mechanisms of intrinsic resistivity are changes in the electronic band configurations, changes in the electron-phonon interaction cross-sections, and changes in the density of defect structures. The deformation dependent model for electronic band configurations is to represent changes in the number density of mobile electrons. The deformation dependent model for electron-phonon interaction and the density of defect structures is to represent changes in the scattering mechanisms that impede electron transport through a material. It is only after intrinsic resistivity is formulated in terms of recoverable and nonrecoverable deformation measures that a portion of a materials' resistance change can be isolated and explicitly identified as stress tensor dependent. This stress dependent part of the intrinsic resistivity response is referred to as the idealized piezoresistivity of a material. This idealized piezoresistivity is the change that depends on recoverable strains, which in the idealized case are elastic. In order to analyze and design reliable stress gages it is necessary to understand this idealized piezoresistance response, as well as other recoverable and nonrecoverable deformation dependent contributions to resistivity. Finally, an analysis is presented to demonstrate that a resistivity measurement for a single piezoresistance foil gage is not uniquely related to only one stress tensor applied to the gage. This analysis sugggests a new design for a triple material piezoresistance gage package to provide three independent and simultaneous resistivity measurements that are uniquely related to the three normal components of the stress tensor. DEVELOPMENT OF AN ULTRA-LOW-LOAD MICROHARDNESS INDENTATION TEST MACHINE
D. T. Schmale, R. J. Bourcier, and E. Martinez Apr. 1986 25 p
(Contract DE-AC04-76DP-00789)
(DE86-011150; SAND-86-0509) Avail: NTIS HC A02/MF A01

As part of a program to characterize the mechanical response of surface modified materials, a microhardness indentation test machine has been developed. An electromagnetic drive system controls a diamond indenter which is suspended on a low friction ball slide. The test specimen is mounted on a cantilevered arm in a vertical plane perpendicular to the indentation direction on an X-Y micrometer translation system. Tests are controlled with a 16-bit A/D closed loop digital controller/function generator designed for this system. Load is monitored with a strain gage load cell while displacement is measured with a set of capacitance probes. Load/depth/time data are stored on a digital oscilloscope which is linked to a DEC LSI 11/23 for subsequent processing. The system allows indentation loading up to 1 kg with load resolutions of 5 mg and a depth resolution of 10 nm. DOE

HIGH TEMPERATURE CALORIMETER PERFORMANCE VARIABLE STUDY
R. Troyer Apr. 1986 96 p
(Contract DE-AC05-84OR-21400)
(DE86-010074; ORNL/Sub-84-19712/1) Avail: NTIS HC A05/MF A01

Oak Ridge National Laboratory with funding supplied by the Department of Energy sponsored the evaluation of a water calorimeter for thermal transmission testing of refractory fiber insulation using a ruggedness test. The specimens tested were low density refractory fiber flexible blanket insulation. The factors evaluated included: (1) emissivity of copper plate; (2) calorimeter to guard balance; (3) calorimeter to room temperature balance; (4) calorimeter water flow rate; (5) perimeter insulation; (6) type of hot side thermocouple, and (7) type of cold side thermocouple. A ruggedness test is a statistical method of evaluating step changes making multiple changes with each test. Five of the seven factors were found to be significant at a minimum of one temperature. One plate versus three plates, two inch thick specimen versus three inch thick specimen and a release agent were three factors that were tested independently of the ruggedness test. The specimens were also tested in a guarded hot plate for comparison purposes. Recommendations are given to improve the design and operation of the calorimeter. DOE

METHODS FOR VERIFYING STRAIN GAGE INSTALLATIONS
V. I. Bateman, R. A. May, and R. T. Reese 1986 7 p
(DE86-009286; SAND-85-1804C) Avail: NTIS HC A02/MF A01

Methods for verifying strain gage installations were developed for instrumented test structures subjected to hostile environments including high speed entry into water and earth. The methods include the comparison of the results of multiple state load tests with appropriate analytical predictions and the use of dynamic signature analysis to identify the mode shapes and frequencies of the test structures which are compared with predictions. These methods are used prior to and after the completion of an individual test or test series involving the instrumented test structure. Two examples are shown which describe the approach used and the results obtained. B.G.

(NASA-CR-179768; NAS 1.26:179768) Avail: NTIS HC A02/MF A01 CSCL 20E

This work focused on understanding the effects of arbitrary transverse and longitudinal relaxation rates on the susceptibilities of coherently driven three-level systems. The approximation of a single relaxation rate often made in previous work is strongly invalidated by the variation in the spontaneous emission lifetime between various atomic level pairs in systems such as cesium. It is of great importance to the problem of nonlinear infrared generation to determine the dependence of both real and imaginary susceptibility on relaxation rates. The imaginary susceptibility on the pump transition determines the absorption of pump photons and the imaginary susceptibility on the laser transition determines the spectral dependence of the gain. This is of particular importance for pure Raman emission (i.e., absorption at linecenter of the gain transition) as it determines the tunability characteristics we are aiming to predict. The real susceptibility is important when cavities are used at the signal field as this will determine the loaded resonance of the Raman oscillator. Researchers show that in some cases which result from having different relaxation rates mode splitting may result, allowing more than one frequency to have the same Raman wavelength, possibly resulting in a temporal instability. MONOLITHIC AREA ARRAY FOR LASER RANGING APPLICATION Patent Application
James Halvis, inventor (to Air Force) Filed 24 Feb. 1986 15 p
(AD-D012296; US-Patent-Appl-SN-831897) Avail: NTIS HC A02/MF A01 CSCL 20/5

Laser ranging in volume of interest is accomplished using a laser transmitter, a planar matrix of photosensitive optical elements, a memory, a display, and a mechanical or electronic shutter. The laser transmitter directs a pulsed laser towards the volume of interest. The mechanical or electronic shutter shields all light from the planar matrix of photosensitive optical elements except during an interval occuring between times corresponding to the minimum range and maximum range of this laser rangefinder. The photosensitive optical elements each produce an output signal to the memory when receiving target echo return signals from objects in the volume of interest. When the memory is plurality of charge coupled device storage registers integral to the optical elements, then the receiver array has its own internal memory, which may be accessed to indicate the range values of object within the volume of interest. INVESTIGATION OF SINGLE CRYSTAL SILICATES FOR BLUE TUNABLE LASERS Quarterly Progress Report, 1 Sep. - 30 Nov. 1985
R. F. Belt and J. A. Catalano Jan. 1986 37 p
(Contract N00014-85-C-0823)
(AD-A167613; QPR-1) Avail: NTIS HC A03/MF A01 CSCL 20/5

The single crystal growth of rare earth silicates was investigated for the purpose of tunable laser hosts. Silicates of the type R2SiO5, where R = La, Gd, Y, Lu, were prepared from stoichiometric melts and doped with Ce(3+) activators. Seed crystals were obtained from crystallized melt sections or by growth on an iridium wire. These seeds were utilized in standard Czochralski type growth to obtain larger single crystals. Cathodoluminescence experiments on both powders and single crystals showed wavelength shifts with different rare earth ions. The Gd, Y, and mixed crystals of Gd-Y silicates gave good bright emission with Ce(3+). The emission is broad band and covers the wavelength range of 370 to 525 nm. The peak emission can be centered near 450 to 460 nm by other compositions. Larger single crystals for laser hosts are under development. GRA

RANGE DOPPLER COUPLING MAGNIFIER Patent
Bernard L. Lewis, inventor (to Navy) Issued 25 Mar. 1986 9 p Supersedes AD-D010594
(AD-D012316; US-Patent-4,578,677; US-Patent-Appl-SN-535085; US-Patent-Class-343-17.2PC) Avail: US Patent and Trademark Office CSCL 17/9

A pulse expander-compressor for magnifying the range-Doppler-coupling effects that accompany the use of frequency-modulation derived phase coded pulse compressors in order to accentuate the Doppler-coupling velocity effects on target echoes. The foregoing magnification is accomplished by generating a Doppler tolerant polyphase coded waveform with equal time spaces inserted between successive code elements in order to make the time difference between the first and last code elements independent of the number of code elements involved. These equal spaces may be variable in order to allow any desired target radial velocity to produce a phase difference between the first and last code elements of 2 pi. The foregoing may be implemented in a pulse expander-compressor by replacing each delay tc in the compressor input-signal expansion circuit by a set of N delay elements tc, and a set of N associated switches, the switches permitting each element in the set to be connected or bypassed, as desired. The time-dispersion circuit for the compressor is likewise modified by replacing each of its Mtc delays by a set of N delay elements Mtc, each of which is independently connectable or bypassable. SCANNING SYSTEM FOR MAPPING GAS FLOW UNIFORMITY IN A LASER Patent
David K. Neumann and Nicholas R. Pchelkin, inventors (to Air Force) Issued 15 Apr. 1986 6 p Supersedes AD-D010174
(AD-D012324; US-Patent-4,583,001; US-Patent-Appl-SN-475436; US-Patent-Class-250-573) Avail: US Patent and Trademark Office CSCL 17/5

A scanning system for mapping the degree of uniformity of gas flow in the cavity of a laser includes a carriage mounted for movement along a set of parallel tracks disposed along the side of a laser cavity. The carriage mounts an infrared detector in radiation receiving relationship with the laser cavity. A screw drive mechanism is coupled to the carriage for moving it in opposite directions on the tracks. Spaced windows along the side of the laser cavity allows passage of radiation from the laser cavity to the detector. Because of the alternating relationship between transmissive windows and non-transmissive plates which define the windows, successive portions of a voltage signal generated by the detector representing separate measurements can be easily identified with successive positions of the carriage along the laser cavity, and thus with particular successive portions of the laser cavity where measurement was taken. OPTICALLY PUMPED CW (CONTINUOUS WAVE) SEMICONDUCTOR RING LASER Patent
Michael M. Salour, Adrian Fuchs, and Dick Bebelaar, inventors (to Air Force) Issued 1 Apr. 1986 10 p Supersedes AD-D010977
(AD-D012326; US-Patent-4,580,269; US-Patent-Appl-SN-552554; US-Patent-Class-372-94) Avail: US Patent and Trademark Office CSCL 20/5

This patent discloses an optically pumped semiconductor ring laser having a plurality of reflective elements optically aligned with one another to form a ring-shaped resonant cavity. A semiconductor lasing medium is mounted within the ring-shaped resonant cavity by a transparent, heat conductive mount located within a vacuum/cooling chamber of the type which allows the passage of a laser beam therethrough. A pump beam initiates a lasing action within the ring-shaped resonant cavity to produce said laser beam and said laser beam exits the resonant cavity as a pair of outputs. An alternate embodiment of the above described semiconductor ring laser provides a semblance of unidirectional lasing operation. GRA

TWO-DIMENSIONAL PHASE LOCKED SEMICONDUCTOR LASER ARRAY Patent Application
Weng W. Chow, inventor (to Air Force) Filed 17 Mar. 1986 14 p
(AD-D012330; US-Patent-Appl-SN-840620) Avail: NTIS HC A02/MF A01 CSCL 20/5

A phase locked two-dimensional semiconductor laser array is disclosed that emits a unified wavefront using columns of individual lasers, each laser having a slant mirror between it and the other lasers in its column. The individual lasers are all evanescently coupled to the neighboring lasers. The slant mirrors reflect the light from the lasers next to it upwards out of the face of the array. The phase locking is accomplished by the evanescent wave coupling. The plane (uniform) wavefront is accomplished by the design of the array in which: each laser in an ith column forms an optical path length of x sub i with the slant mirror adjacent to it; and the optical path length between mirrors and lasers in the (i + 1) th column is given by: x sub i = x sub i(+1) + or - n (lambda/2) where lambda equals a measure of wavelength of the light transmitted out of the array, and n is an odd integer. GAIN ANISOTROPY IN LOW PRESSURE CHEMICAL LASERS
Harold Mirels 15 Apr. 1986 20 p
(Contract F04701-85-C-0086)
(AD-A168125; TR-0086(6060)-4; SD-TR-86-21) Avail: NTIS HC A02/MF A01 CSCL 20/5

Continuous-wave (CW) chemical lasers are frequently operated at pressures of the order of 1 Torr to achieve efficient lasing. At these pressures, the medium is inhomogeneously (Doppler) broadened, and the line shape (gain coefficient versus frequency), under power on operation, is a function of the viewing angle. For example, when viewed along the optical resonator axis, the line shape may have holes because of the radiation field; when viewed from a direction orthogonal to the resonator axis, it is free of holes. This anisotropy of the gain medium is the subject of the present study. The purpose is to aid in the experimental validation of numerical CW chemical laser codes wherein the line shape, as viewed along the resonator axis, is predicted, and experimental measurements of power on gain are made from an orthogonal direction. In the first portion of this study, general expressions for line shape are deduced. These expressions are then applied to determine both the axial and orthogonal gain distribution in a low pressure multimode CW chemical laser with a Fabry-Perot (F-P) resonator. GRA

INTERACTING COLLECTIVE MODES IN A LASER CAVITY
E. L. Graca, A. L. de Brito, and B. Baseia 1985 10 p
(DE86-701945; UFPB-DF-09/85) Avail: NTIS (US Sales Only) HC A02/MF A01

Collective operators are defined for the quantized radiation field in a one-dimensional laser cavity coupled to a semi-infinite outside region and the overlaps of neighbouring collective modes are considered to show how they modify, in the linear appoximation, the time evolution of the radiation field below threshold. The model and procedure work directly within a continuous spectrum of modes and allow us to get an improved insight on the prescription for the laser field in single-mode operation. DOE

GAIN PHYSICS OF RF-LINAC-DRIVEN XUV FREE-ELECTRON LASERS
J. C. Goldstein, B. D. McVey, and B. E. Newnam 1986 22 p Presented at the Topical Meeting on Short Wavelength Coherent Radiation, Monterey, Calif., 24 Mar. 1986
(Contract W-7405-eng-36)
(DE86-010201; LA-UR-86-1420; CONF-860316-6) Avail: NTIS HC A02/MF A01

In an RF-linac-driven XUV free-electron laser oscillator, the gain depends on the details of the shape of the electron beam's phase-space distribution, particularly the distribution of electrons in the transverse (to the direction of propagation) position and velocity coordinates. This strong dependence occurs because the gain in this device is inhomogeneously broadened. Our previous theoretical studies have assumed that the transverse phase space distribution is a product of uncorrelated Gaussian functions. In the present work, we shall present the results of a theoretical study of the gain for non-Gaussian phase-space distributions. Such distributions arise either from a better representation of the electron beam from an RF-linac or from an emittance filter applied to the beam after the linac. DOE

YAG LASER MONITORING Final Report
L. D. Wonnell Apr. 1986 31 p
(Contract DE-AC04-76DP-00613)
(DE86-010301; BDX-613-3425) Avail: NTIS HC A03/MF A01

A program has been initiated to characterize, calibrate, and monitor the output of high power Nd:YAG lasers at Allied Corporation, Bendix Kansas City Division (BKC). This program was developed to aid in maintaining product quality in the application of these lasers during manufacturing processes. Reference standards have been established, a basic calibration procedure outlined, critical laser output parameters identified, and recommendations made on instrumentation for in-process monitoring of Nd:YAG lasers. Success was related to the design and construction of two major items, a reference sensor assembly for characterizing and calibrating the direct output of a laser and a laser output monitor for continuous monitoring of a laser's output. A method of repairing a tubular assembly in which access to a defect in the tube is limited includes the steps of cutting an opening in the tube on the side opposite the defect so as to expose the defect from the inside of the tube. A tubular insert is inserted into the tube to cover the defect and is secured in place by means of brazing or welding. The remaining space between the opening and insert is closed by means of close-out patches which are welded or brazed to both the insert and the tube. The result is a permanent repair having great structural integrity. NASA

REMOTELY OPERABLE PERISTALTIC PUMP Patent
Robert R. Belew, inventor (to NASA) Issued 5 Aug. 1986 11 p Filed 08 Mar. 1985 Supersedes N85-29288 (23 - 18, p 3116)
(NASA-Case-MFS-28059-1; US-Patent-4,604,038;
US-Patent-Appl-SN-709255; US-Patent-Class-417-475) Avail: US Patent and Trademark Office CSCL 13K

A peristaltic pump is disclosed which includes a roller assembly on which is mounted a series of pump rollers. As the roller assembly is rotated by a drive gear the pump rollers are driven in reverse rotation by means of a stationary ring gear and pump roller gears. An upper pressure shoe plate and a lower pressure shoe plate are positioned above sets of flexible tubing. The tubing is sandwiched between the pressure shoe plates and the pump rollers. A highly compact pump is provided having twice as many fluid channel lines as is conventional. The peristaltic pump device may be remotely operated by means of a rotary actuator which rotates a driving hub to move the shoe plates by means of eccentrically mounted links. The pressure shoe plates may be moved by the rotary actuator to a loaded position in which the fluid lines are pinched by the pump rollers and fluid is pumped to an unloaded position in which the fluid lines are maintained in an undeformed, uncrimped configuration so that no creases or crimps are set into the fluid lines during periods of prolonged nonuse. NASA

MINIMUM-COST CONTROL OF ROBOTIC MANIPULATORS WITH GEOMETRIC PATH CONSTRAINTS Ph.D. Thesis
Neil David McKay 1985 311 p
Avail: Univ. Microfilms Order No. DA8600499

A variety of control schemes for industrial robots has been described in the literature, which usually divides control into three levels. The upper level is a task planner, which generates a geometric path which the robot follows in order to accomplish a task. The middle level is a trajectory planner, which assigns timing information to the geometric path. This typically is done so as to minimize some cost function while meeting the constraints imposed by the robot's dynamics and actuator characteristics. The lower level consists of a tracker, which tries to make the robot's actual behavior match the desired behavior. The middle level of the control process, trajectory planning is discussed here. Three methods for solving the trajectory planning problem are presented. Two of these apply only to minimum time trajectory planning, while the third can minimize a wide variety of cost functions. Usually the dynamics of the robot are assumed to be known during trajectory planning. However, if the dynamics are not known exactly, the nominal trajectory produced by the trajectory planner may not be realizable. To solve this problem, one of the trajectory planning methods has been extended so that rather than producing a minimum-time trajectory for a given nominal payload, it will produce that trajectory which has the shortest possible traversal time given that the trajectory must meet the actuator constraints for all payloads which fall into a given range. The technique can easily be extended to other sources of dynamic variations.Dissert. Abstr.

(NASA-CR-174913; NAS 1.26:174913; RI/RD85-183) Avail: NTIS HC A06/MF A01 CSCL 13K

Six small, low specific speed centrifugal pump configurations were designed, fabricated, and tested. The configurations included shrouded, and 25 and 100% admission open face impellers with 2 inch tip diameters; 25, 50, and 100% emission vaned diffusers; and volutes with conical exits. Impeller tip widths varied from 0.030 inch to 0.052 inch. Design specific speeds (N sub s = RPM*GPM**0.5.FT**0.75) were 430 (four configurations) and 215 (two configurations). The six configurations were tested with water

as the pumped fluid. Noncavitating performance results are presented for the design speed of 24,500 rpm over a flowrate range from 1 to 6 gpm for the N sub s = 430 configurations and test speeds up to 29,000 rpm over a flowrate range from 0.3 to 1.2 gpm for the N sub s = 215 configurations. Cavitating performance results are presented over a flowrate range from 60 to 120% of design flow. Fabrication of the small pump conponents is also discussed. Author

A COMPARISON OF EXPERIMENTAL AND THEORETICAL RESULTS FOR LEAKAGE, PRESSURE GRADIENTS, AND ROTORDYNAMIC COEFFICIENTS FOR TAPERED ANNULAR GAS SEAL Progress Report
David Alan Elrod and Dara W. Childs Sep. 1986 128 p
(Grant NAG3-181)
(NASA-CR-179709; NAS 1.26:179709; TRC-SEAL-4-86) Avail: NTIS HC A07/MF A01 CSCL 11A

A brief review of current annular seal theory and a discussion of the predicted effect on stiffness of tapering the seal stator are presented. An outline of Nelson's analytical-computational method for determining rotordynamic coefficients for annular compressible-flow seals is included. Modifications to increase the maximum rotor speed of an existing air-seal test apparatus at Texas A&M University are described. Experimental results, including leakage, entrance-loss coefficients, pressure distributions, and normalized rotordynamic coefficients, are presented for four convergent-tapered, smooth-rotor, smooth-stator seals. A comparison of the test results shows that an inlet-to-exit clearance ratio of 1.5 to 2.0 provides the maximum direct stiffness, a clearance ratio of 2.5 provides the greatest stability, and a clearance ratio of 1.0 provides the least stability. The experimental results are compared to theoretical results from Nelson's analysis with good agreement. Test results for cross-coupled stiffness show less sensitivity of fluid prerotation than predicted. Author

IMPROVED FRACTURE TOUGHNESS CORROSION-RESISTANT BEARING MATERIAL Final Report, 1981-1984
E. N. Bamberger and A. H. Nahm Jan. 1986 81 p
(Contract NAS3-22508)
(NASA-CR-174990; NAS 1.26:174990; R86AEB104) Avail: NTIS HC A05/MF A01 CSCL 13I

A development program was performed to establish whether a corrosion-resistant bearing material, such as a 14Cr steel, could be modified to allow carburization, thereby providing the excellent fracture toughness characteristics feasible with this process. The alloy selected for investigation was AMS 5749. Several modifications were made including the addition of a small amount of nickel for austenite stabilization. While some promising results were achieved, the primary objective of an acceptable combination of case hardness and microstructure was not attained. Because the high chromium content presents a serious problem in achieving a viable carburizing cycle, a number of experimental steels having lower chromium contents (8 to 12%) were produced in laboratory quantities and evaluated. The results were basically the same as those initially obtained with the modified AMS 5749. Corrosion tests were performed on AMS 5749, AISI M50, and 52100 bearing steels as well as some of the lower chromium steels. These tests showed that a reduced chromium level (10 to 12%) provided essentially the same corrosion protection as the 14Cr steels. Author

CONSTANT SPEED DRIVE WITH COMPENSATION USING DIFFERENTIAL GEARS Patent
William U. Borger, inventor (to Air Force) Issued 25 Feb. 1986 13 p Supersedes AD-D011156
(AD-D012256; US-Patent-4,572,961; US-Patent-Appl-SN-601514; US-Patent-Class-290-4) Avail: US Patent and Trademark Office CSCL 01/3

The electrical supply system on aircraft may employ a constant speed drive to convert variable engine speed to constant speed for operation of synchronous 400 Hz electrical generators. The heart of these devices is a differential which mechanically sums the input of two shafts and outputs this sum to a third shaft. Connected to this third shaft is a constant speed synchronous generator. Connected to one of the input shafts is the turbine generator. The second input shaft is connected to a speed compensating drive which accounts for engine speed changes. The speed compensating device disclosed in this patent is an electrically compensating motor/generator arrangement. Bidirectional power flow in the electric compensation link uses two high-speed, permanent-magnet, three-phase machines interconnected by a power conditioning network. One machine is operated as a brushless dc machine, while the other functions as a variable speed synchronous machine. Steady-state performance of two types of power conditioning are presented-a dc link inverter and a cycloconverter link. GRA

ESTIMATION OF INERTIAL PARAMETERS OF RIGID BODY LINKS OF MANIPULATORS
Chae H. An, Christopher G. Atkeson, and John M. Hollerbach Feb. 1986 20 p
(Contracts N0014-80-C-0505; N00014-82-K-0334)
(AD-A167930; AI-M-887) Avail: NTIS HC A02/MF A01 CSCL 13/13

A method of estimating the mass, the location of center of mass, and the moments of inertia of each rigid body link of a robot during general manipulator movement is presented. The algorithm is derived from the Newton-Euler equations, and uses measurements of the joint torques as well as the measurement and calculation of the kinematics of the manipulator while it is moving. The identification equations are linear in the desired unknown parameters, and a modified least squares algorithm is used to obtain estimates of these parameters. Some of the parameters, however, are not identifiable due to the restricted motion of proximal links and the lack of full force/torque sensing.

The algorithm was implemented on the MIT Serial Link Direct Drive Arm. A good match was obtained between joint torques predicted from the estimated parameters and the joint torques computed from motor currents. GRA

LEAK FREE FLOATING PACKING SHAFT SEAL Patent
John D. Spargo, A. B. Neild, and Martha M. Phillips, inventors (to Navy) Issued 25 Feb. 1986 11 p
(AD-D012311; US-Patent-4,572,518; US-Patent-Appl-SN-666938; US-Patent-Class-277-75) Avail: US Patent and Trademark Office CSCL 13/10

A leak free floating packing shaft seal is provided for a rotatable shaft and a supporting annular structure has a high pressure upstream side and a low pressure downstream side. The floating seal includes and annular holder which is slidably mounted in the supporting structure for radial movement therein. A ring of packing material is mounted in a recess in the inner circumferential side of the holder. A first O-ring arrangement is mounted between the supporting structure and the upstream side of the holder for effecting a seal from the high pressure environment, and second O-ring arrangement is mounted between the supporting structure and the downstream side of the holder. At least one passageway is provided for communicating the upstream and downstream side of the holder. A least one passageway is provided for communicating the upstream and downstream size of the holder. At least one passageway is provided for communicating the upstream and downstream size of the holder for balancing the pressures therebetween. With this arrangement the holder is free to undergo the radial movement without leakage and the detriment of lateral forces thereon. GRA

AND/OR GRAPH REPRESENTATION OF ASSEMBLY PLANS Interim Report
Luiz S. H. de Mello and Arthur C. Sanderson Apr. 1986 26 p Sponsored in part by Conselho Nacional de Desenvolvimento Cientifico e Technologico
(AD-A168036; CMU-RI-TR-86-8) Avail: NTIS HC A03/MF A01 CSCL 13/9

Presented is a compact representation of all possible assembly plans of a given product using AND/OR graphs. Such a representation forms the basis for efficient planning algorithms which permit an increase in assembly system flexibility by allowing an intelligent robot to pick a course of action according to instantaneous conditions. Two applications are discussed: the selection of the best assembly plan (off-line planning), land opportunistic scheduling (on-line planning). An example of an assembly with four parts illustrates the use of the AND/OR graph representation to find the best assembly plan based on weighing of operations according to complexity of manipulation and stability of subassemblies. In practice, a generic search algorithm, such as the AO may be used to fine this plan. The scheduling efficiency using this representation is compared to fixed sequence and precedence graph representations. The AND/OR graph consistently reduces the average number of operations. GRA

A COMPARISON OF A MANUAL AND COMPUTER-INTEGRATED PRODUCTION PROCESS IN TERMS OF PROCESS CONTROL DECISION-MAKING Interim Report
Steven M. Miller and Susan R. Bereiter Mar. 1986 50 p
(AD-A168037; CMU-RI-TR-86-6) Avail: NTIS HC A03/MF A01 CSCL 13/8

This report is an investigation into the changes in process control that took place in the body shop of a vehicle assembly plant that was modernized from a principally manual process to one that extensively uses programmable automation. In this study, process control is defined as the information flow and decision-making required to perform basic process operations. We investigate affects of the implementation of a computer-integrated production system on the amount of process control decision-making, the types of process control decisions being made, and the distribution process control decision-making between humans and machines. We found that as a result of the modernization, the amount of process control decision-making nearly tripled, the emphasis on decisions to meet product quality specifications increased, and the emphasis on decisions related to flexibility in handling a variety of product options decreased. Decisions relating to meeting product quality specifications and to timing and synchronization of tasks were mostly taken on by the automated equipment, while decisions relating to the flexibility of the process remained to a large extent under manual control. Whereas humans made nearly 75 percent of the decisions required to assemble and weld a vehicle body in the principally manual system, humans made fewer than ten percent of the comparable decisions in the automated system. The research procured under this contract is oriented toward the understanding and development of the flexible robot based manufacturing cells or islands which will increasingly become basic blocks for the building of modern parts production and assembly facilities. Present work spans a hierarchy of sub-systems oriented toward the development and integration of high performance manipulators into flexible manufacturing cells. The research topics being pursued range from highly sophisticated and accurate control algorithms for robot arm control, new types of sensors, analysis and use of advanced sensors information, to higher level languages for robot control, integration of robot systems with CAD databases, and heuristic problem solving techniques. OPERATING EFFICIENCIES OF A LYSHOLM HELICAL EXPANDER FOR BRAYTON-CYCLE HEAT ENGINES
B. Myers, G. Deis, and T. Shell Jan. 1986 10 p Presented at the 31st International Gas Turbine Conference and Exhibit, Dusseldorf, West Germany, 8 Jun. 1986
(Contract W-7405-eng-48)
(DE86-007178; UCRL-94019; CONF-860635-3) Avail: NTIS HC A02/MF A01

Operating tests on a Lysholm helical expander have been done to develop a data base for comparing the performance of helical expanders with turbine expanders by using simple scaling arguments. The eventual goal of such work would be to develop a rugged and reliable ceramic helical expander for operating at temperatures up to 1300 C (2400 F). We used a 127.5 mm (5.020 in.) metal expander on which we measured seven perfor-

mance variables against applied pressure ratio at six shaft speeds and an inlet gas temperature of 100 C (212 F). Our data system included: a torque and angular-speed cell to measure power; flow, pressure, and temperature instrumentation; and a data reduction program. Test results are presented in seven data plots; equations for computing the performance variables are tabulated. Adiabatic efficiency was found to be at least 85% in the pressure ratio range of 2.75 to 5.00. Performance is strongly influenced by gas leakage. Large machines with clearance ratios the same as smaller machines would benefit by size scaling effects. It is expected that ceramic helical expanders for 1300 C service would be able to operate at adiabatic efficiencies higher than 85%. DOE

AIR FLOW INSIDE A PNEUMATIC TIRE Final Report
W. J. Rae Aug. 1985 25 p
(Contract DE-FG02-84ER-13239)
(DE86-007850; DOE/ER-13239/1) Avail: NTIS HC A02/MF A01

This document contains a final report on all technical activity on Contract No. DE-FG02-84ER13239. This work involved a one-year theoretical study of the airflow that takes place inside a rolling pneumatic tire. Analytical and numerical studies of the flow are reported, which show details of the velocity, pressure and temperature fields that are generated at low forward speed. These results are found to be consistent with velocity-field measurements taken under a previous Department of Energy study. DOE

INVESTIGATION FOR DISTURBANCES OF THE INDEX PROFILE IN JOINTS OF ARC WELDED GLASS FIBERS [ONDERZOEK NAAR VERSTORING VAN HET INDEXPROFIEL IN LASSEN VAN VLAMBOOGGELASTE GLASVEZELS]
P. P. vandeMortel Mar. 1984 51 p In DUTCH
(ETN-86-97536) Avail: NTIS HC A04/MF A01

The course of the index profile in a welded joint was investigated using a reflectometric method. Arc welding usually disturbs the profile and causes extra damping. The surfaces to be measured were prepared by polishing. In order to remove the evenly spread material and stabilize the profile, the surface was etched and passivated. Results show a maximum index value of 0.0005. Because of hindering effects, i.e., the time dependent index profile of the polished fiber, the impossibility to measure the surface etched, disturbance susceptibility, and roundabout preparations, the method is not recommended. EVALUATION OF DIFFUSION DENSIFICATION HEALING (DDH) AND WELD REPAIRED F100 TURBINE VANES UNDER SIMULATED SERVICE CONDITIONS
A. J. A. Mom, N. M. Madhava, G. A. Kool, and M. Dean 19 Aug. 1985 13 p Presented at AGARD Structures and Materials Specialists Meeting on Advanced Joining of Metallic Materials, Oberammergau, West Germany, Sep. 1985
(NLR-MP-85065-U; B8664044; ETN-86-97682) Avail: NTIS HC A02/MF A01

The diffusion densification healing (DDH) process as applied to repair of cracked and unserviceable F100 turbine vanes was evaluated under simulated service test conditions with respect to

the conventional weld/patch coat repair procedure. The evaluation shows that the DDH process is a remarkably effective restoration process, resulting in strongly improved test behavior in relation to the original weld/patch coat procedure. Additional advantages are that scrap rates during repair are considerably reduced and that relaxation of current repair limits might be considered. ESA

A METHOD FOR DEVELOPING DESIGN DIAGRAMS FOR CERAMIC AND GLASS MATERIALS USING FATIGUE DATA
T. M. Heslin, M. B. Magida, and K. A. Forrest Sep. 1986 55 p
(NASA-RP-1174; NAS 1.61:1174) Avail: NTIS HC A04/MF A01 CSCL 14D

The service lifetime of glass and ceramic materials can be expressed as a plot of time-to-failure versus applied stress whose plot is parametric in percent probability of failure. This type of plot is called a design diagram. Confidence interval estimates for such plots depend on the type of test that is used to generate the data, on assumptions made concerning the statistical distribution of the test results, and on the type of analysis used. This report outlines the development of design diagrams for glass and ceramic materials in engineering terms using static or dynamic fatigue tests, assuming either no particular statistical distribution of test results or a Weibull distribution and using either median value or homologous ratio analysis of the test results. ACOUSTO-ULTRASONIC VERIFICATION OF THE STRENGTH OF FILAMENT WOUND COMPOSITE MATERIAL
Harold E. Kautz 1986 24 p Presented at the Pressure Vessel Conference, Chicago, Ill., 21-24 Jul. 1986; sponsored by the American Society of Mechanical Engineers
(NASA-TM-88827; E-3201; NAS 1.15:88827) Avail: NTIS HC A02/MF A01 CSCL 14D

The concept of acousto-ultrasonic (AU) waveform partitioning was applied to nondestructive evaluation of mechanical properties in filament wound composites (FWC). A series of FWC test specimens were subjected to AU analysis and the results were compared with destructively measured interlaminar shear strengths (ISS). AU stress-wave factor (SWF) measurements gave greater than 90 percent correlation coefficient upon regression against the ISS. This high correlation was achieved by employing the appropriate time and frequency domain partitioning as dictated by wave propagation path analysis. There is indication that different SWF frequency partitions are sensitive to ISS at different depths below the surface. Author

NONPARAMETRIC ESTIMATION OF QUANTILES AND OF DENSITY FUNCTIONS UNDER CENSORING, DISCRETE FAILURE MODELS AND MULTIPLE COMPARISONS Annual Technical Report, 1 Jun. 1984 - 31 May 1985
W. J. Padgett and J. D. Spurrier 14 Jun. 1985 13 p
(Grant AF-AFOSR-0156-84)
(AD-A167584; AFOSR-86-0174TR) Avail: NTIS HC A02/MF A01 CSCL 12/1

Major results have been obtained in the areas of nonparametric estimation of quantiles and of density functions under censoring, discrete failure models, and multiple comparisons. In particular, smooth nonparametric estimators of quantile functions from censored data were developed which give better estimates of percentiles of the lifetime distribution than the usual product-limit quantile function. Also, smooth density estimators from censored data were investigated using maximum penalized likelihood procedures. Several parametric models were proposed for the case of discrete failure data. These models provide a better fit to such data than some previously used discrete models. Finally, new methods of constructing simultaneous confidence intervals for pairwise differences of means of normal populations were developed, and the problem of selecting an asymptotically optimal design for comparing several new treatments with a control was solved. Work is continuing on the study of properties of kernel type quantile function estimators and development of goodness-of-fit tests for the model assumptions in accelerated life testing. GRA

FATIGUE TESTING A PLURALITY OF TEST SPECIMENS AND METHOD Patent Application

James D. Hodo, inventor (to NASA), Dennis R. Moore, inventor (to NASA), Thomas F. Morris, inventor (to NASA), and Newton G. Tiller, inventor (to NASA) Filed 16 Jul. 1986 12 p

(NASA-Case-MFS-28118-1; US-Patent-Appl-SN-886121) Avail: NTIS HC A02/MF A01 CSCL 20K

This invention relates to a fatigue testing apparatus for simultaneously subjecting a plurality of material test specimens to cyclical tension loading to determine the fatigue strength of the material. The fatigue testing apparatus includes a pulling head having cylinders defined therein which carry reciprocating pistons. The reciprocation of the pistons is determined by cyclical supplies of pressurized fluid to the cylinders. Piston rods extend from the pistons through the pulling head and are attachable to one end of test specimens, the other end of the test specimens being attachable to a fixed base, causing test specimens attached between the piston rods and the base to be subjected to cyclical tension loading. Because all of the cylinders share a common pressurized fluid supply, the breaking of a test specimen does not substantially effect the pressure of the fluid supplied to the other cylinders nor the tension applied to the other test specimens. VERTICAL DROP TEST OF A TRANSPORT FUSELAGE SECTION LOCATED AFT OF THE WING

Edwin L. Fasanella and Emilio Alfaro-Bou Sep. 1986 26 p

(NASA-TM-89025; NAS 1.15:89025) Avail: NTIS HC A03/MF A01 CSCL 20K

A 12-foot long Boeing 707 aft fuselage section with a tapering cross section was drop tested at the NASA Langley Research Center to measure structural, seat, and occupant response to vertical crash laods and to provide data for nonlinear finite element modeling. This was the final test in a series of three different transport fuselage sections tested under identical conditions. The test parameters at impact were: 20 ft/s velocity, and zero pitch, roll, and yaw. In addition, the test was an operational shock test of the data acquisition system used for the Controlled Impact Demonstration (CID) of a remotely piloted Boeing 720 that was crash tested at NASA Ames Dryden Flight Research Facility on December 1, 1984. Post-test measurements of the crush showed that the front of the section (with larger diameter) crushed vertically approximately 14 inches while the rear crushed 18 inches. Analysis of the data traces indicate the maximum peak normal (vertical) accelerations at the bottom of the frames were approximately 109 G at body station 1040 and 64 G at body station 1120. The peak floor acceleration varied from 14 G near the wall to 25 G near the center where high frequency oscillations of the floor were evident. The peak anthropomorphic dummy pelvis normal (vertical) acceleration was 19 G's. Author

VIBRATION OF BEAMS ON INTERMEDIATE ELASTIC SUPPORTS

A. Joshi and A. R. Upadhya Jul. 1986 54 p

(NAL-TM-ST-8608) Avail: NTIS HC A04/MF A01

The problem of free vibration of a beam on intermediate elastic supports is studied. The beam represents an idealized model of a launch vehicle whose dynamic characteristics are to be studied when mounted on an elastic support system. The support system consists of a pair of translational springs, a pair of rotational springs and a cantilevered beam. This configuration of the support system is normally used for mounting the aeroelastic buffet models inside the wind tunnel. Numerical results are obtained for the frequencies and mode shapes of this elastically coupled system, for a range of values of the spring constants and cantilevered beam stiffness and inertia values. The study shows that when the springs are supported at the nodal points corresponding to the first free-free beam mode, the linear spring stiffness has no effect on the first model mode and marginal effect on subsequent model modes. However, the rotational stiffness has a significant effect on all the model modes. The study also shows that though the variations in the stiffness or the inertia values of the cantilever beam affect only the predominantly cantilever modes, these variations become important because of the fact that the cantilever frequencies may come close to or even cross over, the model frequencies. FRACTURE ANALYSIS OF RADIAL SCIENTIFIC INSTRUMENT MODULE REGISTRATION FITTINGS OF THE SPACE TELESCOPE Final Report, 15 Jan. 1985 - 15 Jul. 1986

C. W. Springfield, Jr. 10 Sep. 1986 81 p

(Contract NAS8-36287)

(NASA-CR-178932; NAS 1.26:178932) Avail: NTIS HC A05/MF A01 CSCL 20K

Various pieces of the registration fittings for the Radial Scientific instrument (SI) module of the Space Telescope were examined from a fracture mechanics point of view and deemed to be fail-safe or else have had maximum allowable flaw sizes specified for them. The results of these analyses are summarized in tabular form. In many instances the applied stress levels were so low that the threshold stress intensity factor range was never reached. In most of the others the allowable flaw sizes were large enough to be detected by visual inspection. However, for some parts, such as the flexures connecting the aluminum cover to the ball retainer in the fitting at point A, the flaw sizes were rather small. Eddy current tests are capable of detecting flaws of this size (0.022 inches x 0.1 inches), so for those which have been so tested these small flaws should represent no danger of going undetected. In every instance approximations were made to err on the conservative side. These were pointed out in the discussions of the analyses for each fitting. One conservative approximation that was not mentioned, however, is the fact that retardation was not included in the crack propagation computations. Author

MODAL TEST STRUCTURE PROJECT Status Report
D. O. Smallwood and D. L. Gregory 1986 28 p Presented at the 32nd Annual Institute of Environmental Sciences Technical Meeting, Dallas, Tex., 6 May 1986
(Contract DE-AC04-76DP-00789)
(DE86-010100; SAND-86-2065C; CONF-8605105-2) Avail: NTIS HC A03/MF A01

The objectives of the study were to develop a simple test structure which could be used to compare modal systems and modal methods. A secondary objective would be to develop a structure which could be used to train newcomers to modal testing. We wanted a structure which would be easy to analyze, have well defined properties, be easy to fabricate, and have both widely spaced and closely coupled modes. The widely spaced modes could test the single degree of freedom methods and the closely coupled modes could test the multiple degree of freedom methods. Most test structures have very low damping, while most real structures have significant damping. Each range of damping presents its own problems for modal extraction. We wanted to find a mateial with a moderate amount of damping to more closely model the kinds of structures frequently tested. DOE

DYNA3D USER'S MANUAL (NONLINEAR DYNAMIC ANALYSIS OF STRUCTURES IN THREE DIMENSIONS), REVISION 2
J. O. Hallquist and D. J. Benson Mar. 1986 138 p
(Contract W-7405-eng-48)
(DE86-010256; UCID-19592-Rev-2) Avail: NTIS HC A07/MF A01

The user's manual for DYNA3D, an explicit three-dimensional finite element code for analyzing the large deformation dynamic response of inelastic solids and structures is updated. A contact-impact algorithm permits gaps and sliding along material interfaces with friction. By a specialization of this algorithm, such interfaces can be rigidly tied to admit variable zoning without the need of transition regions. Spatial discretization is achieved by the use of 8-node solid elements, 2-node beam elements, 4-node shell elements, 8-node solid shell elements, and rigid bodies. The equations-of-motion are integrated in time by the central difference method. DYNA3D contains sixteen material models and nine equations of state to cover a wide range of material behavior. DOE

CORRELATION OF ACOUSTIC EMISSION TO MICROSTRUCTURAL SOURCES Final Technical Report
J. Mohr and A. K. Mukherjee 26 Feb. 1986 34 p
(Contract W-7405-eng-48)
(DE86-010558; UCRL-15799) Avail: NTIS HC A03/MF A01

Tensile tests were conducted on Fe-21Ni-.6C alloy to determine the relation between true strain and acoustic emission, magnetic susceptibility, and true stress. Results, presented as graphs, show cyclic behavior characteristic of serrated yielding. The magnetic and acoustic emission monitors were designed to be used during the deformation and hence they depicted the changes that occurred during the deformation. DOE

TAPE JOINT STIFFNESS
R. P. Rechard Apr. 1986 46 p
(Contract DE-AC04-76DP-00789)
(DE86-010626; SAND-86-0022) Avail: NTIS HC A03/MF A01

This report evaluates the stiffness for a standard tape-joint structural connection. This stiffness is frequently necessary when modeling a structure (e.g., a shock model). In general, for a standard cylindrical tape joint, the stiffness is 1.2 times greater in compression and 0.67 smaller in tension than the mating shell material. The stiffness of a special-purpose planar and development cylindrical tape joint is also evaluated. Joint stiffness must usually be determined experimentally because standard connections are difficult and/or time consuming to analyze in depth. However, the simple design of the tape permitted a detailed finite-element analysis. The finite-element results on a developmental joint deviated less than 2% from the experimental values in compression and less than 25% in tension. DOE

INFLUENCE OF CONSTANT AMPLITUDE AND VARIABLE AMPLITUDE LOADING ON CRACK INITIATION AND MICROCRACK PROPAGATION IN Al 2024-T3
Joachim Foth Nov. 1985 143 p Original language document was announced as N85-16220
(ESA-TT-900; DFVLR-FB-84-29; ETN-86-97567) Avail: NTIS HC A07/MF A01; original German version available from DFVLR, Cologne, West Germany DM 41

The influence of constant amplitude and variable amplitude loading on the formation and on the propagation characteristics of microcracks was studied. The fatigue life of notched and unnotched specimens was compared. A concept based on fracture mechanics and taking into account the crack geometry and stress distributions was elaborated to describe the propagation characteristics of the microcracks. Up to the time of crack initiation, the microscopic plastic deformations occurring within a low-amplitude fatigue cycle are increased if preceded by large-amplitude fatigue cycles. The effect on the crack opening behavior is decisive for crack propagation. ESA

FATIGUE RESISTANCE OF HIGH QUALITY STEELS UNDER MULTIAXIAL LOAD Thesis [RESISTANCE A LA FATIGUE DES ACIERS A HAUTES CARACTERISTIQUES EN CHARGEMENT MULTIAXIAL]

Catherine Froustey Oct. 1985 54 p In FRENCH

(Contract DRET-84-1214)

(ETN-86-97878) Avail: NTIS HC A04/MF A01

The measurement procedures and the computation techniques for simultaneous torsion and flexion loads were studied to improve design procedures of helicopter rotating parts. The study includes the performance tests of a hydraulic multiaxial fatigue test machine and a bibliographic analysis of multiaxial fatigue design criteria. It is shown that the test machine is operational and that the three design criteria methods studied give slightly different results in combined flexion and torsion, and that the Dang Van critical point position differs from the results derived from Sines or Grossland. GRAVITY, GEOID AND THE OCEANIC LITHOSPHERE **c46**
A. B. Watts *In* CNES International Geophysics and Space 1985 p 237-339 (For primary document see N86-32786 24-42)
Avail: CEPADUES, Toulouse, France

The contributions of studies of the Earth's gravitational field to understanding of the oceanic lithosphere are reviewed. The concept of isostasy is introduced and the Airy and Pratt models are presented. The strong lithosphere concept is discussed, and the theory of flexure of elastic plates is outlined. The flexure model of isostasy is shown to be consistent with extrapolations from experimental rock mechanics. The role of flexure in geological features on the ocean floor, such as isolated seamounts, aseismic ridges, midocean ridges, large fracture zone offsets, and sedimentary basins, are examined. The importance of flexure for bathymetric prediction and studies of small scale mantle convection is emphasized. ESA

POTENTIAL MODELS [MODELES DE POTENTIEL] **c46**
G. Balmino *In* CNES International Geophysics and Space 1985 p 499-526 In FRENCH (For primary document see N86-32786 24-42)
Avail: CEPADUES, Toulouse, France

Global models of the Earth's gravitational field based on spherical harmonics, such as GEM, GRIM, SAO, and NWL, are introduced. Analysis of orbit perturbation and surface data is outlined. The data used and their processing are discussed. It is concluded that knowledge of geopotential is insufficient for accurate satellite trajectory determination, for ocean geoid determination, and for regional geophysical investigations where gravity is only known through trajectory analysis. The situation can be improved by using very low orbit, drag free satellites; by improving satellite altimetry; and by using onboard gravity gradiometers. ESA

N86-32801 Bureau Gravimetrique International, Toulouse (France).
STRUCTURE OF THE TELLURIC PLANETS [STRUCTURE DES PLANETES TELLURIQUES] **c91**
G. Balmino *In* CNES International Geophysics and Space 1985 p 527-570 In FRENCH (For primary document see N86-32786 24-42)
Avail: CEPADUES, Toulouse, France

Data on telluric planet gravitational fields, surface topography and shape, and rotation are used to deduce constraints on internal structure. Radial models, including those using seismic and petrological information, are presented. Methods using lateral density variations (thick plate, flexural models) are applied to Mars.

The behavior of the topographical spectra of the planets according to geometrical and physical models is discussed. It is concluded that radial models give only very rough approximations and require the installation of seismic networks on the planets. Lateral variation models can explain 50% of the observed gravitational fields. ESA

N86-32802 Mainz Univ. (West Germany). Inst. fuer Geowissenschaften.
DRIVING MECHANISMS OF PLATES c46
Wolfgang R. Jacoby *In* CNES International Geophysics and Space 1985 p 571-589 (For primary document see N86-32786 24-42)
Avail: CEPADUES, Toulouse, France

Models of buoyancy forces driving tectonic plates, and application of the laws of statics to plates are discussed. Model results are criticized because of the difference in basal drag present and past, and problems with continental push. Most of the force parameterizations are at best crude approximations based on plausible guesses. Models assuming zero net torque on the whole lithosphere avoid problems of force parametrization inherent in models with torque equilibrium at each plate, but cannot resolve the driving mechanism. Stress in the plates seems to be one of the best indicators for the driving mechanism, but unfortunately it is only a very crude one. The fair consistency in the results of so many models lends them credibility. Full solution of the thermal convection problem for the whole mantle is needed, but this cannot yet be handled. ESA

ON THE RELATIONSHIP BETWEEN LONG-TERM DRIFTER TRAJECTORIES AND MEAN SEASONAL DISTRIBUTIONS OF GEOSTROPHIC WIND AND BAROCLINIC OCEAN CURRENT IN THE EASTERN NORTH ATLANTIC c48
William J. Emery, Juergen Stahlmann (Kiel Univ., West Germany), and Wolfgang Krauss *In* CNES The 10th ARGOS Users Conference 1985 27 p (For primary document see N86-32805 24-42)
Avail: NTIS HC A14/MF A01

A 4 yr collection of trajectories from 100 satellite tracked drifting buoys in the North Atlantic is analyzed to determine the correspondence of buoy trajectories with mean seasonal distributions of geostrophic wind (sea level atmospheric pressure) and baroclinic ocean current (0/1500 db dynamic topography). Buoy positions were interpolated to 3 hr intervals then averaged over 60 hr and smoothed with a 3-month running mean and separated into winter and summer seasons. Visual comparison between smooth trajectories and winter/summer averages of atmospheric pressure and baroclinic ocean current suggests the stronger influence of the wind field upon the character of long term trajectories compared to that of the baroclinic current. Statistical comparisons between buoy and geostrophic wind speed and direction reveal strong correlations only in the south (10 to 30 N) where seasonal variations of atmospheric pressure are small. In the north (40 to 50 N) overall mean directions agree well, while low correlations are due to interannual changes in the winter sea-level pressure distributions. ESA

SYSTEM ARGOS, SEA SURFACE TEMPERATURES AND CIRCULATION PATTERNS IN THE NORTHERN ATLANTIC c48
A. P. Cracknell and R. D. Callison *In* CNES The 10th ARGOS Users Conference 1985 9 p (For primary document see N86-32805 24-42)
Avail: NTIS HC A14/MF A01

The accuracy of TIROS-N satellites AVHRR-derived sea surface temperatures (SST) is discussed. The possibility of using thermal infrared scanner data for studying ocean currents and circulation patterns, with data obtained via System ARGOS, for the North Atlantic is considered. Differences between measured and satellite derived SST are 0.3 to 0.4 K. ESA

N86-32808# Kiel Univ. (West Germany). Inst. fuer Meereskunde.
ON THE CORRELATION OF WIND AND THE TRAJECTORIES OF DROGUED DRIFTING BUOYS c48
Juergen Stahlmann *In* CNES The 10th ARGOS Users Conference 1985 11 p (For primary document see N86-32805 24-42)
Avail: NTIS HC A14/MF A01

Average values of the deviation angle between the heading of the wind and the heading of the drift current, and the quotient between the speed of the current and the wind stress were obtained. They are found to be dependent on the depth of the buoy's drogue and on the force of the wind. These current parameters can be used to separate the wind-induced part from observed drifting buoy current measurements and therefore help modelers of eddy-resolving models in comparing their results with observations. ESA

N86-32809# Oceanor, Trondheim (Norway).
TECHNICAL EXPERIENCE WITH THE ARGOS SYSTEM FOR TRANSMISSION OF OCEANOGRAPHICAL DATA c35

Avail: NTIS HC A14/MF A01

Oceanographical instruments and moorings equipped with ARGOS systems are described. Current meters, waveriders, buoys, and thermistor/salinity strings are presented. Problems with access to the ARGOS data center, and the limited data storage facilities (only 24 hr data are buffered) are mentioned. ESA

N86-32810# Oceanor, Trondheim (Norway).
THE IMPORTANCE OF MEASURING CURRENT, WAVES AND OTHER ENVIRONMENTAL PARAMETERS IN ORDER TO IMPROVE THE CURRENT FORECAST SERVICE c47
Svein Erling Hansen *In* CNES The 10th ARGOS Users Conference 1985 15 p (For primary document see N86-32805 24-42)

Avail: NTIS HC A14/MF A01

A current forecasting service to predict occurrences of high velocity current whirls in the Norwegian coastal current was established. It is relatively successful, but has difficulties due to lack of data in real time. Further observation has to be supplied in real time along the Skagerrak coast, and NW of Stavanger. ESA

N86-32811# Kiel Univ. (West Germany). Inst. fuer Meereskunde.

THE CURRENT SYSTEM OF THE NORTH ATLANTIC AS DEDUCED FROM DRIFTING BUOYS c48

Wolfgang Krauss *In* CNES The 10th ARGOS Users Conference 1985 24 p (For primary document see N86-32805 24-42)

Avail: NTIS HC A14/MF A01

More than 100 buoys were launched in the North Atlantic to analyze the large-scale circulation and the eddy intensities in the northern and eastern part of the North Atlantic. Results reveal a current system which predominantly transports water masses from the area southeast of Flemish Cap to the northeastern North Atlantic. A broad band (1500 km) of eddies is associated with the current; they exchange water masses across the Subarctic Front and yield intensive mixing of subtropical and polar waters. The subtropical anticyclonic gyre appears as an almost separate circulation system. The eastern recirculation of this gyre, however, receives a distinct amount of water from the area between the Azores and the Bay of Biscay. ESA

N86-32812# Continental Shelf Inst., Trondheim (Norway).

A NEW WAVE DIRECTION BUOY ALLOWS PRESENTATION OF WAVE DIRECTION DATA IN NEAR REAL TIME c48

G. Ueland and S. F. Barstow *In* CNES The 10th ARGOS Users Conference 1985 15 p Sponsored by Norske Shell A/S, Norsk Hydro A/S, Statoil, Royal Norwegian Council for Scientific and Industrial Research (For primary document see N86-32805 24-42)

Avail: NTIS HC A14/MF A01

The onboard data acquisition and processing system of a wave direction buoy compatible with the ARGOS system is described. It consists of a single board CMOS microcomputer with 192 KB memory; 12 bit CMOS analog to digital converter with 32 input channels; digital input channels; watchdog logic; power save logic; power supply with subsystem on/off switching; ARGOS PTT; sea data tape recorder; and field and lab test terminal. Field tests show that wave direction measurements are available onshore in near real time. ESA

THE USE OF SPATIAL TECHNIQUES FOR A BETTER CURRENT SURFACE KNOWLEDGE, WITH APPLICATION TO THE SOUTHERN OCEAN c48

Nathalie Daniault and Yves Menard (Centre National d'Etudes Spatiales, Toulouse, France) *In* CNES The 10th ARGOS Users Conference 1985 19 p (For primary document see N86-32805 24-42)

Avail: NTIS HC A14/MF A01

The eddy kinetic energy distribution in the Southern Ocean was estimated from SEASAT altimeter data and from 192 free drifting buoy trajectories. The ARGOS system was used for positioning of the buoys. A good spatial coherence is found between the results of the two methods. The distribution shows strong eddy kinetic activity near the western boundaries and near topographic features. The ratio between both estimates was very high, with kinetic energy distribution from drifters being three times larger than from the altimeter. The drifters eddy kinetic energy distribution was recomputed and processed through a bandpass filter, giving a better match. Remaining differences are attributed to nonsimultaneity of the two data bases. ESA

N86-32815# Norwegian Meteorological Inst., Blindern.

THE NORWEGIAN METEOROLOGICAL INSTITUTE'S USE OF THE ARGOS SYSTEM c47

Carl Kolderup Jensen *In* CNES The 10th ARGOS Users Conference 1985 12 p (For primary document see N86-32805 24-42)

Avail: NTIS HC A14/MF A01

The use of the ARGOS system technical equipment; the location of stations; advantages and disadvantages of using a local user terminal station, and the collection and control of data are discussed. ESA

N86-32816# Direction de la Meteorologie Nationale, Brest (France).

A DRIFTING BUOY EXPERIMENT AS PART OF COST-43 c48

Pierre Blouch and Thor Kvinge (COST-43 Technical Secretariat, Bergen, Norway) *In* CNES The 10th ARGOS Users Conference 1985 11 p (For primary document see N86-32805 24-42)

Avail: NTIS HC A14/MF A01

The System of Operational Buoys in the Atlantic program is described. A zone with few observations from ships was chosen. At least two buoys must be maintained drifting at sea and operational in the area at all times throughout a period of at least 3 yr. The buoys must provide meteorological, oceanographic and position data via the ARGOS system. As with FGGE, the observations must include at least air pressure and sea surface temperature. The date must be available in real-time via the Global Telecommunication System of the World Meteorological Organization in the DRIBU code and/or SHIP code. Archived data must be retrievable through ARGOS Service and must be available on request to other COST-43 members. There are no plans to recover the buoys. ESA

N86-32817# Christian Michelsens Institutt for Videnskap og Andsfrihet, Bergen (Norway). Dept. of Science and Technology.

REPORT ON ICE BUOYS IN THE ARCTIC AND THE ANTARCTIC c48

Niels S. Nergaard *In* CNES The 10th ARGOS Users Conference 1985 19 p (For primary document see N86-32805 24-42)

Avail: NTIS HC A14/MF A01

The status of over 20 buoys dropped by parachute onto polar ice is reported. Data from the buoys suggest an average export speed for ice conveyed from the Arctic Ocean by the Transpolar Drift Stream through the Fram Strait of 10 cm/sec, with a variation in the central area of 5 to 70 cm/sec. The buoys are tracked by the ARGOS system. ESA

N86-32818# Bergen Univ. (Norway).

EXPERIENCE AND RESULTS FROM USE OF ARGOS TRACKED BUOYS DURING MIZEX 83 AND 84 c48

Brian A. Farrelly *In* CNES The 10th ARGOS Users Conference 1985 13 p (For primary document see N86-32805 24-42)

Avail: NTIS HC A14/MF A01

During the Marginal Ice Zone Experiment, ships, aircraft, and satellites tracked ARGOS buoys on the ice and in the open sea in the Fram Strait. Buoy positions and other information were

relayed to the field coordinator to update experiment plans. This proved invaluable for buoy recovery and for giving details of ice movement and ocean currents. Ice kinematics derived from ARGOS buoys and from aircraft remote sensing are presented. Since several of the ice platforms acquiring meteorological and oceanographic data were tracked by ARGOS, the balance of forces on the ice could be estimated. ESA

N86-32819# Danish Meteorological Inst., Copenhagen.
OPERATIONAL EXPERIENCES WITH THE ARGOS SYSTEM IN GREENLAND **c47**
Fleming Jensen *In* CNES The 10th ARGOS Users Conference 1985 14 p (For primary document see N86-32805 24-42)
Avail: NTIS HC A14/MF A01

The ARGOS system was deployed as a primary communication system for automatic weather stations distributed along the coast of Greenland. Operational experience with ARGOS is good and, for the northernmost stations, this system is considered to provide the best and the most simple means of data communication. Since Greenland is located in the polar region the ARGOS system gives nearly consecutive coverage as regards synoptic measurements if the system comprises two satellites with orbits reasonably well separated. ESA

N86-32820# High Arctic Consulting Ltd., Raahe (Finland).
USE OF AN ARGOS PLATFORM ON AN EXPEDITION TO THE NORTH POLE 1984 **c04**
Matti Tervaskanto *In* CNES The 10th ARGOS Users Conference 1985 10 p (For primary document see N86-32805 24-42)
Avail: NTIS HC A14/MF A01

Use of an ARGOS platform for location, data transfer, and emergency communication during a polar expedition is described. The equipment withstood the rough handling and low temperatures (down to minus 56 C) well mechanically, but displays froze and the PTT occasionally changed all the data bits to ones. ESA

N86-32821# Societe Nationale Elf Acquitaine, Paris (France).
ENVIRONMENTAL AND METEOROLOGICAL DATA ACQUISITION SYSTEM WITH INTEGRATED ARGOS TRANSMITTER: IMPROVEMENT IN SEA STATE FORECAST FOR CRITICAL OFFSHORE OPERATIONS **c32**
R. Carton, Stephanie Antalovsky (SYMINEX, Marseille, France), and D. Sembresq *In* CNES The 10th ARGOS Users Conference 1985 12 p (For primary document see N86-32805 24-42)
Avail: NTIS HC A14/MF A01

The use of the Environmental and Meteorological Data Acquisition Systems (EMDAS) equipped with an ARGOS link to increase the reliability of seastate forecasts in offshore areas, thus optimizing the cost and safety of offshore operations is described. In spite of the relatively small amount of information transmitted by ARGOS, several months experience confirms the operational value of the EMDAS-ARGOS system and proves that extensions to other fields (in-service monitoring and others) are possible. However, hardware and software improvements are needed to improve data recovery. ESA

N86-32822# Norwegian Defence Research Establishment, Kjeller.
DESCRIPTION OF THE NORWEGIAN DOPPLER POSITIONING PROGRAM **c04**
Per Helge Andersen, K. Aksnes, and Einar Haugen (Royal Norwegian Council for Scientific and Industrial Research, Oslo) *In* CNES The 10th ARGOS Users Conference 1985 10 p (For primary document see N86-32805 24-42)
Avail: NTIS HC A14/MF A01

A satellite Doppler positioning program was developed. The sequential version of the program updates the satellite parameters and then performs the transmitter positioning. A version which utilizes Doppler data over several passes for the updating of orbital elements and estimation of unknown positions in a simultaneous manner was written. Results indicate that this procedure gives more accurate estimates of the positions than the sequential method. ESA

N86-32823# Oregon State Univ., Newport. Hatfield Marine Science Center.
PRELIMINARY TECHNICAL EVALUATION OF AN ARGOS-MONITORED RADIO TAG FOR TRACKING MANATEES **c32**
Bruce Mate, Gaylen Rathbun (Fish and Wildlife Service, San Simeon, Calif.), Richard Merrick, and James Reed (Fish and Wildlife Service, Gainesville, Fla.) *In* CNES The 10th ARGOS Users Conference 1985 5 p (For primary document see N86-32805 24-42)
Avail: NTIS HC A14/MF A01

A radio tagged manatee was released into a river leading to subtropical waters and tracked by satellite. Up to 8 locations a day are reported. The manatee remained in the river system, but is expected to head for the Gulf of Mexico. ESA

N86-32824# Deutsche Forschungs- und Versuchsanstalt fuer Luft- und Raumfahrt, Wesseling (West Germany). Applied Data Systems Div.
UTILIZATION OF ARGOS FOR OZONE MEASUREMENT STATIONS **c45**
W. Balzer and K. Reiniger *In* CNES The 10th ARGOS Users Conference 1985 14 p (For primary document see N86-32805 24-42)
Avail: NTIS HC A14/MF A01

The data collection and transmission requirements of an autonomous ozone measurement station are described. The data preprocessing strategy for application of ARGOS are shown for a prototype station. Experience in application, achieved data quality, and scientific results achieved during a measurement campaign in Greece are demonstrated. ESA

N86-32825# National Museum of Natural History, Marseille (France).
BEHAVIOR OF DERMOCHELYS CORIACEA IN CAPTIVITY (ANIMAL CARRYING DUMMY PTT IN PRELIMINARY PHASE OF AN ARGOS EXPERIMENT) **c32**
Michele Duron-Dufrenne *In* CNES The 10th ARGOS Users Conference 1985 15 p (For primary document see N86-32805 24-42)
Avail: NTIS HC A14/MF A01

The degree to which a turtle would accept the Transat-type ARGOS PTT, and the reliability of the harness securing it to the carapace were tested, using an adult kept in a swimming pool for 36 hr. Its pelagic behavior turns out to be comparable to that in the open sea, the animal appearing unperturbed by the equipment. ESA

N86-32826# Institut Francais de Recherche pour l'Exploitation de la Mer, Nantes (France).
ARGOS AND FISHING **c48**
Claude Leroy, Claude Leroy, and Loic Mercier (CEIS-Espace, Toulouse, France) *In* CNES The 10th ARGOS Users Conference 1985 10 p (For primary document see N86-32805 24-42)
Avail: NTIS HC A14/MF A01

The ARGOS system contributions to tuna finding in the NE Atlantic, and shrimp trawling on the Continental Shelf off French Guiana are described. Tuna catch data and environmental measurements transmitted from a shipboard keypad terminal are integrated in a wider aid-to-fish-finding strategy centered on the generation of sea surface temperature maps using thermal infrared imagery. Useful data are then retransmitted to the tuna boats by facsimile. The program to aid shrimp trawling includes use of onboard PTT, and a microcomputer to generate the catch and environment message. ESA

N86-32827# South African Weather Bureau, Pretoria.
THE SOUTH AFRICAN CONTRIBUTION TO TOGA **c47**
Piet leRoux *In* CNES The 10th ARGOS Users Conference 1985 3 p (For primary document see N86-32805 24-42)
Avail: NTIS HC A14/MF A01

Drifting buoys and automatic weather stations were used in the Tropical Ocean Global Atmosphere program. Information on

oceanographic parameters in the South Atlantic and Southern Indian Ocean, and surface and upper air data are collected. ESA

43 EARTH RESOURCES

Includes remote sensing of earth resources by aircraft and spacecraft; photogrammetry; and aerial photography.

A FUELWOOD PLANTATION SITE SELECTION PROCEDURE USING GEOGRAPHIC INFORMATION SYSTEM TECHNOLOGY: A CASE STUDY IN SUPPORT OF THE NASA GLOBAL HABITABILITY PROGRAM Final Report, 1 Feb. 1985 - 30 Jun. 1985
N. E. G. Roller, J. E. Colwell, and A. N. Sellman Jul. 1985 39 p (Contract NASw-3852)
(NASA-CR-179704; NAS 1.26:179704; ERIM-173900-2-F) Avail: NTIS HC A03/MF A01 CSCL 02F

A study undertaken in support of NASA's Global Habitability Program is described. A demonstration of geographic information system (GIS) technology for site evaluation and selection is given. The objective was to locate potential fuelwood plantations within a 50 km radius of Nairobi, Kenya. A model was developed to evaluate site potential based on capability and suitability criteria and implemented using the Environmental Research Institute of Michigan's geographic information system. Author

N86-32829*# Delaware Univ., Newark. College of Marine Studies.
EVALUATION OF SPATIAL, RADIOMETRIC AND SPECTRAL THEMATIC MAPPER PERFORMANCE FOR COASTAL STUDIES Quarterly Status and Technical Progress Report, 1 Jul. - 30 Sep. 1984
V. Klemas 1985 4 p
(Contract NAS5-27580)
(NASA-CR-177149; NAS 1.26:177149) Avail: NTIS HC A02/MF A01 CSCL 08B

The main emphasis of the research was to determine what effect different wetland plant canopies would have upon observed reflectance in Thematic Mapper bands. The three major vegetation canopy types (broadleaf, gramineous and leafless) produce unique spectral responses for a similar quantity of live biomass. Biomass estimates computed from spectral data were most similar to biomass estimates determined from harvest data when models developed for a specific canopy were used. In other words, the spectral biomass estimate of a broadleaf canopy was most similar to the harvest biomass estimate when a broadleaf canopy radiance model was used. Work is continuing to more precisely determine regression coefficients for each canopy type and to model the change in the coefficients with various combinations of canopy types. Researchers suspect that textural and spatial considerations can be used to identify canopy types and improve biomass estimates from Thematic Mapper data. Author

MICROWAVE REMOTE SENSING APPLIED TO VEGETATION
W. R. Burke, comp. Jan. 1985 159 p EARSeL Workshop held in Amsterdam, Netherlands, 10-12 Dec. 1984
(ESA-SP-227; ISSN-0379-6566; ETN-86-95054) Avail: NTIS HC A08/MF A01

Two approaches to radar signal processing for remote sensing are reviewed. The first considers the microwave region as just another window to be used in combination with the ones already existing in other wavelength regions. The second tries to solve the problem by fundamental investigations in the interaction between microwaves and remote sensing objects. For individual titles, see N86-32831 through N86-32844.

N86-32831# Technische Hogeschool, Delft (Netherlands). Dept. of Electrical Engineering.
MICROWAVE REMOTE SENSING AND VEGETATION; PROBLEMS AND SOLUTIONS, A REVIEW
L. Krul *In* ESA Microwave Remote Sensing Applied to Vegetation Jan. 1985 p 3-9 (For primary document see N86-32830 24-43)
Avail: NTIS HC A08/MF A01

Semiempirical calibration models for radar remote sensing of vegetation are reviewed. Measurement of the physical parameters for interaction models by ground based and airborne scatterometers is discussed. ESA

N86-32832# Sheffield Univ. (England). Dept. of Geography.
ACTIVE MICROWAVE MAPPING OF VEGETATION
G. M. Foody *In* ESA Microwave Remote Sensing Applied to Vegetation Jan. 1985 p 15-23 (For primary document see N86-32830 24-43)
Avail: NTIS HC A08/MF A01

Per pixel and per field sampling methodologies for land cover mapping are compared. As a result of the changing viewing geometry, land cover map accuracy is found to be low and spatially variable. In an area of flat terrain land cover map accuracy is increased by allowing for the variations in viewing geometry by dividing the image into sectors defined by range distance and treating each sector independently. Using SAR 580 data, it is found that the use of tonal and textural information collected on a per field basis for a sectored image gives the highest land cover map accuracy. However, land cover map accuracy remains spatially variable. ESA

N86-32833# Hunting Geology and Geophysics Ltd., Boreham Wood (England).
A REVIEW OF RADAR ANALYSIS OF WOODLAND
P. N. Churchill, A. I. D. Horne (Forestry Commission, Farnham (England).), and R. Kessler (Freiburg Univ. (West Germany).) *In* ESA Microwave Remote Sensing Applied to Vegatation Jan. 1985 p 25-32 (For primary document see N86-32830 24-43)
(Contract ESTEC-5778/83/NS-MS)
Avail: NTIS HC A08/MF A01

The ability of satellite imaging radar to make woodland determination is assessed, and the optimum radar parameters required are reviewed. Imagery and methods used in the analysis of imaging radar data of woodland are discussed. Imaging radar demonstrates great potential in making woodland determinations, but insufficient data exists to ascertain its full potential and to fully define optimum system parameters for the analysis of woodland. More work is needed to eliminate speckle and to incorporate texture or pattern measures in machine classification. ESA

N86-32834# Technische Hogeschool, Delft (Netherlands). Dept. of Electrical Engineering.
MULTIPLE-INPUT SEGMENTATION ALGORITHM FOR SLAR-IMAGERY
Jan J. Gerbrands *In* ESA Microwave Remote Sensing Applied to Vegetation Jan. 1985 p 35-39 (For primary document see N86-32830 24-43)
Avail: NTIS HC A08/MF A01

An algorithm for automated segmentation of radar imagery of crops is outlined. The procedure is based on a sequential split-and-merge approach which allows for the simultaneous segmentation of multitemporal or multiangular views of the same scene, yielding one segmentation plan. The criteria for merging, splitting or grouping the tentative regions are based on the random scatterer model for natural backgrounds. Results are acceptable, but interactive tuning of the parameters requires considerable experience and run time for a 512 x 256 pixel scene is 50 min. ESA

N86-32835# Physics Lab. RVO-TNO, The Hague (Netherlands).
OPTIMIZATION OF AGRICULTURAL CROP IDENTIFICATION IN SLAR IMAGES: HIERARCHIC CLASSIFICATION AND TEXTURE ANALYSIS
Peter Hoogeboom *In* ESA Microwave Remote Sensing Applied to Vegetation Jan. 1985 p 41-48 Sponsored by National Remote

Sensing Steering Committee (For primary document see N86-32830 24-43)
Avail: NTIS HC A08/MF A01

A SLAR flight program was carried out over an agricultural area. A classification study showed that high accuracies are obtained from a simultaneous classification of three flights, so in order to obtain the best possible classification result in the earliest possible stage of the growing season, flights from April, May, June, and July were analyzed. The hierarchic classifier is introduced. Very satisfying results are obtained from a combination of one flight in May and two in July at different incidence angles. Texture measures were determined from the gray level cooccurrence matrix. Within field variations do not contribute substantially to a classification process. ESA

N86-32836# Consiglio Nazionale delle Ricerche, Florence (Italy).
MICROWAVE EMISSION FROM VEGETATION: GENERAL ASPECTS AND EXPERIMENTAL RESULTS
P. Pampaloni and S. Paloscia *In* ESA Microwave Remote Sensing Applied to Vegetation Jan. 1985 p 53-60 (For primary document see N86-32830 24-43)
Avail: NTIS HC A08/MF A01

Microwave radiometry applications to soil moisture content measurement is discussed. Vegetation cover reduces sensitivity for wavelengths less than 20 cm. The effect of vegetation can be studied by refering to radiative transfer theory and considering the canopy cover as uniform absorbent and scattering medium. At wavelengths less than 3 cm, most emission comes from the plants and can give information on vegetation type and conditions. Measurements show that the difference between Ka and X band brightness temperatures depends on the crop leaf area index. A sensitivity of the Ka band polarization index to plant water content was determined for corn and a linear relationship between this parameter and the leaf water potential is found. The relative roles of absorption and scattering, and the contributions of stalks, leaves, and fruits to the emitted power are unclear. ESA

N86-32837# Physics Lab. RVO-TNO, The Hague (Netherlands).
VARIATION OF THE RADAR BACKSCATTER OF VEGETATION THROUGH THE GROWING SEASON
G. P. deLoor *In* ESA Microwave Remote Sensing Applied to Vegetation Jan. 1985 p 63-67 (For primary document see N86-32830 24-43)
Avail: NTIS HC A08/MF A01

Radar backscattering by crops through the growing season was measured. The backscatter shows typical temporal patterns depending on species. The place and length in time of this temporal signature can vary with latitude (climate). A model in which vegetation is modeled as a water cloud proves to be useful to obtain information about the vegetation canopy and the underlying soil. ESA

N86-32838# Institute of Hydrology, Wallingford (England).
ANALYSIS OF DIGITAL RADAR DATA FROM SAR-580 IN RELATION TO SOIL/VEGETATION MOISTURE AND ROUGHNESS
K. Blyth *In* ESA Microwave Remote Sensing Applied to Vegetation Jan. 1985 p 71-83 (For primary document see N86-32830 24-43)
Avail: NTIS HC A08/MF A01

Soil and vegetation characteristics were surveyed in two test areas to evaluate the capabilities of digitally processed X and L band SAR to detect spatial and temporal variations in soil and vegetation moisture. One test area lay on homogeneous clay soils where local variations in soil moisture were minimized to simplify the study of vegetation effects. The other areas were of mixed soils and varying subsurface permeability where local variations in soil moisture were maximized. Here, flat, bare-earth sites were preferred to simplify the study of soil moisture effects. Field sampling methodology, digital data extraction techniques, radiometric balancing of digital data, and the effects of soil and vegetation moisture and roughness on radar relative backscatter are discussed. Results show no consistent relationship between surface soil moisture or vegetation moisture and radar backscatter. ESA

N86-32839# Freiburg Univ. (West Germany). Abt. Luftbildmessung und Fernerkundung.
SOME PRELIMINARY RESULTS ON LAND USE EVALUATIONS BY TEXTURE ANALYSIS OF SAR-580 DATA OVER THE TEST SITE FREIBURG (WEST GERMANY)
R. Kessler and R. Waltenspiel *In* ESA Microwave Remote Sensing Applied to Vegetation Jan. 1985 p 85-91 (For primary document see N86-32830 24-43)
Avail: NTIS HC A08/MF A01

Texture investigations of digital SAR-50 data in X-HH are described. Forest and agricultural sites were tested with a texture analysis program which informs about the statistical distribution of radar reflection intensities. The results show textural properties of the sites by demonstrating the statistical variations of backscatter intensity graphs along an adjustable boundary, which is located parallel to the mean intensity value. ESA

N86-32840# Royal Aircraft Establishment, Farnborough (England). National Remote Sensing Centre.
SAR IMAGE SEGMENTATION USING DIGITISED FIELD BOUNDARIES FOR CROP MAPPING AND MONITORING APPLICATIONS
M. G. Wooding *In* ESA Microwave Remote Sensing Applied to Vegetation Jan. 1985 p 93-98 (For primary document see N86-32830 24-43)
Avail: NTIS HC A08/MF A01

The use of digitized field boundary data to segment images into fields which are treated as separate units for backscatter measurement and image classification in SAR surveys of agricultural regions is discussed. The technique is demonstrated with the analysis of SAR 580 data for the GB6 test site in England. Digitized field boundaries are overlain on SAR 580 images geometrically corrected to fit the UK National Grid. Image analysis includes the preparation of images showing mean backscatter values for individual fields, the measurement of backscatter for different crop types, and the analysis of changes in backscatter on different imaging dates. Relationships between backscatter and ground data are examined in the context of crop mapping and monitoring crop growth. ESA

N86-32841# Wageningen Agricultural Univ. (Netherlands). Dept. of Land Surveying and Remote Sensing.
TEXTURE ANALYSIS OF SLAR IMAGES AS AN AID IN AUTOMATED CLASSIFICATION OF FORESTED AREAS
Dirk H. Hoekman *In* ESA Microwave Remote Sensing Applied to Vegetation Jan. 1985 p 99-109 (For primary document see N86-32830 24-43)
Avail: NTIS HC A08/MF A01

Experiments to elucidate the usefulness and behavior of statistical texture measures derived from gray level co-occurence and gray level difference counts in forest classification from SLAR imagery were performed. A fine resolution SLAR image of a forest with stands of tree species in the pole phase together with mature beach forests occurring in various spatial structures related to canopy roughness was analyzed. The measures reveal the potential to discriminate these forest structures. An integral classification approach for forests is suggested. ESA

N86-32842# Canada Centre for Remote Sensing, Ottawa (Ontario).
MICROWAVE REMOTE SENSING OF AGRICULTURAL CROPS IN CANADA
J. Cihlar, R. J. Brown, and B. Guindon *In* ESA Microwave Remote Sensing Applied to Vegetation Jan. 1985 p 113-120 (For primary document see N86-32830 24-43)
Avail: NTIS HC A08/MF A01

Crop classification accuracies achieved with SAR, visible, and IR data; crop and soil parameters affecting SAR images; the procedures for digital SAR image analysis; and the relationship between airborne SAR data and satellite SAR data are discussed. Developments in ground and airborne microwave instrumentation for agricultural studies are presented, and research activities are outlined. ESA

THE DELFT UNIVERSITY OF TECHNOLOGY SCATTEROMETER (DUTSCAT): A SIX-FREQUENCY AIRBORNE SCATTEROMETER
E. P. W. Attema and P. Snoeij *In* ESA Microwave Remote Sensing Applied to Vegetation Jan. 1985 p 127-129 Sponsored by Delft University and Netherlands Remote Sensing Board (For primary document see N86-32830 24-43)
Avail: NTIS HC A08/MF A01

The Delft University of Technology Scatterometer is a multiband coherent pulse scatterometer installed in a Beechcraft Queen Air research aircraft. The radar system uses a 0.9 m diameter dual polarized parabolic dish antenna mounted on a support structure and protected by a radome. In the support structure the RF parts of the radar are mounted. This whole system can be tilted between 0 and 80 deg incidence angle, looking to the left. The incidence angle and polarization are selected by the operator inside the aircraft. Frequencies are between 1.2 and 17.25 GHz. It is used for vegetation studies. ESA

N86-32844# Hunting Geology and Geophysics Ltd., Boreham Wood (England).
HUMAN AND AUTOMATIC INTERPRETATION OF RADAR IMAGES OF LAND COVER
P. Churchill and A. Wright (GEC-Marconi Electronics Ltd., Chelmsford (England).) *In* ESA Microwave Remote Sensing Applied to Vegetation Jan. 1985 p 131-140 Sponsored by ESA (For primary document see N86-32830 24-43)
Avail: NTIS HC A08/MF A01

Methods used in the manual interpretation of SAR imagery of agricultural and woodland areas are reviewed. A 10 class categorization based on visual tone and texture as seen in XHV, XHH, CHV and CHH imagery is described. A selection of the different classes was analyzed using simple statistics and the spatial gray level dependency matrix method for measuring texture. Results indicate that for all classes, apart from rough, the regions have a pixel intensity variation compatible with the speckle expected in a homogeneous area. It is believed that the different visual texture is the effect of the increased pixel variation (speckle) with mean intensity. The studies show that the same classification can be achieved using computed measures as is defined manually. ESA

N86-32845# European Space Agency, Paris (France).
REMOTE SENSING APPLICATIONS IN CIVIL ENGINEERING
Norman Longdon, comp. Mar. 1985 107 p Postgraduate Summer School held in Dundee, Scotland, 19 Aug. - 8 Sep. 1984; sponsored by Science andEngineering Research Council, ESA, Council of Europe and European Association of Remote Sensing Labs.
(ESA-SP-216; ISSN-0379-6566; ETN-86-95251) Avail: NTIS HC A06/MF A01

The physical basis of remote sensing; data reception; ESA Earth observation programs; the UK National Remote sensing Center; digital image processing; space cartography; land use applications of remote sensing; remote sensing for highway engineers; geological surveys for nuclear plant location; estuary observations; snow and ice monitoring; and coastal zone monitoring were discussed. Avail: NTIS HC A06/MF A01

The UK National Remote Sensing Centre, including its organization and terms of reference; data reception facilities; data services and products; image processing facilities and major operations; and main fields of application are described. Domains covered include: coastal processes; oceanography and marine applications; land applications; information handling techniques; education and training; hydrology and water resources; and geological applications. Satellites and sensors, including ERS-1, and geographic information systems are discussed. ESA

N86-32851# Fachhochschule, Munich (West Germany). Fachbereich 07: Informatik, Mathematik.
DIGITAL IMAGE PROCESSING
Peter Haberaecker *In* ESA Remote Sensing Applications in Civil Engineering Mar. 1985 p 35-90 (For primary document see N86-32845 24-43)
Avail: NTIS HC A06/MF A01

Hardware and software for a remote sensing digital image processing system are described. Algorithms, including local operations applied prior to further processing steps are discussed. The moving average, Laplacian, and Sobel operator are shown.

Since local operations are special applications of digital filters in the spatial domain, the basic ideas of Fourier transform and digital filtering are summarized. The theoretical background of the orthonormal expansion of two dimensional functions is given, including the Fourier expansion and the Karhunen-Loewe transformation. Geometrical transformations of digital images are discussed. Scene analysis and segmentation (thresholding, multivariate classification, contour following, region growing) are covered. Image interpretation is mentioned. ESA

OPTICAL IMAGE PROCESSING
P. Tollin *In* ESA Remote Sensing Applications in Civil Engineering Mar. 1985 p 91-96 (For primary document see N86-32845 24-43)
Avail: NTIS HC A06/MF A01

Ways in which optical image processing can complement and supplement digital image processing techniques in remote sensing are indicated. Optical methods provide a fast, cheap and convenient way of performing Fourier image processing methods since the Fraunhofer diffraction pattern found in the back focal plane of a lens is just the Fourier transform of the scattering object. Applications to the detection of periodicities, noise removal, the use of amplitude, phase and complex filters are discussed and pattern recognition is considered. ESA

N86-32853# University Coll., London (England).
SPACE CARTOGRAPHY
I. J. Dowman *In* ESA Remote Sensing Applications in Civil Engineering Mar. 1985 p 97-121 (For primary document see N86-32845 24-43)
Avail: NTIS HC A06/MF A01

Means whereby information on a satellite image can be transferred to a map at a suitable scale so that the size or area of the features can be determined; the relative position of the features can be found; information obtained at different times and with different sensors can be compared; and the position of features in a national reference system can be found are discussed. Image rectification is explained using Landsat scanner imagery and radar. Height measurement is shown using space photography and SPOT imagery. ESA

N86-32854# North East London Polytechnic, Dagenham (England). Dept. of Land Surveying.
OPTICAL AND INFRARED MULTISPECTRAL IMAGERY LAND USE APPLICATIONS 2
R. K. Bullard *In* ESA Remote Sensing Applications in Civil Engineering Mar. 1985 p 123-127 (For primary document see N86-32845 24-43)
Avail: NTIS HC A06/MF A01

Applications of visible and infrared remote sensors for land use studies are discussed. Methods of obtaining imagery, need for ground data, establishing the classification, sampling, and reliability are considered. Agricultural land use and its encroachment by urban development are commented upon as are the need to monitor changes including those brought about by civil engineering projects. Derelict land and pollution monitoring by remote sensing are mentioned. ESA

N86-32855# Transport and Road Research Lab., Crowthorne (England). Overseas Unit.
REMOTE SENSING FOR HIGHWAY ENGINEERS
P. J. Beaven *In* ESA Remote Sensing Applications in Civil Engineering Mar. 1985 p 129-137 (For primary document see N86-32845 24-43)
Avail: NTIS HC A06/MF A01

It is shown how highway engineers can interpret remotely sensed imagery for all scales of survey. At reconnaissance scale satellite photographic products are appropriate; for more detailed studies image processors must be used, but for the greatest detail, stereoscopic aerial photographs are essential. Advice on the choice of the appropriate imagery for different surveys and on how the interpretation should be organized is given. The emphasis for highway engineering is on visual interpretation, and it is shown that there are economical ways of obtaining a high quality image using low cost equipment. ESA

N86-32856# Strathclyde Univ., Glasgow (Scotland). Dept. of Applied Geology.
REMOTE SENSING OF NATURAL GEOLOGICAL HAZARDS IN THE SITING OF ENGINEERING FACILITIES
C. A. Davenport *In* ESA Remote Sensing Applications in Civil Engineering Mar. 1985 p 139-142 (For primary document see N86-32845 24-43)
Avail: NTIS HC A06/MF A01

Hazards to civil engineering facilities produced by active surface faulting and volcanism are reviewed, emphasizing site selection and design criteria in nuclear power plant safety studies. Phenomena sought during regional and local site investigations are described and remotely sensed data which can be applied to these investigations are grouped to provide an optimum-input scheme for siting studies. Lineaments, morphotectonics, geological offsets, fault traces, deformation zones and appurtenant landslides are illustrated to provide details of important geological hazards and to document satellite and aerial imagery and photography, radiometry, moving and time-lapse film techniques, and seismological records. ESA

N86-32857# Dundee Univ. (Scotland). Dept. of Geology.
GRADIENTS OF CHANGE IN THE ESTUARINE ENVIRONMENTS OF THE TAY
John McManus *In* ESA Remote Sensing Applications in Civil Engineering Mar. 1985 p 143-149 (For primary document see N86-32845 24-43)
Avail: NTIS HC A06/MF A01

The hydrology and structure of the Tay estuary (Scotland) were studied to assess remote sensing methods and technology. Results show that estuarine waters provide gradients of water surface, salinity, temperature and suspended sediment concentrations. Intertidal flats show systematic variations of grain size with coarse sands in channel margins and fine muds beside marshes. ESA

N86-32858# Norwegian Water Resources and Electricity Board, Oslo.
SNOW AND ICE
Gunnar Oestrem *In* ESA Remote Sensing Applications in Civil Engineering Mar. 1985 p 151-163 (For primary document see N86-32845 24-43)
Avail: NTIS HC A06/MF A01

A method which uses data from polar orbiting satellites to monitor snow cover in Norway was developed. Winter snow cover is of great economic importance in Norway because the meltwater accounts for a substantial part or annual inflow into reservoirs for hydroelectric power production(more than 99% of all electricity production). Snow surveys made by traditional methods are costly and labor intensive. Airborne gamma methods are also used, and a radio-echo method proves useful for glacier thickness measurements. A snow stick can be used for monitoring snowpack variations, and real-time data transmission can be made in the ARGOS system. General sea ice conditions can be reported by the NIMBUS microwave radiometer, whereas more detailed ice-edge mapping can be made from NOAA-IR data. ESA

N86-32859# Royal Aircraft Establishment, Farnborough (England).
MONITORING ICEBERG PRODUCTION USING LANDSAT DATA
R. V. Birnie (MacAulay Inst. for Soil Research, Aberdeen (Scotland).) and J. M. Williams *In* ESA Remote Sensing Applications in Civil Engineering Mar. 1985 p 165-167 (For primary document see N86-32845 24-43)
Avail: NTIS HC A06/MF A01

The use of Landsat MSS data to monitor iceberg production from west Greenland glaciers was studied. The importance of such data to iceberg management in oilfields off Labrador and Newfoundland is underlined. Most of the freshwater icebergs

found off eastern Canada originate from west Greenland glacier sources and it is known that on average it takes 2 to 3 yr for icebergs to drift, first north in the west Greenland current, then south through the Davis Straight in the Labrador current. The study suggests that it is possible to do an annual census of iceberg production from the major west Greenland glacier sources to predict ice conditions around drilling sites up to 3 years in advance. ESA

APPLICATION POTENTIAL OF REMOTE SENSING: A CASE FOR NATURAL RESOURCES MANAGEMENT SYSTEM
I. V. Murali krishna *In* ESA Remote Sensing Applications in Civil Engineering Mar. 1985 p 169-174 (For primary document see N86-32845 24-43)
Avail: NTIS HC A06/MF A01

The Indian Remote Sensing satellite (IRS-1) program is outlined. A long program of IRS utilization is expected to provide a basic input to technology operationalization. The natural resources management system conceived under IRS utilization is expected to create demand for remotely sensed data and promote acceptance of the technology as a basic tool for resource monitoring and management. The information system required, and application to coastal erosion and environmental monitoring are discussed. ESA

N86-32861# National Remote Sensing Agency, Hyderabad (India).
OPTICAL REMOTE SENSING FOR COASTAL ZONE MANAGEMENT
I. V. Murali krishna *In* ESA Remote Sensing Appl. in Civil Eng. Mar. 1985 p 175-191 (For primary document see N86-32845 24-43)
Avail: NTIS HC A06/MF a01

Remote sensing application to engineering problems in coastal zone management in intertropical regions is discussed. Studies of aquatic suspended sediment patchiness and tidal vortices are described. The capability of remotely sensed satellite data to monitor the effects of littoral processes is shown. The utility of proposed sensors is assessed. ESA

N86-32862# National Oceanic and Atmospheric Administration, Washington, D. C. Satellite Applications Lab.
AN EXPERIMENTAL TECHNIQUE FOR PRODUCING MOISTURE CORRECTED IMAGERY FROM 1 km ADVANCED VERY HIGH RESOLUTION RADIOMETER (AVHRR) DATA
Eileen Maturi, John Pritchard, and Pablo Clemente-Colon Jun. 1986 34 p
(NOAA-TM-NESDIS-15) Avail: NTIS HC A03/MF A01

Removal of atmospheric moisture from infrared measurements of the sea surface, allows for better detection of sea surface temperature gradients. A multispectral processing technique is applied to 1 km AVHRR data to correct for moisture. The resulting data is then feature enhanced and converted to imagery. This process and the applications of the moisture corrected imagery are presented. Author

(Grant NAGw-455)
(NASA-CR-179769; NAS 1.26:179769) Avail: NTIS HC A05/MF A01 CSCL 05B

Research continues to focus on improving the type, quantity, and quality of information which can be derived from remotely sensed data. The focus is on remote sensing and application for the Earth Observing System (Eos) and Space Station, including associated polar and co-orbiting platforms. The remote sensing research activities are being expanded, integrated, and extended into the areas of global science, georeferenced information systems, machine assisted information extraction from image data, and artificial intelligence. The accomplishments in these areas are examined. For individual titles, see N86-32864 through N86-32867.

SUPPORT FOR GLOBAL SCIENCE: REMOTE SENSING'S CHALLENGE
John E. Estes and Jeffrey L. Star *In its* Remote Sensing Information Sciences Research Group, Santa Barbara Information Sciences Research Group, year 3 5 Jan. 1986 13 p (For primary document see N86-32863 24-43)
Avail: NTIS HC A05/MF A01 CSCL 05B

Remote sensing uses a wide variety of techniques and methods. Resulting data are analyzed by man and machine, using both analog and digital technology. The newest and most important initiatives in the U. S. civilian space program currently revolve around the space station complex, which includes the core station as well as co-orbiting and polar satellite platforms. This proposed suite of platforms and support systems offers a unique potential for facilitating long term, multidisciplinary scientific investigations on a truly global scale. Unlike previous generations of satellites, designed for relatively limited constituencies, the space station offers the potential to provide an integrated source of information which recognizes the scientific interest in investigating the dynamic coupling between the oceans, land surface, and atmosphere. Earth scientist already face problems that are truly global in extent. Problems such as the global carbon balance, regional deforestation, and desertification require new approaches, which combine multidisciplinary, multinational research teams, employing advanced technologies to produce a type, quantity, and quality of data not previously available. The challenge before the international scientific community is to continue to develop both the infrastructure and expertise to, on the one hand, develop the science and technology of remote sensing, while on the other hand, develop an integrated understanding of global life support systems, and work toward a quantiative science of the biosphere. KBGIS-2: A KNOWLEDGE-BASED GEOGRAPHIC INFORMATION SYSTEM
Terence Smith, Donna Peuquet, Sudhakar Menon, and Pankaj Agarwal *In its* Remote Sensing Information Sciences Research Group, Santa Barbara Information Sciences Research Group, year 3 5 Jan. 1986 43 p (For primary document see N86-32863 24-43)
Avail: NTIS HC A05/MF A01 CSCL 05B

The architecture and working of a recently implemented knowledge-based geographic information system (KBGIS-2) that was designed to satisfy several general criteria for the geographic information system are described. The system has four major functions that include query-answering, learning, and editing. The main query finds constrained locations for spatial objects that are describable in a predicate-calculus based spatial objects language. The main search procedures include a family of constraint-satisfaction procedures that use a spatial object knowledge base to search efficiently for complex spatial objects in large, multilayered spatial data bases. These data bases are represented in quadtree form. The search strategy is designed to reduce the computational cost of search in the average case. The learning capabilities of the system include the addition of new locations of complex spatial objects to the knowledge base as queries are answered, and the ability to learn inductively definitions of new spatial objects from examples. The new definitions are added to the knowledge base by the system. The system is currently performing all its designated tasks successfully, although currently implemented on inadequate hardware. Future reports will detail the performance characteristics of the system, and various new extensions are planned in order to enhance the power of KBGIS-2. Author

NON-ENDING HELIUM STORY
E. F. Hammel, M. C. Krupka, and K. D. Williamson, Jr. 1986 15 p Presented at the 11th International Cryogenic Engineering Conference, Berlin, West Germany, 22 Apr. 1986
(Contract W-7405-eng-36)
(DE86-010192; LA-UR-86-1363; CONF-860437-1) Avail: NTIS HC A02/MF A01

Why an adequate supply of helium is of importance to cryoengineering is obvious to everyone present at this conference. Why there is a non-ending helium problem - or more specifically why helium supply problems have arisen in the past, why they may arise again in the future, what are those problems and what solutions appear to exist - is more complicated. To answer these questions this paper is divided into three sections: resource availability, the demand for helium and the supply of helium. DOE

SEMI-OPERATIONAL IDENTIFICATION OF AGRICULTURAL CROPS FROM AIRBORNE SLAR DATA
P. Binnenkade, H. W. J. vanKasteren, and D. Uenk 26 Mar. 1985 11 p Presented at 11th Intern. Symposium on Machine Processing of Remotely Sensed Data, West Lafayette, Ind., 25-27 Jun. 1985 Previously announced in IAA as A86-37025
(NLR-MP-85030-U; B8665118; ETN-86-97674) Avail: NTIS HC A02/MF A01

Preprocessing, segmentation, and pseudo-hierarchical classification of a multitemporal data set of three test sites for identification of potatoes and other agricultural crops is described. Good discrimination capabilities between crop types, especially potatoes, is achieved. Unique identification of the three major crop types (sugar beets, potatoes and winter wheat) with an accuracy greater than 90% is possible. In one area, this accuracy is obtained when using only the July data set. It appears possible to identify more than one species of winter wheat and potatoes. Oats and barley are difficult to distinguish from other crop types. It is possible to obtain the required results with a high and a low track in July and one other run in May. ESA

REMOTE SENSING AND WATER QUALITY IN THE IJSSELMEER (NETHERLANDS) AREA [REMOTE SENSING EN WATERKWALITEIT IN HET IJSSELMEERGEBIED]
Jan. 1985 25 p In DUTCH
(MDLK-R-8537; ETN-86-97493) Avail: NTIS HC A02/MF A01

Possible contributions of Landsat multispectral scanner recording to the determination of a quantitatively spatial image of algae and silt, and relations between these and other parameters (e.g., transparence) were investigated. The relation between the feeding behavior of cormorants and RS observable differences of the water surface were examined as the birds seem to choose their feeding areas on the basis of optical water information. Valuable information concerning the spatial variation of optically observable matters and processes, e.g., chlorophyl, suspending dust, humus acids, transparence, temperature, and stream phenomena can be obtained. The results offer sufficient perspectives for further water quality investigations. ESA

REMOTE SENSING STUDY PROJECT IN OOST-GELDERLANDS (NETHERLANDS) Final Report [REMOTE SENSING STUDIEPROJECT COST GELDERLAND]
Sep. 1985 65 p In DUTCH
(Nota-1641; ETN-86-97495) Avail: NTIS HC A04/MF A01

Possibilities of operational applications of remote sensing (RS) recording and processing techniques for agriculture and nature areas were investigated. Information about water consumption of vegetation covering, soil moisture supply, crop production, the composition of natural vegetation, and the occurrence of agricultural crops was obtained in rural areas and peat colonies in the summer. Scanner recorded reflection and heat images and false color photographs were used. A vegetational description and an evapotranspiration map were composed using the automatic processing of digital reflection and heat images. The application of a combination of RS and conventional techniques leads to better results than the separate use of one of the techniques. ESA

The resistance to radiation damage of an n(+)p boron doped silicon solar cell is improved by lithium counterdoping. Even though lithium is an n-dopant in silicon, the lithium is introduced in small enough quantities so that the cell base remains p-type. The lithium is introduced into the solar cell wafer by implantation of lithium ions whose energy is about 50 keV. After this lithium implantation, the wafer is annealed in a nitrogen atmosphere at 375 C for two hours. NASA

Presented are the FY 1985 accomplishments, activities, and planned research efforts of the Biocatalysis Project of the U.S. Department of Energy, Energy Conversion and Utilization Technologies (ECUT) Program. The Project's technical activities were organized as follows: In the Molecular Modeling and Applied Genetics work element, research focused on (1) modeling and simulation studies to establish the physiological basis of high temperature tolerance in a selected enzyme and the catalytic mechanisms of three species of another enzyme, and (2) determining the degree of plasmid amplification and stability of several DNA bacterial strains. In the Bioprocess Engineering work element, research focused on (1) studies of plasmid propagation and the generation of models, (2) developing methods for preparing immobilized biocatalyst beads, and (3) developing an enzyme encapsulation method. In the Process Design and Analysis work element, research focused on (1) further refinement of a test case simulation of the economics and energy efficiency of alternative biocatalyzed production processes, (2) developing a candidate bioprocess to determine the potential for reduced energy consumption and facility/operating costs, and (3) a techno-economic assessment of potential advancements in microbial ammonia production. WIND ENERGY CONVERSION SYSTEMS: EVALUATION OF RELIABILITY, AVAILABILITY, AND MAINTAINABILITY AT VARIOUS LOCATIONS Interim Report, Sep. 1981 - Sep. 1984
Dharam Pal Mar. 1986 34 p
(AD-A168272; NCEL-TN-1748) Avail: NTIS HC A03/MF A01 CSCL 10/1

This report describes the results of long-term field evaluation of four horizontal-axis, upwind, small wind energy conversion systems (SWECS) configured in an application mode. The long-term field evaluation of these SWECS covers performance, reliability, maintenance, maintainability, and availability data. Results of these evaluations have proven SWECS to be a viable source of alternative energy, but they must be properly designed and maintained to operate in a highly corrosive marine environment. The SWECS require frequent preventive maintenance, depending on design and location, including corrosion control at least every 3 months. The following recommendations resulted from the field evaluations: (1) do not use sliprings and bearings, if at all possible; (2) use sealed and self-lubricating bearings; (3) ensure that the tower is guyed and hinged for easy maintenance; (4) as much as possible enclose all components exposed directly to the marine environment; (5) ensure that all controls are passive and fail safe; and (6) improve the programming of the synchronous inverter so that it matches generator impedance at all wind speeds. WIND TURBINE AERODYNAMICS RESEARCH NEEDS ASSESSMENT
F. S. Stoddard and B. K. Porter Jan. 1986 143 p
(Contract DE-AC01-85ER-30075)
(DE86-009189; DOE/ER-30075/H1) Avail: NTIS HC A07/MF A01

A prioritized list is developed for wind turbine aerodynamic research needs and opportunities which could be used by the Department of Energy program management team in detailing the DOE Five-Year Wind Turbine Research Plan. The focus of the Assessment was the basic science of aerodynamics as applied to wind turbines, including all relevant phenomena, such as turbulence, dynamic stall, three-dimensional effects, viscosity, wake geometry, and others which influence aerodynamic understanding and design. The study was restricted to wind turbines that provide electrical energy compatible with the utility grid, and included both horizontal axis wind turbines (HAWT) and vertical axis wind turbines (VAWT). Also, no economic constraints were imposed on the design concepts or recommendations since the focus of the investigation was purely scientific. DOE

SOLAR THERMAL ENERGY SYSTEMS. PROGRAM SUMMARY,

FISCAL YEAR 1985
Apr. 1986 159 p Prepared in cooperation with Sandia National Labs., Livermore, Calif. and Midwest Research Inst., Golden, Colo.
(Contracts DE-AC02-83CH10093; DE-AC04-76DR00789; DE-AC04-76DP-00789)
(DE86-004441; SERI/SP-273-2938) Avail: NTIS HC A08/MF A01

The research and development (R and D) described in this document was conducted within the US Department of Energy's (DOE) Solar Thermal Technology Program. The goal of the Solar Thermal Technology Program is to advance the engineering and scientific understanding of solar thermal technology, and to establish the technology base from which private industry can develop solar thermal power production options for introduction into the competitive energy market. Research areas emphasized include central receivers, distributed receivers and solar thermal materials. This program summary highlights tasks conducted by the participating national laboratories under contract by industrial, academic, or other research institutions. This summary covers activities initiated, renewed, or completed during Fiscal Year 1985 (October 1, 1984 through September 30, 1985). This document includes introductory information, a list of directing organizations, a list of acronyms and abbreviations, and an index of current contractors. It also includes individual activity summary sheets, grouped by directing organizations and a list of FY 1985 publications. DOE

N86-32881# Sandia National Labs., Albuquerque, N. Mex.
OVERVIEW OF SANDIA'S STORAGE BATTERY PROGRAM
R. P. Clark and K. R. Grothaus 1986 10 p Presented at the 32nd NASA/US Army International Power Sources Symposium, Cherry Hill, N.J., 8 Jun. 1986
(Contract DE-AC04-76DP-00789)
(DE86-010956; SAND-86-2092C; CONF-860688-1) Avail: NTIS HC A02/MF A01

The primary mission of Sandia National Laboratories is the design and development of the non-nuclear components and systems for nuclear weapons. To a lesser degree, Sandia is also involved in a variety of other programs; such as, energy projects with the Department of Energy, conventional military projects with the Department of Defense, and nuclear waste management and reactor safety with the Nuclear Regulatory Commission. Over the years, Sandia has evolved a considerable expertise in the areas of specialty primary, reserve, and more recently, secondary battery systems. This paper focuses on the status of the storage or secondary battery programs. These programs are divided into those battery systems being developed for energy applications and those being developed for military applications. DOE

NEW TECHNIQUE FOR IMPROVING VOLTAGE REGULATION IN Li/FeS THERMAL BATTERIES
N. A. Godshall and A. R. Baldwin 1986 10 p Presented at the 32nd NASA/US Army International Power Sources Symposium, Cherry Hill, N.J., 8 Jun. 1986
(Contract DE-AC04-76DP-00789)
(DE86-010962; SAND-85-2284C; CONF-860688-2) Avail: NTIS HC A02/MF A01

Lithiation of the FeS cathode material lowers the voltage of the initial discharge (which is often too high for many applications) and raises the voltage of the battery at the end of discharge (which is often too low due to a second voltage plateau). In the example of the Sandia ten-cell Li(Si)/FeS long-life thermal battery, lithiating the cathode improves the voltage regulation from 12.8 to 0.5% during the initial 5 minutes of discharge and from 38 to 12% over the entire 60 minute discharge time. Batteries employing the new lithiated cathode material were also subjected to dynamic mechanical environments, both before and during electrochemical discharge. No adverse changes in either the electrical or mechanical properties of these batteries were observed, relative to standard composition batteries. DOE

IEA SOLAR: WORKING TOWARD GREATER COST-EFFECTIVENESS, REPORT OF THE INTERNATIONAL ENERGY AGENCY SOLAR HEATING AND COOLING PROGRAMME Annual Report, 1985
S. Blum, ed. Feb. 1986 55 p
(Contract DE-AC03-83SF-11918)
(DE86-011521; IEA/SHC/AR-85) Avail: NTIS HC A04/MF A01

This is the 1985 Annual Report of the International Energy Agency Solar Heating and Cooling (SHC) Program. The format of the report has been changed substantially from that of previous years. In addition, the report has been given a special theme: Working Toward Greater Cost-Effectiveness. Section 2 of this report, the special theme chapter, discusses the contributions of each of the cooperative activities to achieving more cost-effective solar heating and cooling systems. A report on the progress and accomplishments during 1985 of the current tasks is found in Section 3. Section 4, Appendix, contains a description of each of the tasks as background information for those unfamiliar with all or parts of the program. Finally, the Appendix also contains information on IEA SHC reports, meetings, Executive Committee Members and task technical participants. DOE

DESIGN OF AN INTERMEDIATE-SIZED, AUTONOMOUS PHOTOVOLTAIC-DIESEL POWER PLANT
T. M. Calloway Apr. 1986 27 p
(Contract DE-AC04-76DP-00789)
(DE86-010629; SAND-85-2136) Avail: NTIS HC A03/MF A01

A method is presented for designing an intermediate-sized, autonomous photovoltaic power plant with a diesel-electric generator and a battery bank. Energy output from the photovoltaic array first satisfies any load demand then charges the batteries. Diesel-electric generators periodically equalize battery charge and occasionally supply load demand when array output is insufficient and battery state of charge is too low to provide supplemental energy. Given hourly load demand and annual fuel consumption, battery capacity is functionally related to array size. Subsequently, a model predicts battery life by deducting the fraction of total life consumed each day. An economic model then computes life-cycle system cost. Repeating this process for different combinations of array area and battery capacity produces a curve that identifies the minimum-cost system design. DOE

EVALUATION OF THE NATIONAL WIND ENERGY DEVELOPMENT PROGRAM NOW-2, PHASE 1 [EVALUATIE NATIONAAL ONTWIKKELINGSPROGRAMMA WINDENERGIE NOW-2, FASE 1]
Sep. 1985 73 p In DUTCH
(Rept-1-4098-39-05; ETN-86-97774) Avail: NTIS HC A04/MF A01

The situation in the field of wind energy in the Netherlands is depicted for the years 1980 and 1985. Central wind energy production projects (horizontal-axis turbines, offshore applications, multiple wind turbines, system studies), decentralized wind energy production projects (testing projects, test facilities, development

of small and medium turbines, autonomous wind-diesel system, feasibility studies, cost-effective wind turbine), and the investigation of the effects of tip vanes on turbines are presented. Opinions of representatives from involved sectors are given. ESA

ATTEMPT TO EVALUATE THE TIP VANE CONCEPT WITH A LIFTING-LINE MODEL
O. deVries Sep. 1985 25 p In DUTCH; ENGLISH summary
(NLR-MP-85071-U; B8664364; ETN-86-97684) Avail: NTIS HC A02/MF A01

A nonlinear vortex model based on a lifting-line approximation (code HELIX) was developed to estimate the aerodynamic performance of the tip vane wind turbine. Application of the code reveals a strong dependence of the performance on the tip-speed ratio lambda. Though a power coefficient Cp-1 can be obtained for lambda between 3 and 4, the power is scarcely in excess of that of a conventional turbine (Cp between 0.40 and 0.45) for lambda between 10 and 11. The costs of rotor, gear box, and tower increase so strongly at low lambda, that the cost effectiveness of a tip vane wind turbine is only slightly better than for a conventional high lambda wind turbine. The perspectives of the tip vane concept are therefore more limited than originally expected. ESA

45 ENVIRONMENT POLLUTION

Includes air, noise, thermal and water pollution; environment monitoring; and contamination control.

WATER: A STRATEGIC RESOURCE?
Robert E. Thornton 15 Apr. 1986 30 p
(AD-A168470) Avail: NTIS HC A03/MF A01 CSCL 13/2

Availability of fresh water has been taken for granted throughout our history. In fact, the United States has been blessed with what was once thought to be a limitless natural resource, fresh water. The sources for this fresh water are precipitation, surface water and ground water. Today, these sources are under relentless pressure from chronic pollution and over-usage. The federal government has begun the process of studying and doumenting the problems associated with our water supply but to date its efforts are far to little, too late. Budget constraints and funding projections only add to the already bleak picture. We are learning that water problems can't be contained and that they cross state, local and private boundaries. This problem of area pollution has drawn considerable concern within the Department of Defense (DOD) as more and more of our installations are finding their water environment jeopardized. Solutions for the preservation, cleansing, and protection of our fresh water systems are going to be expensive and technically complicated to accomplish and administer. Action is needed now. GRA

REPORT OF THE INTERNATIONAL CONFERENCE ON THE ASSESSMENT OF THE ROLE OF CARBON DIOXIDE AND OF OTHER GREENHOUSE GASES IN CLIMATE VARIATIONS AND ASSOCIATED IMPACTS
1986 83 p Conference held in Villach, Austria, 9-15 Oct. 1985 Prepared in cooperation with ICSU, Rome, Italy
(WMO-661; ISBN-92-63-10661-4; ETN-86-97660) Avail: NTIS MF A01; print copy available at WMO, Geneva, Switzerland

The contributions to and environmental, social, and economic impact of the greenhouse effect were discussed. It was concluded that it is a matter of urgency to refine estimates of future climate conditions to improve planning decisions. Climate change and sea level rises due to greenhouse gases are closely linked with other major environmental issues, such as acid deposition and threats to the Earth's ozone shield, mostly due to changes in the composition of the atmosphere by man's activities. While warming of climate appears inevitable due to past actions, the rate and degree of future warming could be profoundly affected by governmental policies on energy conservation, use of fossil fuels, and the emission of greenhouse gases. SPECTROSCOPY OF THE FAR AND EXTREME ULTRAVIOLET DAYGLOW Ph. D. Thesis
Charles W. Bowers 1985 155 p
Avail: Univ. Microfilms Order No. DA8601246

Researchers have designed, built and flown in a sounding rocket payload, a spectrograph with approx. 2 angstrom resolution from 850 angstroms to 1850 angstroms obtaining the highest resolution, broad wavelength coverage UV dayglow spectrum to date. This instrument utilizes a newly developed photon counting detector consisting of an ultraviolet-to-visible-light image intensifier with two microchannel plates in a tandem arrangement followed by a phosphor coated on the face of a fiber optics output bundle. Light generated in the phosphor by electron pulses produced by the MCP stack is transmitted to photodiode array with 1024 independent photodiodes. The broad light pulses generated by the intensifier were detected by the photodiode array. This flight data was transmitted to the ground and centroided, recovering the spectrograph resolution of approx. 2 angstroms. The vacuum spectrograph contains an osmium coated holographic f/2 concave diffraction grating, baffled to f/4 for flight. A movable slit wheel mechanism provides a vacuum seal, which is broken during flight as the entrance slit is moved into position. The UV dayglow spectrum obtained is presented and tentative identification of most of the emission features is made. Dissert. Abstr.

Total odd nitrogen, NO(y), may be defined as the sum of all active nitrogen species that interchange photochemically with one another on a time scale of the order of weeks or less. As noted, NO + NO2 reactions dominate the processes controlling the ozone balance in the contemporary stratosphere. The observational data from non-satellite platforms are reviewed. The growth in available satellite data in the past four years is considered. Some of the most important scientific issues are discussed, taking into account new results from atmospheric models (mainly 2-D). The model results are compared with the observational data. B.G.

N. Husson, A. Barbe, L. R. Brown, B. Carli, A. Goldman, H. M. Pickett, A. E. Roche, L. S. Rothman, and M. A. H. Smith *In its* Atmospheric Ozone 1985. Assessment of our Understanding of the Processes Controlling its Present Distribution and Change, Volume 3 1985 41 p (For primary document see N86-32897 24-46)
Avail: NASA, Goddard Space Flight Center, Code 610, Greenbelt, Md. 20770 HC free; NTIS HC A23/MF A01 CSCL 04A

Several aspects of quantitative atmospheric spectroscopy are considered, using a classification of the molecules according to the gas amounts in the stratosphere and upper troposphere, and reviews of quantitative atmospheric high-resolution spectroscopic measurements and field measurements systems are given. Laboratory spectroscopy and spectral analysis and prediction are presented with a summary of current laboratory spectroscopy capabilities. Spectroscopic data requirements for accurate derivation of atmospheric composition are discussed, where examples are given for space-based remote sensing experiments of the atmosphere: the ATMOS (Atmospheric Trace Molecule) and UARS (Upper Atmosphere Research Satellite) experiment. A review of the basic parameters involved in the data compilations; a summary of information on line parameter compilations already in existence; and a summary of current laboratory spectroscopy studies are used to assess the data base. Assessment of our Understanding of the Processes Controlling its Present Distribution and Change, Volume 3 1985 31 p (For primary document see N86-32897 24-46)
Avail: NASA, Goddard Space Flight Center, Code 610, Greenbelt, Md. 20770 HC free; NTIS HC A23/MF A01 CSCL 04A

Over the past few years, several field campaigns were devoted to the goal of assessing instrument reliability, as opposed to solely obtaining data to answer a geophysical question. Some examples of the formal instrument intercomparisons that have occurred in the past decade and those that are planned for the very near future are listed chronologically. Balloon-borne techniques and instruments that address the height profiles of the trace species in the lower stratosphere are emphasized. Beginning with the most extensively studied trace constituent, the approach taken and the results obtained, are described. The current status of the measurement capabilities are summarized, and the needs for future intercomparisons and assessments are listed. B.G.

Progress from March 1, 1986 to August 31, 1986 is covered and includes the work performed in response to a proposal entitled A Spartan Payload for Spatially Resolved Spectroscopy of Extended Faint Sources in the Extreme Ultraviolet (EUV). During this period, one rocket was launched, the reflight of the payload to observe Halley's comet on March 13, 1986. Most of the effort during this period was concentrated on detailed mechanical and electronic design of a Spartan payload and on the reduction and analysis of the data from the two Halley rocket flights and from the UVX experiment which flew on STS-61C in January 1986. Model deformations near the active plate boundaries of Western North America using space-based geodetic measurements as constraints are discussed. The first six months of this project were spent gaining familarity with space-based measurements, accessing the Crustal Dynamics Data Information Computer, and building time independent deformation models. The initial goal was to see how well the simplest elastic models can reproduce very long base interferometry (VLBI) baseline data. From the Crustal Dynamics Data Information Service, a total of 18 VLBI baselines are available which have been surveyed on four or more occasions. These data were fed into weighted and unweighted inversions to obtain baseline closure rates. Four of the better quality lines are illustrated. The deformation model assumes that the observed baseline rates result from a combination of rigid plate tectonic motions plus a component resulting from elastic strain build up due to a failure of the plate boundary to slip at the full plate tectonic rate. The elastic deformation resulting from the locked plate boundary is meant to portray interseismic strain accumulation. During and shortly after a large interplate earthquake, these strains are largely released, and points near the fault which were previously retarded suddenly catch up to the positions predicted by rigid plate models. Researchers judge the quality of fit by the sum squares of weighted residuals, termed total variance. The observed baseline closures have a total variance of 99 (cm/y)squared. When the RM2 velocities are assumed to model the data, the total variance increases to 154 (cm/y)squared. Author

A PORTABLE SPECTROMETER FOR USE FROM 5 TO 15 MICROMETERS
Gordon Hoover and Anne B. Kahle 1 Jul. 1986 56 p
(Contract NAS7-918)
(NASA-CR-179751; JPL-Pub-86-19; NAS 1.26:179751) Avail: NTIS HC A04/MF A01 CSCL 08G

A field portable spectrometer suitable for collecting data relevant to remote sensing applications in the 8 to 12 micrometer atmospheric window has been built at the Jet Propulsion Laboratory. The instrument employs a single cooled HgCdTe detector and a continuously variable filter wheel analyzer. The spectral range covered is 5 to 14.5 micrometers and the resolution is approximately 1.5 percent of the wavelength. A description of the hardware is followed by a discussion of the analysis of the spectral data leading to finished emissivity and radiance spectra. A section is devoted to the evaluation of the instrument performance with respect to spectral resolution, radiometric precision, and accuracy. Several examples of spectra acquired in the field are included. Author

This program exists to provide support for the balloon stratospheric remote sensing program. Its purpose is to provide laboratory data and engineering support for the remote sensing effort. The goals and efforts are chosen in reponse to both short term and long term needs of the lidar effort. Progress was made on interfacing a Fizeau wave meter to a microcomputer in a way that is compatible with the electronics of the stratospheric balloon system. Installation was begun on a low divergence excimer laser system. B.G.

DISTURBANCE VECTOR IN SPACE FROM SURFACE GRAVITY ANOMALIES USING COMPLEMENTARY MODELS
Jaime Y. Cruz Aug. 1985 155 p
(Contract F19628-82-K-0022)
(AD-A166730; OSU/DGSS-366; AFGL-TR-85-0209; SR-10) Avail: NTIS HC A08/MF A01 CSCL 08/5

The modeling of the external disturbance vector of the Earth from surface gravity anomaly data is discussed. The low frequency features of the signal are represented in spherical harmonic series. The recovery of the coefficients of the series from the given gravity anomalies is discussed focusing on the use of analytical continuation and ellipsoidal corrections to account for the Earth's topography and ellipticity. The spectrum and data response of the spatial disturbance vector are studied to aid the design of models and experiments. The local models studied to complement the globally valid spherical harmonic model are the residual topographic model (RTM); the classical integral model; three versions of the Dirac approach to collocation; and two versions of the least squares collocation (l.s.c.) approach. Results indicate that the RTM itself should be used to model the high frequency signal variations whenever detailed (e.g., 1km x 1km) height data is available. The residual signal not already modeled by the RTM and spherical harmonic model can in most cases be accurately modeled by the integral model with meantopography accounted for. For high accuracies in mountainous areas, however, a collocation model should be used to account for the full variations of the topography, not just mean topography. Matrix conditioning problems with the l.s.c. approach support preference to the Dirac systems for rigorous treatment of the topography at detailed (5' x 5') resolutions. GRA

HANDBOOK OF GEOPHYSICS AND THE SPACE ENVIRON-

MENT, 4TH EDITION Final Report
Adolph S. Jursa 5 Dec. 1985 65 p
(AD-A167000; AFGL-TR-85-0315; AFGL-SR-253) Avail: NTIS HC A04/MF A03 CSCL 04/1

This fourth edition of the Air Force Handbook of Geophysics and the Space Environment has been completely revised. It begins with chapters on the sun and its emissions, then treats the Earth's magnetic field and the radiation belts, and follows with chapters on the ionosphere and the aurora. The subject of electrical charging of space vehicles has been of special concern to the Air Force and has been included to aid the designers interested in that problem. The next group of chapters deals with properties of the atmosphere, and the handbook concludes with chapters on the earth sciences and infrared astronomy. GRA

INFRARED ISSUES FOR THE NUCLEAR WINTER PHENOMENON Technical Report, 17 Jul. 1984 - 30 Sep. 1985
G. McCartor, D. Archer, W. Wortman, and T. Old 3 Oct. 1985 128 p
(Contract DNA001-84-C-0319; DNA Proj. S99-QMXB)
(AD-A168717; MRC-R-955; DNA-TR-85-312) Avail: NTIS HC A07/MF A01 CSCL 04/1

Simple models of the nuclear winter phenomenon are used to study the possibility that the infrared radiators: hydrocarbons, carbon dioxide, nitrogen dioxide, H2O or condensed water (clouds), might have important effects. Most of these substances are found to be unimportant but water clouds, if they are present and it appears they might be, are found to be of great potential significance. GRA

MAGNETIC RECONNECTION IN A NON-MAXWELLIAN NEUTRAL SHEET Interim Report
J. Chen, P. J. Palmadesso, and Y. C. Lee 30 May 1986 15 p
(AD-A168858; NRL-MR-5787) Avail: NTIS HC A02/MF A01 CSCL 04/1

The collisionless tearing-mode instability is believed to play an important role in magnetospheric reconnection processes. It has been found that the linear growth rate for a non-Maxwellian neutral sheet can be enhanced by a few orders of magnitude in comparison with the conventional isotropic case and that the short wavelength perturbations (k delta is greater than 1) are strongly favored, where delta is the characteristic half-width of the neutral sheet. For typical magnetotail parameters, it is found that the linear e-folding time can be reduced to a small function of a minute. The resulting small scale islands are expected to coalesce rapidly. The additional free-energy is the particle energy in the form of non-Maxwellian distribution. Differential equation analysis and full integro-differential analysis using exact unperturbed orbits are discussed. Physically, if non-Maxwellian features are generated in the plasma distribution by changes in external conditions such as the solar wind conditions, then the magnetotail may become strongly unstable, resulting in rapid development of small scale islands, coalescence and reconnection. This process may manifest itself as triggering of substorms following such changes. Author (GRA)

THE THERMAL PLASMA EXPERIMENT IN THE UPPER-AIR SOUNDING ROCKET PROGRAM HEATING, PROJECT HERO Final Report, Dec. 1983
Wolfgang Ott Bonn, West Germany Bundesministerium fuer Forschung und Technologie Dec. 1985 67 p In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-W-85-019; ISSN-0170-1339; ETN-86-97463) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 14

A thermal plasma experiment was performed to demonstrate the existence of ionospheric modifications. A retarding potential analyzer was developed to determine the electron temperature and the suprathermal electron flows, and to measure the electric field strength of the electromagnetic thermal wave and of electron plasma oscillations, electron density, electrostatic plasma waves and airglows in situ. The measurements were performed during rocket flights. Langmuir waves are produced with heat wave energy. Modifications are observed during ascent and within the thermal wave reflection height only. Neither increase nor decrease of density are shown in modified ionospheric heights. Density structurations of less than 8% are recorded. ESA

IONOSPHERIC SOUNDING BY MEANS OF LINEAR FREQUENCY MODULATION Ph.D. Thesis [SONDAGES IONOSPHERIQUES PAR MODULATION LINEAIRE DE FREQUENCE]
Marie-Noelle Basselier-Bauchot Dec. 1984 313 p In FRENCH
(ENST-84E022; ISSN-0751-1353; ETN-86-97868) Avail: NTIS HC A14/MF A01

An ionospheric sounding system is described. The linear frequency modulated transmitter is operated in on-off pulses. The receiver is active when the transmitter is off. An analysis of the design of the system shows that after a low-pass filter, the blind zones can be eliminated without changing the allowed frequency band. The implementation of the emitter-receiver system and the data processing, including an algorithm for automatic curve computation, are described. The use of positive and negative frequency gradients to compute a Doppler component is discussed. The experimental results confirming the system capabilities are included. ESA

CONTRIBUTION TO THE PHENOLOGY OF EUROPE 5 LONG PHENOLOGICAL SERIES OF EUROPE AND THEIR RELATIONS TO TEMPERATURE [BERICHTE DES DEUTSCHEN WETTERDIENSTE NR. 169: BEITRAEGE ZUR PHAENOLOGIE EUROPAS 5 LANGE PHAENOLOGISCHE REIHEN EUROPAS UND IHRE BEZIEHUNGEN ZUR TEMPERATUR]
Friedrich Lauscher and Fritz Schnelle 1986 28 p In GERMAN; ENGLISH summary
(BDW-169; ISSN-0072-4130; ISBN3-88148-224-5; ETN-86-97829)
Copyright. Avail: Issuing Activity

All individual data of 11 long phenological data sets of Europe were analyzed with respect to average value, trend, standard deviation and extreme values. Correlations with monthly averages of the temperature show that the heat of the third month preceding the beginning of the phases has a certain influence. Tests were made to estimate on the basis of the normal monthly averages, average temperatures for a period of 30 days preceding the beginning of the phases. These estimated values are in general significant for the phase data, however, there are different deviations which have to be attributed to anomalous weather sequences. ESA

THE NUMERICAL SIMULATION OF THUNDERSTORM OUTFLOW DYNAMICS Ph. D. Thesis
Kelvin Kay Droegemeier 1985 708 p
Avail: Univ. Microfilms Order No. DA8600166

Two high-resolution, two-dimensional numerical models are developed and used to investigate the dynamics of thunderstorm outflows. The first model employs the set of unapproximated, inviscid, fully compressible hydrodynamical equations, while the second, more economical model is based on a simplified set of inviscid, quasi-compressible equations. Neither model includes moist microphysical processes. The outflow models are designed with the flexibility needed to address many aspects of outflow dynamics with a high degree of physical realism. Turbulent mixing in outflows, manifest as Kelvin-Helmholtz shearing instability, is successfully simulated with the outflow models. This is the first time it has ever been reproduced in modeled outflows. The characteristics of the Kelvin-Helmholtz instability are compared with linear theory and laboratory results, and the sensitivity of the associated turbulent mixing to several physical and computational parameters is discussed. The characteristics of the ambient environment are found to play key roles in the dynamics of simulated outflows. Several vertical wind shear and static stability profiles are examined in the model, and their influence on outflow behavior is addressed. Dissert. Abstr.

N86-32921 Missouri Univ., Columbia.
ENERGETICS OF CYCLONIC DEVELOPMENT IN THE ASIAN WINTER MONSOON SYSTEM Ph.D. Thesis
Stephen Edward Masters 1985 111 p
Avail: Univ. Microfilms Order No. DA8529674

The storm development and the kinetic energy budget in the Asian winter monsoon is studied with the GFDL version of the FGGE III-b data set. Energetics for fixed sub-regions of the winter monsoon area and a moving area encompassing the primary monsoon storm system are computed. The synoptic low region budgets are averaged according to the development stage of the storm system to derive a composite view of a developing storm. Five individual cyclonic systems are examined closely with respect to their synoptic low region energetics and surface development. Finally, the spatial energetics patterns of two storms and the hemispheric spectral energy flow are examined. The 1978-79 winter monsoon circulation was anomalously weak, with few strong synoptic-scale storms and accompanying cold air outbreaks. The field of motion and regional kinetic energy transformations were nevertheless quite strong. The composite budget of the synoptic low region had the classical cyclonic generation and dissipation profiles. In contrast with previous studies of North American systems, the cyclones of the Asian winter monsoon are found to be net exporters of kinetic energy. Two distinctly different cyclone development sequences are apparent: one a classical synoptic development and the other characterized by a weaker, more disorganized structure. Composite budgets of these two storm types are consistently found to show distinct differences. These contrasts, which are very clear at the regional scale are also reflected in the Northern Hemisphere spectral energy flow. Dissert. Abstr.

N86-32922 Arizona Univ., Tucson.
EXTINCTION OF NEAR INFRARED SOLAR RADIATION AS A MEANS FOR REMOTE DETERMINATION OF ATMOSPHERIC WATER VAPOR Ph.D. Thesis
Larry Willis Thomason 1985 134 p
Avail: Univ. Microfilms Order No. DA8529410

A computationally efficient and accurate model is derived for the calculation of the atmospheric transmittance along inhomogeneous paths and within spectral bands dominated by molecular line absorption. It is a Stieltjes integration of transmission weighted by the frequency of occurrence of absorption coefficient within the band. Path inhomogeneitites are accounted for by assuming that the rank of absorption coefficient at any wavenumber is independent of temperature and pressure. The technique is then applied to the ground based radiometric determination of precipitable water. It is found that the techique predicts the behavior of the rho sigma tau water vapor absorption band very well. An RMS disagreement of 11% is found when the model predictions are compared to radiosonde determinations of precipitable water. The model is also applied to the determination of vertical water vapor distributions in the stratosphere given measured effective optical depths as a function of tangent height from a limb scanning satellite. A new iterative reduction technique is introduced which incorporates the transmission model and it is shown to be both numerically stable and rapidly convergent. A comparison of the results with an independent reduction technique shows good overall agreement with a small systematic difference above 20 km. The uncertainty in the measurements, which yields solution uncertainties on the order of 30%, renders this systematic difference unimportant. Dissert. Abstr.

TROPICAL CYCLONES, 1985: CENTRAL NORTH PACIFIC
W. Au, A. Chun, L. Iwai, H. Rosendal, and T. Yamashiroya May 1986 54 p
(PB86-202215; NOAA-TM-NWSTM-PR-31) Avail: NTIS HC A04/MF A01 CSCL 04B

Tropical Depression ENRIQUE moved into the CPHC area at 1200 GMT on July 1 after having been a minimal tropical storm near 13N 130W for approximately 24 hours on June 29. ENRIQUE moved slightly north of west from near 14N 140W on July 1 to 16N 150W on July 4 at an average speed of a little less than 10 knots. Maximum sustained winds were estimated to be about 25 knots with weak southwesterlies to the south of the center. Moisture carried along by ENRIQUE caused a few localized heavy showers on the windward side of the Big Island of Hawaii on July 5. GRA

POSSIBLE CLIMATIC CONSEQUENCES OF A MAJOR NUCLEAR WAR
G. S. Golitsyn and N. A. Phillips Feb. 1986 28 p
(WCP-113; WMO/TD-99; ETN-86-97808) Avail: NTIS MF A01; print copy available at WMO, Geneva, Switzerland

The atmospheric consequences of nuclear war are discussed. Fires set off by nuclear explosions can produce large amounts of highly absorbing smoke, and if the amount of smoke is as much as 10 or 2 times 10 to the 14th power grams, temperature decreases of 10 to 30 C are likely to occur in the interior of continents during several weeks after the nuclear explosions. Dust raised by near-surface explosions would induce additional cooling. Increase in the amount of smoke above the value indicated above would increase the duration and the areal extent of the cooling, but the cooling intensity would not increase proportionally to the amount of smoke. At the same time, the upper troposphere would be warm because of the absorption of solar radiation. Uncertainties exist in the calculations, for example as to the hypothetical distribution of nuclear exlosions and the details of smoke generation and its physical properties. ESA

ICE NUCLEUS ACTIVITY MEASUREMENTS OF SOLID ROCKET MOTOR EXHAUST PARTICLES
Vernon W. Keller, comp. Sep. 1986 22 p
(NASA-TM-86555; NAS 1.15:86555) Avail: NTIS HC A02/MF A01 CSCL 04B

The ice Nucleus activity of exhaust particles generated from combustion of Space Shuttle propellant in small rocket motors has been measured. The activity at -20 C was substantially lower than that of aerosols generated by unpressurized combustion of propellant samples in previous studies. The activity decays rapidly with time and is decreased further in the presence of moist air. These tests corroborate the low effectivity ice nucleus measurement results obtained in the exhaust ground cloud of the Space Shuttle. Such low ice nucleus activity implies that Space Shuttle induced inadvertent weather modification via an ice phase process is extremely unlikely. Author

VERY SHORT RANGE STATISTICAL FORECASTING OF AUTOMATED WEATHER OBSERVATIONS Interim Report, Oct. 1984 - Sep. 1985
Robert G. Miller Mar. 1986 97 p
(Contract DTFA01-83-Y-20625)
(AD-A167049; DOT/FAA/PM-86/10) Avail: NTIS HC A05/MF A01 CSCL 04/2

A procedure is developed for providing weather forecasting guidance over the short period of 10, 20, 30, ... 60 minutes. It uses automated surface observation elements as predictors and predictands. The model is founded on Markov assumption and uses multivariate linear regression as the statistical operator. Details are given on how the Generalized Equivalent Markov (GEM) model is constructed and how it compares with other objective methods such as climatology and persistence. Tests are performed on an independent data sample. Overall, GEM succeeds in bettering persistence and does so uniformly over the 6 projection periods of 10, 20, 30,....60 minutes. GRA

METEOROLOGICAL DATA INVENTORY, SOUTHERN CALIFORNIA, COASTAL ZONE, RAGGED POINT (SAN LUIS OBISPO COUNTY) TO MEXICAN BORDER
Dec. 1985 282 p
(Contract DACW09-85-D-0010)

(AD-A167645; COE/SPLPD/C-CCSTWS-85-7) Avail: NTIS HC A13/MF A01 CSCL 04/2

This report details the results of a data search on the meteorology of the coastal watersheds between Ragged Point, San Luis Obispo County and the U.S.-Mexican Border. Included in this report are general meteorological descriptions of the drainage areas, for the purpose of providing background information. These sections are followed by detailed accounts of the sources of meteorological data which are available. Data of interest include precipitation patterns, historical hyetographs, wind patterns, and general weather patterns responsible for the wind and precipitation. Also of interest are data on Pacific storms and storm patterns. Included in the discussion are the location of data, data formats available and indications of the quality of the data. Data gaps and limitations are noted, and suggestions are made for reducing these limitations. GRA

FORECAST VERIFICATION AND RECONNAISSANCE DATA FOR SOUTHERN HEMISPHERE TROPICAL CYCLONES Technical Note, 1 Jul. 1982 - 30 Jun. 1984

W. P. Wirfel and S. A. Sandgathe Feb. 1986 106 p

(AD-A168274; NOCC/JTWC-TN-86-1) Avail: NTIS HC A06/MF A01 CSCL 04/2

This report documents tropical cyclones which developed in the South Indian Ocean and South Pacific Ocean from 1 July 1982 to 30 June 1984. It provides composite storm best-tracks, a brief summary of each year's tropical cyclone season, and detailed position and reconnaissance fix data. In addition, this report contains forecast accuracy statistics for Southern Hemisphere tropical cyclones. A total of 55 tropical cyclones reached warning status in the combined Joint Typhoon Warning Center and Naval Western Oceanography Center area of responsibilty between 1 July 1982 and 30 June 1984. Twenty-five attained warning status in the 1982 to 1983 season, with thirty reaching warning status in the 1983 to 1984 season. Intensity estimates for Southern Hemisphere tropical cyclones are derived primarily from satellite imagery evaluation (Dvorak, 1973) and from intensity estimates reported by other regional warning centers. In very rare instances, the intensity estimates are based on surface observational data. Estimates of the minimum sea-level pressure are usually derived from the Atkinson and Holliday (1977) realtionship between the maximum sustained 1-min. surface wind and the minimum sea-level pressure. ANALYSIS OF WIND SPEEDS AT THE SPACE SHUTTLE LAUNCH SITE, VANDENBERG AIR FORCE BASE

Eugene S. Takle and Joseph D. Griffin 3 Apr. 1986 91 p

(AD-A168565; BLMRP86-01) Avail: NTIS HC A05/MF A01 CSCL 04/2

Wind speeds at the launch complex may be a factor to be considered in ensuring safe and flawless shuttle launch. High wind speeds may lead to unacceptably large horizontal forces at vulnerable times in the launch process. Low wind speeds will reduce the capability of the atmospheric boundary layer to disperse residual HC acid vapor from the solid rocket boosters. In this analysis, we computed and presented wind-speed distributions for multiple-hr as well as 1-hr averaging periods for guidance in determining the probability that a given wind condition will persist beyond 1 hr. High wind speeds at tower level tend to arise from strong coupling of the low level flow to high speed flow aloft resulting from large pressure gradients on the synoptic-scale. Under these conditions, wind direction tends to be more uniform with height than under weak synoptic-scale forcing, so the tower level wind direction can usually be approximated from the conventional synoptic analysis or forecast maps. Low wind speeds at the launch site for brief or extended periods could lead to hazards resulting from the acid cloud lingering in the near vicinity. Even though the cloud may attain a stabilized height well above the surface, if it rains out, revolatilized acid vapor could lead to high HC vapor concentrations in the surrounding air. Since revolatilized HC vapor concentrations are inversely proportional to wind speed, extended periods of low wind speeds would result in high acid vapor densities for correspondingly long periods. MONTHLY AND SEASONAL CLIMATOLOGY OF THE NORTHERN WINTER OVER THE GLOBAL TROPICS AND SUBTROPICS FOR THE PERIOD 1974 TO 1983. VOLUME 3: SURFACE WINDS Technical Report, May 1985 - May 1986

James S. Boyle and C. P. Chang May 1986 147 p

(AD-A168852; NPS-63-86-002-Vol-3) Avail: NTIS HC A07/MF A01 CSCL 04/2

This atlas of the surface circulation field contains northern winter monthly and seasonal mean wind analyses, velocity potential and streamfunction from 40 deg S to 60 deg N over a global belt for the period 1974 through 1983. In addition, the deviations of the individual annual seasonal and monthly means from their respective nine-year means are presented for the same variables. The basic wind data used are the operational Global Band Analyses of the United States Navy's Fleet Numerical Oceanography Center. Author (GRA)

ANALYSIS OF RESULTS FROM ENERGY BALANCE AND RADIATIVE-CONVECTIVE MODELS, APPENDIX A
M. E. Schlesinger 1986 40 p
(Contract W-7405-eng-48)
(DE86-010554; UCRL-15808-App-A) Avail: NTIS HC A03/MF A01

Three different types of climate models have been used to simulate the change in the equilibrium climate resulting from an increase in the carbon dioxide (CO) concentration: energy balance models (EBMs), radiative-convective models (RCMs), and general circulation models (GCMs). This appendix presents a detailed analysis of the results from EBMs and RCMs. The discussion places emphasis on the quantitative understanding of climate feedback processes. For this reason, the discussion necessarily involves a highly mathematical approach. This approach is helpful for analyzing the differences in sensitivity among climate models.

EFFECTS OF ENERGY TECHNOLOGY ON GLOBAL CO2 EMISSIONS
H. C. Cheng, M. Steinberg, and M. Beller Apr. 1986 98 p
(Contract DE-AC02-76CH-00016)
(DE86-010257; DOE/NBB-0076) Avail: NTIS HC A05/MF A01

The increase in atmospheric CO2, which results primarily from combustion of fossil fuels for energy, may alter the radiative balance on the earth and thus raise the global temperature. This so-called greenhouse effect could cause dramatic global climatic and environmental changes. This study explores the potential for more effective use of energy through improvements in energy technology and determines the consequent reduction in future buildup of atmospheric CO2 (which would mitigate the expected climatic and environmental changes). The study was done from the perspective of the physical sciences rather than the social and political sciences, i.e., it focused on how energy is consumed for a specific energy service rather than on technical tradeoffs such as use of mass transit instead of automobiles. Calculations showed that an overall reduction of 10 petagrams (10(15) g) of carbon emission (i.e., reduction of carbon emission from 17 petagrams without improvement to 7 petagrams with improvement) could be achieved in 2050 in the technology improvements discussed in this study were implemented.

LONG-TERM CHANGES IN PRECIPITATION PATTERNS, PART 7
T. P. Barnett 1986 14 p
(DE86-009705; UCRL-15776; DR-1805-8) Avail: NTIS HC A02/MF A01

The large-scale patterns of precipitation are summarized. No attempt is made to detect a CO2 signal. Available precipitation data and some of the associated measurement problems are briefly described. Selected studies of regional precipitation changes since the turn of the century will then be reviewed. These summaries are sugmented, whenever necessary, by a set of new regional studies. The possibilities of a coherent precipitation signal in the set of regional averages are investigated. B.G.

DESCRIPTION OF THE EELDEL (NETHERLANDS) WIND OBSERVATION STATION (PERIOD 1945 TO 1980)
B. Oemraw 1985 53 p In DUTCH; ENGLISH summary
(KNMI-TR-78; B8663488; ISSN-0169-1708; ETN-86-97730) Avail: NTIS HC A04/MF A01

The location of anemometers at Eelde (Netherlands) and the various types of wind meters and recorders are described. Corrections for sheltering effects from the surroundings are given. Corrected wind data summaries for the period 1961 to 1980 above open terrain are tabulated. The tables cover the diurnal and annual course, various frequency distributions, and for each two-month season the highest observed values of the hourly average wind speed per 30 deg azimuth sector. It is concluded that the wind data, after objective correction for sheltering effects, are reasonably dependable and homogeneous from January 1961 on. ESA

RELATIONSHIP OF TEMPERATURE AND VELOCITY VARIANCE TO ATMOSPHERIC THERMAL STABILITY
E. E. Gossard and A. S. Frisch Mar. 1986 35 p
(PB86-199809; NOAA-TM-ERL-WPL-134) Avail: NTIS HC A03/MF A01 CSCL 04B

The relationship between the variances of temperature and vertical velocity fluctuations is examined theoretically and experimentally. It is concluded that the remotely sensed ratio of these quantities offers hope of measuring gradients of temperature and radio refractive index from clear-air radar soundings. Theoretical aspects of the problem are first examined, and the conclusions are then compared with mean gradient and variance data recorded on the 300 m tower at the Boulder Atmospheric Observatory, in Colorado, USA. INFLUENCE OF SURFACE HEAT AND MOISTURE FLUXES ON EXPLOSIVE MARINE CYCLOGENESIS Ph.D. Thesis
W. A. Nuss 1986 192 p Prepared in cooperation with Washington Univ., Seattle
(Grant NSF ATM-82-17015)
(PB86-199346; NCAR/CT-101) Avail: NTIS HC A09/MF A01 CSCL 04B

The influence of surface heat and moisture fluxes on cyclogenesis was tested using a mesoscale model. Initial conditions were derived from baroclinic instability theory, case studies, and a composite analysis of explosive cyclones. Experiments with and without the effects of surface heat and moisture fluxes and latent heating were performed. Test of the sensitivity of development to the initial static stability and baroclinicity were also done. A downward surface moisture flux and significant initial moisture resulted in less latent heating and an insignificant increase in the development of the model cyclone compared to other studies. GRA

AN ANALYSIS OF THE TENSOR DIELECTRIC CONSTANT OF SEA ICE AT MICROWAVE FREQUENCIES Final Report
A. Stogryn Oct. 1985 40 p
(Contract N00014-83-C-0726)
(AD-A168015; AESC-7975) Avail: NTIS HC A03/MF A01 CSCL 08/12

This study has concentrated on deriving equations for computing the tensor dielectric constant of sea ice and making comparisons of the computations with published measurements on various components of the dielectric tensor (as well as attenuation coefficients, which are closely related to the dielectric constant). The theory is shown to be able to account quantitatively for large parts of the published experimental data on a variety of ice types in the frequency range 0.1 to 40 GHz and temperatures from -5 to -30 C. A few discrepancies, however, are noted. It is not known whether further development of the theory will be required to resolve these difference between theory and experiment or whether the experiments themselves must be refined. It is well known that accurate dielectric constant measurements on sea ice present some rather difficult experimental problems. Some inconsistencies

within the existing body of experimental data itself are pointed out in this work. GRA

INTEGRAL NONLINEAR PARTIAL DIFFERENTIAL EQUATIONS IN THE DESCRIPTION OF WATER FLOW IN CHANNELS OR STRAITS OF VARIABLE WIDTH AND DEPTH
D. Levi 6 Dec. 1985 9 p
(Preprint-485; ETN-86-97919) Avail: NTIS HC A02/MF A01

Starting from the Euler equations for a three-dimensional homogeneous incompressible inviscid fluid, a generalized Kadomtsev-Petviashvili equation (GKP), together with its appropriate boundary conditions are derived in the quasi one-dimensional long wave and shallow water approximation. The coefficients of this equation depend on the form of the bottom and on the vorticity; the sides of the straits figure only in the boundary conditions. Under certain restrictions on the vorticity and the geometry of the straits, the GKP is reduced to one of several completely integrable partial differential equations, in order to study the evolution of solitons which originate in the strait. NASA WORKSHOP ON ANIMAL GRAVITY-SENSING SYSTEMS
Meryl Lee Corcoran, ed. Aug. 1986 52 p Held at Pacific Grove, Calif., Feb. 1985
(NASA-TM-88249; A-86233; NAS 1.15:88249) Avail: NTIS HC A04/MF A01 CSCL 06C

The opportunity for space flight has brought about the need for well-planned research programs that recognize the significance of space flight as a scientific research tool for advancing knowledge of life on Earth, and that utilize each flight opportunity to its fullest. For the first time in history, gravity can be almost completely eliminated. Thus, studies can be undertaken that will help to elucidate the importance of gravity to the normal functioning of living organisms, and to determine the effects microgravity may have on an organism. This workshop was convened to organize a plan for space research on animal gravity-sensing systems and the role that gravity plays in the development and normal functioning of these systems. Scientists working in the field of animal gravity-sensing systems use a wide variety of organisms in their research. The workshop presentations dealt with topics which ranged from the indirect gravity receptor of the water flea, Daphnia (whose antennal setae apparently act as current-sensing receptors as the animal moves up and down in water), through specialized statocyst structures found in jellyfish and gastropods, to the more

complex vestibular systems that are characteristic of amphibians, avians, and mammals. Author

IN VIVO DERMAL ABSORPTION METHOD AND SYSTEM FOR LABORATORY ANIMALS Patent
James N. McDougal, Michael L. Gargas, Robert A. Strohaver, Gary W. Jepson, and Kenneth R. Thimling, inventors (to Air Force) Issued 15 Apr. 1986 8 p Supersedes AD-D011231
(AD-D012325; US-Patent-4,582,055; US-Patent-Appl-SN-612776; US-Patent-Class-128-202.12) Avail: US Patent and Trademark Office CSCL 06/11

A method and system for in vivo dermal absorption testing of a laboratory animal uses a mask and harness for protecting the respiratory tract of the animal when the animal is housed within a sealed chamber with a hazardous test vapor introduced in the chamber. Because of the difficulty of getting a good seal with a protective mask on a laboratory animal, this system is designed with an air leak from inside the mask into the chamber. To ensure that the test vapor does not infiltrate the mask nor leak from the chamber, the vapor is maintained at a negative pressure within the chamber as compared to the external atmospheric pressure and air is supplied to the mask for the animal to breathe at a positive pressure and at a greater rate than that needed by the animal. PERIPHERAL NERVE INJURY IN DEVELOPING RATS REORGANIZES MOTOR CORTEX
John P. Donoghue and Jerome N. Sanes 19 May 1986 14 p
(Contracts N00014-81-K-0136; PHS-1-R01-NS22517-01)
(AD-A168019; TR-29) Avail: NTIS HC A02/MF A01 CSCL 06/5

The effect of neonatal nerve lesions on cerebral motor cortex organization was investigated by comparing the cortical motor representation of normal adult rats with adult rats that had one forelimb removed on the day of birth. Mapping of cerebral neocortex with electrical simulation revealed an altered relationship between the motor cortex and the remaining muscles. While distal forelimb movements are normally elicited at the lowest threshold in the motor cortex forelimb area, the same stimuli activated shoulder and trunk muscles in experimental animals. In addition an expanded cortical representation of intact body parts was present and there was an absence of a distinct portion of motor cortex. These data demonstrate that representation patterns in motor cortex are subject to environmental events that occur during development. GRA

GROWTH AND DEVELOPMENT OF RHESUS MONKEYS EXPOSED TO ELF (EXTREMELY LOW FREQUENCY) ELECTRIC AND MAGNETIC FIELDS DURING THE FIRST 54 MONTHS OF LIFE Final Report, Oct. 1979 - Sep. 1984
W. G. Lotz, Jack L. Saxton, Toby A. Griner, and James D. Grissett May 1986 62 p
(AD-A168733; NAMRL-1318) Avail: NTIS HC A04/MF A01 CSCL 06/19

Thirty rhesus monkeys (Macaca mulatta), 17 males and 13 females, were exposed to 22 hours per day, 7 days per week, from 1 to 54 months of age to extremely low frequency (ELF) electric and magnetic fields. A second group of 30 animals served as controls. The project was designed to produce fields similar to, but stronger than those associated with the Navy's ELF communications system. The field parameters (0.2mT and 20 V/m at a frequency modulated between 72 and 80 Hz) were the same as those used in an earlier study in which enhanced growth rate occurred in pubescent male rhesus monkeys. The biological endpoints measured included body weight, bone growth, steroid hormones, hematology, and menstrual cycle data. No differences between exposed and control groups were observed prior to puberty. During puberty, body weight, bone growth, the age at which menarche was observed, and the progressive development of the mature endocrine rhythms of the menstrual cycle were all similar for both the exposed and control female monkeys. Body weight curves of the exposed and control males began to grow faster than the controls, and continued to diverge slowly through approximately 42 months of age. The growth curve separation narrowed, however, in the last 12 months of the study. The differences in growth were not statistically significant. No significant differences in mean testosterone levels of male monkeys were observed. GRA

ZOPICLONE'S RESIDUAL EFFECT UPON ACTUAL DRIVING PERFORMANCE VERSUS THOSE OF NITRAZEPAM AND FLUNITRAZEPAM
E. R. Volkwerts, J. W. Louwerens, A. B. M. Gloerich, K. A. Brookhuis, and J. F. OHanlon Apr. 1986 56 p Partly in ENGLISH and DUTCH Sponsored by Rhone-Poulenc Sante
(VK-84-10; ISBN-90-6807-016-9; ETN-86-97768) Copyright. Avail: Issuing Activity

It is shown that a patient possessing normal sensitivity to hypnotic drugs should be able to operate an automobile, in relative safety, 10 hr after ingesting nitrazepam 5 mg, flurazepam 2 mg, or zopiclone 7.5 mg. Residual driving performance impairment is expected during the morning following short-term, nocturnal use of flunitrazepam 2 mg, or zopiclone 7.5 mg, but not nitrazepam 5 mg. Residual impairment is expected in the afternoon following short-term, nocturnal use of flunitrazepam 2 mg, but not zopiclone 7.5 mg or nitrazepam 5 mg. Sleep quality is much improved by flunitrazepam 2 mg and zopiclone 7.5 mg, but less by nitrazepam 5 mg. Feelings of mental activation during the day following short term, nocturnal use of zopiclone 7.5 mg are initially (morning) less than normal, but eventually (afternoon) greater than normal. ESA

VARIABLE CONTRAST DIRECT READ-OUT VISION TESTER Patent
Harry L. Task and Louis V. Genco, inventors (to Air Force) Issued 25 Feb. 1986 6 p
(AD-D012273; US-Patent-4,572,630; US-Patent-Appl-SN-585092; US-Patent-Class-351-243) Avail: US Patent and Trademark Office CSCL 06/12

A novel vision tester and vision testing method is described which comprises a pair of translucent displays, each transilluminated by electroluminescent lighting panels, the images of two patterns being superimposed to provide a combined image characterized by a pattern of variable contrast. Light sensors near each light panel provide a measure of the relative intensities of the two images, which provides a measure of the contrast of each combined image. Contrast may be directly read out by processing the signals from the light sensors. The tester may be battery powered for portability. Author (GRA)

A SIMULATION STUDY OF THE EFFECTS OF SLEEP DEPRIVATION, TIME OF WATCH AND LENGTH OF TIME ON WATCH ON WATCHSTANDING EFFECTIVENESS
Anita D. DAmico, Edmund Kaufman, and Christine Saxe Jan. 1986 138 p
(AD-A167729; CAORF-16-8122-02) Avail: NTIS HC A07/MF A01 CSCL 06/19

Watchstander's work performance and physiological measures were studied in a simulated open-sea watch. A second purpose was to evaluate marine simulation as a method for studying

the effects of such variables on mariner performance. Sleep deprivation is a common problem among mariners and was the primary variable of interest. Time of watch and length of time on watch were examined because of their interrelationship with the fatiguing effects of sleep deprivation. The standard work schedule of watch officers - four hours on and eight hours off work - is discordant with the typical work/rest schedules and accompanying circadian rhythm of most people. Thus, this watch schedule was expected to mediate the effects of sleep deprivation on watch standing. The length of time which a watch officer has stood a relatively uneventual watch was also expected to interact with the effects of sleep deprivation, such that the deleterous effects of sleep deprivation would be exacerbated as time on watch increased. Twenty-five watchstanding mates were assigned to one of four experimental groups: Group 1 slept for 7.5 hours, then stood a morning watch; Group 2 slept for 7.5 hours, then stood an afternoon watch; Group 3 received no sleep before standing a morning watch; Group 4 received no sleep before standing an afternoon watch. All watches were stood on the bridge of a full-scale full-mission shiphandling simulator. Dependent measures were collected before, during and after a four-hour watch. GRA

PREDICTORS OF PERIODIC BREATHING AT ALTITUDE
David P. White, Kevin Gleeson, John T. Reeves, Cheryl K. Pickett, Anne M. Rannels, Allen Cymerman (Army Research Inst. of Environmental Medicine, Natick, Mass.), and John V. Weil Apr. 1986 31 p
(AD-A167947; USARIEM-M27/86) Avail: NTIS HC A03/MF A01 CSCL 06/16

Periodic breathing is commonly seen during sleep in healthy humans following ascent to high altitude. The hyperventilation induced by hypoxia at altitude leads to hypocapnia which can, during sleep, inhibit respiration yielding apnea. The subsequent fall in P02 and rise in PC02 could then trigger hyperventilation and perpetuate the cycle. This cycling requires sufficient hyperventilation in response to hypoxia and rising PC02 to produce the necessary level of hypocapnia. As a result, these events may be influenced by inter-individual variability in the hypoxic and hypercapnic ventilatory response. To test this theory, we measured hypoxic (HVR) and hypercapnic (HCVR) ventilatory responses awake and NREM sleep both at sea level and on nights 1, 4, and 7 following arrival at altitude (14,110 ft) in six healthy males. Ventilatory pattern and PC02 were also determined on these nights. On night 1 at altitude, periodic breathing developed in three of the six subjects and correlated significantly with the sea level NREM HVR ($r=.86$, $P=.02$), and near-significantly with both the sea level awake HVR ($r=.83$, $P=.08$), and sea level NREM HCVR ($r=.76$, $P=.08$). Periodic breathing decreased on nights 4 and 7, but an association persisted between the number of respiratory oscillations and the NREM hypercapnic response determined on the respective night (night 4, $r=.93$, $P=.02$; night 7, $r=.89$, $P=.04$). INHALATION TOXICOLOGY. PART 6: EVALUATION OF THE RELATIVE TOXICITY OF THERMAL DECOMPOSITION PRODUCTS FROM 9 AIRCRAFT PANEL MATERIALS Final Report
Charles R. Crane, Donald C. Sanders, Boyd R. Endecott, and John K. Abbott Feb. 1986 17 p
(AD-A168250; FAA/AM-86/3-Pt-6) Avail: NTIS HC A02/MF A01 CSCL 06/20

The purpose of this study was to determine the relative toxicity of the combustion products from aircraft cabin panels, representing both composite and homogeneous construction, that were being tested concurrently for flammability and smoke production at the FAA Technical Center. A combustion/exposure assembly was designed and constructed in which panel sections were pyrolyzed by radiant head directed on the upper surface only; the relative toxicity of the evolved gases was measured by determining the effect (time-to-incapacitation) on the laboratory rat. Also determined was the realtive toxicity of gases from the same nine panels when pyrolyzed in the older (and smaller) combustion tube assembly in order to compare the effects of the different pyrolysis modes. EFFECTS OF HIGH ALTITUDE ON NEUROLOGICAL AND PULMONARY FUNCTION: THE EFFECT OF HIGH ALTITUDE ON VISUAL EVOKED POTENTIALS IN HUMANS ON MT. EVEREST Final Report, 15 Apr. 1984 - 14 Jul. 1985
Michael R. Colpitts, Richard N. Wohns, Yoko Colpitts, Tom Clement, and W. B. Blackett 25 Jul. 1985 26 p
(Grant DAMD17-84-G-4023; DA Proj. 3E1-62777-A-879)
(AD-A168335) Avail: NTIS HC A03/MF A01 CSCL 06/19

The goal of the Ultima Thule Everest Expedition was to investigate the effects of high altitude on cerebral function. We were interested in noninvasive methods of assessing cerebral function at altitude and thus used electrophysiological tests involving cortical evoked potential studies and a drug study using Dilantin and placebo in a double blind randomized fashion. The subjects were climbers and support members of the expedition. Our hypothesis was that acute mountain sickness was a form of cerebral edema and could be objectively assessed with visual evoked potential measurements. Visual evoked potentials were chosen since it has been shown that these wave forms are directly altered by raised intracranial pressure. Dilantin was chosen as a drug that works in the CNS and stabilizes brain function. We hypothesized that Dilantin might prevent some of the symptoms of acute mountain sickness. Our studies revealed that exposure to high altitude, both with and without the symptoms of acute mountain sickness, altered the evoked potential patterns in a significant fashion. With comparison of baseline measurements to high altitude measurements it was seen that certain individuals had objective evidence of transient raised intracranial pressure. The Dilantin study was minimally conclusive based on lack of symptoms of altitude sickness, thus making comparison of the effects of Dilantin to placebo very difficult. However, it was seen that the subjects taking Dilantin had fewer and less headaches than the placebo group. GRA

A COMPARISON OF THE SPECIFIC ABSORPTION RATE IN A HOMOGENEOUS MAN MODEL AND A MAN MODEL CONTAINING REALISTIC MODEL BONES
Toby A. Griner and Richard G. Olsen 6 Jan. 1986 14 p
(AD-A168547; NAMRL-1315) Avail: NTIS HC A02/MF A01 CSCL 06/18

As part of a study of far-field microwave dosimetry in the human body, local and average specific absorption rates (SARs) in a homogeneous full-size muscle-equivalent upper-body man model were compared with measurements in an upper-body man model also containing simulated skull, brain material, oral and throat cavities, and vertebrae. The measurements were made in the torso and head region at 2.0 GHz with e-polarized irradiation. Qualitative comparisons of front surface temperature were obtained with a thermographic camera. Whole-body SAR was measured with a gradient-layer calorimeter while SAR profiles at the eye and neck locations were measured using a nonperturbing temperature probe. The result of these comparisons showed minor differences in radio frequency (RF) absorption. At this frequency, the freespace wavelength (15 cm) is less than the major body dimensions, and the energy absorption ocurred primarily at the front surface of the model in a fairly uniform pattern. We conclude that the interior composition of our man model does not significant affect the over-all absorption characteristics at frequencies where the body dimensions are greater than the irradiation wavelength. GRA

RADIOGRAPHIC DETERMINATION OF MASS OF INERTIAL TENSORS OF ANATOMICAL SEGMENTS Progress Report
Paul Ibanez 3 Jan. 1986 13 p
(Contract N00014-85-C-0594)

(AD-A168581) Avail: NTIS HC A02/MF A01 CSCL 06/5

ANCO is investigating the use of radiographic techniques to determine properties of anatomical segments - mass, center of gravity, and the inertial tensor. Three orthogonal projections (X-ray photographs) through the segment will determine these properties if sufficiently high energy X-rays are used so that attenuation is independent of atomic number and just dependent on mass density. This occurs above a few hundred keV energy. The intent of this study is to investigate the practicality and potential accuracy of the method. Progress to date is described herein. GRA

ALTITUDE ACCLIMATIZATION ATTENTUATES PLASMA AMMONIA DURING SUBMAXIMAL EXERCISE

Particia M. Young, Paul B. Rock, Charles S. Fulco, Laurie A. Trad, and Vincent A. Forte, Jr. May 1986 27 p

(AD-A168630; USARIEM-M33/86) Avail: NTIS HC A03/MF A01 CSCL 07/2

This study examined the effects of acclimatization to 4300 m altitude on changes in plasma ammonia concentrations with 30-min submaximal (75% VO2 max) cycle exercise. Human test subjects were divided into a sedentary (n=6) and active group (n=5). Maximal oxygen uptake (VO2 max) was determined at sea level, after acute HA (t24h) and chronic HA (t=13d), exposure to 4300 m altitude. The VO2 max of both groups decreased 32% with acute HA when compared to sea level. In the sedentary group, VO2 max was decreased an additional 16% following 13-days continuous residence at 4300 m, while VO2 max in the active group showed no further change. Plasma ammonia concentration increased (P0.05) over resting levels immediately following submaximal exercise during sea-level and acute HA exposure in both groups. Immediately following submaximal exercise at chronic HA, the active group showed no increased plasma ammonia accumulation, whereas the post-exercise ammonia in the sedentary group was elevated but to a lesser ex tent than sea level or acute HA. Thus, post-exercise plasma ammonia concentration is decreased with altitude acclimatization when compared to exercise performed at the same relative intensity at sea level or acute HA. This decrease in ammonia levels may contribute to enhanced performance and altered substrate utilization with exercise following acclimatization to altitude. GRA

EFFECT OF DEXAMETHASONE ON SYMPTOMS OF ACUTE MOUNTAIN SICKNESS AT PIKES PEAK, COLORADO (4300m)

Paul B. Rock, T. S. Johnson, Allen Cymerman, Richard L. Burse, and Leo J. Falk May 1986 22 p

(AD-A168662; USARIEM-M-32/86) Avail: NTIS HC A02/MF A01 CSCL 06/15

In a previous controlled study, dexamethasone (DEX) was shown to prevent acute mountain sickness (AMS) during exposure to simulated high altitude. To determine the effect of DEX during actual altitude exposure, sixteen young men were treated with either DEX (4 mg every 6h) or placebo for 48 h prior to and 48 h after being rapidly transported from sea level to the summit of Pikes Peak, CO (4300m). Symptoms of AMS were evaluated twice daily at Pikes Peak using the Environmental Symptoms Questionnaire and a clinical assessment. During treatment the mean symptom scores were higher for subjects taking placebo in 18 out of 20 comparisons. On an individual basis, 60% of the subjects receiving placebo met the criteria of being sick compared to 31% of subjects receiving DEX. Beginning 24 h after cessation of treatment, DEX subjects experienced a progressive increase in symptom scores which lasted through the end of the altitude sojourn (day 6). The results indicate that DEX is an effective prophylactic treatment for AMS in an actual mountain environment, but the AMS symptoms can occur if the drug is stopped abruptly. drug is stopped abruptly. PROPOSAL FOR A NEW TOMOGRAPHIC DEVICE PROVIDING INFORMATION ON THE CHEMICAL PROPERTIES OF A BODY SECTION

E. Gatti, P. Rehak, and J. Kemmer (Technische Univ., Munich (West Germany).) 27 Feb. 1986 68 p Presented at the 4th European Symposium on Semiconductor Detectors, Munich, West Germany, 3 Mar. 1986 Prepared in cooperation with Beschleuniger-laboratorium der Univ. und Technischen Univ. Muenchen, Garching (Germany, F.R.).

(Contract DE-AC02-76CH-00016)

(DE86-010547; BNL-37795; CONF-8603109-3) Avail: NTIS HC A04/MF A01

A system to analyze the chemical properties of a region of tissue located deep inside the human body without having to access it is proposed. The method is based on a high precision detection of X-rays or (GAMMA)-rays (photons) from an external source Compton scattered from the tissue under inspection. The method provides chemical information of plane regions lying not too deep inside the body (<6 cm). The amount of radiation absorbed by the body is about the same as needed for a standard X-ray tomography. The exposure time is estimated to be shorter than 10 minutes. DOE

IMPLEMENTATION OF MODELS FOR THE TRANSIENT DIVISION SYSTEM OF SPATIO-TEMPORAL VISUAL PERCEPTION [IMPLEMENTATIE VAN MODELLEN VOOR HET TRANSIENTE DEELSYSTEEM VAN DE SPATIO-TEMPORELE VISUELE WAARNEMING]

A. C. denBrinker May 1984 124 p In DUTCH

(ETN-86-97533) Avail: NTIS HC A06/MF A01

Three adaptive filter based models for the mathematical description of a spatial two-dimensional choroid membrane placed inside the transient system of visual perception were derived. Via estimate procedures applied to psychophysical impulse responses (IR) the model parameters for different subjects were determined. One model in which the temporary system as estimated from measurement results was placed in series with the membrane leads to the conclusion that membrane currency effects are no longer essential. A model in which the lateral membrane was identified with a second filter from the adaptive filter model, predicts an IR with more than 3 phases, for simulation with a 1 deg field without environment. Later phases are big enough to be measured by the model. A third model in which part of the estimated IR is identified with the membrane action was tested. ESA

A MODEL OF THE TRANSIENT PART OF THE SPATIO-TEMPORAL PERCEPTION, CONTAINING A TWO-DIMENSIONAL LONG FIBER [EEN MODEL VAN HET TRANSIENTE DEEL VAN DE SPATIO-TEMPORELE VISUELE PERCEPTIE, BEVATTENDE EEN TWEE-DIMENSIONALE LANGE LEIDING]

A. C. denBrinker and Th. J. P. vanAalst May 1984 34 p In DUTCH

(ETN-86-97540) Avail: NTIS HC A03/MF A01

A Griffith visual perception model containing a lateral (choroid) membrane for extension and coupling of signals in the spatial domain was developed. The membrane was mathematically described using the long fiber analogy of nerve fibers. Propagation velocity (v) and damping (beta) were included. The parameters were assumed to be independent of the average luminance via adaptive processes to calculate luminous pattern discontinuities into discontinuities of beta and v. A linear Partial Differential Equation (PDE) was found; the appropriate Green function was derived. Starting from a membrane excitation by a disk direct-impulse superposed on a continously present luminance profile, PDE solutions were obtained for profiles from which the luminance is equally distributed, and constantly distributed inside the disk and zero outside, or tending to infinity outside. An important part of stereo vision consists of finding and matching points in two images which correspond to the same physical element in the scene. This document shows that zeros of curvature of curves are perspective invariants and can therefore be used to find corresponding points. These can be used to help solve the registration problem and to obtain the correct depth when a curve enters the forbidden zone. These are also relevant to theories for representing image curves. The stability of these zeros of curvature are considered. Author (GRA)

A simulation technique is used to determine whether complexity (multidimensionality) of task performance in complex managerial tasks is trainable. The present report is specifically concerned with measurement. Previous simulation based measurement, which had included sixteen measures was extended to thirty-seven primary measures and twelve derived measures. Information is provided on the characteristics and purpose of each of those measures. In addition formulas or related statements that allow calculation of performance scores by other researchers and/or in other settings is provided. Further, this report considers the Time-Event Matrix on which measurement is based. GRA

THE STARTLE REFLEX AS A LEARNING TASK: APPARATUS AND TEST PARAMETERS Interim Technical Paper Jun. - Sep. 1985
Darrell G. Evans, Linda B. Anderson, Sandra Z. Brothers, Stuart L. Hutchinson, and Thomas G. Wheeler Mar. 1986 12 p
(AD-A167958; USAFSAM-TP-85-6) Avail: NTIS HC A02/MF A01 CSCL 06/16

The objective of this report is to define the startle reflex inhibition learning task and to present results of a pilot study designed to determine the experimental conditions which produce the most consistent learning curves. The startle response (muscle flinch) to each tone stimulus was recorded via an accelerator voltage output. The three primary task parameters--tone intensity, interstimulus interval (ISI), and adaptation period-were evaluated to determine which parameters were important in producing consistent learning curves. The results indicate that ISI and adaptation period have little effect on the inhibition learning curves and tone intensity proved to be the primary variable for the range of conditions used in this study. COMPLEX MONITORING PERFORMANCE AND THE CORONARY-PRONE TYPE A BEHAVIOR PATTERN Final Report
Richard I. Thackray and R. M. Touchstone Mar. 1986 15 p
(AD-A168240; AD-E900565; FAA/AM-86/4) Avail: NTIS HC A02/MF A01 CSCL 05/10

The present study examined the possible relationship of the coronary-prone Type A behavior pattern to performance of a complex monitoring task. The task was designed to functionally simulate the general task characteristics of future, highly automated air traffic control systems in which passive monitoring is expected to be a principal job requirement. Thirty-six male subjects, half classified as Type A and half as Type B, monitored the simulated radar display over a 2-hour session for infrequent critical changes in alphanumeric targets. In addition to performance, physiological changes and subjective reactions were also assessed. Type A individuals were found not to differ from Type B individuals in either task performance or in subjective reaction to the task. Task-related changes in heart rate, blood pressure, and general restlessness failed also to provide any evidence of greater arousal in Type A's than in Type B's. The findings are discussed relative to other studies of Type A behavior and performance and to the specific problem of finding useful predictors of performance in operational monitoring situations. GRA

MULTITASK PERFORMANCE: PREDICTING SUCCESS IN NAVAL AVIATION PRIMARY FLIGHT TRAINING Interim Report
G. R. Griffin and D. K. McBride Mar. 1986 20 p
(AD-A168246; NAMRL-1316) Avail: NTIS HC A02/MF A01 CSCL 05/9

A multitask experiment simulating certain motor control and communication requirements characteristics of flight was conducted to determine relative strengths of several performance measures as predictors of primary flight training success. A Psychomotor Task (PMT) and a Dichotic Listening Task (DLT) performed under single-task conditions were found to be significantly related (p less .05) to a primary flight training pass/fail criterion. Two separate multitask DLT measures also correlated with the pass/fail criterion and at higher levels of statistical significance (p less than .01) than the single-task measures. The results indicate that various single- and multitask measures are significantly related to primary flight performance, and further reveal that the component test measures may be better predictors under multitask than under single-task conditions. Additional research using larger samples and additional multitask tests is indicated. GRA

OPERATOR ALERTNESS/WORKLOAD ASSESSMENT USING STOCHASTIC MODEL-BASED ANALYSIS OF MYOELECTRIC SIGNALS Final Report, Apr. 1984 - Oct. 1985
Azad Madni, Carla Conaway, Shirley Otsubu, and Yee-Yeen Chu Nov. 1985 130 p
(Contract F49620-83-C-0001)
(AD-A168567; PFTR-1126-85-11; AFOSR-86-0325TR) Avail: NTIS HC A07/MF A01 CSCL 05/9

This report summarizes the research conducted in the second

phase of this three-year research and development program directed toward the analysis and evaluation of myoelectric signals (MES) as indicators of operator alertness and piloting workload. The purpose of the study was to investigate the efficiency of stochastic models such as autoregressive (AR), autoregressive-moving-average (ARMA), and autoregressive integrated moving average (ARIMA) models in characterizing the MES under different levels of task-imposed burden. The implications from this three-year research program are two-fold. Surface myoelectric activity is not a reliable measure of operator alertness. During Phase 1, the first autoregressive coefficient of the ARIMA model revealed a significant correlation with task difficulty level. During Phase 3, the pi weights did not show the same trend. Intramuscular electrodes, on the other hand, that do pick up more reliable signatures have obvious drawbacks. Post hoc analysis of the experimental data revealed that the total number of experimental subjects which were constrained by program scope and size were inadequate in terms of producing a statistically significant difference in perceived stress between the single and dual-task groups. GRA

OPERATOR ALERTNESS/WORKLOAD ASSESSMENT USING STOCHASTIC MODEL-BASED ANALYSIS OF MYOELECTRIC SIGNALS Interim Report, Apr. 1983 - Oct. 1985
Azad Madni, Carla Conaway, Shirley Otsubu, Yee-Yeen Chu, and Denis Purcell Nov. 1985 83 p
(Contract F49620-83-C-0001)
(AD-A168568; PIR-1126-85-4; AFOSR-86-0317TR) Avail: NTIS HC A05/MF A01 CSCL 05/9

This report summarizes the activities in the second phase of a three-year program of research and development directed toward the analysis and evaluation of myoelectric signals (MES) as indicators of operator alertness, and potentially workload in aircraft piloting tasks. The purpose of the study is to investigate the efficiency of stochastic models such as autoregressive (AR), autoregressive-moving-average (ARMA) and autoregressive integrated moving average (ARIMA) models in characterizing the MES under different levels of task imposed burden. The specific objectives of this effort are: (1) to develop/adapt state-of-the-art stochastic models for characterizing myoelectric signal patterns; (2) To investigate under controlled experimental conditions if meaningful repeatable quantitative relationships can be identified between MES patterns and operator loading; (3) To experimentally identify muscle sites that provide reliable MES signatures; (4) To develop methods and procedures for tuning the models and possibly filtering out pattern variations due to variables in electrode locations and individual biases; and (5) To develop guidelines for automatically assessing operator alertness level from the MES temporal signature in piloting tasks. INVESTIGATION OF PILOT BEHAVIOR WITHIN THE SCOPE OF A TRAINING PROGRAM FOR HANDLING QUALITIES RATING IN A GROUND SIMULATOR
Dietrich Altenkirch May 1985 41 p In GERMAN; ENGLISH summary
(DFVLR-Mitt-86-01; ISSN-0176-7739; ETN-86-97814) Avail: NTIS HC A03/MF A01; DFVLR, Cologne, West Germany DM 15.50

A pilot training session for rating handling qualities of transport aircraft was conducted with four test pilots by using a moving cockpit ground simulator. Each pilot flew three tasks: take-off/climb, cruise/landing, approach/touchdown. In addition to the basic version of the aircraft, the pilots rated the handling qualities of two configurations differing in dynamics and control modes. Cooper-Harper pilot ratings and special effort ratings, as well as statistical values computed from measured performance data of the pilot/aircraft system are presented as a function of the configuration and turbulence levels. DESCRIPTIVE LINEAR MODELING OF STEADY-STATE VISUAL EVOKED RESPONSE
William H. Levison, Andrew M. Junker (Aerospace Medical Research Labs., Wright-Patterson AFB, Ohio.), and Kevin Kenner (Synergy, Inc., Washington, D. C.) *In* NASA. Ames Research Center 21st Annual Conference on Manual Control May 1986 16 p (For primary document see N86-32976 24-54)
Avail: NTIS HC A22/MF A01 CSCL 05H

A study is being conducted to explore use of the steady state visual-evoke electrocortical response as an indicator of cognitive task loading. Application of linear descriptive modeling to steady state Visual Evoked Response (VER) data is summarized. Two aspects of linear modeling are reviewed: (1) unwrapping the phase-shift portion of the frequency response, and (2) parsimonious characterization of task-loading effects in terms of changes in model parameters. Model-based phase unwrapping appears to be most reliable in applications, such as manual control, where theoretical models are available. Linear descriptive modeling of the VER has not yet been shown to provide consistent and readily interpretable results. Author

ANALYTICAL COMPARISON OF TRANSIENT AND STEADY STATE VISUAL EVOKED CORTICAL POTENTIALS
Andrew M. Junker, Kevin M. Kenner, David L. Kleinman, and Terrence D. McClurg *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 14 p (For primary document see N86-32976 24-54)
(Grant AF-AFOSR-2312-V2)
Avail: NTIS HC A22/MF A01 CSCL 05H

To better describe the linear-dynamic properties of the human visual-cortical response system, transient and steady state Visual Evoked Response Potentials (VERP) were observed. The stimulus presentation device provided both the evoking stimulus (flickering or pulsing lights) and a video task display. The steady state stimulus was modulated by a complex, ten frequency, sum-of-sines, wave. The transient VERP was the time-locked average of the EEG to a series of narrow light pulses (pulse width of 10 msec). The Fourier transform of the averaged pulses had properties that approximate band limited white noise, i.e., a flat spectrum over the frequency region spanned by the 10 summed sines. The Fourier transform of both the steady state and the transient evoked potentials resulted in transfer that are equivalent and therefore comparable. To investigate the effects of task loading on evoked potentials, a grammatical reasoning task was provided. Results support the relevancy of continued application of a systems engineering approach for describing neurosensory functioning. Author

MODIFIED PETRI NET MODEL SENSITIVITY TO WORKLOAD MANIPULATIONS
Stephen A. White, David P. MacKinnon, and John Lyman *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 17 p (For primary document see N86-32976 24-54)
Avail: NTIS HC A22/MF A01 CSCL 05H

Modified Petri Nets (MPNs) are investigated as a workload modeling tool. The results of an exploratory study of the sensitivity of MPNs to work load manipulations in a dual task are described. Petri nets have been used to represent systems with asynchronous, concurrent and parallel activities (Peterson, 1981). These characteristics led some researchers to suggest the use of Petri nets in workload modeling where concurrent and parallel activities are common. Petri nets are represented by places and transitions. In the workload application, places represent operator activities and transitions represent events. MPNs have been used to formally represent task events and activities of a human operator in a man-machine system. Some descriptive applications demonstrate the usefulness of MPNs in the formal representation of systems. It is the general hypothesis herein that in addition to descriptive applications, MPNs may be useful for workload estimation and prediction. The results are reported of the first of a series of experiments designed to develop and test a MPN system of workload estimation and prediction. This first experiment is a screening test of MPN model general sensitivity to changes in workload. Positive results from this experiment will justify the more complicated analyses and techniques necessary for developing a workload prediction system. E.R.

LEVELS OF INFORMATION PROCESSING IN A FITTS LAW TASK (LIPFITTS)
Kathleen L. Mosier (California Univ., Berkeley.) and Sandra G. Hart *In its* 21st Conference on Manual Control May 1986 15 p (For primary document see N86-32976 24-54)
Avail: NTIS HC A22/MF A01 CSCL 05H

State-of-the-art flight technology has restructured the task of human operators, decreasing the need for physical and sensory resources, and increasing the quantity of cognitive effort required, changing it qualitatively. Recent technological advances have the most potential for impacting a pilot in two areas: performance and mental workload. In an environment in which timing is critical, additional cognitive processing can cause performance decrements, and increase a pilot's perception of the mental workload involved. The effects of stimulus processing demands on motor response performance and subjective mental workload are examined, using different combinations of response selection and target acquisition tasks. The information processing demands of the response selection were varied (e.g., Sternberg memory set tasks, math equations, pattern matching), as was the difficulty of the response execution. Response latency as well as subjective workload ratings varied in accordance with the cognitive complexity of the task. Movement times varied according to the difficulty of the response execution task. Implications in terms of real-world flight situations are discussed. Author

THE EFFECTS OF STIMULUS MODALITY AND TASK INTEGRALITY: PREDICTING DUAL-TASK PERFORMANCE AND WORKLOAD FROM SINGLE-TASK LEVELS
Sandra G. Hart, Robert J. Shively, Michael A. Vidulich, and Ronald C. Miller (Informatics General Corp., Palo Alto, Calif.) *In its* 21st Annual Conference on Manual Contol May 1986 15 p (For primary document see N86-32976 24-54)
Avail: NTIS HC A22/MF A01 CSCL 05H

The influence of stimulus modality and task difficulty on workload and performance was investigated. The goal was to quantify the cost (in terms of response time and experienced workload) incurred when essentially serial task components shared common elements (e.g., the response to one initiated the other) which could be accomplished in parallel. The experimental tasks were based on the Fittsberg paradigm; the solution to a SternBERG-type memory task determines which of two identical FITTS targets are acquired. Previous research suggested that such functionally integrated dual tasks are performed with substantially less workload and faster response times than would be predicted by suming single-task components when both are presented in the same stimulus modality (visual). The physical integration of task elements was varied (although their functional relationship remained the same) to determine whether dual-task facilitation would persist if task components were presented in different sensory modalities. Again, it was found that the cost of performing the two-stage task was considerably less than the sum of component single-task levels when both were presented visually. Less facilitation was found when task elements were presented in different sensory modalities. These results suggest the importance of distinguishing between concurrent tasks that complete for limited resources from those that beneficially share common resources when selecting the stimulus modalities for information displays. THE IMPACT OF PHYSICAL AND MENTAL TASKS ON PILOT MENTAL WORKOAD
Scott L. Berg and Thomas B. Sheridan *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 26 p (For primary document see N86-32976 24-54)
Avail: NTIS HC A22/MF A01 CSCL 05H

Seven instrument-rated pilots with a wide range of backgrounds and experience levels flew four different scenarios on a fixed-base simulator. The Baseline scenario was the simplest of the four and had few mental and physical tasks. An activity scenario had many physical but few mental tasks. The Planning scenario had few physical and many mental taks. A Combined scenario had high mental and physical task loads. The magnitude of each pilot's altitude and airspeed deviations was measured, subjective workload ratings were recorded, and the degree of pilot compliance with assigned memory/planning tasks was noted. Mental and physical performance was a strong function of the manual activity level, but not influenced by the mental task load. High manual task loads resulted in a large percentage of mental errors even under low mental task loads. Although all the pilots gave similar subjective ratings when the manual task load was high, subjective ratings showed greater individual differences with high mental task loads. Altitude or airspeed deviations and subjective ratings were most correlated when the total task load was very high. Although airspeed deviations, altitude deviations, and subjective workload ratings were similar for both low experience and high experience pilots, at very high total task loads, mental performance was much lower for the low experience pilots. MEMORY AND SUBJECTIVE WORKLOAD ASSESSMENT
Lowell Staveland (San Jose State Univ., Calif.), Sandra Hart, and Yei-Yu Yeh (Illinois Univ., Urbana-Champaign.) *In its* 21st Annual Conference on Manual Control May 1986 13 p (For primary document see N86-32976 24-54)
Avail: NTIS HC A22/MF A01 CSCL 05H

Recent research suggested subjective introspection of workload is not based upon specific retrieval of information from long term memory, and only reflects the average workload that is imposed upon the human operator by a particular task. These findings are based upon global ratings of workload for the overall task, suggesting that subjective ratings are limited in ability to retrieve specific details of a task from long term memory. To clarify the limits memory imposes on subjective workload assessment, the difficulty of task segments was varied and the workload of specified segments was retrospectively rated. The ratings were retrospectively collected on the manipulations of three levels of segment difficulty. Subjects were assigned to one of two memory

groups. In the Before group, subjects knew before performing a block of trials which segment to rate. In the After group, subjects did not know which segment to rate until after performing the block of trials. The subjective ratings, RTs (reaction times) and MTs (movement times) were compared within group, and between group differences. Performance measures and subjective evaluations of workload reflected the experimental manipulations. Subjects were sensitive to different difficulty levels, and recalled the average workload of task components. Cueing did not appear to help recall, and memory group differences possibly reflected variations in the groups of subjects, or an additional memory task. Author

THE EFFECTS OF ACCELERATION STRESS ON HUMAN WORKLOAD AND MANUAL CONTROL

Richard T. Gill, William B. Albery (Aerospace Medical Research Labs., Wright-Patterson AFB, Ohio.), and Sharon L. Ward *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 15 p (For primary document see N86-32976 24-54)

Avail: NTIS HC A22/MF A01 CSCL 05H

The effects of +Gz stress on operator task performance and workload were assessed. Subjects were presented a two dimensional maze and were required to solve it as rapidly as possible (by moving a light dot through it via a trim switch on a control stick) while under G-stress at levels from +1 Gz to +6 Gz. The G-stress was provided by a human centrifuge. The effects of this stress were assessed by two techniques; (1) objective performance measures on the primary maze-solving task, and (2) subjective workload measures obtained using the subjective workload assessment technique (SWAT). It was found that while neither moderate (+3 Gz) nor high (+5 Gz and +6 Gz) levels of G-stress affected maze solving performance, the high G levels did increase significantly the subjective workload of the maze task. KNOWLEDGE-BASED LOAD LEVELING AND TASK ALLOCATION IN HUMAN-MACHINE SYSTEMS

M. H. Chignell and P. A. Hancock *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 11 p (For primary document see N86-32976 24-54)

Avail: NTIS HC A22/MF A01 CSCL 05H

Conventional human-machine systems use task allocation policies which are based on the premise of a flexible human operator. This individual is most often required to compensate for and augment the capabilities of the machine. The development of artificial intelligence and improved technologies have allowed for a wider range of task allocation strategies. In response to these issues a Knowledge Based Adaptive Mechanism (KBAM) is proposed for assigning tasks to human and machine in real time, using a load leveling policy. This mechanism employs an online workload assessment and compensation system which is responsive to variations in load through an intelligent interface. This interface consists of a loading strategy reasoner which has access to information about the current status of the human-machine system as well as a database of admissible human/machine loading strategies. Difficulties standing in the way of successful implementation of the load leveling strategy are examined. Author

THE EFFECTS OF STRESS ON ATTENTIONAL RESOURCES Abstract Only

P. A. Hancock and M. H. Chignell *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 1 p (For primary document see N86-32976 24-54)

Avail: NTIS HC A22/MF A01 CSCL 05H

A new perspective is presented from which to view the action of stress on human behavior. At a behavioral level, the action of stress is related to notions of human attention and an indication of an isomorphic relationship between modes of control at a physiological and behavioral level is presented. Examples of this phenomenon are extracted from performance under heat stress, since this is one of the most simple stress circumstances. It is suggested that stress sufficient to overcome adaptive capability, that is efficient homeostasis, acts to drain attentional resources. The manner in which such resources fail approximates that function typical of a positive feedback system, which also characterizes the breakdown of physiological response under severe environmental stress. The end point of this draining sequence is the absence of all attentional resources, which is taken to be unconsciousness, to be rapidly followed by the failure of physiological adaptability upon which life sustaining functions depend. This overall picture preserves the inverted-U shaped relationship between stress and performance, yet is in distinct contrast to the traditional arousal account of such behavior. The theoretical and practical ramifications of these observations are explored. Author

THE EFFECTS OF VOICE AND MANUAL CONTROL MODE ON DUAL TASK PERFORMANCE

Christopher D. Wickens, John Zenyuh, Victor Culp, and William Marshak *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 1 p (For primary document see N86-32976 24-54)

Avail: NTIS HC A22/MF A01 CSCL 05H

Two fundamental principles of human performance, compatibility and resource competition, are combined with two structural dichotomies in the human information processing system, manual versus voice output, and left versus right cerebral hemisphere, in order to predict the optimum combination of voice and manual control with either hand, for time-sharing performance of a dicrete and continuous task. Eight right handed male subjected performed a discrete first-order tracking task, time-shared with an auditorily presented Sternberg Memory Search Task. Each task could be controlled by voice, or by the left or right hand, in all possible combinations except for a dual voice mode. When performance was analyzed in terms of a dual-task decrement from single task control conditions, the following variables influenced time-sharing efficiency in diminishing order of magnitude, (1) the modality of control, (discrete manual control of tracking was superior to discrete voice control of tracking and the converse was true with the memory search task), (2) response competition, (performance was degraded when both tasks were responded manually), (3) hemispheric competition, (performance degraded whenever two tasks were controlled by the left hemisphere) (i.e., voice or right handed control). The results confirm the value of predictive models invoice control implementation. Author

EVALUATION OF 2 COGNITIVE ABILITIES TESTS IN A DUAL-TASK ENVIRONMENT

Michael A. Vidulich and Pamela S. Tsang *In its* 21st Annual Conference on Manual Control May 1986 10 p (For primary document see N86-32976 24-54)

Avail: NTIS HC A22/MF A01 CSCL 05H

Most real world operators are required to perform multiple tasks simultaneously. In some cases, such as flying a high performance aircraft or trouble shooting a failing nuclear power plant, the operator's ability to time share or process in parallel can be driven to extremes. This has created interest in selection tests of cognitive abilities. Two tests that have been suggested are the Dichotic Listening Task and the Cognitive Failures Questionnaire. Correlations between these test results and time sharing performance were obtained and the validity of these tests were examined. The primary task was a tracking task with dynamically varying bandwidth. This was performed either alone or concurrently with either another tracking task or a spatial transformation task. The results were: (1) An unexpected negative correlation was detected between the two tests; (2) The lack of correlation between either test and task performance made the predictive utility of the tests scores appear questionable; (3) Pilots

made more errors on the Dichotic Listening Task than college students. Author

AT LEAST SOME ERRORS ARE RANDOMLY GENERATED (FREUD WAS WRONG)
Abigail J. Sellen and John W. Senders *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 1 p (For primary document see N86-32976 24-54)
Avail: NTIS HC A22/MF A01 CSCL 05H

An experiment was carried out to expose something about human error generating mechanisms. In the context of the experiment, an error was made when a subject pressed the wrong key on a computer keyboard or pressed no key at all in the time allotted. These might be considered, respectively, errors of substitution and errors of omission. Each of seven subjects saw a sequence of three digital numbers, made an easily learned binary judgement about each, and was to press the appropriate one of two keys. Each session consisted of 1,000 presentations of randomly permuted, fixed numbers broken into 10 blocks of 100. One of two keys should have been pressed within one second of the onset of each stimulus. These data were subjected to statistical analyses in order to probe the nature of the error generating mechanisms. Goodness of fit tests for a Poisson distribution for the number of errors per 50 trial interval and for an exponential distribution of the length of the intervals between errors were carried out. There is evidence for an endogenous mechanism that may best be described as a random error generator. Furthermore, an item analysis of the number of errors produced per stimulus suggests the existence of a second mechanism operating on task driven factors producing exogenous errors. Some errors, at least, are the result of constant probability generating mechanisms with error rate idiosyncratically determined for each subject. Author

PILOT INTERFACE WITH FLY BY WIRE CONTROL SYSTEMS
William W. Melvin *In* NASA. Ames Research Center 21st Annual Conference on Manual Control May 1986 7 p (For primary document see N86-32976 24-54)
Avail: NTIS HC A22/MF A01 CSCL 05H

Aircraft designers are rapidly moving toward full fly by wire control systems for transport aircraft. Aside from pilot interface considerations such as location of the control input device and its basic design such as side stick, there appears to be a desire to change the fundamental way in which a pilot applies manual control. A typical design would have the lowest order of manual control be a control wheel steering mode in which the pilot is controlling an autopilot. This deprives the pilot of the tactile sense of angle of attack which is inherent in present aircraft by virtue of certification requirements for static longitudinal stability whereby a pilot must either force the aircraft away from its trim angle of attack or trim to a new angle of attack. Whether or not an aircraft actually has positive stability, it can be made to feel to a pilot as though it does by artificial feel. Artificial feel systems which interpret pilot input as pitch rate or G rate with automatic trim have proven useful in certain military combat maneuvers, but their transposition to other more normal types of manual control may not be justified. Avail: NTIS HC A22/MF A01 CSCL 05H

A fixed-base simulation was performed to identify and quantify interactions between the pilot's hand/arm neuromuscular subsystem and such features of typical modern fighter aircraft roll rate command control system mechanization as: (1) force sensing side-stick type manipulator; (2) vehicle effective roll time constant; and (3) flight control system effective time delay. The simulation results provide insight to high frequency pilot induced oscillations (PIO) (roll ratchet), low frequency PIO, and roll-to-right control and handling problems previously observed in experimental and production fly-by-wire control systems. The simulation configurations encompass and/or duplicate several actual flight situations, reproduce control problems observed in flight, and validate the concept that the high frequency nuisance mode known as roll ratchet derives primarily from the pilot's neuromuscular subsystem. The simulations show that force-sensing side-stick manipulator force/displacement/command gradients, command prefilters, and flight control system time delays need to be carefully adjusted to minimize neuromuscular mode amplitude peaking (roll ratchet tendency) without restricting roll control bandwidth (with resulting sluggish or PIO prone control). FLIGHT TEST OF A DISPLACEMENT SIDEARM CONTROLLER
Andrew L. Lippay, Ronald Kruk, Michael King, and Murray Morgan (National Aeronautical Establishment, Ottawa (Ontario).) *In* NASA. Ames Research Center 21st Annual Conference on Manual Control May 1986 23 p (For primary document see N86-32976 24-54)
Avail: NTIS HC A22/MF A01 CSCL 05H

A six-axis displacement-stick sidearm controller was developed to enable single-handed control of remote manipulator operations in space. With a working model available, piloted evaluation became possible in a fly-by-computer variable-stability research aircraft, originally a Bell 205 helicopter. The original mechanization was limited to three rotational axes and a linear one, analogous to the collective stick. A newly designed short stickgrip was mounted and the spring force pattern adjusted to suit the helicopter flight control environment. A standard set of test maneuvers was flown by four experimental pilots with conventional helicopter flight controls and with sidearm controllers equipped with two different handgrips. Existing data from flight tests with an isometric-stick controller were added to complete the comparison. The displacement controller consistently achieved a rating of 3.0 to 3.5 on the Cooper-Harper scale, on par with the conventional controls. The same basic controller design was tested in spacecraft and remote manipulator simulations with very promising results. In each application operator/system integration was rapid and positive. The results demonstrate feasibility and support the design philosophy of using deflection as well as force to generate proprioceptive feedback. Author

ANTHROPOMETRIC CONSIDERATIONS FOR A 4-AXIS SIDE-ARM FLIGHT CONTROLLER
William B. DeBellis *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 14 p (For primary document see N86-32976 24-54)
Avail: NTIS HC A22/MF A01 CSCL 05H

A data base on multiaxis side-arm flight controls was generated. The rapid advances in fly-by-light technology, automatic stability systems, and onboard computers have combined to create flexible flight control systems which could reduce the workload imposed on the operator by complex new equipment. This side-arm flight controller combines four controls into one unit and should simplify the pilot's task. However, the use of a multiaxis side-arm flight controller without complete cockpit integration may tend to increase the pilot's workload. Author

ACTIVE CONTROLLERS AND THE TIME DURATION TO LEARN A TASK
D. W. Repperger and C. Goodyear (Systems Research Labs., Inc., Dayton, Ohio.) *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 12 p (For primary document see N86-32976 24-54)

Avail: NTIS HC A22/MF A01 CSCL 05H

An active controller was used to help train naive subjects involved in a compensatory tracking task. The controller is called active in this context because it moves the subject's hand in a direction to improve tracking. It is of interest here to question whether the active controller helps the subject to learn a task more rapidly than the passive controller. Six subjects, inexperienced to compensatory tracking, were run to asymptote root mean square error tracking levels with an active controller or a passive controller. The time required to learn the task was defined several different ways. The results of the different measures of learning were examined across pools of subjects and across controllers using statistical tests. The comparison between the active controller and the passive controller as to their ability to accelerate the learning process as well as reduce levels of asymptotic tracking error is reported here. HESITATION IN TRACKING INDUCED BY A CONCURRENT MANUAL TASK

Patricia A. Kelly and Stuart T. Klapp *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 3 p (For primary document see N86-32976 24-54)

(Contract NCC2-223)

Avail: NTIS HC A22/MF A01 CSCL 05H

When people are required to track with one hand and perform occasional discrete responses with the other hand, there is a strong possibility that errors will be induced in tracking attributable to the simultaneous action by the other. This problem was investigated by pairing pursuit tracking (right hand) with a handle movement response (left hand) guided by an auditory stimulus. Tracking is assumed to represent flight control and the left hand response to represent other aspects of aircraft system management. The general goal of this research is to identify the types of errors induced into tracking by the requirement of a secondary response with the other hand. An attempt is reported to determine if hesitations can be reduced further by combining tracking emphasis with a higher degree of practice. It is concluded that there is a tendency to freeze the tracking response when a discrete simultaneous response is required of the other hand. By contrast, practice seems to reduce hesitations while also improving left hand reaction time. Thus there appears to be a mode of control which permits tracking and discrete simultaneous responses to occur together. Author

PROGRESSION-REGRESSION EFFECTS IN TRACKING REPEATED PATTERNS Abstract Only

Richard J. Jagacinski and Sehchang Hah *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 1 p (For primary document see N86-32976 24-54)

Avail: NTIS HC A22/MF A01 CSCL 05H

Subjects used a position control system to perform compensatory tracking of a repeated input pattern. The input pattern was 20 seconds in duration and was either an arctangent function or the sum of two sine waves. Tracking error decreased with practice and increased with the addition of a concurrent memory task. The shape of the ensemble-average tracking error resembled the shape of the input velocity signal throughout these changes in performance. Regression analyses were used to parameterize these effects and compare these results with the predictions of several conceptualizations of perceptual-motor learning. Author

THE ROLE OF IMPULSE PARAMETERS IN FORCE VARIABILITY

Les. G. Carlton and K. M. Newell (Illinois Univ., Urbana-Champaign.) *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 9 p (For primary document see N86-32976 24-54)

Avail: NTIS HC A22/MF A01 CSCL 05H

One of the principle limitations of the human motor system is the ability to produce consistent motor responses. When asked to repeatedly make the same movement, performance outcomes are characterized by a considerable amount of variability. This occurs whether variability is expressed in terms of kinetics or kinematics. Variability in performance is of considerable importance because for tasks requiring accuracy it is a critical variable in determining the skill of the performer. What has long been sought is a description of the parameter or parameters that determine the degree of variability. Two general experimental protocals were used. One protocal is to use dynamic actions and record variability in kinematic parameters such as spatial or temporal error. A second strategy was to use isometric actions and record kinetic variables such as peak force produced. What might be the important force related factors affecting variability is examined and an experimental approach to examine the influence of each of these variables is provided. E.R.

HITTS LAW? A TEST OF THE RELATIONSHIP BETWEEN INFORMATION LOAD AND MOVEMENT PRECISION

Mathew Zaleski and Neville Moray *In* NASA. Ames Research Center 21st Annual Conference on Manual Control May 1986 21 p (For primary document see N86-32976 24-54)

(Grant NAGw-429)

Avail: NTIS HC A22/MF A01 CSCL 05H

Recent technological developments have made viable a man-machine interface heavily dependent on graphics and pointing devices. This has led to new interest in classical reaction and movement time work by Human Factors specialists. Two experiments were designed and run to test the dependence of target capture time on information load (Hitt's Law) and movement precision (Fitts' Law). The proposed model linearly combines Hitt's and Fitts' results into a combination law which then might be called Hitts' Law. Subjects were required to react to stimuli by manipulating a joystick so as to cause a cursor to capture a target on a CRT screen. Response entropy and the relative precision of the capture movement were crossed in a factorial design and data obtained that were found to support the model. Author

AIRCREW COORDINATION AND DECISIONMAKING: PEER RATINGS OF VIDEO TAPES MADE DURING A FULL MISSION SIMULATION

Miles R. Murphy and Cynthia A. Awe (San Jose State Univ., Calif.) *In its* 21st Annual Conference on Manual Control May 1986 33 p (For primary document see N86-32976 24-54)

Avail: NTIS HC A22/MF A01 CSCL 05H

Six professionally active, retired captains rated the coordination and decisionmaking performances of sixteen aircrews while viewing videotapes of a simulated commercial air transport operation. The scenario featured a required diversion and a probable minimum fuel situation. Seven point Likert-type scales were used in rating variables on the basis of a model of crew coordination and decisionmaking. The variables were based on concepts of, for example, decision difficulty, efficiency, and outcome quality; and leader-subordin ate concepts such as person and task-oriented leader behavior, and competency motivation of subordinate crewmembers. Five-front-end variables of the model were in turn dependent variables for a hierarchical regression procedure. The variance in safety performance was explained 46%, by decision efficiency, command reversal, and decision quality. The variance of decision quality, an alternative substantive dependent variable to safety performance, was explained 60% by decision efficiency and the captain's quality of within-crew communications. The variance of decision efficiency, crew coordination, and command reversal were in turn explained 78%, 80%, and 60% by small numbers of preceding independent variables. A principle component, varimax factor analysis supported the model structure suggested by regression analyses. Author

AN EXPERIMENTAL PARADIGM FOR TEAM DECISION PROCESSES

Daniel Serfaty and David L. Kleinman *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 2en1] p (For primary document see N86-32976 24-54)

Avail: NTIS HC A22/MF A01 CSCL 05H

The study of distributed information processing and decision making is presently hampered by two factors: (1) The inherent complexity of the mathematical formulation of decentralized problems has prevented the development of models that could be used to predict performance in a distributed environment; and (2) The lack of comprehensive scientific empirical data on human team decision making has hindered the development of significant descriptive models. As a part of a comprehensive effort to find a new framework for multihuman decision making problems, a novel experimental research paradigm was developed involving human terms in decision making tasks. Attempts to construct parts of an integrated model with ideas from queueing networks, team theory, distributed estimation and decentralized resource management are described. Author

INVESTIGATION OF CREW PERFORMANCE IN A MULTI-VEHICLE SUPERVISORY CONTROL TASK Abstract Only

Richard A. Miller, Brian D. Plamondon, Richard J. Jagacinski, and Alex C. Kirlik *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 1 p (For primary document see N86-32976 24-54)

Avail: NTIS HC A22/MF A01 CSCL 05H

Crew information processing and decision making in a supervisory control task which is loosely based on the mission of future generation helicopters is measured and represented. Subjects control the motion and activities of their own vehicle and direct the activities of four additional craft. The task involves searching an uncertain environment for cargo and enemies, returning cargo to home base and destroying enemies while attempting to avoid destruction of the scout and the supervised vehicles. A series of experiments with two-person crews and one-person crews were performed. Resulting crew performance was modeled with the objective of describing and understanding the information processing strategies utilized. Of particular interest are problem simplification strategies under time stress and high work load, simplification and compensation in the one-person cases, crew coordination in the two-person cases, and the relationship between strategy and errors in all cases. The results should provide some insight into the effective use of aids, particularly aids based on artificial intelligence, for similar tasks. The simulation is described which is used for the study and some preliminary results from the first two-person crew study are discussed. Author

FORCE/TORQUE DISPLAY FOR SPACE TELEOPERATION CONTROL EXPERIMENTS AND EVALUATION

Kevin Corker (Bolt, Beranek, and Newman, Inc., Cambridge, Mass.), Antal Bejczy, and Barry Rappaport *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 24 p (For primary document see N86-32976 24-54)

Avail: NTIS HC A22/MF A01 CSCL 05H

Experiments were performed at the Johnson Space Center (JSC), Manipulator Development Facility using the full scale Shuttle Remote Manipulator System (SRMS) to evaluate the effect of visual presentation through perspective display of the orthogonal forces and torques sensed at the manipulator end effector. The experiments investigated the effect of the display information on the management of forces and torques generated during payload berthing and deployment, as well as simulated satellite module change-out operations. The evaluation also addressed (1) issues of display format, including: force/torque scaling, point of resolution, and display mixing with video generated imagery, and (20) task related variables of payload size, alternative sources of guidance information, and control mode. The results are presented of a first-pass informal anlaysis of the analog, strip chart-recorded data from these evaluation tests. The results provide a relative measure of improvement in force management through the use of such a display, as well as information regarding the impact of display variables and task demands on operator performance. MODEL ANALYSIS OF REMOTELY CONTROLLED RENDEZVOUS AND DOCKING WITH DISPLAY PREDICTION

Paul Milgram and Paul H. Wewerinke *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 18 p (For primary document see N86-32976 24-54)

(Contract ESA-5594/83/NL/AN(SC))

Avail: NTIS HC A22/MF A01 CSCL 05H

Manual control of rendezvous and docking (RVD) of two spacecraft in low earth orbit by a remote human operator is discussed. Experimental evidence has shown that control performance degradation for large transmission delays (between spacecraft and operations control center) can be substantially improved by the introduction of predictor displays. An intial Optimal Control Model (OCM) analysis of RVD translational and rotational perturbation control was performed, with emphasis placed on the predictive capabilities of the combined Kalman estimator/optimal predictor with respect to control performance, for a range of time delays, motor noise levels and tracking axes. OCM predictions are then used as a reference for comparing tracking performance with a simple predictor display, as well as with no display prediction at all. Use is made here of an imperfect internal model formulation, whereby it is assumed that the human operator has no knowledge of the system transmission delay. Author

A MODEL FOR THE HUMAN'S USE OF VISUAL FIELD CUES IN NAP-OF-THE-EARTH FLIGHT Abstract Only

Ronald A. Hess and Kam Chan *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 1 p (For primary document see N86-32976 24-54)

Avail: NTIS HC A22/MF A01 CSCL 05H

A simple model is developed which describes the manner in which the human pilot may use visual field cues in controlling a vehicle in nap-of-the earth flight. The model is based upon the feedforward of information obtained from streamer patterns in the visual field to the inner-most loop of a multi-loop pilot/vehicle model. In this framework, the model is a logical extension of pursuit and preview models of the human operator which have appeared in the literature. Simulation and flight test data involving low-level helicopter flight tasks are applied to model development and validation. Author

VIRTUAL SPACE AND 2-DIMENSIONAL EFFECTS IN PERSPECTIVE DISPLAYS

Michael Wallace McGreevy, Cordell R. Ratzlaff (San Jose State Univ., Calif.), and Stephen R. Ellis *In its* 21st Annual Conference on Manual Control May 1986 14 p (For primary document see N86-32976 24-54)

Avail: NTIS HC A22/MF A01 CSCL 05H

When interpreting three dimensional spatial relationships presented on a two dimensional display surface, the viewer is required to mentally reconstruct the original information. This reconstruction is influenced by both the perspective geometry of the displayed image and the viewer's eye position relative to the display. In a study which manipulated these variables, subjects judged the azimuth direction of a target object relative to a reference object fixed in the center of a perspective display. The results support a previously developed model which predicted that the azimuth judgement error would be a sinusoidal function of stimulus azimuth. The amplitude of this function was correctly predicted to be systematically modulated by both the perspective

geometry of the image and the viewer's eye position relative to the screen. Interaction of the two components of the model, the virtual space effect and the 3D-to-2D projection effect, predicted the relative amplitudes of the sinusoidal azimuth error functions for the various conditions of the experiment. Mean azimuth judgements in some directions differed by as much as 25 degrees as a result of different combinations of eye position and image geometry. The results illustrate the need to consider the effects of perspective geometry when designing spatial information instruments, and show the model to be a reliable predictor of average performance. OPTIMAL COOPERATIVE CONTROL SYNTHESIS OF ACTIVE DISPLAYS
Sanjay Garg and David K. Schmidt *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 18 p (For primary document see N86-32976 24-54)
(Grant NAG2-228)
Avail: NTIS HC A22/MF A01 CSCL 05H

The utility of augmenting displays to aid the human operator in controlling high order complex systems is well known. Analytical evaluation of various display designs for a simple k/s sup 2 plant in a compensatory tracking task using an optimal Control Model (OCM) of human behavior is carried out. This analysis reveals that significant improvement in performance should be obtained by skillful integration of key information into the display dynamics. The cooperative control synthesis technique previously developed to design pilot-optimal control augmentation is extended to incorporate the simultaneous design of performance enhancing augmented displays. The application of the cooperative control synthesis technique to the design of augmented displays is discussed for the simple k/s sup 2 plant. This technique is intended to provide a systematic approach to design optimally augmented displays tailored for specific tasks. Author

MANUAL CONTROL OF UNSTABLE SYSTEMS
R. Wade Allen, Jeffrey R. Hogue, and Zareh Parseghian *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 18 p (For primary document see N86-32976 24-54)
Avail: NTIS HC A22/MF A01 CSCL 05H

Under certain operational regimes and failure modes, air and ground vehicles can present the human operator with a dynamically unstable or divergent control task. Research conducted over the last two decades has explored the ability of the human operator to control unstable systems under a variety of circumstances. Past research is reviewed and human operator control capabilities are summarized. A current example of automobile directional control under rear brake lockup conditions is also reviewed. A control system model analysis of the driver's steering control task is summarized, based on a generic driver/vehicle model presented at last year's Annual Manual. Results from closed course braking tests are presented that confirm the difficulty the average driver has in controlling the unstable directional dynamics arising from rear wheel lockup. Author

MODIFIED SUPERPOSITION: A SIMPLE TIME SERIES APPROACH TO CLOSED-LOOP MANUAL CONTROLLER IDENTIFICATION
Daniel J. Biezad, David K. Schmidt, Frank Leban, and Susan Mashiko *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 30 p (For primary document see N86-32976 24-54)
Avail: NTIS HC A22/MF A01 CSCL 05H

Single-channel pilot manual control output in closed-tracking tasks is modeled in terms of linear discrete transfer functions which are parsimonious and guaranteed stable. The transfer functions are found by applying a modified super-position time series generation technique. A Levinson-Durbin algorithm is used to determine the filter which prewhitens the input and a projective (least squares) fit of pulse response estimates is used to guarantee indentified model stability. Results from two case studies are compared to previous findings, where the source of data are relatively short data records, approximately 25 seconds long. Time delay effects and pilot seasonalities are discussed and analyzed. It is concluded that single-channel time series controller modeling is feasible on short records, and that it is important for the analyst to determine a criterion for best time domain fit which allows association of model parameter values, such as pure time delay, with actual physical and physiological constraints. The purpose of the modeling is thus paramount. Author

COMPARISON OF THE STI NIPIP TRACKING DYNAMICS IDENTIFICATION WITH THE ON-LINE FOURIER ANALYZER DFA RESULTS INCLUDING A TIME VARYING CASE
Henry R. Jex and Greg Hanson *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 7 p (For primary document see N86-32976 24-54)
(Contract F33615-82-C-0629)
Avail: NTIS HC A22/MF A01 CSCL 05H

The Non-Intrusive Pilot Identification Procedure (NIPIP) recently developed at STI and described at the 1981 Annual Manual was used to identify operators who were compensatory tracking a sub-critical-instability task. NIPIP uses a time domain least squares procedure converting to frequency domain coefficients. The forcing function was a sum of sinusoids supplied by the STI Mark II Describing Function Analyzer, which computes on-line Fourier coefficients of the operator's error/input describing function. The resulting open-loop and operator dynamics computed by each procedure are compared, and they are shown to be reasonably close when there is reasonable power in the error signal at the measurement frequencies. A special run was made in which the operator abruptly reduced gain within 1 sec, and the ability of the NIPIP to identify this step time variation in the operator is illustrated. Author

A FLIGHT TEST METHOD FOR PILOT/AIRCRAFT ANALYSIS
Ruthard Koehler and Ernst Buchacker *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 14 p (For primary document see N86-32976 24-54)
Avail: NTIS HC A22/MF A01 CSCL 05H

In high precision flight maneuvres a pilot is a part of a closed loop pilot/aircraft system. The assessment of the flying qualities is highly dependent on the closed loop characteristics related to precision maneuvres like approach, landing, air-to-air tracking, air-to-ground tracking, close formation flying and air-to air refueling of the receiver. The object of a research program at DFVLR is the final flight phase of an air to ground mission. In this flight phase the pilot has to align the aircraft with the target, correct small deviations from the target direction and keep the target in his sights for a specific time period. To investigate the dynamic behavior of the pilot-aircraft system a special ground attack flight test technique with a prolonged tracking maneuvres was developed. By changing the targets during the attack the pilot is forced to

react continously on aiming errors in his sights. Thus the closed loop pilot/aircraft system is excited over a wide frequency range of interest, the pilot gets more information about mission oriented aircraft dynamics and suitable flight test data for a pilot/aircraft analysis can be generated. MAXIMUM NORMALIZED ACCELERATION AS A FLYING QUALITIES PARAMETER
Joel S. Warner and Edward D. Onstott *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 11 p (For primary document see N86-32976 24-54)
Avail: NTIS HC A22/MF A01 CSCL 05H

In 1984, Maximum Normalized Rate (MNR) was presented as a Flying Qualities parameter. Subsequent analysis of data from ground based simulation and flight test revealed the utility of a companion parameter, Maximum Normalized Acceleration (MNA). MNR and MNA profiles reveal the presence of both continuous and pulsed compensation strategies during discrete attitude tracking. In addition, MNR appears to be a suitable metric for pilot opinion in the LATHOS data base, while the MNR/MNA relationship is sensitive to pilot-induced-oscillation (PIO) and roll ratcheting problems. As part of an investigation of this problem, Northrop has developed an analysis technique known as the Step Target Method. The Step Target method is essentially a one degree-of-freedom simulation, where an attitude command in the form of a step function is presented to a closed-loop pilot/aircraft model. The two parameters MNR and MNA were shown to be useful in Flying Qualities analysis. MNR was shown to correlate with Pilot Opinion Rating in the LATHOS data base, while MNA reflects PIO and roll ratcheting. Profiles of MNR versus MNA reveal the presence of pulsed compensation strategies in both ground based and in-flight simulation. Furthermore, comparison of continuous and discrete attitude tracking simulation data reveals that these two tracking tasks exhibit independent sensitivities to aircraft characteristics. E.R.

CLOSED-LOOP, PILOT/VEHICLE ANALYSIS OF THE APPROACH AND LANDING TASK
Mark R. Anderson and David K. Schmidt *In* NASA. Ames Research Center, 21st Annual Conference on Manual Control May 1986 5 p (For primary document see N86-32976 24-54)
Avail: NTIS HC A22/MF A01 CSCL 05H

In the case of approach and landing, it is universally accepted that the pilot uses more than one vehicle response, or output, to close his control loops. Therefore, to model this task, a multi-loop analysis technique is required. The analysis problem has been in obtaining reasonable analytic estimates of the describing functions representing the pilot's loop compensation. Once these pilot describing functions are obtained, appropriate performance and workload metrics must then be developed for the landing task. The optimal control approach provides a powerful technique for obtaining the necessary describing functions, once the appropriate task objective is defined in terms of a quadratic objective function. An approach is presented through the use of a simple, reasonable objective function and model-based metrics to evaluate loop performance and pilot workload. The results of an analysis of the LAHOS (Landing and Approach of Higher Order Systems) study performed by R.E. Smith is also presented. Author

CONTROL OF A FREE-FLYING ROBOT MANIPULATOR SYSTEM Semiannual Report, Feb. - Jul. 1985
Harold Alexander and Robert H. Cannon, Jr. Jul. 1985 8 p
(Contract NCC2-333)
(NASA-CR-179717; NAS 1.26:179717; SAR-1) Avail: NTIS HC A02/MF A01 CSCL 05H

The goal of the research is to develop and test control strategies for a self-contained, free flying space robot. Such a robot would perform operations in space similar to those currently handled by astronauts during extravehicular activity (EVA). The focus of the work is to develop and carry out a program of research with a series of physical Satellite Robot Simulator Vehicles (SRSV's), two-dimensionally freely mobile laboratory models of autonomous free-flying space robots such as might perform extravehicular functions associated with operation of a space station or repair of orbiting satellites. The development of the SRSV and of some of the controller subsystems are discribed. The two-link arm was fitted to the SRSV base, and researchers explored the open-loop characteristics of the arm and thruster actuators. Work began on building the software foundation necessary for use of the on-board computer, as well as hardware and software for a local vision system for target identification and tracking. Author

AUTOMATED ANTHROPOMETRIC DATA MEASUREMENT SYSTEM Patent Application
W. F. Moroney, J. C. Bartholomew, C. Cagle, and R. E. Hughes, inventors (to Navy) Filed 17 Oct. 1985 20 p
(AD-D012299; US-Patent-Appl-SN-788371) Avail: NTIS HC A02/MF A01 CSCL 06/14

An automated anthropometric data measurement system includes a standing measuring assembly and a seated measuring assembly to determine pertinent anthropometric features of aviators being screened for assignment to particularly suitable aircraft. Both assemblies have a plurality of position sensors and measuring probes which are selectively placed by an operator upon the aviator, each mesuring probe producing a digital data signal indicative of the particular feature measured when selective position sensors indicate body contact. The signals are then collected by a microcomputer which compares them to a predetermined population and outputs the compared data to magnetic storage media. GRA

A COLLATION OF UNITED STATES AIR FORCE ANTHROPOMETRY
Kenneth W. Kennedy 14 Jan. 1986 92 p
(AD-A168485; AAMRL-TR-85-062) Avail: NTIS HC A05/MF A01 CSCL 06/14

Four major anthropometric surveys of United States Air Force personnel have been conducted since the end of World War II: that of male rated and non-rated flying personnel in 1950, of male recruits, enlisted and non-rated officers in 1965, of male rated officers and cadets in 1967, and of female officers and enlisted in 1968. Only two surveys have been adequately published: those of 1950 and 1968. For the purposes of this collation, four USAF subpopulations have been distinguished: (1) non-rated male officers and enlisted (2) rated male officers and cadets, (3) non-rated female officers and enlisted personnel, and (4) rated female officers and cadets. The latter is an artificial subset of women taken form the 1968 survey and who meet the Air Force body-size criteria for entry into Undergraduate Pilot Training and retention as a rated officer. Dimension titles and descriptions are listed alphabetically and cross referenced such that the user can be quickly directed to the desired or to related body size data. Summary statistics consists of the number of subjects measured, the Mean, Standard Deviation, and the 1st, 5th, 50th, 95th, and 99th percentile values for each dimension. GRA

EFFECT OF OXYGEN FLOW ON PASSENGER FACE MASK PERFORMANCE Final Report, Jan. 1984 - May 1985
Ronald D. Holden, M. S. Haswell, and Estrella M. Forster Apr. 1986 23 p
(AD-A168832; USAFSAM-TR-85-102) Avail: NTIS HC A02/MF A01 CSCL 06/11

The passenger emergency oxygen system presently used onboard USAF transort aircraft is a phase dilution continuous flow system, and is similar to that on commercial aircraft. The mask is certified for emergency use up to 40,000 ft, when provided with an oxygen flow in accord with military specifications (MIL-D-19326F). We have evaluated the effect on arterial hemoglobin saturation (SaO2), of reductions in oxygen flow (below those specified) to the emergency mask; the volunteer subjects were exposed to simulated altitudes of 40, 35, 30 and 25 thousand feet. At reduced oxygen flows to the emergency pasenger mask, SaO2, was: 68 + or - 2.8%, 92 + or - 3.5%, 98 + or - 1.2%, and 97 + or - 1.0%; at 40, 35, 30, and 25 thousand ft respectively. Although halving the oxygen flow to the mask at 25,000 ft and 30,000 ft resulted in acceptable levels of SaO2, reductions in flow--at 35,000 ft and, especially, at 40,000 ft--were not as well tolerated. at 40,000 ft and, to a lesser extent, 35,000 ft, inboard leakage of ambient air around the face and through the anti-suffocation valve seriously compromised SaO2, Because passengers suddenly exposed to a 40,000-ft cabin altitude would undoubtedly suffer from anxiety and would tend to hyperventilate, and because of limitations inherent in continuous flow oxygen systems, we recommend that oxygen flow to the passenger mask (as specified in MIL-D-19326F) be reduced with great caution. ELEMENTARY DESIGN GUIDELINES FOR CO2 SCRUBBING WITH LiOH, TECHNICAL MANUAL
Daniel B. Post Dec. 1985 22 p
(AD-A168850; NCSC-TM-4110-2-85) Avail: NTIS HC A02/MF A01 CSCL 06/11

The removal of carbon dioxide from closed-cycle gaseous environments is essential to keeping people alive in an environment such as a submarine, a gas saturation habitat on the floor of the ocean, or a diver using closed-circuit UBAs. If the CO2 were not removed from these environments, its concentration would soon rise to toxic and lethal proportions. The removal of CO2 from these environments is commonly referred to as CO2 scrubbing and its purpose is to lower the CO2 concentrations to physiologically acceptable levels. This technical manual contains a brief outline of preliminary laboratory work leading up to NAVCOASTSYSCEN's investigation of LiOH for scrubbing CO2, theoretical considerations of the reaction of CO2 with LiOH, a description of the procedure and apparatus used to collect the LiOH-CO2 scrubber data, elementary design equations to predict canister efficiency, an example problem using results presented earlier in the manual, and practical considerations concerning the theoretical design of CO2 scrubbers. HUMAN FACTORS REVIEW PLAN
B. Paramore, ed. and L. R. Peterson, ed. Dec. 1985 261 p
Prepared in cooperation with Essex Corp., Alexandria, Va.
(Contract W-7405-eng-48)
(DE86-010561; UCRL-15688) Avail: NTIS HC A12/MF A01

Human Factors is concerned with the incorporation of human user considerations into a system in order to maximize human reliability and reduce errors. This review plan is intended to assist in the assessment of human factors conditions in existing DOE facilities. In addition to specifying assessment methodologies, the plan describes techniques for improving conditions which are found to not adequately support reliable human performance. The following topics are addressed: (1) selection of areas for review describes techniques for needs assessment to assist in selecting and prioritizing areas for review; (2) human factors engineering review is concerned with optimizing the interfaces between people and equipment and people and their work environment; (3) procedures review evaluates completeness and accuracy of procedures, as well as their usability and management; (4) organizational interface review is concerned with communication and coordination between all levels of an organization; and (5) training review evaluates training program criteria such as those involving: trainee selection, qualification of training staff, content and conduct of training, requalification training, and program management. CONTROL LOOPS WITH HUMAN OPERATORS IN SPACE OPERATIONS. PART 2: ROBOTICS OPERATIONS AND MANUAL CONTROL EXPERIMENT Final Report
C. M. vanSwieten and Sytze Kampen Paris ESA 5 Sep. 1985 140 p Prepared in cooperation with Royal Netherlands Aircraft Factories Fokker, Amsterdam
(Contract ESA-5594/83)
(NLR-TR-84116-L-Pt-2; Fok-TR-R-84-CHO-131-Pt-2; ESA-CR(P)-2190-Pt-2; ETN-86-97788-Pt-2) Avail: NTIS HC A07/MF A01

Servicing of satellites and assembly of space structures via robotic operations controlled from the ground by human operators are discussed. Five operational modes for the combined space and ground segment are defined: high level manipulation; manual augmented; preprogrammed; single joint (emergency mode); and direct drive (emergency mode). The main difficulty in the manual modes is the presence of time delay in the control loop and the way the operator can cope with it. Human operator performance was assessed for the direct drive mode, in which the system provides the least support. A simple model for this mode shows essentially nonlinear actuator behavior, which makes results from the literature not applicable. Therefore experiments were done. The experiments show that the operator can control the system, but a lot of overshooting responses are observed. Possibly, these overshoots can be eliminated by different instructions to the operator, who was instructed in the experiments to be as fast as possible. ESA

HARDWARE PROOFS USING LCF-LSM AND ELLA
W. J. Cullyer and C. H. Pygott Sep. 1985 47 p
(RSRE-Memo-3832; BR99176; ETN-86-98002) Avail: Issuing Activity

A method for writing the formal specification for a digital system, a high level design which satisfies this requirement, and a gate level realization, using the languages LCF-LSM and ELLA is described. It is shown how to carry out mathematical proofs to establish that the high level design respects the specification and the gate level design agrees precisely with the high level design. A chain of correspondence proof is created from specification to the ultimate realization, as required during the development of safety critical and security critical hardware. The methods were used to develop formal proofs for the VIPER 32 bit microprocessor. ESA

REUSUABLE SOFTWARE
L. N. Simcox and R. G. Ball 1985 60 p Sponsored by UK Civil Aviation Authority
(RSRE-Memo-3884; BR99098; ETN-86-98005) Avail: Issuing Activity

The issues involved in reusing software in a general context and in a research environment are examined. In the general context, the characteristics of reusable software are discussed and the views of the potential developer and those seeking to reuse existing software are considered. Reuseable software is assessed using the concept of the life cycle model, the economic aspects being based on the COCOMO parametric software cost model. Recommendations for procuring, developing, and researching software are made. ESA

ANALYZING THE SECURITY OF AN EXISTING COMPUTER SYSTEM
Matt Bishop May 1986 20 p
(Contract NAS2-11530)
(NASA-TM-89205; RIACS-TR-86.13; NAS 1.15:89205) Avail: NTIS HC A02/MF A01 CSCL 09B

Most work concerning secure computer systems has dealt with the design, verification, and implementation of provably secure computer systems, or has explored ways of making existing computer systems more secure. The problem of locating security holes in existing systems has received considerably less attention; methods generally rely on thought experiments as a critical step in the procedure. The difficulty is that such experiments require that a large amount of information be available in a format that makes correlating the details of various programs straightforward. This paper describes a method of providing such a basis for the thought experiment by writing a special manual for parts of the operating system, system programs, and library subroutines. Author

A VIEW OF KANERVA'S SPARSE DISTRIBUTED MEMORY
Peter J. Denning 4 Jun. 1986 16 p
(Contract NCC2-387)
(NASA-TM-89206; RIACS-TR-86.14; NAS 1.15:89206) Avail: NTIS HC A02/MF A01 CSCL 09B

Pentti Kanerva is working on a new class of computers, which are called pattern computers. Pattern computers may close the gap between capabilities of biological organisms to recognize and act on patterns (visual, auditory, tactile, or olfactory) and capabilities of modern computers. Combinations of numeric, symbolic, and pattern computers may one day be capable of sustaining robots. The overview of the requirements for a pattern computer, a summary of Kanerva's Sparse Distributed Memory (SDM), and examples of tasks this computer can be expected to perform well are given. Author

NOTES ON IMPLEMENTATION OF SPARSELY DISTRIBUTED MEMORY
James D. Keeler and Peter J. Denning 7 Aug. 1986 31 p
(Contract NCC2-387)
(NASA-TM-89254; RIACS-TR-86.15; NAS 1.15:89254) Avail: NTIS HC A03/MF A01 CSCL 09B

The Sparsely Distributed Memory (SDM) developed by Kanerva is an unconventional memory design with very interesting and desirable properties. The memory works in a manner that is closely related to modern theories of human memory. The SDM model is discussed in terms of its implementation in hardware. Two appendices discuss the unconventional approaches of the SDM: Appendix A treats a resistive circuit for fast, parallel address decoding; and Appendix B treats a systolic array for high throughput read and write operations. FIRST 3 YEARS OF OPERATION OF RIACS (RESEARCH INSTITUTE FOR ADVANCED COMPUTER SCIENCE) (1983-1985) Final Report
Peter J. Denning 15 Apr. 1986 8 p
(Contracts NCC2-387; NAS2-11530)
(NASA-CR-179699; RIACS-TR-86.11; NAS 1.26:179699) Avail: NTIS HC A02/MF A01 CSCL 09B

The focus of the Research Institute for Advanced Computer Science (RIACS) is to explore matches between advanced computing architectures and the processes of scientific research. An architecture evaluation of the MIT static dataflow machine, specification of a graphical language for expressing distributed computations, and specification of an expert system for aiding in grid generation for two-dimensional flow problems was initiated. Research projects for 1984 and 1985 are summarized. B.G.

Ada (TRADE NAME) COMPILER VALIDATION SUMMARY REPORT: DDC Ada COMPILER SYSTEM VERSION 3.1 FOR DEC VAX-11/785 Final Report
27 Dec. 1985 48 p
(Contract F33600-84-D-0280)
(AD-A166817; Rept-3285-2-15.2) Avail: NTIS HC A03/MF A01 CSCL 09/2

The purpose of this Validation Summary Report is to present the results and conclusions of performing standardized tests on the Dansk Datamatik Center (DDC) International Ada Compiler System. On-site testing was performed 23 to 27 Sep. 1985 at DDC International in Copenhagen, Denmark under the auspices of the Ada Validation Facility (AVF), according to the Ada Validation Office policies and procedures. The DDC Ada Compiler (Version 3.1) is hosted on the DEC VAX-11/785 operating under VMS 4.1. The suite of tests known as the Ada Compiler Validation Capability (ACVC), Version 1.6, was used. The ACVC suite of tests is used to validate conformance of the compiler to ANSI/MIL-STD-1815A (Ada). Not all tests in the ACVC test suite are applicable to a specific implementation. Also, known test errors in Version 1.6 are present in some tests; these tests were withdrawn. The purpose of the testing is to ensure that the compiler properly implements legal language constructs and that it identifies, rejects from processing, and labels illegal language constructs. The testing also identifies implentation-dependent behavior permitted by the standard. Author (GRA)

A LANGUAGE CAPABLE OF DESCRIBING COMPUTER ARCHITECTURE M.S. Thesis
Luis M. Machado Mar. 1986 110 p
(AD-A168553) Avail: NTIS HC A06/MF A01 CSCL 09/2

A fully automated and effective aid for computer system design is of great interest in increasing designers efficiency and reduce costs. Such a system, which requires unified and compatible tools for designing and analyzing computer architectures is still missing. Inserted in a research program by Professor Rigas to develop a complete automated design system, this thesis focuses on designing a formal language capable of describing the data flow of a computer. The language is capable of describing the interconnections between the major data flow components and the control of the flow of information. Using this language, several decompositions of the intended system can be specified and studied to find the optimal one. Author (GRA)

(ENST-86E003; ISSN-0751-1353; ETN-86-097636) Avail: NTIS HC A08/MF A01

A pixel calculator of multiprocessing type is specified. The computer system is defined by a multi-micro processing architecture with multiple pixel computers. A computing time of 1 to 10 min per image is accepted. Only computers of the CRAY-1 type can do the same within these time limits. A base microcomputer using the 32 bits NS-32032 microprocessor is described. A statistical analysis of the synthesis algorithm, a model implementation and a simulation of the system were carried out. It is shown that the proposed architecture is feasible. ESA

A GUIDE TO SID FOR USERS OF THE FLEX COMPUTER
S. J. Goodenough, P. D. Taylor, and G. D. Whitaker Nov. 1985 35 p
(RSRE-Memo-3768; BR99097; ETN-86-98000) Avail: Issuing Activity

A utility known as SID available on the Flex computer, which accepts a syntax with embedded actions, transforms it, and produces an Algol 68 RS module (suitable for any RS system) that contains an analyzer procedure is described. This analyzer checks whether an input conforms to the given syntax and, while doing so, initiates calls to the embedded actions which take the form of user-defined procedures that operate on stacks managed by the analyzer. By combining the analyzer module with other user-defined modules to form a complete program, syntax-directed utilities such as compilers, interpreters and translators may be constructed; SID was written using itself. SIX DEGREE OF FREEDOM SIMULATION SOFTWARE
K. S. Govindaraj, J. K. Sridhar, Padma Madhuranath, and B. S. Bhagawan Jul. 1986 37 p
(NAL-PD-SE-8614) Avail: NTIS HC A03/MF A01

The methodology for realizing a general six degree of freedom aircraft simulation on UNIVAC was documented by taking CESSNA 172 as an example. The software package was designed, developed, and validated by making the program trim the aircraft for a flight condition and then exciting the longitudinal and lateral modes. The results compare well with those reported in literature. The software structure is designed to simulate any known aircraft and enables modular addition of complex flight control systems, turbulence and landing gear dynamics. Author

SUPERCOMPUTER IMPLEMENTATION OF FINITE ELEMENT ALGORITHMS FOR HIGH SPEED COMPRESSIBLE FLOWS Progress Report, period ending 30 Jun. 1986
Earl A. Thornton and R. Ramakrishnan Jun. 1986 170 p (Grant NsG-1321)
(NASA-CR-177065; NAS 1.26:177065) Avail: NTIS HC A08/MF A01 CSCL 09B

Prediction of compressible flow phenomena using the finite element method is of recent origin and considerable interest. Two shock capturing finite element formulations for high speed compressible flows are described. A Taylor-Galerkin formulation uses a Taylor series expansion in time coupled with a Galerkin weighted residual statement. The Taylor-Galerkin algorithms use explicit artificial dissipation, and the performance of three dissipation models are compared. A Petrov-Galerkin algorithm has as its basis the concepts of streamline upwinding. Vectorization strategies are developed to implement the finite element formulations on the NASA Langley VPS-32. The vectorization scheme results in finite element programs that use vectors of length of the order of the number of nodes or elements. The use of the vectorization procedure speeds up processing rates by over two orders of magnitude. The Taylor-Galerkin and Petrov-Galerkin algorithms are evaluated for 2D inviscid flows on criteria such as solution accuracy, shock resolution, computational speed and storage requirements. The convergence rates for both algorithms are enhanced by local time-stepping schemes. Extension of the vectorization procedure for predicting 2D viscous and 3D inviscid flows are demonstrated. Conclusions are drawn regarding the applicability of the finite element procedures for realistic problems that require hundreds of thousands of nodes. Author

A LINEAR ALGORITHM FOR NON-LINEAR INTERPOLATION FOR COMPUTER AIDED DESIGNS Patent Application
Stuart H. Rubin, inventor (to Army) Filed 4 Apr. 1986 14 p
(AD-D012271; US-Patent-Appl-SN-848416) Avail: NTIS HC A02/MF A01 CSCL 09/2

This invention (patent application) relates to computer aided intelligence design and, more particularly, to an artificial intelligence program for use wherever very fast, interpolating learning algorithms are required. The linear algorithm of the present invention is a deterministic algorithm, which permits a user to store any MP2D run, and retrieve any of the run's statistics, inclusive of run time. When written in Fortran, it is such a learning base which permits a user to predict such statistics in 0 (N) time – i.e., linear time, along with a measurement of reliability, and for any or all of the maximum 961 runs permitted with the MP2D computer. Although, in a preferred embodiment of the invention, a cell counter interface to the MP2D input was employed of a 0 (N**2) process, in operation this would still be considered as a O (N) process with but little loss in performance if some 3,000 cells were exceeded – and, for the reason that any standby on a computer just to count cells does not establish any substantial problem as it takes many orders of magnitude more time to establish the existing MP2D input form (and, since the cell count is only performed once, never for the re-run modifications). As will be seen from the description that follows, the linear algorithm of the invention will be seen to operate utilizing three of the basic statistics from the MP2D input base – namely, (1) the number of cells; (2) the number of basic wires required; and (3) the estimated placement complexity. GRA

PARALLEL LOGIC PROGRAMMING AND ZMOB AND PARALLEL SYSTEMS SOFTWARE AND HARDWARE Final Report,

10 Oct. 1984 - 11 Jan. 1985
Jack Minker and Mark Weiser 30 Dec. 1985 12 p
(Grant AF-AFOSR-0303-82)
(AD-A168127; AFOSR-86-0220TR) Avail: NTIS HC A02/MF A01
CSCL 09/2

The initial version of PRISM uses a simulation of the ZMOB hardware, and has been fully tested and debugged. In addition, several enhancements were made to PRISM to permit experimental analyses to be made, and to incorporate additional features to take full advantage of parallelism in a problem solving environment. Tracing and a statistical gathering package were added to permit experimental analysis. An AND-parallelism capability was added to achieve a second version of the PRISM system, and other features were added to the system to more fully exploit parallelism. Preliminary application and evaluation studies were performed. In the area of systems hardware and software, the ZMOB processor is now fully functional and in everyday use with 128 processors. Work is continuing on an experimental upgrade of some of ZMOB's processors to 68000s. Basic system software for multiprocessing on ZMOB is becoming more robust and performance studies now pinpoint areas for improvement. Studies of parallel software debugging continue to prove the value of multiple program views, and in particular the dicing approach was verified in a controlled experiment. We have also constructed an interactive visual slicer. Studies of the automatic parallelization of programs continues. We can now slice/splice arbitrarily structured programs and have techniques that significantly reduce information overhead between the slices and the splicer. Author (GRA)

ESTIMATION AND CONTROL OF SPARSE DYNAMIC SYSTEMS
M. I. Hodzic and D. D. Siljak Jun. 1985 137 p
(Contract W-7405-eng-48)
(DE86-008135; UCRL-15768-Pt-2) Avail: NTIS HC A07/MF A01

In this report, a piece-by-piece scheme is proposed for a hierarchical LQG design of estimators and controllers for sparse large-scale systems. Advantage is taken of the special lower-block triangular structure of the system matrices resulting from the application of a graph-theoretic decomposition algorithm. We consider any number of subsystems in the hierarchy, and build the overall system estimator and controller as a union of locally optimal, subsystem estimators and controllers. Due to the hierarchical structure of the decomposed system, the overall closed-loop system is stable and suboptimal. DOE

SOME THEORETICAL PROPERTIES OF AN AUGMENTED LAGRANGIAN MERIT FUNCTION
P. E. Gill, W. Murray, M. A. Saunders, and M. H. Wright Apr. 1986 26 p
(Contract DE-AS03-76ER-72018)
(DE86-011330; SOL-86-6) Avail: NTIS HC A03/MF A01

Sequential quadratic programming (SQP) methods for nonlinearly constrained optimization typically use a merit function to enforce convergence from an arbitrary starting point. We define a smooth augmented Lagrangian merit function in which the Lagrange multiplier estimate is treated as a separate variable, and inequality constraints are handled by means of non-negative slack variables that included in the linesearch. Global convergence is proved of an SQP algorithm that uses the merit function. It is also proved that steps of unity are accepted in a neighborhood of the solution when this merit function is used in a suitable superlinearly convergent algorithm. Finally, a selection of numerical results is presented to illustrate the performance of the associated SQP method. DOE

SOFTWARE RELIABILITY MODELS ON TRIAL: SELECTION, IMPROVED ESTIMATION AND PRACTICAL RESULTS
G. Moek Sep. 1984 43 p Presented at ESA/ESTEC Software Engineering Seminar, Noordwijk, Netherlands, 11-14 Oct. 1983 Submitted for publication
(Contract NIVR-1909)
(NLR-MP-83059-U; B8665119; ETN-86-97663) Avail: NTIS HC A03/MF A01

Four software reliability models were selected for application to software failure data obtained in practice. Unknown model parameters were estimated by the maximum likelihood method. Criteria on the data that have to be satisfied in order that bounded estimates for the model parameters exist are presented. A simple averaging approach to combine the results of the individual models into one reliability estimate is proposed. Estimation results at failure times as well as between failure times were obtained for two software projects. The results, although based on the same number of data, are different for the two projects. The background of the poor performance for one of the projects is analyzed. ESA

CONCEPT OF AN APPLICATION-INDEPENDENT SYSTEM FOR COMPUTER AIDED ORDER PROCESSING
J. T. vandenHoven and H. F. Weesing 1 Feb. 1985 21 p In DUTCH; ENGLISH summary Presented at 1st National Conference on Computer Applications in Production and Engineering CAPE '85, Amsterdam, Netherlands 1-3 May 1985
(NLR-MP-85009-U; B8664047; ETN-86-97668) Avail: NTIS HC A02/MF A01

A system that enables the user to define the information sets required in the processing of an order for aircraft transport is described. Order processing can be divided into different steps. Decisions to be taken in each step need information which may differ in structure and content. The steps are not necessarily carried out at the same location. The required information sets can be used in an operational environment without any programming effort. The system is implemented in a network of seven minicomputers. A distributed data base management system takes care of the automatic distribution of changes in the data to all related data bases in the network. Special measures were taken to prevent unauthorized use of the data, and to guarantee that all displayed information is kept up to date if changes occur. ESA

A DERIVATION OF A DISTRIBUTED IMPLEMENTATION OF WARSHALL'S ALGORITHM
Jan L. A. vandeSnepscheut 1985 10 p
(CS-8505; ETN-86-97739) Avail: NTIS HC A02/MF A01

A distributed implementation of an algorithm for computing the transitive closure of a binary relation is derived. The boolean matrix is distributed over a network of cells. Execution of one phase of the algorithm is made possible by routing the matrix elements involved through the network. The proof obligation to avoid multiple messages on a connection leads to the timing of successive phases. The resulting program is very similar to, although an order of magnitude shorter than, the cellular automaton described in Scoy (1980) and very different from the systolic array described in Guidas et al (1979). ESA

NONDETERMINISM IN DATA TYPES, A MATHEMATICAL APPROACH
Wim H. Hesselink Sep. 1985 40 p
(CS-8506; ETN-86-97740) Avail: NTIS HC A03/MF A01

The theory of abstract data types is generalized to the case of nondeterministic operations (set-valued functions). Since the nondeterminism of operations may be coupled, signatures are extended so that operations can have results in cartesian products. Input-output behavior is used to characterize implementation of one model by another. It is described by accumulated arrows, which form a variation of the term algebra. Morphisms of nondeterministic models are introduced. Both innovations prove to be powerful tools in the analysis of input-output behavior. Extraction equivalence and observable equivalence of values are investigated. Quotient models for equivalence relations are constructed. The equivalence relations are compared with each other, with separation of values, and with the separation property that characterizes a terminal model. Examples show that the four concepts are different. In deterministic models the concepts coincide. ESA

TERM REWRITING SYSTEMS WITH PRIORITIES
J. C. M. Baeten, J. A. Bergstra, and J. W. Klop Feb. 1986 22 p Submitted for publication Sponsored by European Economic Commission
(FVI-86-03; V8664357; ETN-86-97747) Avail: NTIS HC A02/MF A01

A term rewriting system with priorities, called a priority rewrite system (PRS) is treated. The effect of such a priority assignment to rules, without imposing further restrictions such as choosing a certain reduction strategy in combination with rule priorities is studied. In the executability of the specification given by a PRS, this is a drawback: a PRS alone is not be an executable specification. It is problematic whether a pure PRS has a well-defined semantics at all (i.e., does determine an actual rewrite relation). A priority rewrite system is well-defined when there is a unique sound and complete rewrite set associated with it. It is shown that bounded PRS's are always well-defined. A stabilization lemma, which gives a different way of showing well-definedness, and a confluency result for left-linear PRS's are proved. ESA

DENOTATIONAL SEMANTICS OF NETS WITH NONDETERMINISM
J. N. Kok Jan. 1986 15 p Submitted for publication
(Grant ZWO-125-20-04)
(CWI-CS-R8605; B8664604; ETN-86-97755) Avail: NTIS HC A02/MF A01

A topological framework for streams of traces, in which Kahn's method generalizes to nets with bounded nondeterminism is defined. Fixpoints of multivalued functions are considered. A standard fixed point theorem can be used to model feedback loops, as can iteration. A general syntax of nets is used to analyze them in the stream framework. It is shown how to avoid the Brock-Ackerman and Keller anomalies. The fair merge, which is a continuous function in the framework, and delay along lines are

modeled. A lemma which says that the order in which nodes are connected does not matter is proved. For nodes with unbounded nondeterminism, fixpoints can be employed without losing the iteration theorem in the topological framework. ESA

FAILURE SEMANTICS WITH FAIR ABSTRACTION
J. A. Bergstra, J. W. Klop, and E.-R. Olderog Jan. 1986 72 p Submitted for publication Sponsored by European Economic Commission
(CWI-CS-R8609; B8664608; ETN-86-97759) Avail: NTIS HC A04/MF A01

Countably branching processes subject to alternative composition, sequential composition, and abstraction are considered. Axiom systems are given for such processes which contain deadlock, empty process, silent move, and delay. Axiomatizing divergence via delay in the context of bisimulation semantics and failure semantics is emphasized. A process model which is intermediate between bisimulation semantics with fair abstraction and failure semantics with catastrophic divergence is found. ESA

ANALYSIS OF A DATA COMPRESSION FOR SPACECRAFT OBSERVATION
J. C. Berges and M. Orlando 4 Apr. 1984 24 p In FRENCH; ENGLISH summary
(CNES-CT/DTI/MS/MN/088; ETN-86-97646) Avail: NTIS HC A02/MF A01

A method to reduce the data to be processed to determine a satellite orbit is presented. The goal is to be able to use a minicomputer with a sequential estimating algorithm (Kalman filters). Several cases of data weighting and consecutive data spacing are considered. Simplified equations are discussed. A general description of the compression algorithm is presented. It is shown that the procedure efficiency increases when the data presents either uniform weighting functions or equal spacing. ESA

A LINEAR TIME IMPLEMENTATION OF FRONTAL INCREASE MINIMIZATION (FIM) STRATEGY ALGORITHMS FOR THE PROFILE REDUCTION OF SPARSE MATRICES
L. Marro 1986 49 p
(SNIAS-861-440-107; ETN-86-97615) Avail: NTIS HC A03/MF A01

An improved implementation of Frontal Increase Minimization strategy is described. The aim is to reduce computer time utilization, which is a major drawback of this type of algorithm. An insight into the numbering process and best appropriate data structures is found. It is shown that the time complexity of this implementation is linear with respect to the number of nonzero elements for all algorithms of this type. Numerical results highlight the improvement and the efficiency of the method for small problems. ESA

(ENST-86E002; ISSN-0751-1353; ETN-86-97869) Avail: NTIS HC A12/MF A01

Fast transversal algorithms are studied, presenting their fundamental equations and pointing out the importance of the pseudo-likelihood parameter. The properties of the normalized algorithm are detailed. A method to stabilize the algorithm against long-term divergence is presented. For voice signal applications, a recursive method to compute the autoregressive model by a fast recursive algorithm is outlined. The implementation of the multi-impulse classical method is studied by a deconvolution method. ESA

(AD-A168678; EE-TR-861) Avail: NTIS HC A08/MF A01 CSCL 09/2

This report proposes to use generalized stochastic Petri nets (GSPN) in reliability, maintainability, and availability studies. The novelty of this modeling approach lies on the ground of the following distinctive reasons: (1) The GSPN offers a precise description of system activities and conditions while involves less complexity, comparing to other modeling techniques. Specifically, it is an inherently effective bookkeeping for conditions and activities; (2) it provides a clairvoyant insight of the key parameters that effect RMA analysis. Causes and results of events can be easily tracked by executing the GSPN; and (3) it takes the advantage of the existence of concurrency and timing of events, thus describes accurately the sequence of events. SET OF FORTRAN ROUTINES FOR MULTITASK TIMING ANALYSIS ON SHARED MEMORY MACHINES
G. R. Montry 31 Mar. 1986 43 p
(Contract DE-AC04-76DP-00789)
(DE86-010310; SAND-86-0037) Avail: NTIS HC A03/MF A01

A set of FORTRAN-based timing routines has been written for shared memory parallel processors. These routines are designed to measure the performance of multitasking codes on machines with different hardware configurations. Complete run-time histories of all executing tasks are provided in a postmortem summary. The package is able to provide both processing time and elapsed time statistics for each task subject to functional hardware constraints. Source code for the ELXSI 6400 version of the package is included in an Appendix. DOE

(Contract W-31-109-eng-38)
(DE86-005552; CONF-860678-1) Avail: NTIS HC A02/MF A01

This paper describes a part of an ongoing research project

whose goal is to develop a formal design verification system based on the use of ITP, an LMA (Logic Machine Architecture) based Interactive Theorem Prover developed at Argonne National Laboratory. Specifically, a Petri net representation for systems is described together with the ITP implementation of a rule-based system for the manipulation of system descriptions. To illustrate the representation and the capabilities of the system under development, the Draper Laboratories Fault-Tolerant Processor is used as an example. Results concerning the formal verification of the fault-tolerant properties of this system are described. DOE

APPROACH TO THE NAVY'S SHIPBOARD NONTACTICAL ADP PROGRAM (SNAP) DATA COMMUNICATIONS NEEDS
C. E. Hammons and C. R. Stewart May 1986 25 p
(Contract DE-AC05-84OR-21400)
(DE86-011340; ORNL-6269) Avail: NTIS HC A02/MF A01

The ARPANET/MILNET Defense Data Network (DDN) communications link with the Shipboard Nontactical ADP Program (SNAP) computers is a research project being conducted by ORNL in support of the Navy's nontactical computing efforts. The purpose of the project is to investigate the feasibility of application of state-of-the-art (SOA) data communications techniques to the SNAP systems as deployed on board Navy ships. (Two systems have been approved - the Honeywell DPS6 family of processors known as SNAP-I and the Harris 300 series systems known as SNAP-II.) The installation of high-speed electronic computer networking capabilities has traditionally had a synergistic effect on the processing of data because operations that were previously not feasible due to data transfer logistics have become feasible. The most desirable situation would be one in which the computer networking speed and flexibility rivaled that of local computer operations. While networking of this caliber has not yet been achieved in a practical way, the advances that have been made more than offset the effort required to bring this desirable capability to SNAP. DOE

ROSES: AN EFFICIENT SCHEDULER FOR PRECEDENCE - CONSTRAINED TASKS ON CONCURRENT MULTIPROCESSORS
J. Barhen and E. C. Halbert 1985 26 p Presented at the Conference on Hypercube Microprocessors, Knoxville, Tenn., 1 Aug. 1985
(Contract DE-AC05-84OR-21400)
(DE86-011083; CONF-8508173-2) Avail: NTIS HC A03/MF A01

One of the first steps in attempting to solve a problem on a concurrent computation ensemble is its decomposition into a set of tasks (or processes). Problem decomposition often induces precedence constraints among the tasks, which the distributed nature of the computational system translates into message passing requirements. The efficient scheduling of sets of tasks among which complex interrelationships (such as precedence constraints) may exist is essential for achieving optimal performance from the new generation of concurrent supercomputers. This paper focuses on the ROSES system, which is being developed to schedule precedence-constrained tasks for computation by an ensemble of concurrent processors. This endeavor is particularly difficult when the number of tasks required exceeds the number of available processors, or when the interconnection topology of the task graph differs from the interconnection topology of the computation ensemble. The ROSES approach seeks near-optimal solutions by combining heuristic techniques to minimize scheduling time as a function of the number and relationship of tasks, with sophisticated data structures to most efficiently utilize available computer memory, and algorithms to control search and eliminate dead ends. The methodology is applied to the solution of the inverse dynamics equations of a robot manipulator and benchmark results are included. DOE

EXPERIMENTS WITH PARALLEL ALGORITHMS FOR COMBINATORIAL PROBLEMS
G. A. P. Kindervater and H. W. J. M. Trienekens Nov. 1985 22 p Submitted for publication
(CWI-OS-R8512; B8664681; ETN-86-97761) Avail: NTIS HC A02/MF A01

Results concerning the solution of knapsack, shortest paths, and change-making problems by branch and bound, dynamic programming, and divide and conquer algorithms on the ICL-DAP SIMD computer, Manchester dataflow machine, and the CDC-CYBER 205, a pipeline computer, are presented. Results show that the ICL-DAP and CDC-CYBER-205 are very well suited for performing regular and relatively simple computations in a fast way, due to their SIMD-type parallelism. They are inefficient if the behavior of the algorithm is irregular or cannot be predicted in advance. The problems solvable on the Manchester dataflow machine are still very small. However, the computational results indicate that this machine captures all sorts of parallelism. ESA

BASIC RESEARCH ON ADAPTIVE MODEL ALGORITHMIC CONTROL Final Report, Feb. 1982 - Jun. 1985
Wallace E. Larimore and Shahjahan Mahmood Dec. 1985 206 p
(Contract F33615-82-C-3600)
(AD-A168016; AFWAL-TR-85-3113) Avail: NTIS HC A10/MF A01 CSCL 12/1

The Model Algorithmic Control (MAC) method is investigated in terms of robustness and adaption to unknown or changing plants. The adaption method used is Canonical Variate Analysis (CVA) system identification. CVA is shown to provide system identification accuracy comparable to maximum likelihood and to provide an optimal selection of instrumental variables. Computationally CVA is a noniterative procedure that gives a numerically and statistically well conditioned solution to the system identification problem. A one-step-ahead MAC is explained using the classical root locus techniques. Conditions are developed for robustness of the controller to perturbations in the plant due to error in plant identification. Selection of an optimal sampling rate is based upon the control-ability and observability matrices. Simulations illustrating the above theory are presented using a Multi-Input Multi-Output (MIMO) missile aerodynamic model. GRA

This paper describes sensor fusion in the context of an autonomous mobile robot, the NAVLAB system, based on a commercial truck with computer controls and studded with cameras and other sensors. This paper describes the software architecture of the NAVLAB, consisting of two parts; a whiteboard system called CODGER that is similar to a blackboard but supports parallelism in the knowledge source modules, and an organized collection of perceptual and navigational modules tied together by the CODGER database/communication system. The NAVLAB vehicle is a commercial truck modified by adding sensors, electronic controls, and on-board computers and power generators. It will be completely self-contained, requiring neither a cable tethering it to an off-board mainframe computer, nor an electronic telecommunications tether. Telecommunications gear is present for data recording and tele-operation, but is not required for computer control of the vehicle. The control systems of the vehicle include computer control of a hydraulic drive/braking system computer control of the steering wheel, and processors to monitor and control engine functions. A global system clock and a processor maintain a primitive vehicle position estimate based on dead reckoning. An inertial navigation system is also on-board. GRA

The use of focusing in the PUNDIT text processing system is described. Focusing provides a powerful tool for pronoun resolution. However, its range of application is actually much more general, in that it can be used for several problems in reference resolution. Specifically, in the PUNDIT system, focusing is used for one-anaphora, elided noun phrases, and certain types of definite and indefinite noun phrases, in addition to its use for pronouns. Another important feature in the PUNDIT reference resolution system is that the focusing algorithm is based on syntactic constituents, rather than on thematic roles. This feature is based on considerations arising from the extension of focusing to cover one-anaphora. These considerations make syntactic focusing a more accurate predictor of the interpretation of one-anaphora noun phrases without decreasing the accuracy for definite pronouns. GRA

Eigenstructure control concepts work well if the feedback designer possesses a deep understanding of the physical system to be controlled. With other systems the designer may have some difficulty in selecting appropriate desired eigenvectors. Physical system characteristics may place constraints on the achievable eigenvectors which are not obvious to the control system designer; these constraints can complicate the design process. However, achievable eigenvectors must lie within the column space of an easily computed matrix. It is found that examining the singular value decomposition of this matrix helps one understand a physical system and appreciate what can be accomplished with feedback control. An example problem illustrates the idea and shows that the decomposition may broaden the range of control systems which are easily designed with the eigenstructure approach. DOE

DEVELOPMENT OF A SELF-TUNING ALGORITHM FOR A DISCRETE ADAPTIVE RPM CONTROL [ONTWIKKELING VAN EEN SELF-TUNING ALGORITHME VOOR EEN DISCRETE ADAPTIEVE TOERENTAL-REGELING]
A. P. A. M. Sprangers May 1984 98 p In DUTCH; ENGLISH summary
(ETN-86-97534) Avail: NTIS HC A05/MF A01

A self-tuning algorithm for adaptive motor speed control was developed. The process under control, a thyristor controlled direct current motor with variable shaft load, is described. An encoder interface circuit to transpose the encoder pulses into a (9 bits) parallel speed sample, a clock circuit which sends at the sample moments an interrupt pulse to the processor, and a circuit to display the number of revolutions (rpm) of the motorshaft, were designed and tested. The algorithm was written in real time Micropower/Pascal and implemented on a Falcon single board SBC/11/21 computer. Tests were done with various setpoints and changing motor shaft loads. Results show that the algorithm is easily implemented and good adaptive control can be realized. ESA

ON THE NECESSITY OF IDENTIFYING THE TRUE PARAMETER IN ADAPTIVE LINEAR QUADRATIC (LQ) CONTROL
J. W. Polderman Jan. 1986 8 p Submitted for publication
(CWI-OS-R8602; B8664685; ETN-86-97764) Avail: NTIS HC A02/MF A01

The fact that in linear quadratic control identification takes place in closed loop which makes it hard or even impossible to identify the real system is considered. The real system is assumed

to be deterministic, linear, time invariant, of known dimensions. The state is assumed to be observed. The control objective is the minimization of a quadratic cost functional. It is shown that among those parameters which correspond to the true optimal control law, the true one is the only one that can be identified in closed loop. Therefore dropping the requirement of identifying the true system does not simplify the control problem. ESA

PARTIAL DISTURBANCE DECOUPLING WITH CONSTANT STATE FEEDBACK: APPLICATION TO THE REGULATOR PROBLEM
Reinhold Steinhauser Jan. 1986 40 p In GERMAN; ENGLISH summary
(DFVLR-FB-86-09; ISSN-0171-1342; ETN-86-97819) Avail: NTIS HC A03/MF A01; DFVLR Cologne, West Germany DM 14.50

The geometrical approach to control theory is demonstrated for the simple disturbance decoupling problem. From the known conditions for the solution of the disturbance decoupling problem (without and with internal stability) necessary and sufficient conditions for the solution of problems of partial disturbance decoupling are deduced. It is shown that the regulator problem can be simplified if partial disturbance decoupling is possible. ESA

FIELD-CONSISTENCY: TOWARD A SCIENCE OF CONSTRAINED MULTI-STRAIN-FIELD FINITE ELEMENT FORMULATIONS
G. Prathap Feb. 1986 62 p
(NAL-TM-ST-8602) Avail: NTIS HC A04/MF A01

The finite element method has progressed rapidly from simple engineering principles through rigorous mathematical formalizations to become a body of engineering knowledge incorporating well defined conceptual schemes and operational procedures. However, it still lacks the self-criticality needed for a falsifiable scientific basis. In this paper, we describe an additional conceptual scheme called field-consistency, and demonstrate new methodology and terminology that helps to clear up an area of the finite element method that had remained difficult to understand for some time, and which enhances the predictive capabilities of error analyses of the method. This paper is also in a limited sense, an essay on how the processes of the method of Science are seen to work in this area of engineering know-how. Author

ESTIMATION AND IMPROVEMENT OF ERROR IN DIFFERENCE SCHEMES WITH ALGEBRAIC TRANSFORMATION
M. D. Deshpande and T. K. Sen Gupta May 1986 23 p
(NAL-TM-FM-8601) Avail: NTIS HC A02/MF A01

From an analysis of the truncation errors of finite difference schemes when a coordinate transformation is made conditions are derived to retain the order of accuracy. If the computational domain is segmented into subdomains, problems of accuracy may specially arise at the subdomain boundaries where the derivatives of transformation function are discontinuous. The conditions derived are on the continuity of higher order derivatives of the transformation function. Correction factors are developed to retain the second order accuracy and/or to minimise the truncation errors of certain central difference schemes when such conditions on transformation function are not met. Elimination of the need to satisfy these conditions greatly improves the flexibility on the choice of transformation functions. The effectiveness of the corrections is evaluated through a test case of numerical solution of Laplace equation on a square domain. Author

SOLUTION OF NON-LINEAR FREDHOLME INTEGRAL EQUATIONS BY A VARIATIONAL APPROACH
G. A. Evans, R. C. Forbes, and J. Hyslop Dec. 1985 15 p
(LUT-MR-186) Avail: NTIS HC A02/MF A01

A method for the numerical solution of nonlinear Fredholme integral equations based on a suitable variational principle is considered. The relation between the suggested method and existing methods is investigated in terms of the variational principle, and a measure of the convergence rate is obtained. All inner products were computed by Clenshaw Curtis quadrature except in the case of singular integrals where the transformation methods of Evans, Forbes, and Hyslop are used. The method was tested on a number of examples including a particularly difficult one due to Cohen. The method demonstrates robustness without loss of speed compared with previous techniques. Author

IMPLICIT MULTIGRID ALGORITHMS FOR THE THREE-DIMENSIONAL FLUX SPLIT EULER EQUATIONS Ph.D. Thesis
William Kyle Anderson Aug. 1986 98 p
(NASA-CR-179742; NAS 1.26:179742) Avail: NTIS HC A05/MF A01 CSCL 12A

The full approximation scheme multigrid method is applied to several implicit flux-split algorithms for solving the three-dimensional Euler equations in a body fitted coordinate system. Each uses a variation of approximate factorization and is implemented in a finite volume formulation. The algorithms are all vectorizable with little or no scalar computations required. The flux vectors are split into upwind components using both the splittings of Steger-Warming and Van Leer. Results comparing pressure distributions with experimental data using both splitting types are shown. The stability and smoothing rate of each of the schemes are examined using a Fourier analysis of the complete system of equations. Results are presented for three-dimensional subsonic, transonic, and supersonic flows which demonstrate substantially improved convergence rates with the multigrid algorithm. The influence of using both a V-cycle and a W-cycle on the convergence is examined. Using the multigrid method on both subsonic and transonic wing calculations, the final lift coefficient is obtained to within 0.1 percent of its final value in a few as 15 cycles for a mesh with over 210,000 points. A spectral radius of 0.89 is achieved for both subsonic and transonic flow over the ONERA M6 wing while a spectral radius of 0.83 is obtained for supersonic flow

over an analytically defined forebody. Results compared with experiment for all cases show good agreement. Author

The linear span of integer translates of a fixed compactly supported function phi provides a particularly simple model of an approximating family of the finite element type. The approximating power of such a span (or, more precisely, of its scaled versions) has been known for some time to be characterizable in terms of the space pi phi of polynomials it contains. Recent work on box splines has provided concrete examples of interest in a multivariate settings and so rekindled interest in the space pi phi. The report derives and extends specific information about pi phi contained in recent work by Dahmen and Micchelli, and by Chui, Diamond, Jetter, Lai and Ward, but does so without reference to specific properties (such as piecewise polynomiality, or factorizablity of the Fourier transform) of phi. Understanding, in the simplest possible and most efficient terms, of the approximation power of such spaces may provide the necessary insight into approximation by smooth piecewise polynomials on regular, and perhaps even not so regular, partitions. IMPROVED ALGORITHMS FOR ESTIMATION, PREDICTION AND CONTROL Final Report
J. G. Caldwell 26 Jan. 1986 152 p
(Contract N00014-85-C-0814)
(AD-A167601) Avail: NTIS HC A08/MF A01 CSCL 09/2

This report describes the results of a study to examine the feasibility of developing fast algorithms for estimation, prediction and control. The objective of the study was to assess the likelihood of finding procedures which could be faster, in terms of computer running time, than the classifcal least-squares method of parameter estimation, used extensively to develop models of stochastic phenomena. While the least-squares method has proved its worth in over a century of use, it has some serious drawbacks, stemming from the fact that it requires the inversion of matrices. For large problems such as the problem of tracking many missiles or processing data from multiple intelligence sensors in real-time, the computational burden of the least-squares method can overwhelm even today's powerful computing systems. Previous attempts to solve this problem have centered on the development of faster computers (e.g., array processors), the improvement of algorithm for matrix inversion, or the simplification of the model to produce a matrix that is easier to invert. In general, these approaches have not been successful in solving the problem. Modern sensor exploitation systems, for example, still cannot operate in real-time or even near real-time. GRA

ESTIMATING WEIGHTS IN HETEROSCEDASTIC REGRESSION MODELS BY APPLYING LEAST SQUARES TO SQUARED OR ABSOLUTE RESIDUALS Technical Report, Aug. 1985 - Aug. 1986
Raymond J. Carroll, Marie Davidian, and David Ruppert Oct. 1985 40 p
(Contract F49620-82-C-0009)
(AD-A168487; MIMEO-SER-1584; AFOSR-86-0318TR) Avail: NTIS HC A03/MF A01 CSCL 12/1

This document considers a nonlinear regression model for which the variances depend on a parametric function of known variables. The authors focus on estimating the variance function, after what it is typical to estimate the mean function by weighted least squares. Most often, squared residuals from an unweighted least squares fit are compared to their expectations and used to estimate the variance function. If properly weighted such methods are asymptotically equivalent to normal-theory maximum likelihood. Instead, one could use the deviations of the absolute residuals from their expectations. Constructed is such an estimator of the variance function based on absolute residuals whose asymptotic efficiency relative to maximum likelihood is precisely the same for symmetric errors as the asymptotic efficiency in the one-sample problem of the mean absolute deviation relative to the sample variance. The estimators are computable using nonlinear least squares software. The results hold with minimal distributional assumptions. Author (GRA)

PROBABILISTIC ANALYSIS OF ALGORITHMS FOR NP-COMPLETE PROBLEMS Final Annual Scientific Report, 30 Sep. 1984 - 29 Sep. 1985
John Franco 12 Dec. 1985 8 p
(Grant AF-AFOSR-0372-84)
(AD-A168617; AFOSR-86-0310TR) Avail: NTIS HC A02/MF A01 CSCL 12/1

The goal of this research is to develop and analyze algorithms which can, in some practical sense, solve certain NP-complete problems efficiently. By solve we mean determine whether a solution to a given instance of an NP-complete problem exists where, for the problems we have considered, a solution is an assignment of values to a list of variables which cause some predicate to be true. We do not consider actually finding solutions when they exist since doing so adds unnecessary complexity to the statement of the algorithms: the algorithms we consider can all be modified to find solutions without significantly altering performance. NP-complete problems are found in Crytology, Operations Research, Artificial Intelligence, Computer System Design and many other areas. There is no known algorithm for an NP-complete problem which runs in time bounded by a polynomial on the length of the input (polynomial time) in the worst case nor is one likely to be found. We seek algorithms which solve nearly every instance of specific NP-complete problems in polynomial time. GRA

AN ERROR DETECTION AND SMOOTHING ALGORITHM FOR INFRARED DATA
R. A. Steinberg and M. J. McHugh Apr. 1986 47 p
(Contract N00024-85-C-5301)
(AD-A168628; JHU/APL/TG-1355) Avail: NTIS HC A03/MF A01 CSCL 17/5

A new algorithm for error detection and smoothing, EDS, has been developed for infrared image data. Numerical validation indicates that EDS detects more than 99% of all significant errors. Operating in the time domain, EDS exploits smoothness criteria calculated from laboratory point source measurements, and isolates error bursts via a region-growing approach. EDS is applicable to data from any optical scanner whose output is sampled digitally multiple times per dwell. Author (GRA)

ALGORITHMS FOR BAYESIAN VARIABLE SELECTION IN REGRESSION
T. J. Mitchell and J. J. Beauchamp 1986 5 p Presented at the 18th Symposium on the Interface of Computer Science and Statistics, Fort Collins, Colo., 20 Mar. 1986
(Contract DE-AC05-84OR-21400)
(DE86-008884; CONF-8603103-1) Avail: NTIS HC A02/MF A01

We have developed a Bayesian approach to the problem of deciding which subset of a proposed set of k predictor variables to include in a linear regression model that is to be used for prediction. The direct implementation of this method requires the computation of the usual regression statistics for each of the 2/sup k/ possible submodels. We present here a branch-and-bound method which yields the same results much more quickly by eliminating from consideration those submodels which are destined to have negligible posterior probability. Implementation of the algorithm on the Cray X-MP supercomputer is discussed. DOE

MODELING MULTIVARIATE COVARIANCE NONSTATIONARY TIME SERIES AND THEIR DEPENDENCY STRUCTURE
W. Gersch Aug. 1985 38 p
(Contract W-7405-eng-48)
(DE86-010052; UCID-20625) Avail: NTIS HC A03/MF A01

The parametric modeling of covariance nonstationary time series and the computation of their changing interdependency structure from the fitted model are treated. The nonstationary time series are modeled by a multivariate time varying autoregressive (AR) model. The time evolution of the AR parameters is expressed as linear combinations of discrete Legendre orthogonal polynomial functions of time. The model is fitted by a Householder transformation-AIC order determination, regression subset selection method. The computation of the instantaneous dependence, feedback and causality structure of the time series from the fitted model, is discussed. An example of the modeling and determination of instantaneous causality in a human implanted electrode seizure event EEG is shown. DOE

ON GELFAND TRIPLES ORIGINATING FROM ALGEBRAS OF UNBOUNDED OPERATORS
S. J. L. vanEijndhoven and P. Kruszynski May 1984 93 p
(EUT-84-WSK-02; ISSN-0167-9708; ETN-86-97544) Avail: NTIS HC A05/MF A01

The locally convex topological vector space which contains a Hilbert space X which contains also a dense subspace S (Gelfand's triple) is considered. The existence of a Gelfand triple for a family of bounded Borel functions and a positive adjoint operator A in X is discussed. The fact that the family of bounded Borel functions and the analytic domain of the operator A are related with the locally connex topological GB*-algebras of unbounded operators, given the commutant and its bicommutant of closable operators, is proved. The inductive limit topology for S is given in terms of explicit seminorms. ESA

READIES AND FAILURES IN THE ALGEBRA OF COMMUNICATING PROCESSES
J. A. Bergstra, J. W. Klop, and E.-R. Olderog Sep. 1985 41 p Submitted for publication Sponsored by European Economic Commission
(CWI-CS-R8523; B8664599; ETN-86-97750) Avail: NTIS HC A03/MF A01

Readiness and failure semantics are studied in the setting of algebra of communicating processes (ACP). A model of process graphs modulo readiness and failure equivalence is constructed, and an equational axiom system which is complete for this graph model is presented. An explicit representation of the graph model is given: the failure model, whose elements are failure sets. A characterization of failure equivalence is obtained as the maximal congruence which is consistent with trace semantics. By restricting the communication format in ACP, this result is shown to carry over to Milner's CCS and Hoare's CSP. It is shown that failure semantics is incompatible with Koomen's fair abstraction rule, a proof principle based on the notion of bisimulation. ESA

FIXED POINT EQUATIONS WITH PARAMETERS IN THE PROJECTIVE MODEL
E. Kranakis Jan. 1986 27 p Submitted for publication Sponsored by European Economic Commission
(CWI-CS-R8606; B8664605; ETN-86-97756) Avail: NTIS HC A03/MF A01

Existence and uniqueness theorems for solving infinite and finite systems of fixed point equations with parameters in the projective model are given. The three main methods discussed depend on the topological properties of the projective model and include: compactness argument, density argument, and Banach's contraction principle. As a converse to the uniqueness theorem it is shown that in certain signatures guarded equations are the only ones that have unique fixed points. ESA

RECURSIVE PARAMETER ESTIMATION FOR COUNTING PROCESSES WITH LINEAR INTENSITY

P. J. C. Spreij Nov. 1985 26 p Submitted for publication

(CWI-OS-R8513; B8664683; ETN-86-97762) Avail: NTIS HC A03/MF A01

Recursively estimating a d-dimensional parameter that occurs in the intensity process of a counting process is considered. Two algorithms that generate recursive estimates are presented and their asymptotic behavior is analyzed. Almost sure convergence and the asymptotic distribution of the estimators are treated. The first is attacked by a stochastic Lyapunov technique; for the second central limit theorems for Martingales is used. Strong consistency and asymptotic normality of the estimators generated by the algorithms are proved. ESA

A NOTE ON ADAPTING FOR HETEROSCEDASTICITY WHEN THE VARIANCES DEPEND ON THE MEAN
Raymond J. Carroll, David Ruppert, and Leonard A. Stefanski Oct. 1985 20 p
(Contract F49620-82-C-0009)
(AD-A168481; MMS-1583; AFOSR-86-0316TR) Avail: NTIS HC A02/MF A01 CSCL 12/1

This document considers the normal-theory regression model when the error disturbances are heteroscedastic, i.e., have non-constant variances. The author distinguishes two cases: (1) predictor heteroscedasticity, where the variances depend on a function g of known quantities, and (2) mean heteroscedasticity, where the variances depend on a function g of the means. For the case where g is unknown, Carroll showed by construction that, in certain cases, it is possible to estimate the regression parameter asymptotically as well as if g were known and weighted least squares applied. This document reconsiders this problem from the information bound theory of Begun, Hall, Huang & Wellner. For mean heteroscedasticity, a rather surprising result is obtained. If g were known in this case, Jobson & Fuller showed that the maximum likelihood estimate is asymptotically more efficient than weighted least squares with known weights. When g is unknown the full Jobson & Fuller improvements are not possible; however, we show that one can, in theory, attain asymptotically better performance than weighted least squares with known weights. THOROUGH APPROACH TO MEASUREMENT UNCERTAINTY ANALYSIS APPLIED TO IMMERSED HEAT EXCHANGER TESTING
R. B. Farrington and C. V. Wells Apr. 1986 7 p Presented at the ASME Solar Energy Division Conference, Anaheim, Calif., 14 Apr. 1986
(Contract DE-AC02-83CH-10093)
(DE86-004445; SERI/TP-253-2862; CONF-860406-7) Avail: NTIS HC A02/MF A01

This paper discusses the value of an uncertainty analysis, discusses how to determine measurement uncertainty, and then details the sources of error in instrument calibration, data acquisition, and data reduction for a particular experiment. Methods are discussed to determine both the systematic (or bias) error in an experiment as well as to determine the random (or precision) error in the experiment. The detailed analysis is applied to two sets of conditions in measuring the effectiveness of an immersed coil heat exchanger. It shows the value of such analysis as well as an approach to reduce overall measurement uncertainty and to improve the experiment. This paper outlines how to perform an uncertainty analysis and then provides a detailed example of how to apply the methods discussed in the paper. The authors hope this paper will encourage researchers and others to become more concerned with their measurement processes and to report measurement uncertainty with all of their test results. DOE

Some simple exercises are carried out which clarify the physics of a 5-dimensional world in which one dimension is curled up to a radius R. A technical problem necessary to generalize this discussion to d dimensions is considered - the determination of the sizes of spinors in higher dimensions. The origin of eigenmodes of a higher-dimensional field with exactly zero energy is explored, using as examples conventional models of field theory. General relativity is then reviewed, formulated as a gauge theory. The conditions for the appearance of zero modes in space-time geometries with compactified dimensions are discussed. The physics of these zero modes are illustrated in a series of examples ranging from the original construction of Kaluza and Klein to the superstring theory. DOE

APPROXIMATIONS USEFUL FOR THE PREDICTION OF ELECTROSTATIC DISCHARGES FOR SIMPLE ELECTRODE GEOMETRIES
Larry Edmonds 15 Aug. 1986 88 p
(Contract NAS7-918)
(NASA-CR-179748; JPL-Pub-86-36; NAS 1.26:179748) Avail: NTIS HC A05/MF A01 CSCL 20C

The report provides approximations for estimating the capacitance and the ratio of electric field strength to potential for a certain class of electrode geometries. The geometry consists of an electrode near a grounded plane, with the electrode being a surface of revolution about the perpendicular to the plane. Some examples which show the accuracy of the capacitance estimate and the accuracy of the estimate of electric field over potential can be found in the appendix. When it is possible to estimate the potential of the electrode, knowing the ratio of electric field to potential will help to determine if an electrostatic discharge is likely to occur. Knowing the capacitance will help to determine the strength of the discharge (the energy released by it) if it does occur. A brief discussion of discharge mechanisms is given. The medium between the electrode and the grounded plane may be a neutral gas, a vacuum, or an unchanged homogeneous isotropic dielectric. Author

BULK ACOUSTIC RESONATOR TRACKING FILTER Patent
Michael S. Buchalter, Francis W. Hopwood, and James T. Haynes, inventors (to Air Force) Issued 25 Feb. 1986 8 p Supersedes AD-D011159
(AD-D012280; US-Patent-4,573,027; US-Patent-Appl-SN-615502; US-Patent-Class-333-I7R) Avail: US Patent and Trademark Office CSCL 17/9

This invention is directed to a narrow band filter for eliminating out-of-band noise in the oscillator signal of a doppler radar system. It provides a very high Q filter derived from a Bulk Acoustic Resonator's (BAR) high Q, L-Band response and uses thermal feedback to lock the BAR's response band onto the input frequency. The BAR is a very narrow band filter with a Q near 40,000 and a comblike frequency response having passbands occurring every 5 MHz, approximately. The comblike response of the BAR shifts down 60 KHz for every 1 deg C. rise in temperature. In this invention a frequency sensitive heater is used to move the response comb of the BAR up or down in accordance with changes in the frequency of the incoming signal. The input frequency can be allowed to drift and the heat source will produce more heat or less heat, keeping the response right at the input frequency. Author (GRA)

INVESTIGATION OF DRY-CONTACT ULTRASONIC GAGING
J. A. Brunk Mar. 1986 11 p
(Contract DE-AC04-76DP-00613)
(DE86-009185; BDX-613-3421) Avail: NTIS HC A02/MF A01

Ultrasonic thickness gaging often can be accomplished without using a liquid coolant. By this method a transducer with a solid compliant membrane instead of the usual hard face or hard plastic delay line is employed. The primary advantage is elimination of the time required to apply and remove couplant, typically more than half the total testing time. The dry technique also makes it practical to gage where intrusion of the liquid couplant must be avoided because of possible damage to electronic circuits or components. For possible applications of robotic ultrasonic gaging, the dry technique would avoid the substantial complication of providing a suitable flow of couplant. The disadvantages are the inability of dry contact transducers to make adequate contact with rough or concave surfaces. These limitations depend on the consistency of the material used for the compliant membrane. The minimum thickness which can be measured generally increases when no couplant is used. The method would appear to be particularly well suited for gaging plastics and measuring machined metal parts by contacting convex surfaces. Accuracy and repeatability are comparable to that obtained with conventional transducers using the same instrumentation. DOE

EVALUATED RAYLEIGH INTEGRALS FOR PULSED PLANAR

EXPANDING RING SOURCES
S. I. Warshaw 20 Dec. 1985 13 p Presented at the 12th International Congress on Acoustics, Toronto, Ontario, 24 Jul. 1986
(Contract W-7405-eng-48)
(DE86-006701; UCRL-93820; CONF-860742-1) Avail: NTIS HC A02/MF A01

Time-domain analytic and semianalytic pressure fields acoustically radiated from expanding pulsed ring sources imbedded in a planar rigid baffle have been calculated. The source functions are radially symmetric delta-function distributions whose amplitude and argument have simple functional dependencies on radius and time. Certain cases yield closed analytic results, while others result in elliptic integrals, which are evaluated to high accuracy by Gauss-Chebyshev and modified Gauss-Legendre quadrature. These results are of value for calibrating computer simulations and convolution procedures, and estimating fields from more complex planar radiators. DOE

A COMPARISON BETWEEN ACOUSTIC MODE MEASUREMENTS AND ACOUSTIC FINITE ELEMENT ANALYSIS PERFORMED FOR SAAB SF 340
P. Goeransson and I. Green Mar. 1986 17 p Sponsored by Swedish Board for Technical Development
(FFA-TN-1986-22; ETN-86-97234) Avail: NTIS HC A02/MF A01

In order to verify an acoustic finite element package, measured and calculated eigenmodes and eigenfrequencies for Saab SF 340 cabin acoustics were compared. The measurements were performed in an acoustic mockup. For the analysis, a two dimensional model of the cross section of the fuselage was used. The comparison shows quite good agreement, the discrepancies being due to the representation of the flexible wall of the fuselage as rigid in the analysis. ESA

ON THE WAY TO EXTENDED NOISE REDUCTIONS IN PROPELLER AIRCRAFT [OP WEG NAAR GROTERE GELUIDSREDUCTIES IN PROPELLER-VLIEGTUIGEN]
R. F. C. Kiers Aug. 1984 9 p In DUTCH; ENGLISH summary Presented at NLR Conference, Noordoostpolder, Netherlands, 6 Oct. 1983 Submitted for publication
(B8573697; ETN-86-97502) Avail: NTIS HC A02/MF A01

Origins of cabin noise in propeller driven aircraft (PDE) and the importance of further reductions are described. Trends in propeller technology and fuselage construction are aimed at the development of extremely fuel-efficient PDE. However, the related increase of cabin noise levels urges the extension of noise reduction in PDE. Fokker noise reduction methodology for meeting the challenge of maintaining and improving noise levels in future PDE is discussed. Additional noise reduction is hard to obtain. Sophisticated techniques were used to acquire the necessary data and take effective noise reduction measures. ESA

DOUBLE PHOTON EXCITATION OF HIGH-RYDBERG ATOMS AS A LONG-LIVED SUBMILLIMETER DETECTOR Patent
Ara N. Chutjian, inventor (to NASA) Issued 15 Jul. 1986 8 p Filed 21 Feb. 1985 Supersedes N85-30779 (23 - 19, p 3352)
(NASA-Case-NPO-16372-1; US-Patent-4,600,640;
US-Patent-Appl-SN-703847; US-Patent-Class-250-338;
US-Patent-Class-250-336.1; US-Patent-Class-250-340) Avail: US Patent and Trademark Office CSCL 20H

A method and apparatus for detecting submillimeter or IR radiation is disclosed. A rare gas, such as xenon, is supplied at its ground state via a pressurized cylinder and an adjustable leak valve into a cryogenically cooled detection area. The ground state of xenon is double photon excited to a particularized level of the Rydberg series by a resonance lamp and a laser. The doubly excited gas is then further excited by the radiation to be measured. A field ionization and an ion measurement indicative of the radiation intensity is achieved. NASA

(NASA-TM-88776; NAS 1.15:88776) Avail: NTIS HC A04/MF A01 CSCL 20H

Ab initio calculations at the self-consistent-field and singles plus doubles configuration-interaction level are used to determine accurate spectroscopic parameters for most of the alkali and alkaline-earth fluorides, chlorides, oxides, sulfides, hydroxides, and isocyanides. Numerical Hartree-Fock (NHF) calculations are performed on selected systems to ensure that the extended Slater basis sets employed for the diatomic systems are near the Hartree-Fock limit. Extended Gaussian basis sets of at least triple-zeta plus double polarization equality are employed for the triatomic system. With this model, correlation effects are relatively small, but invariably increase the theoretical dissociation energies. The importance of correlating the electrons on both the anion and the metal is discussed. The theoretical dissociation energies are critically compared with the literature to rule out disparate experimental values. Theoretical (sup 2)Pi - (sup 2)Sigma (sup +) energy separations are presented for the alkali oxides and sulfides. Author

RAPID ELECTRON BEAM ACCELERATOR (REBA-TRON) Patent Application
Christos A. Kapetanakos, Phillip A. Sprangle, and Demonsthenes Dialetis, inventors (to Navy) Filed 5 Mar. 1986 16 p
(AD-D012303; US-Patent-Appl-SN-836652) Avail: NTIS HC A02/MF A01 CSCL 20/7

The invention comprises a particle accelerator with a toroidal vacuum chamber, an injector for injecting a charged particle beam into the chamber and an exit port to extract the accelerated particle beam. A toroidal magnetic field to confine the beam in the chamber is generated by a set of coils with their axis along the minor axis

of the chamber and by two twisted wires that carry current in the same direction wrapped around the chamber. The two twisted wires also generate a torsatron magnetic field that controls the minor radius of the beam. A time varying magnetic field is generated by two concentric cylindrical plates surrounding the chamber. A convoluted transmission line generates a localized electric field in the chamber to accelerate the beam. GRA

FABRICATE, CALIBRATE AND TEST A DOSIMETER FOR INTEGRATION INTO THE CRRES (COMBINED RELEASE AND RADIATION EFFECTS SATELLITE) SATELLITE Technical Report, 1 Sep. 1984 - 31 Aug. 1985
Paul R. Morel, Frederick A. Hanser, and Bach Sellers Dec. 1985 26 p
(Contract F19628-82-C-0090)
(AD-A168566; AFGL-TR-86-0001; SR-3) Avail: NTIS HC A03/MF A01 CSCL 22/2

A space-radiation dosimeter is being fabricated, calibrated, tested, and integrated into the CRRES satellite. This Dosimeter is essentially identical to that previously designed, fabricated, calibrated, tested and integrated into the DMSP F7 satellite. These dosimeters are primarily designed to measure the dose from electrons of greater than 1 MeV to greater than 10 MeV in four channels. Each channel has a different thickness aluminum dome. The solid state detector outputs are processed to provide the dose from electrons (low energy loss), the dose from protons (high energy loss), the flux of electrons, the flux of protons, and the rate of high energy loss nuclear star events. The dosimeter also has a calibration mode in which the alpha particles from a weak source behind each detector are used to check for total detector depletion and property operation of the electronics. ON THE QCD EFFECTIVE ACTION FOR PIONS AND VECTOR MESONS
Maarten F. L. Golterman and N. D. Hari Dass 1985 33 p
Sponsored by Stichting voor Fundamenteel Onderzoek der Materie
(NIKHEF-H/85-13; ITFA-85-19; ETN-86-97767) Avail: NTIS HC A03/MF A01

A parametrization of the effective action for the system of pi, rho, A1, and omega mesons is given in a manner that makes explicit the contact with the QCD generating functional and its symmetries. The presence of chiral anomalies is taken into account to yield the anomalous part of the effective action. The effective action is organized in increasing order of derivatives and the first nontrivial terms in such a series are presented. The effective action is extended to include the couplings to the weak and electromagnetic sector of the standard model. Experimental consequences of anomalous effective action, as applied, e.g., to meson decay rates, are discussed. ESA

MAGIC ANGLE AND NUCLEAR MAGNETIC RESONANCE (NMR) IMAGING IN SOLIDS
F. Deluca and B. Maraviglia 15 Oct. 1985 8 p
(Preprint-478; ETN-86-97913) Avail: NTIS HC A02/MF A01

An imaging method for solids, which combines the line narrowing at the magic angle in the rotating frame with the full rotating frame NMR imaging technique is proposed. All imaging and spectroscopic methods can be used within the framework of the technique. It can provide an imaging contrast or a spatial map of relaxation times in RF or of relaxation times in the doubly rotating frame. These parameters are sensitive to slow and ultra slow molecular motion. Hence their spatial measurement can be of interest in any system with a critical slow molecular dynamic range as for example in polymers, in the molecular glassy state, and in the in vitro and in vivo study of the proteic part of biological tissues. The exploration of two (or three) spatial dimension can be performed by means of two (or three) RF gradients in two (or three) LF directions. ESA

COMMENT ON THE SIGNIFICANCE OF INDIVIDUAL ABERRATIONS IN WAVEFRONT FITTING BY ABERRATION POLYNOMIALS
Ruixiang Liu and K. G. Birch Nov. 1984 13 p
(NPL-MOM-71; ISSN-0309-3069; ETN-86-97986) Copyright. Avail: Issuing Activity

The possibility of separately identifying individual Seidel type aberrations from the Zernike aberration polynomials used in the analysis of lens interferograms was investigated. Results show that it is not expedient to calculate values for the individual Seidel type aberration terms from the Zernike polynomials fitted to interferograms. The results of such calculations are neither consistent nor do they agree with theoretical Seidel aberration values derived at the lens design stage. The results confirm that an aberration polynomial should only be used in its entirity to represent the wave front. ESA

PHOTODETECTOR ARRAY WITH IMAGE PLANE PROCESSING Patent Application
Daniel J. Jobson, inventor (to NASA) Filed 16 Jul. 1986 11 p
(NASA-Case-LAR-13391-1; US-Patent-Appl-SN-886133) Avail: NTIS HC A02/MF A01 CSCL 20F

An apparatus is provided for merging image detection provided

by an array of photodetector elements and local neighborhood processing of the outputs of photodetector elements which is useful in applications requiring high speed extraction of meaningful information from raw detector signals. The apparatus combines relatively large photodetector elements with small electronic processing elements located between the photodetector elements on the same chip. The close proximity of the photodetector and signal processing elements increases the speed of information acquisition and minimizes undesirable signal noise. NASA

COMPENSATION FOR PRIMARY REFLECTOR WAVEFRONT ERROR Patent Application
Aden B. Meinel, inventor (to NASA), Marjorie P. Meinel, inventor (to NASA), and John E. Stacy, inventor (to NASA) Filed 29 May 1986 16 p
(Contract NAS7-918)
(NASA-Case-NPO-16869; US-Patent-Appl-SN-867986) Avail: NTIS HC A02/MF A01 CSCL 20F

The object of the invention is to compensate for errors in a large telescope primary reflector by making certain compensating deviations in a smaller, auxiliary reflector of the telescope. At least one intermediate element forms an image of the primary surface onto the secondary surface, so each point on the secondary surface corresponds to a point on the primary surface. The secondary surface is formed with a deviation from an ideal secondary surface, with the piston distance of each point on the actual secondary surface equal to the piston distance of a corresponding piston on the actual primary surface from the ideal primary surface. It is found that this results in electromagnetic (e.g., light) rays which strike a deviating area of the actual primary surface being brought to the same focus as if the actual primary surface did not have a diviation from an ideal primary surface. CENTROID TRACKING WITH AREA ARRAY DETECTORS
T. A. Glavich 1 Jun. 1986 108 p
(Contract NAS7-918)
(NASA-CR-179750; JPL-Pub-86-21; NAS 1.26:179750) Avail: NTIS HC A06/MF A01 CSCL 20F

A computer program (ALGEVAL) has been developed to simulate the position estimating behavior of a centroid estimator algorithm using data typical of optical point spread function data recorded by an area array detector. Typical results are shown of varying detector properties and optical point spread function types. The detector parameters currently available for study include read noise mean value, dark current mean value and spatial variation, charge transfer efficiency and point spread function location, saturation level, signal level and pixel size. The program is capable of calculating any order centroid using an array size from 2 x 2 to 15 x 15 pixels. The output of the program is either a performance map, histogram data or tabluar data. A number of further developments are recommended. Author

INTEGRATED OPTICAL SIGNAL PROCESSOR USING DIFFRACTION OF LIGHT BY MAGNETOSTATIC WAVES Patent
John N. Lee and Arthur D. Fisher, inventors (to Navy) Issued 11 Mar. 1986 12 p Supersedes AD-D010750
(AD-D012319; US-Patent-4,575,179; US-Patent-Appl-SN-546757) Avail: US Patent and Trademark Office CSCL 20/6

This patent discloses an integrated optical signal processor which includes a thin film of yttrium iron garnet substrate. A guided optical beam in a first polarization mode is directed through the thin film. A stripline antenna formed on the surface of the thin film is coupled to receive a microwave RF input signal. Under the influence of a bias magnetic field, the RF input signal excites a magnetostatic wave in the thin film. By means of Bragg diffraction, the magnetostatic wave diffracts the guided optical beam and thereby converts a portion of the beam into a second orthogonal polarization mode in response to the RF input signal. The guided optical beam is thereby modulated by the RF input signal. A preferred embodiment is disclosed which can be configured to form a spectrum analyzer, a time integrating correlator, and a space integrating convolver. GRA

METHOD OF WAVELENGTH MULTIPLEXING IN FUSED SINGLE-MODE FIBER COUPLERS Patent
Matthew N. McLandrich, inventor (to Navy) Issued 10 Dec. 1985 5 p Supersedes AD-D009070
(AD-D012329; US-Patent-4,557,553; US-Patent-Appl-SN-317682; US-Patent-Class-350-96-15) Avail: US Patent and Trademark Office CSCL 20/6

An apparatus and method of entering and extracting a discrete wavelength of optical data in a single-mode duplex optical data transmission system relies on a selective evanescent field coupling. A continuous single-mode fiber transmits the two wavelengths in opposite directions with respect to each other. A length of a like single-mode fiber is fused to the continuous single-mode fiber such that the product of the fused length and the coupling coefficient of the fiber pairs equals pi/2 at one of the optical frequencies to effect one-hundred percent evanescent field coupling to and from the continuous fiber. The product of the coupling coefficient and the fused length equals pi at the other optical wavelength to effect a zero percent evanescent field coupling. The other wavelength travels the length of the continuous single-mode fiber uninterrupted while the first wavelength is selectively coupled and decoupled from the fiber as desired. Author (GRA)

OPTICALLY CONTROLLED INTEGRATED OPTICAL SWITCH Patent Application
Richard A. Soref, inventor (to Air Force) Filed 24 Feb. 1986 25 p
(AD-D012334; US-Patent-Appl-SN-831910) Avail: NTIS HC A02/MF A01 CSCL 20/6

This invention relates to an optically controlled integrated optical switch having a body made up of entirely crystalline silicon. More specifically, the body has a pair of channel waveguides intersecting at an X-like configuration forming therein an intersection crossover region. An electrically controlled optical source is positioned over the crossover region to shine intense, short-wave light on the crossover region in order to generate numerous electron-hole pairs in the waveguide material. These charge carriers alter the refractive index of the intersection region. A controllable current source is used to adjust the optical output power of the optical source. This, in turn, changes the amount of optical cross coupling of light between the intersecting waveguides. GRA

HOLOGRAPHIC OPTICAL ELEMENTS FORMED IN LIGHT OF REDUCED COHERENCE Annual Report, 30 Nov. 1984 - 30 Nov. 1985
E. Leith 27 Feb. 1986 38 p
(Grant AF-AFOSR-0012-85)
(AD-A168498; AFOSR-86-0324TR; UMICH-AR-7) Avail: NTIS HC A03/MF A01 CSCL 14/5

The theory of holographic optical elements (HOE) made with light of reduced coherence is developed. Both reduced spatial coherence and temporal coherence methods are considered. A theory of broad source fringe formation based on source image distortion is developed. The theory of HOE formation with two zone plates in tandem and under reduced temporal coherence is developed. A new technique of spatial filtering with spatially incoherent light was developed in which the optical system behaves as if the light were coherent (i.e., linear in amplitude and phase preserved) even though the light is spatially incoherent. A technique for obtaining resolution beyond the classical limit (superresolution) was discovered, based on the principle of incoherent to coherent conversion. GRA

SCINTILLATION EFFECTS ON CENTROID ANISOPLANATISM
Michael T. Tavis and Hal T. Yura 15 May 1986 15 p
(Contract F04701-85-C-0086)
(AD-A168551; TR-0086(6019)-1; SD-TR-86-24) Avail: NTIS HC A02/MF A01 CSCL 20/5

The effect of scintillation on turbulence induced centroid anisoplanatism is discussed. It is shown that this effect has negligible impact on the resulting Strehl ratio for D/r sub o > or = 100, where D is the optics aperture diameter and r sub o is the turbulence induced lateral coherence length. DEVELOPMENT OF APPLIED OPTICAL TECHNIQUES USING LASERS
Cheol-Jung Kim, Doo-Huan Shu, Tae-Soo Kim, Jang-Soo Shin, Dong-Hyun Kim, Yung-Shik Choi, and Jung-Mook Kim Mar. 1985 99 p In KOREAN
(DE86-701692; KAERI/RR-437/84) Avail: NTIS HC A05/MF A01

Research on laser isotope separation of deuterium using Infrared Multi-photon Absorption/Dissociation (IR MPA/D) and UV predissociation was reviewed and several kinds of lasers were built for this purpose. A tunable TEA CO2 laser with power of about 10 MW was assembled and a HF chemical laser with output energy of 300 mJ was built. These lasers are not ready to be used as sources for IR MPA/D experiment yet. The TEA CO2 laser needs modification for more stable output and higher repetition rate and the HF chemical laser needs improvement for more output energy and tunability. Also, a KrF excimer laser was built for UV predissociation experiments, but requires modification for stable output. Furthermore, laser welding of Zr was surveyed and a few samples were welded using an Nd:YAG laser. Finally, a remote inspection instrument was designed using a He-Ne laser and a CCD array. DOE

ON 3(OMEGA)0 FIBER OPTIC DISPERSION AND TRANSMISSION MEASUREMENTS
C. E. Thompson and H. T. Powell 17 Apr. 1986 26 p
(Contract W-7405-eng-48)
(DE86-010640; UCID-20753) Avail: NTIS HC A03/MF A01

We have measured the dispersion and transmission of the standard Nova optical fiber used for transporting beam samples to a streak camera and an experimental fiber at 350 nm. These data indicate that the experimental fiber, provided by Bell Laboratories, can be used on Nova for 3(LC OMEGA)0 signal transmission at lengths up to 20 m with negligible pulse broadening at 100 ps while the standard Nova fiber contributes approximately 120 ps pulse-broadening (i.e., FWHM = 160 ps). However, the Bell fiber exhibits considerably more attenuation than previously encountered at 3(LC OMEGA)0. We are obtaining several hundred meters of the Bell fiber for potential near-term use on Nova and will be testing slightly modified designs which should have less attenuation. DOE

COHERENT INFRARED DETECTION, VOLUME C Final Report
Andreas G. Ullrich, Walter R. Leeb, and Arpad L. Scholtz Paris ESA 31 Aug. 1985 77 p
(Contract ESTEC-5584/83-NL-PR)
(ESA-CR(P)-2184; ETN-86-97784) Avail: NTIS HC A05/MF A01

A diode laser heterodyne/homodyne receiver for optical detection of infrared radiation is discussed. The influence of finite laser linewidth caused by optical phase noise on coherent receivers is treated. For a homodyne receiver based on an optical phase-locked loop, the achievable bit-error-rate is calculated, with the phase noise and the shot noise as parameters. Electronics for GaAlAs laser diode temperature and current control were built, resulting in laser frequency long-term stability on the order of 10 MHz. An arrangement for external phase modulation was set up. Experiments reducing the solitary laser linewidth of 8 MHz to 200 kHz in a 3 mirror cavity were performed, and a criterion for controlling the position of the external mirror was found. It is concluded that the relatively large linewidth of solitary diode lasers and the complexity of linewidth reduction concepts outweigh the inherent advantages of homodyne reception. ESA

75 PLASMA PHYSICS

ANOMALOUS DIFFUSION ACROSS THE MAGNETIC FIELD PLASMA BOUNDARY: THE PORCUPINE ARTIFICIAL PLASMA JET

E. V. Mishin, V. Ya. Kapitanov, and R. A. Treumann Feb. 1986 20 p Sponsored in part by Deutschen Forschungsgemeinschaft and DFVLR

(Contracts BMFT-01D0074A; BMFT-RV14B7/74)

(MPE-Preprint-47; ETN-86-98208) Copyright. Avail: Issuing Activity

Observations of nearly undisturbed penetration of the PORCUPINE dense and fast heavy ion beam into the magnetized ionospheric plasma after termination of the short adiabatic phase are discussed. Very fast magnetic field diffusion into the beam is required. Collisional diffusion and instability of a sharp boundary between magnetic field and plasma yield diffusion times too long to account for the observations. The diffusion is therefore attributed to a transverse electron drift current driven electrostatic instability excited by the diamagnetic current flowing in the boundary layer between the injected beam and the ambient field. ESA

ANALYSIS ON IMPURITY CONTROL EFFECT OF SCRAPE-OFF LAYERS GENERATED BY A PUMP LIMITER AND AN ERGODIC MAGNETIC LIMITER

T. Kawamura, T. Ono, S. Takamura, and A. Miyahara Jul. 1986 15 p

(IPPJ-783; ISSN-0469-4732) Avail: NTIS HC A02/MF A01

The results of theoretical analysis on impurity control effects of a scrape-off layer in a toroidal system are reported, where the two types of limiter systems are presumed, that is, a pump limiter and an ergodic magnetic limiter. Carbon is assumed as representative low Z material. The screening efficency of a scrape-off layer for main plasma contamination and the redeposition effect to the first wall and limiter sides are analyzed in relation to the scrap-off plasma parameters such as density profiles, temperature profiles, and diffusion coefficients. NUMERICAL BGK-SOLUTIONS OF LARGE SCALE ELECTROSTATIC POTENTIAL IN AURORAL PLASMAS

Haruichi Washimi and Isao Katanuma Jul. 1986 20 p

(IPPJ-782; ISSN-0469-4732) Avail: NTIS HC A02/MF A01

Formation of large scale and large amplitude electrostatic potential along magnetic field lines due to a high-speed plasma flow in auroral plasma is discussed. It is shown that the potential profile which is consistent with observations, i.e., which increases very slowly near the plasmasheet and abruptly near the topside ionosphere, can be obtained by introducing a population of electrons which are trapped between the magnetic mirror and the electrostatic potentials. Author

MEASUREMENT OF LOCALIZED ELECTROSTATIC OSCILLATIONS EXCITED BY LOW-POWER MICROWAVES IN A PLASMA WAVEGUIDE

Kazuo Minami, Koichi Izawa, Masanobu Kaminaga, and Kazushige Ishii Jun. 1986 29 p

(IPPJ-778; ISSN-0469-4732) Avail: NTIS HC A03/MF A01

Localized electron plasma oscillations excited at the resonant surface by low-power microwaves incident obliquely on an inhomogeneous unmagnetized plasma in a cylindrical waveguide are measured by a receiving antenna. The disturbance by the antenna on the electrostatic fields is significantly reduced in the condition with a steep density gradient and large angles of incidence. As a result, patterns of large and broad resonance field including phase information are observed. The peak values of the resonantly excited field are compared with numerical analyses. Author

NUMERICAL CALCULATIONS FOR THE ELECTRODE DESIGN OF A RELATIVISTIC ELECTRON BEAM DIODE

Naiyan Wang, T. Ono, T. Kawamura, and A. Miyahara Jun. 1986 22 p

(IPPJ-780) Avail: NTIS HC A02/MF A01

An optimized design for diode construction is presented. An electron beam with energy of 350 KeV, current of 50 kA was extracted sucessfully from the fabricated diode. The voltage and current waveforms are shown. No breakdown was observed inside the diode. It was also proved that the diode works stably. This confirms in turn the reliability and usefulness of the numerical calculations done for the optimization of the diode design. B.G.

UNLIMITED ACCELERATION OF A CHARGED PARTICLE BY AN ELECTROMAGNETIC WAVE: RELATIVISTIC THEORY

Satoshi Takeuchi, Kazuo Sakai, Michio Matsumoto, and Ryo Sugihara Jul. 1986 18 p

(IPPJ-781; ISSN-0469-4732) Avail: NTIS HC A02/MF A01

It is shown that a charged particle can be trapped in a magnetic neutral sheet produced by a static magnetic fields vector B (sub O) and an electromagnetic wave propagating perpendicularly to vector B (sub O). The neutral sheet as well as the trapped particle moves with the phase velocity V (sub p) and the trapped particle feels a constant force q rho(sub p) V(sub p) B(sub O)/c along the neutral sheet, q, c, and rho(sub p) being the charge, the velocity of light and (1 - V(sup 2)(sub p)/c(sub 2)) (sup -1/2). Once the particle is trapped it never detraps and then the acceleration continues unlimitedly. A brief discussion is given on how to realize such a slow electromagnetic wave which can interact with the particle. Author

A statistical study of 1982 data for occurrences of equatorially trapped plasma has been extended. The previous survey, which utilized only the MSFC summary fiche, has been supplemented with the GSFC summary fiche, which has had the effect of substantially improving the late 1982 coverage. It was found that in the post midnight region (1 - 3 LT), the trapped plasma is limited to + or - 5 degrees magnetic latitude, while in the early afternoon (13-15 LT), latitude ranges as high as + or 30 degrees are found. This survey has provided a link to earlier ATS-6 and ISEE studies of pancake distributions. Although the most energetic, and most anisotopic plasmas are trapped within a few degrees of the equator, the results of these equatorial interactions extend substantially along the magnetic field line in the afternoon and dusk region and these high latitude extensions were previously studied by the Huntsville group. Results of this study were incorporated into a revision of the equatorial ion paper, which has been resubmitted and accepted for publication. Author

MAGNETIC RECONNECTION IN LASER-PLASMA INTERACTIONS IN A BACKGROUND MAGNETIC FIELD
M. J. Keskinen 9 May 1986 27 p
(AD-A168024; NRL-MR-5766) Avail: NTIS HC A03/MF A01 CSCL 20/9

For laser irradiances (I) in the ablative regime (I < or = 10 to the 14th power w/sq cm, focused on a small solid target) it is shown that magnetic field-reversed configuration, defined by the laser-produced self-generated magnetic field an externally applied magnetic field perpendicular to the laser axis, is possible near the laser-target interaction region. Approximate conditions under which these field-reversed regions undergo driven reconnection are investigated. Magnetic reconnection of the background magnetic field with the laser-induced spontaneous magnetic field can lead to distortion and dissipation of the background magnetic field near the laser-target interaction region. OBSERVATIONS OF PLASMA DISTRIBUTIONS DURING THE CDAW SUBSTORMS OF 31 MARCH - 1 APRIL 1979
C. Y. Huang, L. A. Frank, and T. E. Eastman Feb. 1986 30 p
(Contract N00014-76-C-0016)
(AD-A168580; U-OF-IOWA-86-12) Avail: NTIS HC A03/MF A01 CSCL 04/1

On 31 March and 1 April 1979 a sequence of substorms was recorded on the ground. During the entire active period the ISEE-1 and -2 satellites were located in the magnetotail, between 22 and 12 Earth radii from the Earth. Observations of plasma distributions made at varying levels of activity during these substorms provide good examples of typical magnetotail responses. These measurements were obtained with the Lepedea on board the ISEE-1 spacecraft. The observations show that the main response of the magnetotail during active periods is primarily spatial. The central plasma sheet contracts at substorm onset and expands during the recovery phase. This motion causes the ISEE-1 and -2 spacecraft to move from one plasma regime to another, e.g., from the central plasma sheet to the plasma sheet boundary layer. Further these regions can be characterized by their plasma distributions which retain their essential signatures even under substorm conditions. At times when accelerated plasma is observed the source of the energetic particles appears to be located tailward of the satellite. This is generally true of the plasma sheet boundary layer in which net earthward streaming is detected on most crossings in this region. GRA

Prepared in cooperation with Arizona Univ., Tucson
(Contract W-7405-eng-36)
(DE86-006033; LA-UR-86-300; CONF-851053-9) Avail: NTIS HC A03/MF A01

Analysis and LASNEX modeling of teo experiments designed to explore the mechanisms and scaling of laser-plasma coupling in high-Z plasmas are presented. The first used layered Au-on-CH spheres irradiated symmetrically using the Omega (Laboratory for Laser Energetics) 0.35 micron laser to observe the X-ray emission and energy penetration in gold plasmas. Measurements of the subkilovolt and kilovolt emission from targets with varying Au-coating thicknesses were made using diagnostics of varying spectral, temporal, and spatial resolution. The results indicate that the X-ray conversion efficiency is a function of target size, with larger targets yielding X-ray emission in excellent agreement with calculations. The X-ray emission fall-off with decreasing gold thickness agrees well with predictions. The second experiment used the Novette (Lawrence Livermore National Laboratory) laser to irradiate solid gold disk targets, examining wavelength scaling to 0.26 microns. The measured subkilovolt X-ray emission is in good agreement with calculations using mildly inhibited thermal electron transport, indicating enhanced target coupling, compared with previous experiments using smaller spot sizes. The experiment also indicates very low suprathennal electron populations, on the order of 0.1% at about 30 keV effective temperature. Finally, we present preliminary plans and designs for experiments which will use the Aurora 5 kJ, 5 ns, 0.25 (MU)m KrF laser now being constructed at Los Alamos. electron populations, on the order of 0.1% at about 30 keV effective temperature. Finally, preliminary plans and designs are presented for experiments which will use the Aurora 5 Kj, 5 ns, 0.25 micron KrF laser now being constructed at Los Alamos. DOE

DENSITY EFFECTS ON SAWTOOTH OSCILLATIONS FOR HIGH-THETA 120 kA DISCHARGES IN ZT-40M
R. A. Nebel, K. A. Werley, and M. M. Pickrell Feb. 1986 22 p
(Contract W-7405-eng-36)
(DE86-008585; LA-10653-MS) Avail: NTIS HC A02/MF A01

The effects of using pulse discharge cleaning and neutral gas refueling to increase the plasma density for 120 kA high-theta discharges on ZT-40M have been studied. Experimentally, increasing the plasma density quenches the sawtooth oscillations. Theoretical analysis indicates that the likely reason for this observation is that increasing the plasma density lowers the on-axis streaming parameter which in turn flattens the effective resistivity profiles leading to smaller (or nonexistent) sawtooth excursions. DOE

DIAGNOSTIC TECHNIQUES IN THERMAL PLASMA PROCESSING, PART 2, VOLUME 2
M. Boulos, P. Fauchais, and E. Pfender Feb. 1986 250 p
(Contract DE-AC02-83ER-13056)
(DE86-011738; DOE/ER-0270-Pt-2-Vol-2) Avail: NTIS HC A11/MF A01

Techniques for diagnostics for thermal plasmas are discussed. These include both optical techniques and in-flight measurements of particulate matter. In the core of the plasma, collisional excitation of the various chemical species is so strong that the population of the corresponding quantum levels becomes high enough for net emission from the plasma. In that case, the classical methods of emission spectroscopy may be applied. But in the regions where the temperatures are below 4000°K (these regions are of primary importance for plasma processing), the emission from the plasma is no longer sufficient for emission spectroscopy. In this situation, the population of excited levels must be increased by the absorption of the light from an external source. Such sources, as for example pulsed tunable dye lasers, are now commercially available. The use of such new devices leads to various techniques such as laser induced fluorescence (LIF) or Coherent Anti Stockes Raman Spectroscopy (CARS) that can be used for analyzing plasmas. Particle velocity measurements can be achieved by photography and laser Doppler anemometry. Particle flux measurements are typically achieved by collecting particles on a substrate. Particle size measurements are based on intensity of scattered light. DOE

TOTAL-DOSE RADIATION EFFECTS DATA FOR SEMICONDUCTOR DEVICES. 1985 SUPPLEMENT. VOLUME 2, PART A
Keith E. Martin, Michael K. Gauthier, James R. Coss, Armando R. V. Dantas, and William E. Price 15 May 1986 579 p
(Contract NAS7-100)
(NASA-CR-179746; JPL-Pub-85-43-Vol-2-Pt-A; NAS 1.26:179746) Avail: NTIS HC A25/MF A01 CSCL 20L

Steady-state, total-dose radiation test data, are provided in graphic format for use by electronic designers and other personnel using semiconductor devices in a radiation environment. The data were generated by JPL for various NASA space programs. This volume provides data on integrated circuits. The data are presented in graphic, tabular, and/or narrative format, depending on the complexity of the integrated circuit. Most tests were done using the JPL or Boeing electron accelerator (Dynamitron) which provides a steady-state 2.5 MeV electron beam. However, some radiation exposures were made with a Cobalt-60 gamma ray source, the results of which should be regarded as only an approximate measure of the radiation damage that would be incurred by an equivalent electron dose. SYNTHESIS AND CRYSTAL STRUCTURE OF TRIS (DIMESITYLARSINO)GALLANE, A MONOMERIC TRICOORDINATE GALLIUM-ARSENIC COMPOUND
C. G. Pitt, K. T. Higa, A. T. McPhail, and R. L. Wells 21 May 1986 13 p
(Contract N00014-83-K-0572)
(AD-A168020; DU/DC/TR-04) Avail: NTIS HC A02/MF A01 CSCL 07/4

The gallium-arsenic bond, in polymeric form is expected to exhibit anisotropic conductivity by virtue of an extended p-pi system, isoelectronic with polyacetylene. Four mono-, bis-, and trisarsinogallanes were prepared from the reaction of lithium dimesitylarsenide with gallium chlorides. One of these, tris(dimesitylarsino) gallane, (Mes2As)3Ga(1), was characterized by single crystal X-ray analysis and shown to be the first example of a monomeric tricoordinate gallium-arsenic compound. Orange crystals of 1 belong to the triclinic system space group P1. The gallium atom is bonded to the three arsenic atoms in a trigonal planar configuration. The color of 1 is the result of tailing of a 276 nm CT band into the visible. GRA

(AD-A168646; TR-11) Avail: NTIS HC A02/MF A01 CSCL 20/2

Low energy electron diffraction, LEED, is an important experimental technique for the study of continuous order disorder phase transitions. Extraction of the critical exponents and their associated amplitudes requires an accurate determination of the single scattering intensity vs. parallel component of the scattering vector. Interpretation of measured intensities is complicated by multiple scattering, variation of the scattering factor, and thermal vibrations. These can cause the measured intensity profiles to be skewed and can add substantial intensity which is peaked at the Brillouin zone center. An example of subsidiary structure induced by multiple scattering is given for Gold(110). The effects on the measured critical exponents beta, gamma, and nu are shown to be small in most cases. However, the amplitudes associated with these exponents, such as the correlation length xi, can be seriously affected. Some of these effects also occur in other diffraction methods. GRA

(DE86-010283; DOE/ER-45113/2) Avail: NTIS HC A03/MF A01

During the first nineteen months of this grant period we have investigated seven primary subjects and have achieved success in completing certain projects and advancing the others toward the goals originally envisaged. Our research has resulted in the publication of eight manuscripts which involved the participation of graduate students, Research Associates and visiting faculty members in our group. In addition, we have submitted four manuscripts for publication, and two of these have been accepted for publication. Our primary efforts in the investigation of critical fields of superconductors have benefited from research in areas with analogous characteristics such as the metals with charge and spin density waves. Recently, the intense experimental efforts in the study of Heavy Fermion superconductors have revealed evidence for a charge density wave in certain alloys, and thus the close relation between these phenomena fits in nicely with our fields of interest. A very interesting observation of antiferromagnetic order and superconductivity in CePb3 induced by an applied magnetic field is another challenge for our investigation which follows naturally from our research on coupled magnetic impurities in superconductors. Representative examples of our results are presented below, and details may be found in the accompanying manuscript reprints and preprints. DOE

CRITICAL FIELD MEASUREMENTS ON VERY THIN FILMS OF V-Ga SUPERCONDUCTORS
J. E. Tkaczyk and P. M. Tedrow 1985 7 p
(Contract DE-FG02-84ER-45094)
(DE86-010772; DOE/ER-45094/T1) Avail: NTIS HC A02/MF A01

V Ga thin films, 500, 20, 10 and 8 nm thick have been made for the purpose of studying the role of spin-orbit scattering in the theory of high field superconductivity. Either 1% dopings or thin layers of high-atomic-number elements have been added to these samples in an attempt to increase the spin-orbit scattering rate in this paramagnetically limited material. Critical fields are presented and material parameters are obtained by fitting to a modified Werthamer-Helfand-Hohenberg (WHH) theory. The uniqueness of the parameters obtained in this manner is discussed in light of Fermi-liquid effects. Comparisons are drawn with bulk V Ga. DOE

MICROSCOPIC CALCULATION OF CRITICAL LAYER THICKNESS FOR COHERENTLY STRAINED SILICON-LIKE STRUCTURES
B. W. Dodson 1986 8 p Presented at the Northeast Regional Meeting on Semiconductor-based Heterostructure Interfacial Structure and Stability, Murray Hill, N.J., 1 May 1986
(Contract DE-AC04-76DP-00789)
(DE86-009853; SAND-86-0031C; CONF-8605111-1) Avail: NTIS HC A02/MF A01

Monte Carlo based microscopic techniques were used to study the stability of thin coherently strained layers of mismatched silicon-like semiconductor material grown on the (111) silicon surface. The atomic interaction used for this study is the Stillinger-Weber potential, modified to allow modelling of mismatched materials. Mismatched layers from 3 to 80 A thickness were considered. For layers greater than about 20 A thickness, the critical layer thickness is accurately described by the continuum theory of Matthews and Blakeslee. For thinner layers, however, the strain energy associated with misfit dislocations becomes greater than the continuum value, resulting in smaller critical layer thickness, to the extent that critical mismatch as a function of layer thickness becomes non-monotonic for the thinnest films considered. DOMAIN CONFIGURATION IN THIN MAGNETIC FILMS, MEASUREMENTS AND CALCULATIONS [DOMEINVORMING IN MAGNETISCHE DUNNE FILMS, METINGEN EN BEREKENINGEN]
Kees Riesebos Apr. 1984 61 p In DUTCH
(ETN-86-97376) Avail: NTIS HC A04/MF A01

Material parameters of thin magnetic films, i.e., magnetization, domain period, anisotropy constant, wall energy, and the field strength at which microwave power is absorbed, were studied with models in which the impact of the domain structure is taken into account. Four films were measured using the vibrating sample magnetometer, electron spin resonance, and Kerr microscope methods. High Q factor films show totally different resonance and magnetization characteristics than those with a low Q, although both have strip domains for a field H=0. A minimal Q (with and without mu-effect) for which a stable perpendicular magnetization is possible, was calculated. A proof for the existence of domains owing to the mu-effect was found. A model in which the domain period can be described up to an H-value for which the domains are contracted to bubbles, was confirmed. ESA

LOCATION AND MEASUREMENT TIME PHENOMENA IN TWO DIMENSIONAL METALLIC (Nb AND Mo) FILMS Ph.D. Thesis [PHENOMENES DE LOCALISATION ET TEMPS MICROSCOPIQUES DANS LES FILMS METALLIQUES (NLCB ET MLCO) BIDIMENSIONNELS]
Samir Khanfir Dec. 1985 118 p In FRENCH Sponsored by Ecole Polytechnique
(ENST-85E014; ISSN-0751-1353; ETN-86-97635) Avail: NTIS HC A06/MF A01

Extremely thin metallic film specimens were obtained and studied. The films presented three conduction varieties: metallic conduction, weak location and strong location. The films were produced by sputtering under extremely high vacuum over a sapphire substrate. The relaxation time of the electronic gas is determined after a very short laser excitation. The electron-phonon time was measured dynamically in the superconductive state. It is shown that time is not responsible for the frequencies of inelastic collisions. The magnetic resistance of Ni shows that it is not controlled by the electron-electron interactions. ESA

OPTICAL PROPERTIES AND INTERFACES OF GaAs/GaAlAs QUANTIC SINKS Ph.D. Thesis [PROPRIETES OPTIQUES ET INTERFACES DES PUITS QUANTIQUES GLCAALCS/GLCAALCLALCS]

Marie-Helene Meynadier Dec. 1985 131 p In FRENCH
(ENST-85E012; ISSN-0751-1353; ETN-86-97633) Avail: NTIS HC A07/MF A01

Phenomena linked to the nature of the interfaces of GaA/GaAlAs quantic sinks in extremely thin layer superlattice structures are studied. The experimental analysis of photoluminescence and excitation spectroscopy was carried out using a Kr laser, a double network monochromotor, a cryostat, and optical equipment. The band discontinuities for several specimens is determined experimentally, showing that the inclusion of acceptors in the interfaces is better explained by a solubility difference than by lattice configurations. Acceptors are found in the barrier, probably due to exodiffusion phenomena. Optical relaxation phenomena are interpreted. ESA

GRAVITATIONAL CONSTANTS AND THE EFFECTIVE ACTION IN CURVED SPACES Ph.D. Thesis
Esteban Adolfo Calzetta 1985 183 p
Avail: Univ. Microfilms Order No. D8601510

Questions related to the computation of the effective action of a classical gravitational field and a system of quantized matter and radiation fields are addressed. The effective action is an extension of the classical action which incorporates quantum effects. Variation of the effective action generates the dynamics of the gravitational field and also that of the expectation values of the quantum fields. In special circumstances the effective action takes the form of the classical action but with space and time dependent constants. In particular we will consider as quantum fields first a broken SU(5) Grand Unified Theory and then a pure non abelian gauge theory in the limit of large curvature. In this second case Renormalization Group methods are used to give the limit form of the effective action in closed form. In the last section of this work (Chapter IV) a thought experiment which challenges the usual interpretation of the energy-time uncertainty relation is considered. The issues raised by this experiment are closely related to the problem of the definition of particles in dynamical space-times. Dissert. Abstr.

COMMENT ON GRAVITATIONAL ANOMALIES
Kazuo Fujikawa, Mitsuyoshi Tomiya, and Osamu Yasuda Nov. 1984 14 p
(DE86-701720; RRK-84-13a) Avail: NTIS (US Sales Only) HC A02/MF A01

It is shown by the path integral method that the general coordinate and local Lorentz anomalies satisfy certain relations between them. The physical meaning of the cancellation of those two anomalies is clarified and it is illustrated for the fields (psi, psi sub((mu)), Fsub(a)) in d = 2. We show that the use of local counter terms can be avoided if one adopts a non-linear realization of general coordinate transformations. The field representation (such as psi sub(mu)) and psi sub(a) dependence of the local Lorentz anomaly is also noted. DOE

ENTHALPY METHOD FOR THE SOLIDIFICATION OF A SUPERCOOLED LIQUID
A. D. Solomon, V. Alexiades, D. G. Wilson, G. Geist, and J. Kerper Mar. 1986 19 p
(Contract DE-AC05-84OR-21400)
(DE86-010073; ORNL-6217) Avail: NTIS HC A02/MF A01

The classical enthalpy formulation of phase change processes does not permit modeling solidification of supercooled liquids. This report describes an enthalpy-based method for simulating a freezing process involving a planar front moving into a supercooled but not hypercooled liquid. The method is applicable when the liquid is initially below its equilibrium freezing temperature, T/sub cr/, but above T/sub cr/ - H/c/sub L/. Here H and c/sub L/ are the latent heat of solidification and the specific heat of the liquid respectively. The report also discusses a computer implementation of the method in one-dimension and results of its application to a particular problem with an explicit solution. DOE

NEAR-INFRARED OBSERVATIONS OF IRAS MINISURVEY GALAXIES
David P. Carico, B. T. Soifer, J. H. Elias, K. Matthews, G. Neugebauer, and C. Beichman 1986 25 p
(NASA-CR-179707; NAS 1.26:179707) Avail: NTIS HC A02/MF A01 CSCL 03A

Near-infrared photometry was obtained for 82 galaxies from the Infrared Astronomy Satellite (IRAS) minisurvey, a sample of infrared selected galaxies. The near-infrared colors of these galaxies are similar to those of normal field spiral galaxies, but cover a larger range in J - H and H - K. There is evidence of a tighter correlation between the near and far infrared emission than exists between far-infrared and the visible emission. These results suggest that hot dust emission contributes to the 2.2 micron luminosity, and extinction by dust affects both the near-infrared colors and the visible luminosities. In addition, there is an indication that the far-infrared emission in many of the minisurvey galaxies is coming from a strong nuclear component. Author

MEMORY AND PROCESSING LIMITS IN DECISION-MAKING Final Report, Jul. 1983 - Sep. 1985
Stuart T. Klapp May 1986 47 p
(Contract F33615-83-K-0039)
(AD-A168559; AFHRL-TR-85-60) Avail: NTIS HC A03/MF A01 CSCL 05/10

According to the classical working memory perspective, tasks such as command and control decision-making should be performed less effectively if extraneous material must be retained in short-term memory. Only marginal support for this prediction was obtained for a simulation involving scheduling trucking and transportation missions (experiments 3 and 4), although robust memory loading did occur in the case of more abstract tasks (Experiments 1 and 2). This pattern of results is not consistent with the classical single system view of working memory, and suggests that working memory may have multiple subsystems. Apparently, some memory demands can be isolated from the memory system used to accomplish the trucking and transportation task. Increased understanding of the nature of working memory subsystems and of isolation of task components into separate subsystems should aid in design of command and control task environments.

(Contract W-31-109-eng-38)
(DE86-010965; ANL/TM-440) Avail: NTIS HC A04/MF A01

CostPro is a locally-developed computerized system that provides uniform planning and tracking tools for the Argonne National Laboratory. CostPro is designed to accomplish the following tasks: simplified storing of large amounts of data, high speed processing for reports, and easy interfacing to other laboratory business systems. CostPro also has the capability to transfer data among a number of personal computer-based software products. Background information on the Non-Programmatic Cost Projection System is provided. Budgeting and tracking requirements of the Laboratory's Budget Office, how the Cost Projection System meets those requirements, the additional requirements defined by the Computerized Non-Programmatic Planning Model Working Group, and how the Cost Projection System satisfies those additional requirements are described. The concepts and functions of the Cost Projection System are explained. Examples are provided of how to use the Cost Projection System to prepare the data and documents for a fiscal year budget, track actual cost against the budget and revise the fiscal year budget during the year.

ORGANIZATION AS INFORMATION PROCESSING SYSTEMS: TOWARD A MODEL OF THE RESEARCH FACTORS ASSOCIATED WITH SIGNIFICANT RESEARCH OUTCOMES
Richard L. Daft, Ricky W. Griffin, and Valerie Yates Apr. 1986 59 p
(Contract N00014-83-C-0025)
(AD-A168018; TR-DG-19-ONR) Avail: NTIS HC A04/MF A01 CSCL 05/2

Three models with the potential to explain significant organizational research outcomes were proposed and tested. Fifty-six organizational scholars were surveyed about one significant and one not-so-significant research project. The findings identified several reported factors that occurred prior to and during research projects that were related to research outcomes. The Ambidextrous model, which includes both organic and mechanistic research characteristics, differentiated significant from not-so-significant research better than the Davis and Antecedents models.

ORGANIZATIONS AS INFORMATION PROCESSING SYSTEMS: ENVIRONMENTAL CHARACTERISTICS, COMPANY PERFORMANCE AND CHIEF EXECUTIVE SCANNING, AN EMPIRICAL STUDY
Richard Daft, Juhani Sormunen, and Don Parks Apr. 1986 59 p
(Contract N00014-83-C-0025)
(AD-A168035; TR-DG-20-ONR) Avail: NTIS HC A04/MF A01 CSCL 05/2

Chief executives in fifty manufacturing companies were interviewed about the perceived strategic uncertainty in six environmental sectors, and the frequency and mode of scanning used for each sector. The findings suggest customer, economic, and competitor sectors generated greater strategic uncertainty than technological, regulatory, and socio-cultural sectors. When sector uncertainty was high, executives reported greater frequency of scanning and greater use of personnal information sources. Chief executives in high performing companies scanned more frequently and more broadly in response to strategic uncertainty than their counterparts in low performing companies.

TEXT STANDARD GENERALIZED MARKUP LANGUAGE. AUTOMATED TECHNICAL ORDER SYSTEM (ATOS)
23 May 1986 187 p
(Contract F42650-85-C-3410)
(AD-A168137) Avail: NTIS HC A09/MF A01 CSCL 05/2

A tagging scheme generally conforming to the standard Generalized Markup Language was developed to identify the data elements which direct text data formats for publications being processed through automated text processing systems. Subsequently, the tagging scheme was minimized and tailored for processing through the Automated Technical Order System (ATOS). The markup tags described herein are based on rules outlined in the Information Processing - Text and Office Systems - Standard Generalized Markup Language (SGML) Standard -ISO/DIS 8879. In addition, processing of these tags produces technical publications that conform to the format requirements detailed in various military specifications. This report discusses, in detail, each markup tag as well as provides sample input text files and composed output. SMGL outlines a metalanguage for use in document structure identification. The standard is not in itself a

tagging scheme, but rather a methodology for creating tagging schemes suited to individual applications. It was this standard which guided the creation of a tagging scheme to identify the elements in specific military documents. The tags were chosen on the basis of familiarity to the end user, based upon standard military abbreviations. The main result which: (1) brings concepts through a content analysis to determine their structure; (2) identifies them with an organized tagging scheme; (3) provides a metalanguage for tagging interpretation; and (4) govern data exchange. FREEDOM OF INFORMATION ACT: NONCOMPLIANCE WITH AFFIRMATIVE DISCLOSURE PROVISIONS
Apr. 1986 36 p
(AD-A168589; GAO/GGD-86-68) Avail: NTIS HC A03/MF A01 CSCL 05/1

To determine whether federal agencies were complying with the Freedom of Information Act's (FOIA) affirmative disclosure requirements, we interviewed officials of component organizations of the 13 cabinet-level departments and the Veterans Administration and evaluated their procedures. Our review was designed to assess compliance efforts at these organizations only, and the results can not be projected to the departments as a whole or to other organizations subject to FOIA requirements. At the 14 organizations we found that: in 13 instances, the U.S. Government organizations did not publish or keep current information on their central and field organizations; in six instances, organizations' published statements on where the public could obtain information were out of date; and one organization did not publish procedural information on its system of hearings and appeals. Officials in the 14 organizations attributed noncompliance with subsection (a)(1) to such reasons as delays in internal rules clearance processes, frequent agency reorganizations, and administrative error. Officials in some organizations also felt that publication of organization material in The United States Government Manual was sufficient compliance. In 20 instances, 60% of the organizations were not in full compliance with subsection (a)(2) requirements. Thus, these organizations did not provide members of the public the means to routinely identify and inspect all materials they might require in dealing with the organizations. GRA

INFORMATION TECHNOLOGY RESOURCES LONG-RANGE PLAN, FY 1987-FY 1991
Dec. 1985 228 p
(DE86-010457; DOE/MA-0048-4) Avail: NTIS HC A11/MF A01

The objective of this plan is to describe the information technology resources and capabilities of the Department, the future requirements, and the strategies and plans to satisfy the identified requirements. The long-range planning process provides the systematic means to meet this objective and assists the Department in assuring that information technology support is provided in an efficient, effective, and timely manner so that the programmatic missions can be accomplished. Another objective of the Plan is to promote better understanding, both within and external to the Department, of its information technology environment, requirements, problems, and recommended solutions. The Plan covers the five-year period from fiscal year 1987 through 1991. It takes into consideration the information technology resource requirements of more than 52 different Departmental components and contractors. The IS section and resource identification is limited to business and project management type applications used by Departmental components. DOE

STATE OF THE ART OF GEOSCIENCE LIBRARIES AND INFORMATION SERVICES
N. J. Pruett 1986 16 p Presented at the 3rd International Conference on Geoscience Information, Adelaide, Australia, 1 Jun., 1986
(Contract DE-AC04-76DP-00789)
(DE86-011188; SAND-86-1284C; CONF-8606122-1) Avail: NTIS HC A02/MF A01

Geoscience libraries and geoscience information services are closely related. Both are trying to meet the needs of the geoscientists for information and data. Both are also being affected by many trends: increased availability of personal computers; decreased costs of machine readable storage; increased availability of maps in digital format (Pallatto, 1986); progress in graphic displays and in developing Geographic Information System, (GIS) (Kelly and Phillips, 1986); development in artificial intelligence; and the availability of new formats (e.g., CD-ROM). Some additional factors are at work at changing the role of libraries: libraries are coming to recognize the impossibility of collecting everything and the validity of Bradford's Law. Unobtrusive studies of library reference services have pointed out that only 50% of the questions are answered correctly. It is clear that the number of databases is increasing although good figures for specifically geoscience databases are not available; lists of numeric database are beginning to appear; evaluative (as opposed to purely descriptive) reviews of available bibliographic databases are beginning to appear; more and more libraries are getting online catalogs. USERS GUIDE TO THE JPL DOPPLER GRAVITY DATABASE
P. M. Muller and W. L. Sjogren 1 Aug. 1986 36 p
(NASA-CR-179749; JPL-Pub-86-16; NAS 1.26:179749) Avail: NTIS HC A03/MF A01 CSCL 05B

Local gravity accelerations and gravimetry have been determined directly from spacecraft Doppler tracking data near the Moon and various planets by the Jet Propulsion Laboratory. Researchers in many fields have an interest in planet-wide global gravimetric mapping and its applications. Many of them use their own computers in support of their studies and would benefit from being able to directly manipulate these gravity data for inclusion in their own modeling computations. Pubication of some 150 Apollo 15 subsatellite low-altitude, high-resolution, single-orbit data sets is covered. The doppler residuals with a determination of the derivative function providing line-of-sight-gravity are both listed and plotted (on microfilm), and can be ordered in computer readable forms (tape and floppy disk). The form and format of this database as well as the methods of data reduction are explained and referenced. A skeleton computer program is provided which can be modified to support re-reductions and re-formatted presentations suitable to a wide variety of research needs undertaken on mainframe or PC class microcomputers. THE QUANTITATIVE MODELLING OF HUMAN SPATIAL HABITABILITY Final Report, Feb. - Dec. 1985
James A. Wise 1985 154 p
(Grant NAG2-346)
(NASA-CR-179716; NAS 1.26:179716) Avail: NTIS HC A08/MF A01 CSCL 05K

A model for the quantitative assessment of human spatial habitability is presented in the space station context. The visual aspect assesses how interior spaces appear to the inhabitants. This aspect concerns criteria such as sensed spaciousness and the affective (emotional) connotations of settings' appearances. The kinesthetic aspect evaluates the available space in terms of its suitability to accommodate human movement patterns, as well as the postural and anthrometric changes due to microgravity. Finally, social logic concerns how the volume and geometry of available space either affirms or contravenes established social and organizational expectations for spatial arrangements. Here, the criteria include privacy, status, social power, and proxemics (the uses of space as a medium of social communication). B.G.

ADVANCED GAS TURBINE (AGT) TECHNOLOGY DEVELOPMENT PROJECT ANNUAL REPORT Interim Progress Report, Jul. 1984 - Jun. 1985
Jul. 1986 175 p
(Contract DEN3-167)
(NASA-CR-179485; NAS 1.26:179485; DOE/NASA/0167-10; GARRETT-31-3725(10)) Avail: NTIS HC A08/MF A01 CSCL 20A

This report is the tenth in a series of Technical Summary reports for the Advanced Gas Turbine (AGT) Technology Development Project, authorized under NASA Contract DEN3-167, and sponsored by the Department of Energy (DOE). This report was prepared by Garrett Turbine Engine Company, A Division of the Garrett Corporation, and includes information provided by Ford Motor Company, the Carborundum Company, and AiResearch Casting Company. The Project is administered by Mr. Thomas N. Strom, Project Manager, NASA-Lewis Research Center, Cleveland, Ohio. This report covers plans and progress for the period July 1, 1984 through June 30, 1985. Author

UNIVERSITY FUNDING: FEDERAL FUNDING MECHANISMS IN SUPPORT OF UNIVERSITY RESEARCH
Feb. 1986 187 p
(AD-A168023; GAO/RCED-86-53) Avail: NTIS HC A09/MF A01 CSCL 05/1

The nation's universities play a vital role in advancing U.S. economic health by performing nearly half of its basic research that provides the foundation for technological progress. Federal funds support approximately two-thirds of this university-based basic research. As reported by the National Science Foundation, the federal government, in fiscal year 1984, expended approximately $5.5 billion at universities for research and development, of which approximately $4 billion was for basic research. The federal government transfer funds to universities and colleges through various funding mechanisms support both research and the infrastructure of research (major equipment and facilities, special training needs, and institutional support). A funding mechanism is a category of federal financial support or scientific research performed at and by U.S. universities. With the last decade concern has grown that the current array of funding mechanisms may not adequately provide for the continuity and stability of research, the modernized equipment, and the human resourcs needed to maintain the vital role the universities play in the nation's research effort. This report provides information on federal funding of university research by presenting the array of funding mechanisms used by Federal agencies in funding such research. GRA

ELECTRIC AND HYBRID VEHICLES PROGRAM: REPORT TO THE CONGRESS Annual Report, fiscal year 1985
Mar. 1986 37 p
(DE86-009607; DOE/CE-0146; AR-9) Avail: NTIS HC A03/MF A01

The ninth annual report on the implementation of the Electric and Hybrid Vehicle Research, Development and Demonstration Act of 1976 (Public Law 94-413, as amended by Public Law 95-238, and Public Law 96-185) referred to as the Act, complies with the reporting requirements established in Section 14 of the Act. In addition to informing Congress of the progress and plans of the Department of Energy Electric and Hybrid Vehicles Program, this report is intended to serve as a communication link between the Department and all of the public and private interests involved in making the program a success. During FY 1985, significant progress was made toward fulfilling the intent of the Congress in the Act. There has been continuing interest shown by both the automobile manufacturing and supply sectors of our economy in electric and hybrid vehicles. Research and development efforts in batteries and propulsion components continue to achieve significant progress in providing industry with technology options that will result in vehicles that will be more economically competitive and more acceptable.

ISOTOPIC RATIOS IN THE SOLAR SYSTEM
1985 304 p Partly in ENGLISH and FRENCH Conference held in Paris, France, 19-22 Jun. 1984
(ISBN-2-85428-133-0; ISSN-0766-1002; ETN-86-97642) Copyright. Avail: CEPADUES, Toulouse, France

The complementarity of isotopic ratio measurements made in situ by space means or in laboratories using meteorites, Moon samples, or interplanetary dust, or else based on the analysis of spectra emitted by the giant planets and comets was discussed. The implications of the results for the formation of planets from the primary solar nebula, and for Universe formation according to the Big Bang theory, were considered. For individual titles, see N86-33217 through N86-33245.

EXPOSURE AGES OF IRON METEORITES: COMPLEX HISTORIES AND THE CONSTANCY OF GALACTIC COSMIC RAYS **c93**
B. Lavielle, K. Marti, and S. Regnier *In* CNES Isotopic Ratios in the Solar System 1985 p 15-20 In FRENCH; ENGLISH summary (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

Starting from a compilation of measured cosmogenic He, Ne, Ar, and K isotopes in iron meteorites, an exposure age T38 is defined. This age is found useful to study the exposure history of iron meteorites in terms of complex history, age distribution versus time and group, and galactic cosmic ray constancy or not. Exposure ages of less than 200 million yr can be determined.

ISOTOPES PRODUCED BY GALACTIC COSMIC RAYS IN IRON METEORITES **c90**
J. L. Birck and C. J. Allegre *In* CNES Isotopic Ratios in the Solar System 1985 p 21-25 (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

The elements Li, Mg, K, Ca, Ti, V, and Cr were investigated in the iron meteorites Grant and Carbo. Their isotopic ratios show clearly the effects of spallation by galactic cosmic rays. The experimental technique can determine the concentration of spallation products with a precision close to 1 per mil for a number of isotopes. The effects of shielding are clearly shown in the calcium data and the exposure ages are calculated by using the K40 measurements.

ON THE PRODUCTION RATE OF Ne-21 IN ORDINARY CHONDRITES **c90**
Ludolf Schultz and Manfred Freundel *In* CNES Isotopic Ratios in the Solar System 1985 p 27-33 (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

Four eucrites were analyzed for cosmogenic Ar and Kr. From their Kr81 exposure ages, production rates of Ar38 and Ne21 in this group of achondrites were determined as P (38) E = (0.139 +or- 0.005) x 10 to the minus 8th power ccSTP/gMa, and P (21) E = (0.185 +or- 0.013) x 10 to the minus 8th power ccSTP/gMa, respectively. Taking into account differences in chemical composition between eucrites and ordinary chondrites, the production rate of Ne21 in L-group chondrites is P (21) L = (0.32 +or- 0.04) x 10 to the minus 8th power ccSTP/gMa. This value agrees with published production rates deduced from other cosmogenic radionuclides except Al26.

LONG-LIVED ISOTOPES AS INDICATORS OF THE NATURE OF THE CRETACEOUS-TERTIARY EVENT: EXPERIMENTAL RESULTS ON THE URANIUM ISOTOPIC COMPOSITION **c90**
R. Rocchia, D. Boclet, Ph. Bonte, Ph. Holliger, and C. Jehanno *In* CNES Isotopic Ratios in the Solar System 1985 p 35-42 (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

The encounter of the solar system with one of the dense interstellar clouds which populate galactic arms, and the accretion by the Earth of interstellar dust, during the Cretaceous-Tertiary (K-T) event is discussed. The presence of interstellar matter, a significant fraction of which was synthetized after the birth of the solar system, could be identified by a rather high concentration of long lived isotopes, in particular Pu244, U235, and Re187. It is shown that the absence of anomalies on Pu and U is not conclusive and that the hypothesis of a nonsolar origin for the K-T event cannot be rejected.

EXTREME MAGNESIUM ISOTOPE FRACTIONATION IN THE LEOVILLE METEORITE **c90**
J. C. Lorin and A. Havette (Paris II Univ., Orsay (France).) *In* CNES Isotopic Ratios in the Solar System 1985 p 43-69 (For primary document see N86-33216 24-88)
(Grant INAG-47-84)
Avail: CEPADUES, Toulouse, France

The fine-scale composition of magnesium in an inclusion from

the Leoville (CV3) meteorite was studied. Results show that magnesium in spinels is heavier than terrestrial by 8 per mil per amu; that Mg26 excesses are found in anorthite; and that these excesses are inversely correlated to magnesium concentration. No Mg26 excesses are found in the soda-rich phase(s), suggesting formation of these phases at least 3 Myr after anorthite. Extreme mass-dependent isotope fractionation is observed in a few areas of magnesium-poor phases, indicating the presence of two closely associated components, one very heavy and the other very light. These components may be carried by grains or aggregates not yet identified, either early condensates or presolar grains. Another possibility is that this pattern was established by condensation in the solar nebula. ESA

IMPLICATIONS OF Ti ISOTOPIC ANOMALIES IN METEORITES **c90**
S. Niemeyer and G. W. Lugmair *In* CNES Isotopic Ratios in the Solar System 1985 p 71-75 (For primary document see N86-33216 24-88)
(Contract DOE-W-7405-Eng-48)
Avail: CEPADUES, Toulouse, France

Observations of Ti isotopic anomalies in Allende inclusions, matrix separates of C2 chondrites, and a bulk sample of a C1 chondrite are reviewed. Results place Ti alongside oxygen as the only known non-noble gas elements which show widespread nuclear isotopic anomalies. At least four distinct isotopic components of Ti are required to account for the observed isotopic variations. The Ti data cannot be plausibly explained in terms of an early solar-system particle irradiation. It is suggested that the Ti anomalies are linked to a diversity of stellar nucleosynthetic sources for Ti isotopes and the refractory behavior of Ti. Therefore a chemical memory from the interstellar medium, rather than late-stage supernova injection, is most likely responsible for the preservation of observed isotopic heterogeneities. ESA

SHORT-LIVED NUCLIDES IN THE EARLY SOLAR SYSTEM AND GENERAL ISOTOPIC ANOMALIES IN METEORITES **c90**
D. A. Papanastassiou *In* CNES Isotopic Ratios in the Solar System 1985 p 77-88 Sponsored by NASA and NSF (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

Evidence for short-lived nuclides in the early solar system is reviewed. The presence of these nuclides requires the addition to the interstellar medium, from which the solar system formed, of freshly synthesized materials just prior to the formation of the solar system. The best evidence is obtained for Al26. The time scale implied by the Al26 effects is equated with the free-fall time for the collapse of the protosolar cloud. From the observation of ratios of short-lived parent to stable isotopes for nuclides with different half-lives, it is apparent that addition of exotic material to the solar system occurred just prior to its formation. Evidence for a diffuse galactic gamma-ray line emission attributed to Al26 provides support for the existence of Al26 in the protosolar cloud. The time scale for isolation of the protosolar cloud would still be restricted on a timescale comparable to tau 1/2 (Al26). ESA

ISOTOPE ABUNDANCE MEASUREMENTS OF CARBON, NITROGEN AND HYDROGEN IN METEORITES **c90**
I. P. Wright and C. T. Pillinger *In* CNES Isotopic Ratios in the Solar System 1985 p 89-94 (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

It is argued that by making light element stable isotope measurements of meteorite fractions, distinctive isotopic signatures frozen-in at some point in the meteorite's history can be found, giving valuable information on the evolution of the solar system. There are vestiges of deuterium-enriched interstellar molecules within the bulk of the organic fractions from C1, C2 and unequilibrated ordinary chondrites. If these isotopically anomalous compounds were admixed with relatively homogenous solar system materials at a late stage in the solar nebula then by default presolar carbon and nitrogen must also survive. The nitrogen in primitive meteorites exhibits large variations in isotopic composition and this may reflect something of the variability of the precursor materials. The carbon isotopic compositions, however, seem relatively uniform implying that presolar carbon had a similar 12C/13C ratio to that of the bulk of the solar system material. Noble gases suggest a variety of origins, including red giant stars and supernovae. ESA

N86-33225 Open Univ., Milton (England). Dept. of Earth Sciences.
THE DISTRIBUTION AND ISOTOPIC COMPOSITION OF GRAPHITE CARBON IN THE EARLY SOLAR SYSTEM **c90**
M. M. Grady and C. T. Pillinger *In* CNES Isotopic Ratios in the Solar System 1985 p 95-105 (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

Isotopic data from graphitic carbon in the early solar system is summarized. There is a greater spread in values of delta C13 for graphite from the oxidized meteorites (ordinary chondrites) than in the reduced specimens (enstatite chondrites and irons). This is presumably a reflection of different production mechanisms and formation localities of the graphite; ordinary chondrites and ureilites, along with interplanetary dust particles, exhibit characteristics of formation via the catalytic decomposition of CO gas, whereas graphite in enstatite chondrites and irons appears more likely to be exsolved from carbon-rich Fe-Ni metal. The isotopic composition of carbon in the ureilites is close to that of the reduced meteorite classes, possibly indicating that the ureilites were accreted in a locality nearer to that where the highly reduced specimens formed than the ordinary chondrites. ESA

N86-33226 Vrije Universiteit, Brussels (Belgium). Dept. de Chimie Organique.
THE C12/C13 ISOTOPIC EFFECT IN CARBONACEOUS CHONDRITES: SIZE AND IMPORTANCE OF THE MAGNETIC ISOTOPE EFFECT **c90**
J. Reisse and F. Mullie *In* CNES Isotopic Ratios in the Solar System 1985 p 107-116 In FRENCH; ENGLISH summary (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

Variations in the C12/C13 isotopic ratios measured for chondritic organic molecules or chondritic samples are discusssed. The broad variations are traditionally explained by taking into account either the difference in mass between the two isotopes or the isotopic inhomogeneities of the protosolar nebula. It is shown that a magnetic isotope effect associated with the difference between the nuclear magnetic moments of different nuclei must also be taken into account because this magnetic effect may, under certain circumstances, be much larger than the massic isotope effect, and indeed may be as large as the effects traditionally interpreted in terms of protosolar nebula inhomogeneities. ESA

NOBLE GAS ANOMALIES IN METEORITIC AND LUNAR SAMPLES AND THEIR CHRONOLOGICAL INTERPRETATION **c91**
O. Eugster *In* CNES Isotopic Ratios in the Solar System 1985 p 117-128 Sponsored by Swiss National Science Foundation (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

The time scales stored in the isotopic signatures of the noble gases in extraterrestrial matter are discussed. It is shown that neon greatly enriched in Ne22(Ne-E) could form in stars from the decay of Na22. If Ne-E found in meteorites originates from in situ decay of Na22 it might be possible to use Ne-E as a chronometer for the formation time of its carrier grains. Based on Xe129 and fission Xe from the decay of extinct I129 and Pu244, respectively, a temporal framework for the formation and earliest evolution of planetary bodies could be established. Absolute formation ages were obtained from the K40-Ar40 dating scheme and from the

Ar39-Ar40 method applied to date the gas retention ages of meteorites and to define the time scales of rock formation on the Moon. The history of meteoritic and lunar matter after its formation can be unraveled in terms of shielding and duration of exposure to galactic cosmic rays. This permits determination of the time which a meteorite travelled in free space and to derive the formation time of lunar surface features such as meteorite impact craters on the Moon.

TRAPPED NEON IN UREILITES: A NEW COMPONENT c90
U. Ott, H. P. Loehr, and F. Begemann *In* CNES Isotopic Ratios in the Solar System 1985 p 129-136 (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

Noble gases in five ureilites were analyzed by conventional noble gas mass spectrometry and, in one case, by closed-system combustion mass spectrometry of an acid-resistant residue. From analyses of the Hajmah ureilite a composition for trapped neon of Ne20/Ne22 = 10.4 +or- 0.3 is derived. This differs from all other known components of trapped neon. Its composition is compatible both with being fractionated solar Ne and being a mixture of solar Ne and Ne-E. The associated He has an He3/He4 ratio within the range of other trapped He compositions. Closed-system combustion data demonstrate the presence of an easily combustible fraction with low Ar36/Xe132 ratio, in accordance with the existence of a second gas component in addition to that residing in diamonds. Attempts to characterize this phase in the Nilpena ureilite reported to be diamond-free met with little success, because diamonds are present.

THE ISOTOPIC COMPOSITION OF NEON EMITTED IN SOLAR FLARES AND TRAPPED IN LUNAR SOIL MINERALS c92
Rainer Wieler, Heinrich Baur, and Peter Signer *In* CNES Isotopic Ratios in the Solar System 1985 p 137-146 (For primary document see N86-33216 24-88)
(Grant SNSF-2.443.-0.82)
Avail: CEPADUES, Toulouse, France

Closed system etching of lunar soil samples and stepwise mass spectrometric analysis of the He, Ne, and Ar released was developed. This noble gas release technique prevents isotopic and elemental fractionation occurring in stepwise heating. Measurements on one pyroxene and two plagioclase separates reveal the presence of trapped noble gases emitted during solar flares (SEP Ne) besides the solar wind, confirming earlier indications for such a component. Solar wind Ne and SEP Ne are isotopically different. The best estimate for the composition of SEP Ne is: Ne20/Ne22 = 11.1 +or- 0.2; Ne21/Ne22 less than or = 0.029. The Ne20/Ne22 ratio is within error limits equal to Ne-C found in meteorites but agrees at best marginally with the respective value measured by satellite borne instruments. The SEP Ne in lunar soils is not identical with planetary Ne. Only weak evidence that SEP Ar may be isotopically different from solar wind Ar is found.

ON THE XENON IN ACID-RESISTANT RESIDUES OF THE EFREMOVKA CV AND ALLENDE CV CHONDRITES c90
A. V. Fisenko, D. VuMinh, L. F. Semjonova, A. K. Lavrukhina, and Ju. A. Shukolyukov *In* CNES Isotopic Ratios in the Solar System 1985 p 147-154 (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

The analysis of Xe isotopic composition was carried out in Hfm HCl-insoluble residues before and after etching with NaOH-H2O2, HNO3, H3PO4, HCLO4, H3PO4 + H2SO4 + HClO4 of the CV chondrite Efremovka. Maximum values of the ratios Xe136/Xe130 and Xe124/Xe130 were measured for residues after etching with mixture H3PO4 + H2SO4 + HClO4. Based on Xe data in different acid resistant residues of the Efremovka CV and Allende CV chondrites excesses for iXe isotopes (i = 129, 131, 132, 136) relative to Xe solar were calculated. The analysis of excesses shows that in Xe-X component the excesses 129, 131, 132Xe isotopes are due to two or more Xe components which must be strongly interrelated, while Xe136, Xe134 excesses are due to another Xe component not connected with previous components.

THE Ar36/Ar38 RATIOS IN SELECTED METEORITES c90
A. Burghele *In* CNES Isotopic Ratios in the Solar System 1985 p 155-161 (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

Three eucrites (Sioux County, Stannern, Yamato 74450); 2 diogenites (Yamato 74013, Johnstown); 1 howardite (Yamato 7308); 1 4A-iron meteorite with abnormal structure (Steinbach); 1 LL6-amphoterite (St. Severin) and 1 L4-Olivine-Hypersthene-Chondrite (Bjurbole) were analyzed using the Ar36/Ar38 ratios. Measured ratios are in good agreement with those theoretically calculated by Hohenberg et al (1978) for Moon material. For all the temperature steps of the separated feldspar of Bjurbole, these ratios have values around 1. The same value of 1 is obtained at the lower temperature steps for meteorites like Steinbach, St. Severin, Yamato 74013, and Johnstown, where the degassing of at least 2 distinct mineral phases can be obseved. Values of 0.65 are obtained for these meteorites at higher temperature steps. For the calcium-rich eucrites: Sioux County, Stannern, and Yamato 74450, the Ar ratios are 0.68 at practically all temperature steps. The degassing patterns of these meteorites show no differentiation between calcium-rich and calcium-poor mineral components. The same is valid for Yamato 7308: a value of 0.80 is obtained for almost all temperature steps.

ORIGIN OF NEON-E c90
S. Ramadurai and O. K. Manuel *In* CNES Isotopic Ratios in the Solar System 1985 p 167-170 (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

The experimental data on the Orgueil meteorite of Eberhardt et al. (1981) is reanalyzed to delineate the various components of neon isotopes and their correlation with other elements and isotopes. The results indicate that there is a good correlation of Ne22 with trapped Ar in high density samples. This correlation indicates the presence of an Ne22-free component of neon. The possibility of mass fractionation is suggested for an earlier experiment on diffusion through a membrane of Vycor.

ISOTOPIC RATIOS IN COMETS c90
Therese Encrenaz *In* CNES Isotopic Ratios in the Solar System 1985 p 173-180 (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

The use of isotopic ratios in comets to study solar system history is discussed. The only isotopic ratio measured in comets is the C12/C13 ratio, derived from the (1-0) C2 bands in the visible range. Results were obtained for 5 comets; although the error bars are large, there may be an indication for a C12 enrichment relative to the mean solar system value. If this effect is real, a possible explanation is a fractionation process in the gaseous phase before the accretion in the cometary nucleus. As the reaction is very temperature dependent, this effect could be a powerful test for determining the temperature of the formation medium. For D/H, several fractionation processes could lead to a strong deuterium enrichment. Knowledge of cometary isotopic ratios should improve significantly with measurements of the Vega and Giotto neutral mass spectrometers during the Halley flyby missions. Estimates of D/H on bright comets are feasible with the Space Telescope.

ISOTOPIC RATIOS IN GIANT PLANETS c90
Daniel Gautier *In* CNES Isotopic Ratios in the Solar System 1985

p 181-190 (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

The accuracy of spectrometric measurements of isotopic ratios in giant planets, and implications on the formation of giant planets are discussed. Derivations of D/H in Jupiter and Saturn form CH3D conflict with derivations from HD. Uncertainties in the interpretation come from the difficulty in estimating the fractionation factor between CH3D and CH4, and from scattering effects in the radiative transfer within HD and H2 absorption lines. However, deuterium abundance in the primordial solar nebula 4.6 billion yr ago can be estimated. Data suggest that D/H is enhanced in Uranus compared to Jupiter and Saturn, in agreement with a scenario of inhomogeneous formation of giant planets. The C12/C13 value in Jupiter from Voyager measurements suggests a value significantly higher than the terrestrial value, but conflicts with the value derived from ground based measurements, which agrees with the terrestrial value. The N14/N15 value is compatible with the terrestrial value. ESA

GRAVITATIONAL SETTLING IN THE JOVIAN ATMOSPHERE **c91**
Georges Michaud, Daniel Gautier (Observatoire de Paris-Meudon (France).), and Hubert Reeves (Commissariat a l'Energie Atomique, Saclay (France).) *In* CNES Isotopic Ratios in the Solar System 1985 p 191-194 (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

It would appear very unlikely that chemical separation by gravitational settling affected the helium in Jupiter. The line forming region, relevant to the observations, is centered around P = 300 mb while the convective zone is believed to start around P = 1b downward. To obtain a depletion of 20% in He requires Y (0.3b) x 0.9. It is expected that CH4 and NH3 be reduced by a factor of 2.5 while PH3 should be down by a factor of 5. There is no evidence for such molecular depletions at high altitude. At 1 mb, carbon (in CH4) is twice solar, leading to a discrepancy of a factor of 5 between the observations and the expectation of the model. Nitrogen and phosphorus are reported to be solar at 1 bar. It is concluded that Y (0.3b) greater than 0.9, equivalent to DT > or = 30/sqcm/sec. For the carbon isotopic ratio, to account for a factor 2 between the level at P = 1mb and P = 1mb requires Y = 0.16, implying a reduction of a factor of 10 in the He/H2 ratio and of greater than 1000 in the CH4/H2 ratio. ESA

THE D/H RATIO IN SATURN'S ATMOSPHERE FROM VOYAGER IRIS SPECTRA **c91**
R. Courtin (Observatoire de Paris-Meudon (France).), D. Gautier, A. Marten, B. Bezard, and R. Hanel *In* CNES Isotopic Ratios in the Solar System 1985 p 201-204 (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

A selection of 1656 spectra recorded between 180 and 2300 mm in the 20 to 40 N latitude range by the Voyager interferometer IRIS were analyzed. The CH3D/H2 and CH4/H2 ratios are determined from a best fit of the radiances measured in the nu6 and nu4 fundamental bands, respectively centered at 1161 and 1304 mm. Results are CH3D/H2 = 3.9 + or - 2.5 times 10 to the minus 7th power and CH4/H2 = 4.5 + 2.4, -1.9 x 0.001. The uncertainty includes random errors due to instrumental noise and possible systematic errors in the assumed temperature profile and spectroscopic parameters. The D/H isotopic ratio is determined from abundance ratios from the expression D/H = 1/4f (CH3D/H2)/(CH4/H2) where f accounts for equilibrium deuterium fractionation between the molecular hydrogen and methane phases. Beer and Taylor (1973, 1978) estimated f = 1.37 + or - 0.07 for Jupiter assuming a wide range of convective velocities and neglecting catalytic effects from dust particles. The same value was adopted for Saturn and yields D/H = 1.6 +1.3, -1.2 times 10 to the minus 5th power. ESA

THE N14/N15 RATIO IN THE ATMOSPHERE OF JUPITER **c91**
Pierre Drossart, Therese Encrenaz, and Michel Combes *In* CNES Isotopic Ratios in the Solar System 1985 p 205-212 In FRENCH; ENGLISH summary (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

Infrared spectra of Jupiter recorded at the European Southern Observatory are discussed. They show evidence of 15NH3 lines; compared with synthetic spectra, other jovian spectra published by Tokunaga et al (1979 and 1980) and IRIS Voyager spectra, the value of the N14/N15 ratio = 270, is close to the solar value. Interpretation problems coming from the absorption by an ammonia cloud on Jupiter with a variable depth, and from the variability of the jovian atmospheric parameters, which are spatially averaged by each Earth recorded spectrum, are emphasized. ESA

ION COMPOSITION IN THE SOLAR WIND IN RELATION TO SOLAR ABUNDANCES **c92**
Johannes Geiss and Peter Bochsler *In* CNES Isotopic Ratios in the Solar System 1985 p 213-228 Sponsored by Swiss National Foundation (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

Processes affecting the composition of the solar wind are reviewed. A process operating in or directly above the chromosphere has to be invoked to explain the observed dependency on the first ionization potential of corona, solar energetic particle, and solar wind abundances relative to the photospheric composition. The critical velocity process, that would lead to this type of element fractionation, was proposed by Alfven (1960). The possibility of explaining the evidence by a diffusive ion-atom separation process in a solar plasma under non-LTE condition is discussed. Element and isotope abundance measurements in the solar wind are summarized. ESA

METEORITES AND COMETS: A STUDY IN RELATION TO C12/C13 RATIOS **c90**
S. Ramadurai and K. S. KrishnaSwamy *In* CNES Isotopic Ratios in the Solar System 1985 p 229-232 (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

Evidence in meteoritic inclusions for an enrichment of C13 is compared with results of the line profile analysis of the high resolution (0-0) Swan band observations by Lambert and Danks (1983). Results for Comet West indicate a ratio of C12/C13 = 50. It is concluded that the close agreement of this ratio with the ratio of carbon associated with S process xenon indicates a common origin for both. ESA

SOLAR ISOTOPIC RATIOS, CHEMICAL EVOLUTION OF GALAXIES AND COSMOLOGY **c90**
Jean Audouze *In* CNES Isotopic Ratios in the Solar System 1985 p 235-249 (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

Use of solar isotopic ratios as tools in building up models of chemical evolution of galaxies is discussed. The relevance of these models (in which the evolution of D, He3 and He4 is analyzed) concerns the primordial nucleosynthesis: standard Big Bang nucleosynthesis constraining the baryon density and the number of neutrino flavors works only in a quite restricted set of models of galactic evolution. Infall or inflow of external material are necessary to provide a consistent picture between the standard Big Bang nucleosynthesis and the solar isotopic ratios. Results allowing a comparison between stellar and solar Mg ratios are presented. ESA

THE INTERSTELLAR LITHIUM ABUNDANCE AND THE LI6/LI RATIO **c90**
R. Ferlat and M. Dennefeld *In* CNES Isotopic Ratios in the Solar System 1985 p 251-255 In FRENCH; ENGLISH summary (For

primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

The lambda 6708 doublet of interstellar Li I was observed at high spectral resolution (3 km/sec) and very good signal to noise ratio (4000) towards delta Sco and zeta Oph. Using a profile fitting method, an Li71Li6 ratio of 38 for a diffuse cloud in front of zeta Oph is derived. Even the lower limit of the error bar (25) is incompatible with the ratio measured in meteorites and is not explained by models of galactic evolution. The existence of a local inhomogeneity is suggested. As for other alkalis, lithium is depleted onto dust grains in the diffuse interstellar medium. ESA

N86-33242 National Observatory, Rio de Janeiro (Brazil).
METAL ENRICHMENT OF STARS IN THE ORION COMPLEX AND ITS RELATION WITH THE FORMATION OF THE SOLAR SYSTEM: PRELIMINARY RESULTS **c90**
Katia Cunha and Ramiro delaReza *In* CNES Isotopic Ratios in the Solar System 1985 p 257-265 (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

The possibility of the formation of the solar system in an OB association similar to those existing in the Orion Complex is considered. Metal enrichment by supernova contamination, in the gas forming successive young stars in Orion OB associations, is examined. Ultraviolet high resolution resonance lines of Al III, and subordinate lines of Mg II were measured. These lines correspond to OB stars belonging to associations of different ages in Orion. Abundance results indicate a positive enrichment in stellar photosphere with time. ESA

N86-33243 Institut d'Astrophysique, Paris (France).
THERMAL NUCLEAR DESTRUCTION OF LITHIUM, BERYLLIUM AND BORON INSIDE A 1 SOLAR MASS STAR **c90**
Pascale Delbourgo-Salvador, Guy Malinie, and Jean Audouze *In* CNES Isotopic Ratios in the Solar System 1985 p 267-272 In FRENCH; ENGLISH summary (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

The destruction rates of lithium, beryllium and boron inside a 1 solar mass star are calculated using nuclear reaction rates updated by Harris et al (1983). The isotopic and elemental composition of the material ejected by the star inside the interstellar medium at the end of its life is determined, in order to evaluate its influence on the galactic evolution of the ratios Li7/Li6, B11/B10, and Li/B. The isotopic ratio B11/B10 is not influenced by stellar nucleosynthesis, these two elements are destroyed in the same proportions. The Li6 is completly destroyed in stars, so the interstellar medium is depleted in this element. The elemental ratio Li/B is affected because boron is less destroyed than lithium in this star. Stellar evolution decreases this ratio. ESA

ELEMENT AND ISOTOPE FRACTIONATION IN PREPLANETARY NEBULA **c90**
G. E. Morfill *In* CNES Isotopic Ratios in the Solar System 1985 p 295-302 (For primary document see N86-33216 24-88)
Avail: CEPADUES, Toulouse, France

Theoretical work on chemical and isotopic fractionation in the solar system is reviewed. A possible evolutionary stage of the presolar cloud is that of a turbulent accretion disk which is continuously fed from a surrounding envelope, contains dust and gas, is hot in the center (a few 1000 K) and the temperature decreases with distance from the rotation axis. Dust particles initially contain an admixture of chemical components, from volatile ices to refractory oxides. Transport within the disk leads to a systematic spatial chemical fractionation by selective sublimation and condensation of the various components in different regions. Physicochemical processes, which in general are mass-dependent, lead to a spatial isotope fractionation. It is possible that these macroscopic structures imprinted on the presolar cloud may be preserved in solid solar system matter today. The consequences of the theory are compared with measurements in the solar system. ESA

INITIAL DATA FOR BLACK HOLE COLLISIONS **Ph.D. Thesis**
Joel David Rauber 1985 143 p
Avail: Univ. Microfilms Order No. DA8527224

A problem of considerable interest in relativistic astrophysics is to determine the gravitational radiation produced by collisions of compact objects, such as black holes. Such collisions may occur, for example, in the nuclei of galaxies. This problem requires that one solve the Einstein equation without limiting approximations,

for example, as a Cauchy problem. Therefore, one must first construct the initial data. The extrinsic curvature on an initial spacelike hypersurface of two black holes with asisymmetric parallel spins is derived in terms of an analytic infinite series. Other two body configurations are also considered. The extrinsic curvature is constructed so that the resulting spacetime will have the topology of two Einstein-Rosen bridges; a physical equivalence of the top and bottom sheets of the initial hypersurface is also built in. It is shown that one may a priori specify the spins of the two black holes. The extrinsic curvature, so constructed, is not derivable from a potential. An appropriate numerical problem for the conformal factor is posed and examined in the above configurations. Efforts at using multi-grid differencing schemes for solving the differential equations are discussed. In order to time evolve ablack hole interaction or collision, the extrinsic curvature and conformal factor must be completely specified on an initial slice of spacetime. Dissert. Abstr.

THE EVOLUTION OF PLANETARY NEBULA NUCLEI (PNN) Ph.D. Thesis
Richard Allen Shaw 1985 154 p
Avail: Univ. Microfilms Order No. DA8600311

The evolution of planetary nebula nuclei (PNNs) is examined with the aid of the most recent available stellar evolution calculations and new observations of these objects. Their expected distribution in the log L-log T plane is calculated. The distribution is found to be insensitive both to the assumed range of main-sequence progenitor mass and to reasonable variations in the age and the star forming history of the galactic disk. Rather the distribution is determined by the strong dependence of the rate of stellar evolution upon core mass, the steepness of the initial mass function, and to a lesser extent the finite lifetime of an observable planetary nebula. An extensive photometric and smaller photographic survey of southern hemisphere planetary nebulae (PNs) is presented. Seven new PNs were discovered in or near Baade's Window, and total fluxes in several nebular lines, relative to H beta, are presented for 134 southern PNs. New B and/or V magnitudes for the nuclei of 117 PNs are presented, and are combined with 54 magnitudes (as well as limits for ten others) from absolute photometry of northern PNNs. A superior method of extracting stellar continuum fluxes from a bright nebular background is developed. The continuum measurements are compared with the widely circulated list of preliminary central star magnitudes by Shao and Litter, which are shown to suffer frequently from severe contamination from the nebular continuum.

THE QUANTUM ERGOSPHERE AND DYNAMICAL TEMPERATURE OF THE REISSNER-NORDSTROM BLACK HOLE Ph.D. Thesis
Billy Ray Smith, Jr. 1985 84 p
Avail: Univ. Microfilms Order No. DA8527323

The techniques pioneered by York (1983) are used to calculate the mass of the quantum ergosphere and the dynamical temperature for the Reissner-Nordstrom black hole. York found that for uncharged black holes, the dynamical temperature and the Hawking temperature agreed within two per cent. The researcher found that the dynamical temperature and Hawking temperature continue to agree for charged black holes, provided that the charge-to-mass ratio is small. From the work of Carter (1974) and Gibbons (1975), the researcher knew that Reissner-Nordstrom black holes will quickly discharge, so that only black holes with a very small charge-to-mass ratio need be examined. Dissert. Abstr.

Q-NUCLEOSYNTHESIS: IMPLICATIONS FOR STELLAR EVOLUTION Ph.D. Thesis
Craig Leslie Joseph 1985 186 p
Avail: Univ. Microfilms Order No. DA8518969

The effects on stellar burning of anomalous nuclei (Q-nuclei) containing an extra embedded quark were investigated using a modified version of the Paczynski stellar evolution code. A series of solar models were constructed for a range in Q-nuclear abundance and the results were compared with the predictions of the standard solar model and observed solar parameters. In an attempt to ascertain whether or not the abundance of Q-nuclei suggested by solar model calculations is compatible with the observed properties of main sequence stars, zero age main sequence models were constructed with and without Q-nuclear burning. The published observations of the Pleiades was compared with the predicted location of the Q-nuclear burning main sequence. Dissert. Abstr.

PROBING THE LARGE-SCALE STRUCTURE OF THE UNIVERSE: AN ANALYSIS OF 55 BRIGHT SOUTHERN CLUSTERS OF GALAXIES Ph. D. Thesis
Ronald Paul Olowin 1985 562 p
Avail: Univ. Microfilms Order No. DA8603517

Presented is the description of 55 bright close (z less than or equal to 0.1) clusters of galaxies as a homogeneous sample taken from a new effort to catalog galaxy clusters in the Southern Hemisphere. The positions of some 21,000 galaxies in clusters have been catalogued along with visual magnitudes, morphological types, position angles of extended objects and pertinent remarks. For all of the clusters, various cluster parameters have been determined and form the basis of comparative studies for these fundamental aggregates of matter in the universe. The aims of this study are to produce a homogeneous sample of galaxy clusters measured to a uniform limiting magnitude m sub v = 19.0 by means of a calibrated stepscale; catalogued with accurate positions relative to nearby astrometric standard stars; morphologically classified and population typed; and statistically analyzed in a uniform fashion to deduce certain cluster parameters. The cluster parameters of interest include an estimate of cluster distance, cluster center and cluster richness, galaxy distributions as a function of morphological type, magnitude distribution and core radius as determined by an isothermal gas sphere model. Dissert. Abstr.

ON THE SOURCE OF THE VIOLET DEPRESSION IN CARBON STARS (A STUDY OF THE BALMER DECREMENT IN CARBON L. P. V.S) Ph. D. Thesis
Maria-Antonietta Orlati 1985 71 p
Avail: Univ. Microfilms Order No. DA8601957

In an effort to determine the nature of the agent(s) of the violet depression in N type stars through the behaviour of their Balmer decrement, slit spectrograms of two C, one CS, two S(all reported to have the violet depression) and one M type L.P.V.s were repeatedly taken between May 1983 and November 1984. The observed phase related changes in the Balmer decrement exclude the possibility that the absorbers are circumstellar because the emission region in the best-observed star is seen to rise through the opacity source. The exact nature and number of kinds of absorbers remains to be determined. Dissert. Abstr.

MULTIPLE IMAGES OF OUR GALAXY IN CLOSED, MULTIPLY CONNECTED COSMOLOGIES
H. V. Fagundes 1985 3 p
(DE86-701777; IFT-P-14/85) Avail: NTIS (US Sales Only) HC A02/MF A01

Friedmanian cosmology with multiply connected spatial sections allows multiple images of cosmic sources, in particular of the galaxy itself. This is illustrated with a specific example of a closed hyperbolic model and a brief mention of a spherical model. Such images may eventually become observable (or recognized as such), thus providing a new test of relativistic cosmology. DOE

ANALYSIS OF TOPOGRAPHY AND IMPLICATIONS FOR THE TECTONIC EVOLUTION OF THE MOON AND VENUS. PART 1: LUNAR SUBSTRUCTURE, MARE RIDGES AND THE TECTONIC EVOLUTION OF MARE BASINS. PART 2: A COMPARISON OF THE REGIONAL SLOPE CHARACTERISTICS OF VENUS AND EARTH Ph.D. Thesis
Virgil LeRoy Sharpton 1985 187 p
Avail: Univ. Microfilms Order No. DA8519903

Subsurface information gathered by the Apollo Lunar Sounder Experiment was combined with surface observations to examine the stratigraphy and tectonic evolution of a typical lunar mare basin, Mare Serenitatis, and to assess the origin and implications of lunar mare ridges. The regional slope characteristics of Venus and Earth were assessed and compared. Dissert. Abstr.

LABORATORY EVALUATION AND APPLICATION OF MICROWAVE ABSORPTION PROPERTIES UNDER SIMULATED CONDITIONS FOR PLANETARY ATMOSPHERES Annual Status Report, 1 Feb. 1986 - 31 Jan. 1987
Paul G. Steffes 1986 64 p
(Grant NAGw-533)
(NASA-CR-179713; NAS 1.26:179713; SASR-6) Avail: NTIS HC A04/MF A01 CSCL 03B

After long arduous work with the simulator, measurements of the refractivity and absorptivity of nitrogen under conditions similar to those for Titan were completed. The most significant measurements, however, were those of the microwave absorption from

gaseous ammonia under simulated conditions for the Jovian atmospheres over wavelengths from 1.3 to 22 cm. The results of these measurements are critical in that they confirm the theoretical calculation of the ammonia opacity using the Ben-Reuven lineshape. The application of both these results, and results obtained previously, to planetary observations at microwave frequencies were especially rewarding. Applications of the results for ammonia to radio astronomical observations of Jupiter in the 1.3 to 20 cm wavelength range and the application of results for gaseous H2SO4 under simulated Venus conditions are discussed. A preliminary C-14 study on lunar soil was carried out with the University of Toronto Iso Trace accelerator mass spectrometer. This accelerator was recommended for C-14 work by Dr. R. Schneider of A.S. and E., who was the field engineer during the assemblage and start-up operation of the accelerator. After the preliminary study using CO2 from 10084,937 soil, which had previously been counted with low-level mini-proportional counters, it became clear that the Toronto accelerator could carry out C-14/C-13/C-12 ratio measurements on 1 gram meteorite and lunar samples and that the C-14 measurements are done with higher precision and better reliability than elsewhere. A collaborative program with the University of Toronto Iso Trace accelerator group, which is expected to be scientifically fruitful. Arrangements have been made for Dr. R.P. Beukens of the Toronto Accelerator Group to extract the carbon compounds from Antarctic meteorite and lunar samples and to convert the compounds to CO2. During the past two years, a uranium-series dating method was developed for polar ice, which method is being applied to ice from the Allan Hills site, Byrd core, and the Beardsmore glacier. Author

CROSS SECTIONS FOR PRODUCTION OF THE 15.10 MeV AND OTHER ASTROPHYSICALLY SIGNIFICANT GAMMA-RAY LINES THROUGH EXCITATION AND SPALLATION OF SUP 12 C AND SUP 16 O WITH PROTONS
F. L. Lang (Catholic Univ. of America, Washington, D.C.), C. W. Werntz, C. J. Crannell, J. I. Trombka, and C. C. Chang (Maryland Univ., College Park.) Washington Sep. 1986 43 p
(Grant NsG-5066)
(NASA-TM-87787; Rept-86B0418; NAS 1.15:87787) Avail: NTIS HC A03/MF A01 CSCL 03B

The ratio of the flux of 15.10-MeV gamma rays to the flux of 4.438-MeV gamma rays resulting from excitation of the corresponding states in C-12 as a sensitive measure of the spectrum of the exciting particles produced in solar flares and other cosmic sources. These gamma rays are produced predominantly by interactions with C-12 and O-16, both of which are relatively abundant in the solar photosphere. Gamma ray production cross sections for proton interactions have been reported previously for all important channels except for the production of 15.10-MeV gamma rays from O-16. The first reported measurement of the 15.10-MeV gamma ray production cross section from p + O-16 is presented here. The University of Maryland cyclotron was employed to produce 40-, 65-, and 86-MeV protons which interacted with CH2 and BeO targets. The resultant gamma ray spectra were measured with a high-purity germanium semiconductor detector at 70, 90, 110, 125, and 140 degrees relative to the direction of the incident beam for each proton energy. Other gamma ray lines resulting from direct excitation and spallation reactions with C-12

and 0-16 were observed as well, and their gamma ray production cross sections described.

SEARCH FOR THE TRACKS OF HEAVY AND SUPERHEAVY COSMIC RAY NUCLEI IN OLIVINES FROM METEORITES
V. P. Perelygin, S. G. Stetsenko, and G. N. Flerov 1985 7 p
(DE86-701120; JINR-E-7-85-245) Avail: (US Sales only) NTIS HC A02/MF A01

The results of investigating the tracks of cosmic nuclei with > = 50 in olivine crystals from meteorites are presented. The obtained spectrum of track lengths for the Z > = 50 nuclei exhibits two pronounced groups of tracks: 190-230 (MU)m tracks, attributed to nuclei ranging from Th to U, and abnormally long 310-360 (MU)m tracks. The hypothesis that the nuclei of superheavy elements with Z > = 110 may be present in cosmic rays is discussed.

CAN A LIGHT GLUINO SOLVE THE CYG X3 PUZZLE
G. Auriemma, L. Maiani, and S. Petrarca 6 Dec. 1985 12 p
Submitted for publication
(Preprint-486; ETN-86-97920) Avail: NTIS HC A02/MF A01

Production of underground muons by the binary X-ray star Cyg X3, known to be source of high energy particles which produce air showers, is discussed. It is proposed that air showers and underground muons are produced by the interaction in the atmosphere of a neutral, light, and long lived hadron. This hadron could be the lightest of the R-hadrons, composed by a gluino and one or more gluons, with a mass near 1 GeV. It is shown that this particle could easily justify the muon excess observed in the air showers > 10 to the 15th power eV associated with Cyg X3, but it is difficult to explain the large flux of underground muons.

SUBJECT INDEX

Typical Subject Index Listing

The subject heading is the key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension has been added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The NASA accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus* (NASA SP-7053).

[PB86-916915] N86-32417
AIRCRAFT COMPARTMENTS
Inhalation toxicology. Part 6: Evaluation of the relative toxicity of thermal decomposition products from 9 aircraft panel materials
[AD-A168250] N86-32958
A comparison between acoustic mode measurements and acoustic finite element analysis performed for SAAB SF 340 — propeller-driven aircraft
[FFA-TN-1986-22] N86-33125
AIRCRAFT CONFIGURATIONS
Transonic Navier-Stokes wing solutions using a zonal approach. Part 2: High angle-of-attack simulation
[NASA-TM-88248-PT-2] N86-32392
AIRCRAFT CONSTRUCTION MATERIALS
Air Force Office of Scientific Research, Air Force Systems Command technical report summaries, first quarter 1986
[AD-A168619] N86-33213
AIRCRAFT CONTROL
An approach to integrated aeroservoelastic tailoring for stability N86-32439
Preliminary control law and hardware designs for a ride quality augmentation system for commuter aircraft. Phase 2
[NASA-CR-4014] N86-32440
A model for the human's use of visual field cues in nap-of-the-Earth flight N86-33004
A flight test method for pilot/aircraft analysis
N86-33011
AIRCRAFT DESIGN
Aerodynamics of aircraft afterbody: Report of the working group on aerodynamics of aircraft afterbody
[AGARD-AR-226] N86-32406
Survivability considerations during aircraft conceptual design
[AD-A168555] N86-32428
The generation of equal probability design load conditions, using Power Spectral Density (PSD) techniques — aircraft design
[NLR-TR-85014-U] N86-32430
Recent developments in propulsion aerodynamics
[NLR-MP-85031-U] N86-32437
Computation of the stress intensity factor in stiffened panels (built in or adhesive bonded stiffeners)
[SNIAS-436.021/85] N86-32784
Simulation and optimization techniques in computer aided design
[NLR-MP-85022-U] N86-33053
An infrastructure for information processing for computer aided design
[NLR-MP-85038-U] N86-33054
AIRCRAFT ENGINES
Cost reductions from introduction of new life philosophies for aircraft engine discs
[NLR-MP-85076-U] N86-32438
AIRCRAFT EQUIPMENT
Fire resistant polyamide based on 1-(diorganooxyphosphonyl)methyl-2,4- and -2,6diamino benzene
[NASA-CASE-ARC-11512-2] N86-32568
Constant speed drive with compensation using differential gears
[AD-D012256] N86-32744
AIRCRAFT LANDING
Closed-loop, pilot/vehicle analysis of the approach and landing task N86-33013
AIRCRAFT MANEUVERS
A mathematical model of the Sea King Mk.50 helicopter aerodynamics and kinematics
[ARL-AERO-TM-379] N86-32425
AIRCRAFT MODELS
KRASH 85 user's guide: Input/output format, revision
[AD-A168646] N86-32416
AIRCRAFT NOISE
Activities report in noise disturbance at Schiphol (Netherlands) — international airport
[ETN-86-97776] N86-32450
A comparison between acoustic mode measurements and acoustic finite element analysis performed for SAAB SF 340 — propeller-driven aircraft
[FFA-TN-1986-22] N86-33125
AIRCRAFT PERFORMANCE
An introduction of the power engineering research at Nanjing Aeronautical Institute
[AD-A168639] N86-32434
AIRCRAFT PILOTS
Operator alertness/workload assessment using stochastic model-based analysis of myoelectric signals
[AD-A168568] N86-32974
Automated anthropometric data measurement system
[AD-D012299] N86-33017
AIRCRAFT RELIABILITY
Flight test instrumentation used in the Fokker F27 and F28 development and certification flight program
[NLR-MP-84023-U] N86-32431
AIRCRAFT SAFETY
Air safety: Federal Aviation Administration's role in developing mid-air collision avoidance back-up systems
[PB86-197506] N86-32418
Very short range statistical forecasting of automated weather observations
[AD-A167049] N86-32926
AIRCRAFT STABILITY
An approach to integrated aeroservoelastic tailoring for stability N86-32439
AIRCRAFT STRUCTURES
The generation of equal probability design load conditions, using Power Spectral Density (PSD) techniques — aircraft design
[NLR-TR-85014-U] N86-32430
Fire resistant polyamide based on 1-(diorganooxyphosphonyl)methyl-2,4- and -2,6diamino benzene
[NASA-CASE-ARC-11512-2] N86-32568
Review of aeronautical fatigue investigations in the Netherlands during the period March 1983 - February 1985
[NLR-MP-85025-U] N86-32779
Short cracks in aerospace structures
[NLR-MP-85054-U] N86-32781
Inhalation toxicology. Part 6: Evaluation of the relative toxicity of thermal decomposition products from 9 aircraft panel materials
[AD-A168250] N86-32958
AIRCRAFT SURVIVABILITY
Survivability considerations during aircraft conceptual design
[AD-A168555] N86-32428
AIRCRAFT TIRES
Remotely controlled aircraft tire inflation/deflation valve
[AD-D012294] N86-32426
AIRFOILS
The structure of separated flow regions occurring near the leading edge of airfoils including transition
[NASA-CR-176857] N86-32391
Studies on transonic Double Circular Arc (DCA) profiles of axial flow compressor calculations of profile design
[AD-A168638] N86-32679

AIRFRAMES
Low mass diffusion bonding tools
[AD-D012295] N86-32746
AIRGLOW
Handbook of geophysics and the space environment, 4th edition
[AD-A167000] N86-32914
AIRLINE OPERATIONS
Schreiner 1945 - 1985 — civil airline
[ETN-86-97773] N86-32415
Concept of an application-independent system for computer aided order processing
[NLR-MP-85009-U] N86-33052
AIRPORTS
Activities report in noise disturbance at Schiphol (Netherlands) — international airport
[ETN-86-97776] N86-32450
ALCOHOLS
Exhaust gas analysis of a diesel engine using alcohol as a fuel
[DE86-751654] N86-32754
ALERTNESS
Complex monitoring performance and the coronary-prone type A behavior pattern
[AD-A168240] N86-32971
Operator alertness/workload assessment using stochastic model-based analysis of myoelectric signals
[AD-A168567] N86-32973
Operator alertness/workload assessment using stochastic model-based analysis of myoelectric signals
[AD-A168568] N86-32974
ALGEBRA
Estimation and improvement of error in difference schemes with algebraic transformation
[NAL-TM-FM-8601] N86-33082
Algebras of extendable unbounded operators
[EUT-84-WSK-04] N86-33097
On a problem of J. de Graaf connected with algebras of unbounded operators
[MEMO-84-02] N86-33104
ALGOL
A guide to SID for users of the Flex computer
[RSRE-MEMO-3768] N86-33041
ALGORITHMS
Active control of helicopter vibrations. Flight evaluation of a vibration reduction system on a Gazelle SA 349 helicopter
[SNIAS-861-210-108] N86-32444
Lattice parameter modeling of stochastic signals: Some fundamental concepts
[DE86-010552] N86-32619
Investigation of characteristics and application of new CCD (Charge Coupled Devices) signal processing devices
[AD-A167929] N86-32638
Estimation of inertial parameters of rigid body links of manipulators
[AD-A167930] N86-32747
AND/OR graph representation of assembly plans
[AD-A168036] N86-32749
Multiple-input segmentation algorithm for SLAR-imagery N86-32834
Study of the architecture of a parallel computer adapted to ray casting 3-d dimensional image synthesis
[ENST-86E003] N86-33037
A linear algorithm for non-linear interpolation for computer aided designs
[AD-D012271] N86-33044
Modular, automated software testing environment
[DE86-008743] N86-33047
Some theoretical properties of an augmented lagrangian merit function
[DE86-011330] N86-33050
A derivation of a distributed implementation of Warshall's algorithm
[CS-8505] N86-33056
A linear time implementation of Frontal Increase Minimization (FIM) strategy algorithms for the profile reduction of sparse matrices
[SNIAS-861-440-107] N86-33062
Fast transversal recursive identification algorithms and methods to model the associated complex pulse reponse. Application to voice signals
[ENST-86E002] N86-33063
Experiments with parallel algorithms for combinatorial problems
[CWI-OS-R8512] N86-33070
Basic research on adaptive model algorithmic control
[AD-A168016] N86-33072
Development of a self-tuning algorithm for a discrete adaptive rpm control
[ETN-86-97534] N86-33078
On transformations of matrix pencils and implications in linear systems theory
[LUT-MR-188] N86-33085
Implicit multigrid algorithms for the three-dimensional flux split Euler equations
[NASA-CR-179742] N86-33086
Proceedings of the Third Annual Symposium on Mathematical Pattern Recognition and Image Analysis
[NASA-CR-171925] N86-33087
Improved algorithms for estimation, prediction and control
[AD-A167601] N86-33090
Probabilistic analysis of algorithms for NP-complete problems
[AD-A168617] N86-33092
An error detection and smoothing algorithm for infrared data
[AD-A168628] N86-33093
Algorithms for Bayesian variable selection in regression
[DE86-008884] N86-33094
ALIGNMENT
Simulator scene display evaluation device
[NASA-CASE-ARC-11504-1] N86-32447
ALKALINE BATTERIES
Research on separators for alkaline zinc batteries
[DE86-009261] N86-32650
ALKALINE EARTH OXIDES
Co-sputtered thermionic cathodes and fabrication thereof
[AD-D012304] N86-32637
ALLOYS
Prototype material properties data network
[NASA-TM-89243] N86-33208
ALPHANUMERIC CHARACTERS
Automatic character recognition system
[AD-D012328] N86-33145
ALTIMETERS
Altimeter measurements for the determination of the Earth's gravity field
[NASA-CR-178893] N86-32912
ALTITUDE ACCLIMATIZATION
Altitude acclimatization attenuates plasma ammonia during submaximal exercise
[AD-A168630] N86-32962
ALTITUDE SICKNESS
Effects of high altitude on neurological and pulmonary function: The effect of high altitude on visual evoked potentials in humans on Mt. Everest
[AD-A168335] N86-32959
Effect of dexamethasone on symptoms of acute mountain sickness at Pikes Peak, Colorado (4300m)
[AD-A168662] N86-32963
ALUMINUM
Film chip capacitor
[AD-D012300] N86-32636
ALUMINUM ALLOYS
Influence of constant amplitude and variable amplitude loading on crack initiation and microcrack propagation in Al 2024-T3
[ESA-TT-900] N86-32760
ALUMINUM OXIDES
Tensile and fatigue behavior of alumina fiber reinforced magnesium composites
[AD-A167725] N86-32531
Method for preparing Pb-beta''-alumina ceramic
[AD-D012352] N86-32575
ALUMINUM 26
Short-lived nuclides in the early solar system and general isotopic anomalies in meteorites N86-33223
AMMONIA
Altitude acclimatization attenuates plasma ammonia during submaximal exercise
[AD-A168630] N86-32962
AMMONIUM COMPOUNDS
Altitude acclimatization attenuates plasma ammonia during submaximal exercise
[AD-A168630] N86-32962
AMORPHOUS MATERIALS
Apparatus for production of ultrapure amorphous metals utilizing acoustic cooling
[NASA-CASE-NPO-15658-1] N86-32551
Variations in the microstructure of nickel-based alloy coatings with the metalloids boron and silicon as a function of deposition parameters in a dual beam ion system
[DE86-009263] N86-32558
AMORPHOUS SEMICONDUCTORS
The stability of amorphous metal films on semiconductor substrates
[DE86-010362] N86-32566
AMPLIFIER DESIGN
Considerations and calculations for application of an optical amplifier as an end and preamplifier
[DFVLR-FB-86-11] N86-32734
AMPLITUDES
Investigation of certain characteristics of acoustic emission during deformation of materials
[BLL-M-TRANS-36869-(5828.4)] N86-32552
Directional antenna system having sidelobe suppression
[AD-D012268] N86-32604
ANATOMY
Radiographic determination of mass of inertial tensors of anatomical segments
[AD-A168581] N86-32961
ANGLE OF ATTACK
Transonic Navier-Stokes wing solutions using a zonal approach. Part 2: High angle-of-attack simulation
[NASA-TM-88248-PT-2] N86-32392
A low speed tunnel semi-free dynamic flying study of the high angle of attack pitch derivatives of HF-24 using MLE procedure
[NAL-TRM-SE-8603] N86-32393
Centrifugally operated moving-mass roll control system
[AD-D012272] N86-32441
ANGULAR VELOCITY
Fluidic angular velocity sensor
[NASA-CASE-NPO-16479-ICU] N86-32695
ANIMALS
The handling and preservation of biosamples in microgravity conditions
[ESA-CR(P)-2193] N86-32487
ANISOTROPY
Gain anisotropy in low pressure chemical lasers
[AD-A168125] N86-32726
ANNUAL VARIATIONS
On the relationship between long-term drifter trajectories and mean seasonal distributions of geostrophic wind and baroclinic ocean current in the Eastern North Atlantic N86-32906
Variation of the radar backscatter of vegetation through the growing season N86-32637
Lake ice occurrence as an early detector of climate perturbations: The potential for monitoring
[DE86-010583] N86-32935
ANNULI
A comparison of experimental and theoretical results for leakage, pressure gradients, and rotordynamic coefficients for tapered annular gas seal
[NASA-CR-179709] N86-32742
ANOMALIES
Specific heat anomaly of AU(110)(1 x 2) studied by low-energy electron diffraction
[AD-A168626] N86-33160
ANTARCTIC REGIONS
The use of spatial techniques for a better current surface knowledge, with application to the Southern Ocean N86-32814
Report on ice buoys in the Arctic and the Antarctic N86-32817
ANTENNA ARRAYS
Parallel processor configuration for adaptive antenna arrays
[AD-D012253] N86-32602
Active matching transmit/receive module
[AD-D012287] N86-32607
Feed displacement correction in a space fed lens antenna
[AD-D012286] N86-32706
Fiber optic data distribution for phased array antenna
[AD-D012322] N86-33144
ANTENNA COMPONENTS
Deployable antenna reflector
[SNIAS-861-422-117] N86-32537
ANTENNA DESIGN
Theoretical and computational aspects of adaptively controlled Navstar antennas
[NLR-TR-84004-U] N86-32424
Deployable antenna reflector
[SNIAS-861-422-117] N86-32537
Directional antenna system having sidelobe suppression
[AD-D012268] N86-32604
Fixed aperture, rotating feed, beam scanning antenna system
[AD-D012312] N86-32611
Offset unfurlable antenna, phase 1 — communication satellites
[MBB-RX11] N86-32622
ANTENNA FEEDS
Fixed aperture, rotating feed, beam scanning antenna system
[AD-D012312] N86-32611
Feed displacement correction in a space fed lens antenna
[AD-D012286] N86-32706
ANTENNA RADIATION PATTERNS
Near-field spillover from a subreflector: Theory and experiment
[NASA-TM-88816] N86-32598
ANTENNAS
Large reflector antenna study
[NASA-CR-176852] N86-32597

Correction for probe-position errors in planar, near-field scanning
[AD-A167072] N86-32605
Pocket size antenna match indicator for VSWR (Voltage Standing Wave Ratio) measurement
[AD-D012241] N86-32708

ANTHROPOLOGY
A collation of United States Air Force anthropometry
[AD-A168485] N86-33019

ANTHROPOMETRY
Anthropometric considerations for a 4-axis side-arm flight controller N86-32993
Automated anthropometric data measurement system
[AD-D012299] N86-33017
A collation of United States Air Force anthropometry
[AD-A168485] N86-33019

APPLICATIONS PROGRAMS (COMPUTERS)
User manual for the simulation package THE/ES
[ETN-86-97696] N86-33055

APPROACH CONTROL
Construction of a job-oriented test for the selection of air traffic controllers
[ESA-TT-921] N86-32423
Closed-loop, pilot/vehicle analysis of the approach and landing task N86-33013

APPROXIMATION
The polynomials in the linear span of integer translates of a compactly supported function
[AD-A167530] N86-33089
Approximating the projective model
[CWI-CS-R8607] N86-33101

APTITUDE
Human factors research in aircrew performance and training
[AD-A167740] N86-32967

ARC LAMPS
Arc lamp power supply
[NASA-CASE-LAR-13202-1] N86-32626

ARC WELDING
Assimilation of production of welded corrosion-resistant nickel-free steel tubes
[BLL-M-TRANS-36809-(5828.4)] N86-32554
Investigation for disturbances of the index profile in joints of arc welded glass fibers
[ETN-86-97536] N86-32761

ARCHITECTURE (COMPUTERS)
Science and technology analyst's assistant, revision
[AD-A168552] N86-32617
Testing methods for integrated circuit chips
[AD-A167932] N86-32639
KBGIS-2: A knowledge-based geographic information system N86-32886
Parqflex firmware
[RSRE-85015] N86-33026
A view of Kanerva's sparse distributed memory
[NASA-TM-89206] N86-33030
First 3 years of operation of RIACS (Research Institute for Advanced Computer Science) (1983-1985)
[NASA-CR-179699] N86-33032
Adaptive associative-processing optical computing architectures
[AD-D012305] N86-33034
A language capable of describing computer architecture
[AD-A168553] N86-33035
Study of the architecture of a parallel computer adapted to ray casting 3-d dimensional image synthesis
[ENST-86E003] N86-33037
An architecture for sensor fusion in a mobile robot
[AD-A168075] N86-33073

ARCTIC OCEAN
Experience and results from use of ARGOS tracked buoys during MIZEX 83 and 84 — Marginal Ice Zone Experiment (MIZEX) N86-32818

ARCTIC REGIONS
Report on ice buoys in the Arctic and the Antarctic N86-32817

ARGON ISOTOPES
The Ar36/Ar38 ratios in selected meteorites N86-33231

ARGON LASERS
Model of the X-ray induction of a high pressure argon discharge — laser discharge
[LP-217] N86-32735

ARMED FORCES (UNITED STATES)
A collation of United States Air Force anthropometry
[AD-A168485] N86-33019
Air Force Office of Scientific Research, Air Force Systems Command technical report summaries, first quarter 1986
[AD-A168619] N86-33213

ARRAYS
Monolithic area array for laser ranging application
[AD-D012296] N86-32719

ARSENIC
Synthesis and crystal structure of tris(dimethylarsino)gallane, a monomeric tricoordinate gallium-arsenic compound
[AD-A168020] N86-33178

ARSENIDES
Influence of arsenic on corrosion resistance of low-carbon, low-alloy steels
[BLL-M-TRANS-36857-(5828.4)] N86-32553

ARTIFICIAL INTELLIGENCE
Science and technology analyst's assistant, revision
[AD-A168552] N86-32617
Remote Sensing Information Sciences Research Group, Santa Barbara Information Sciences Research Group, year 3
[NASA-CR-179769] N86-32663
Research undertaken and proposed directions for the coming year of the Information System Research Group N86-32667
Knowledge-based load leveling and task allocation in human-machine systems N86-32985
A view of Kanerva's sparse distributed memory
[NASA-TM-89206] N86-33030
A linear algorithm for non-linear interpolation for computer aided designs
[AD-D012271] N86-33044
Formal verification of properties of digital systems using an automated reasoning system
[DE86-005552] N86-33067
Will machines ever think
[NASA-TM-89244] N86-33071
Integrating syntax, semantics and discourse DARPA natural language understanding program
[AD-A168341] N86-33074
Paths to high-performance automated theorem proving
[DE86-011003] N86-33077

ARTIFICIAL SATELLITES
The development of space science and technology in China
[AD-A168368] N86-32486

ASCENT TRAJECTORIES
Optimal, impulsive, direct ascent, time-fixed orbital interception N86-32488
Ascent trajectory dispersion analysis for WTR heads-up space shuttle trajectory
[NASA-CR-175894] N86-32509

ASIA
Energetics of cyclonic development in the Asian winter monsoon system N86-32921

ASPECT RATIO
Aspect ratio effects on wings at low Reynolds numbers N86-32390
Improvement and optimization of internal damping in fiber reinforced composite materials
[AD-A168576] N86-32534

ASSEMBLING
AND/OR graph representation of assembly plans
[AD-A168038] N86-32749

ASSOCIATIVE PROCESSING (COMPUTERS)
Adaptive associative-processing optical computing architectures
[AD-D012305] N86-33034

ASTRONOMICAL CATALOGS
The completion of a star catalog for the Optical Aircraft Measurements Program
[AD-A168017] N86-33246

ASTRONOMICAL MODELS
Q-nucleosynthesis: Implications for stellar evolution N86-33250

ASTRONOMICAL OBSERVATORIES
The International Halley Watch (IHW) and its observing nets N86-32465

ASTRONOMICAL PHOTOGRAPHY
The Giotto Halley multicolor camera N86-32483
The evolution of Planetary Nebula Nuclei (PNN) N86-33248

ASTROPHYSICS
The joint NASA/Goddard-University of Maryland research program in charged particle and high energy photon detector technology
[NASA-CR-177062] N86-33129

ASYMPTOTIC METHODS
Investigation of an asymptotic expansion technique to analyze limit cycle response of aerodynamic surfaces with structural nonlinearities
[AD-A168491] N86-32442
Harmonic and transient problems related to submerged structures
[ETN-86-97874] N86-32782
A note on adapting for heteroscedasticity when the variances depend on the mean
[AD-A168481] N86-33113

ASYMPTOTIC PROPERTIES
Effect of thermal expansion on the stability of two-reactant flames
[NASA-CR-178168] N86-33025

ATLANTIC OCEAN
On the relationship between long-term drifter trajectories and mean seasonal distributions of geostrophic wind and baroclinic ocean current in the Eastern North Atlantic N86-32906
System ARGOS, sea surface temperatures and circulation patterns in the northern Atlantic N86-32807
The current system of the North Atlantic as deduced from drifting buoys N86-32811
A drifting buoy experiment as part of COST-43 N86-32818

ATMOSPHERIC BOUNDARY LAYER
A computer program to process Vaisala RS 21-12 C radiosonde data
[KNMI-TR-77] N86-32940

ATMOSPHERIC CHEMISTRY
Report of the International Conference on the Assessment of the Role of Carbon Dioxide and of other Greenhouse Gases in Climate Variations and Associated Impacts
[WMO-681]
Nitrogen species N86-32890
Halogenated species N86-32896
Atmospheric Ozone 1985. Assessment of our understanding of the processes controlling its present distribution and change, volume 3
[NASA-TM-89236] N86-32897

ATMOSPHERIC CIRCULATION
LASERCOM Mitigation Program
[AD-A168111] N86-32815
The South African contribution to TOGA — Tropical Ocean Global Atmosphere (TOGA) program N86-32827
Assessment models N86-32898
The numerical simulation of thunderstorm outflow dynamics N86-32920
Monthly and seasonal climatology of the northern winter over the global tropics and subtropics for the period 1974 to 1983. Volume 3: Surface winds
[AD-A168852] N86-32931
Modeling as a means of studying the climate system
[DE86-009702] N86-32933
Analysis of results from energy balance and radiative-convective models, appendix A
[DE86-010554] N86-32934
Relationship of temperature and velocity variance to atmospheric thermal stability
[PB86-199809] N86-32943
Convective Parameters and Holograph Program: CONVECT
[PB86-197225] N86-32947

ATMOSPHERIC COMPOSITION
Nitrogen species N86-32890
Halogenated species N86-32896
Monthly mean distribution of ozone and temperature N86-32905
Extinction of near infrared solar radiation as a means for remote determination of atmospheric water vapor N86-32922
Analysis of results from energy balance and radiative-convective models, appendix A
[DE86-010554] N86-32934
Long-term changes in precipitation patterns, part 7
[DE86-009705] N86-32937
Ion composition in the solar wind in relation to solar abundances N86-33238

ATMOSPHERIC DENSITY
Comparison of recent empirical models of the thermosphere N86-32491
Anomalous perigee shift and eccentricity variation due to air drag in the reentry phase N86-32498

ATMOSPHERIC EFFECTS
Scintillation effects on centroid anisoplanatism
[AD-A168551] N86-33152

ATMOSPHERIC ELECTRICITY
The relationship of storm severity to directionally resolved radio emissions
[NASA-CR-178916] N86-32601

ATMOSPHERIC HEATING
The thermal plasma experiment in the Upper-Air Sounding Rocket Program HEATING, Project HERO
[BMFT-FB-W-85-019] N86-32917
Relationship of temperature and velocity variance to atmospheric thermal stability
[PB86-199809] N86-32943

ATMOSPHERIC MODELS
Comparison of recent empirical models of the thermosphere N86-32491
Comparison of the ESRO 4 thermosphere model with ESRO 4 data during magnetically quiet conditions N86-32492

Support for global science: Remote sensing's challenge N86-32864
Oxygen species N86-32893
Hydrogen species N86-32894
Halogenated species N86-32896
Atmospheric Ozone 1985. Assessment of our understanding of the processes controlling its present distribution and change, volume 3
[NASA-TM-89238] N86-32897
Assessment models N86-32898
Model predictions of ozone changes N86-32899
Trace gas effects on climate N86-32901
Infrared issues for the nuclear winter phenomenon
[AD-A168717] N86-32915
Possible climatic consequences of a major nuclear war
[WCP-113] N86-32924
Modeling as a means of studying the climate system
[DE86-009702] N86-32933

ATMOSPHERIC MOISTURE
An experimental technique for producing moisture corrected imagery from 1 km Advanced Very High Resolution Radiometer (AVHRR) data
[NOAA-TM-NESDIS-15] N86-32862

ATMOSPHERIC PHYSICS
Statistical model for laser safety analysis
[AD-A167937] N86-32721
Report of the International Conference on the Assessment of the Role of Carbon Dioxide and of other Greenhouse Gases in Climate Variations and Associated Impacts
[WMO-661] N86-32890

ATMOSPHERIC PRESSURE
Forecast verification and reconnaissance data for Southern Hemisphere tropical cyclones
[AD-A168274] N86-32929

ATMOSPHERIC SOUNDING
Atmospheric Ozone 1985. Assessment of our understanding of the processes controlling its present distribution and change, volume 2
[NASA-TM-89238] N86-32892
Multiparameter radar measurements in Colorado convective storms
[PB86-199528] N86-32944

ATMOSPHERIC TEMPERATURE
Contribution to the phenology of Europe 5 long phenological series of Europe and their relations to temperature
[BDW-169] N86-32919

ATMOSPHERIC TURBULENCE
LASERCOM Mitigation Program
[AD-A168111] N86-32615

ATMOSPHERIC WINDOWS
A portable spectrometer for use from 5 to 15 micrometers
[NASA-CR-179751] N86-32910

ATOMIC EXCITATIONS
Theoretical studies of Resonance Enhanced Stimulated Raman Scattering (RESRS) of frequency doubled Alexandrite laser wavelengths in cesium vapor
[NASA-CR-179768] N86-32717
Double photon excitation of high-Rydberg atoms as a long-lived submillimeter detector
[NASA-CASE-NPO-16372-1] N86-33127

ATOMIC STRUCTURE
Theoretical dissociation energies for ionic molecules
[NASA-TM-88776] N86-33128

ATTENTION
The effects of stress on attentional resources N86-32986

ATTITUDE CONTROL
Centrifugally operated moving-mass roll control system
[AD-D012272] N86-32441

AUDIO EQUIPMENT
Solid state research
[AD-A168053] N86-33179

AUDITORY STIMULI
Hesitation in tracking induced by a concurrent manual task N86-32995

AUGER SPECTROSCOPY
Complementary AES and AEM of grain boundary regions in irradiated gamma-strengthened alloys
[DE86-010397] N86-32561

AURORAS
Handbook of geophysics and the space environment, 4th edition
[AD-A167000] N86-32914
Numerical BGK-solutions of large scale electrostatic potential in auroral plasmas
[IPPJ-782] N86-33162

AUTOMATED EN ROUTE ATC
Preliminary design of an automated Air Traffic Control (ATC) radar evaluation system
[NPL-VG-84-009-L] N86-32419

AUTOMATIC CONTROL
Automatic loading of composite tape using cassettes
[AD-D012338] N86-32707

AUTOMATIC GAIN CONTROL
Constant rise AGC (Automatic Gain Control) device
[AD-D012327] N86-32641

AUTOMATIC WEATHER STATIONS
Operational experiences with the ARGOS system in Greenland N86-32819

AUTOMOBILES
Vehicle Aerodynamics — conference
[VKI-LS-1986-05] N86-32397
Review of theoretical and experimental approaches to problems of automobile external aerodynamics N86-32398
Wind tunnel test in vehicle aerodynamics N86-32399
Aerodynamic studies on a formula racing car N86-32400
A computational method for the determination of the flow field around vehicles N86-32401
Theoretical and experimental methods in ground vehicle aerodynamics N86-32402
Moving ground effect and speed (up to 50 m/sec) interaction on sedan and station wagon cars (23 configurations ranging between Cd=0.19 and 0.35) and on racing car (1 configuration Cd=0.39; Cl=-2.15) N86-32403
Wind induced interior and far field radiated exterior noise from automobiles N86-32404
Theoretical and experimental optimization of the road-vehicle internal flow — radiators N86-32405
The relationship between aerodynamics and style in the car industry N86-32406
Electric and Hybrid Vehicles Program: Report to the Congress
[DE86-009607] N86-33214

AUTOREGRESSIVE PROCESSES
Modeling multivariate covariance nonstationary time series and their dependency structure
[DE86-010052] N86-33095

AUXILIARY PROPULSION
Proven, long-life hydrogen/oxygen thrust chambers for space station propulsion
[NASA-TM-88822] N86-32522

AVAILABILITY
Water: A strategic resource?
[AD-A168470] N86-32889

AXIOMS
Failure semantics with fair abstraction
[CWI-CS-R8609] N86-33060

AXISYMMETRIC BODIES
Harmonic and transient problems related to submerged structures
[ETN-86-97874] N86-32782

AXISYMMETRIC FLOW
Axisymmetric turbulent boundary layer on the cylindrical portion of an afterbody test model
[NAL-TM-FM-8505] N86-32395

AZIMUTH
Astronomical geodetic estimates of azimuth in the West German main triangulation network
[SER-B-274-MITT-171] N86-32873

B

B STARS
Metal enrichment of stars in the Orion complex and its relation with the formation of the solar system: Preliminary results N86-33242

BACKSCATTERING
Variation of the radar backscatter of vegetation through the growing season N86-32837

BALL BEARINGS
Apparatus and method for inspecting a bearing ball
[NASA-CASE-MFS-25833-1] N86-32698

BALLASTS (IMPEDANCES)
Performance of electronic ballasts and other new lighting equipment
[DE86-009589] N86-32653

BALLISTICS
Single-shot H(2) CARS spectroscopy of propellant ignition and combustion under pressure
[AD-A168054] N86-32542
Influence of the edge effects on the initial velocity of fragments from a warhead
[SNIAS-861-320-104] N86-32593

BALLOON-BORNE INSTRUMENTS
Resonance fluorescence in atmospheric gases
[NASA-CR-179767] N86-32911

BALMER SERIES
On the source of the violet depression in carbon stars (a study of the Balmer decrement in carbon L. P. V.s) N86-33252

BIOLOGICAL MODELS (MATHEMATICS)

BANACH SPACE
Measure and category
[ZW-8506] N86-33119

BANDPASS FILTERS
Bulk acoustic resonator tracking filter
[AD-D012280] N86-33122

BANDWIDTH
HDTV motion adaptive bandwidth reduction using DATV
[BBC-RD-1986/5] N86-32595

BAROCLINIC WAVES
On the relationship between long-term drifter trajectories and mean seasonal distributions of geostrophic wind and baroclinic ocean current in the Eastern North Atlantic N86-32806

BATTERY CHARGERS
Effect of depth of discharge on lead-acid battery overcharge requirements
[DE86-008945] N86-32648

BAYES THEOREM
Algorithms for Bayesian variable selection in regression
[DE86-008884] N86-33094

BEAMS (SUPPORTS)
Effects of external environments on the short beam shear strength of filament wound graphite/epoxy
[NASA-TM-86553] N86-32528

BEARING (DIRECTION)
A new wave direction buoy allows presentation of wave direction data in near real time N86-32812

BEARINGS
Improved fracture toughness corrosion-resistant bearing material
[NASA-CR-174990] N86-32743
Wind energy conversion systems: Evaluation of reliability, availability, and maintainability at various locations
[AD-A168272] N86-32978

BENZENE
Polymer of phosphonylmethyl-2,4- and -2,6-diamino benzene and polyfunctional monomer
[NASA-CASE-ARC-11506] N86-32525

BERYLLIUM
Thermal nuclear destruction of lithium, beryllium and boron inside a 1 solar mass star N86-33243

BIAS
Bi-directional current differencer for complementary charge coupled device (CCD) outputs
[AD-D012262] N86-32632

BIBLIOGRAPHIES
Aeronautical engineering: A continuing bibliography with indexes (supplement 204)
[NASA-SP-7037(204)] N86-32389
US photovoltaic patents, 1951-1983
[DE86-004431] N86-32684
Publications from the Department of Plasma Physics and the Unit of Accelerator Technology, index and abstracts 1985
[TRITA-EPP-85-09] N86-33159
Bibliography of electron transfer in ion-atom collisions
[IPPJ-AM-45] N86-33169
Corporate author entries, revision 5
[DE86-007602] N86-33205

BINARY DATA
Measured noise performance of a post-detection limiter circuit in the receiver of a binary data transmission system
[AD-A168554] N86-32618

BINARY FLUIDS
A pseudo-spectral solution of binary mixture flows — vapor crystal growth N86-32670

BIOASTRONAUTICS
The handling and preservation of biosamples in microgravity conditions
[ESA-CR(P)-2193] N86-32487

BIOCHEMISTRY
Metal-binding proteins for strategic metal recovery and metal detoxification
[DE86-010776] N86-32565
ECUT (Energy Conversion and Utilization Technologies Program). Biocatalysis Project
[NASA-CR-179754] N86-32877
In vivo dermal absorption method and system for laboratory animals
[AD-D012325] N86-32951

BIOLOGICAL EVOLUTION
NASA Workshop on Animal Gravity-Sensing Systems
[NASA-TM-88249] N86-32950

BIOLOGICAL MODELS (MATHEMATICS)
Implementation of models for the transient division system of spatio-temporal visual perception
[ETN-86-97533] N86-32965
A model of the transient part of the spatio-temporal perception, containing a two-dimensional long fiber
[ETN-86-97540] N86-32966

BIOMASS
Evaluation of spatial, radiometric and spectral thematic mapper performance for coastal studies
[NASA-CR-177149] N86-32829
BIONICS
The role of impulse parameters in force variability N86-32997
BIRDS
Remote sensing and water quality in the IJsselmeer (Netherlands) area
[MDLK-R-8537] N86-32871
BIRTH
Peripheral nerve injury in developing rats reorganizes motor cortex
[AD-A168019] N86-32952
BLACK HOLES (ASTRONOMY)
Initial data for black hole collisions N86-33247
The quantum ergosphere and dynamical temperature of the Reissner-Nordstrom black hole N86-33249
BLOOD PRESSURE
Complex monitoring performance and the coronary-prone type A behavior pattern
[AD-A168240] N86-32971
BODY KINEMATICS
Estimation of inertial parameters of rigid body links of manipulators
[AD-A167930] N86-32747
BODY SIZE (BIOLOGY)
A collation of United States Air Force anthropometry
[AD-A168485] N86-33019
BODY WEIGHT
Growth and development of rhesus monkeys exposed to ELF (Extremely Low Frequency) electric and magnetic fields during the first 54 months of life
[AD-A168733] N86-32953
BOLTZMANN DISTRIBUTION
The infinitely strong shock
[NAL-TM-DU-8604] N86-32664
BONDING
Low mass diffusion bonding tools
[AD-D012295] N86-32746
BOOLEAN ALGEBRA
An alternative implementation of communication primitives
[CS-8504] N86-33107
BOOLEAN FUNCTIONS
A derivation of a distributed implementation of Warshall's algorithm
[CS-8505] N86-33056
BORON
Variations in the microstructure of nickel-based alloy coatings with the metalloids boron and silicon as a function of deposition parameters in a dual beam ion system
[DE86-009283] N86-32558
Boron diffusion: A feasibility study for the diffusion of boron from boron tribromide
[AERE-M-3535] N86-32572
Thermal nuclear destruction of lithium, beryllium and boron inside a 1 solar mass star N86-33243
BOUNDARY LAYER FLOW
Investigations on a supercritical airfoil with boundary layer suction through a perforated strip in the shock region
[ESA-TT-940] N86-32410
Blockage of natural convection boundary layer flow in a multizone enclosure
[DE86-004430] N86-32686
BOUNDARY LAYER PLASMAS
Anomalous diffusion across the magnetic field plasma boundary: The PORCUPINE artificial plasma jet
[MPE-PREPRINT-47] N86-33160
Observations of plasma distributions during the CDAW substorms of 31 March - 1 April 1979
[AD-A168580] N86-33172
BOUNDARY LAYER TRANSITION
The structure of separated flow regions occurring near the leading edge of airfoils including transition
[NASA-CR-176857] N86-32391
BOUNDARY VALUE PROBLEMS
What are the true boundary conditions on the edge of a thin plate: Poisson's or Kirchhoff's
[NAL-TM-ST-8603] N86-32665
Computational methods in Nearfield Acoustic Holography (NAH), appendix
[AD-A168064] N86-32710
Nonlinear integral evolution equations associated with a Riemann-Hilbert scattering problem. Aspects of the initial value problem for the sine-Hilbert class
[PREPRINT-491] N86-33111
BRANCHING (MATHEMATICS)
Quasi-periodic Hopf-bifurcations in forced oscillators
[ZW-8507] N86-33120
BRAYTON CYCLE
Operating efficiencies of a Lysholm helical expander for Brayton-cycle heat engines
[DE86-007178] N86-32753
BRIDGES (STRUCTURES)
A dc switching regulated power supply for driving an inductive load
[AD-D012349] N86-32645
BROADCASTING
The measurement of large values of airborne sound insulation
[BBC-RD-1986/5] N86-32594
Design and realization of a C-MAC/Packet (CMP) Data Demodulator (DD)
[ETN-86-97539] N86-32657
BROMINATION
The milling of pristine and brominated P-100 graphite fibers
[NASA-TM-88828] N86-32573
BUBBLES
The structure of separated flow regions occurring near the leading edge of airfoils including transition
[NASA-CR-176857] N86-32391
BUDGETING
Overview of the non-programmatic cost projection prototype
[DE86-010965] N86-33199
BUOYS
On the correlation of wind and the trajectories of drogued drifting buoys N86-32808
The current system of the North Atlantic as deduced from drifting buoys N86-32811
A new wave direction buoy allows presentation of wave direction data in near real time N86-32812
On board spectral sea-state: The spear F buoy inputs to ERS-1 calibration and validation phase — altimeter and scatterometer calibration N86-32813
The use of spatial techniques for a better current surface knowledge, with application to the Southern Ocean N86-32814
A drifting buoy experiment as part of COST-43 N86-32816
Report on ice buoys in the Arctic and the Antarctic N86-32817
Experience and results from use of ARGOS tracked buoys during MIZEX 83 and 84 — Marginal Ice Zone Experiment (MIZEX) N86-32818
BURNING RATE
Solid fuel burn enhancer
[AD-D012331] N86-32524
BUS CONDUCTORS
Survivable local area network
[AD-D012258] N86-32603

C

CALCULUS OF VARIATIONS
On the existence of periodic solutions for a class of symmetric Hamiltonian systems
[AD-A167487] N86-33088
CALIBRATING
Simulator scene display evaluation device
[NASA-CASE-ARC-11504-1] N86-32447
Spinning disk calibration method and apparatus for laser Doppler velocimeter
[NASA-CASE-ARC-11510-1] N86-32697
YAG laser monitoring
[DE86-010301] N86-32732
On board spectral sea-state: The spear F buoy inputs to ERS-1 calibration and validation phase — altimeter and scatterometer calibration N86-32813
The development and evaluation of color systems for airborne applications: Fundamental visual, perceptual and display systems considerations
[AD-A168563] N86-33020
Thorough approach to measurement uncertainty analysis applied to immersed heat exchanger testing
[DE86-004445] N86-33114
Fabricate, calibrate and test a dosimeter for integration into the CRRES (Combined Release and Radiation Effects Satellite) satellite
[AD-A168566] N86-33131
The completion of a star catalog for the Optical Aircraft Measurements Program
[AD-A168017] N86-33246
CALORIMETERS
High temperature calorimeter performance variable study
[DE86-010074] N86-32713
CANOPIES (VEGETATION)
Evaluation of spatial, radiometric and spectral thematic mapper performance for coastal studies
[NASA-CR-177149] N86-32829
CANTILEVER BEAMS
Vibration of beams on intermediate elastic supports
[NAL-TM-ST-8608] N86-32772
CAPACITANCE
Analysis of equivalent capacitances between mutually coupled windings
[DE86-006019] N86-32662
Comparison of two voltage dividers for the measurement of transient voltages in closed switch gear
[EH-84-A-82] N86-32655
CAPACITORS
Bi-directional current differencer for complementary charge coupled device (CCD) outputs
[AD-D012262] N86-32632
Film chip capacitor
[AD-D012300] N86-32636
Capacitor charging FET switcher with controller to adjust pulse width
[AD-D012347] N86-32644
CAPE KENNEDY LAUNCH COMPLEX
Orbital transfer vehicle launch operations study. Processing flows. Volume 3
[NASA-CR-179786] N86-32505
CARBON
Textured carbon surfaces on copper by sputtering
[NASA-CASE-LEW-14130-1] N86-32587
CARBON DIOXIDE
Report of the International Conference on the Assessment of the Role of Carbon Dioxide and of other Greenhouse Gases in Climate Variations and Associated Impacts
[WMO-661] N86-32890
Trace gas effects on climate N86-32901
CARBON DIOXIDE CONCENTRATION
Analysis of results from energy balance and radiative-convective models, appendix A
[DE86-010554] N86-32934
Effects of energy technology on global CO2 emissions
[DE86-010257] N86-32936
CARBON DIOXIDE LASERS
Isotope exchange in oxide-containing catalyst
[NASA-CASE-LAR-13542] N86-32540
Pretreatment and reactivation of an oxide-containing catalyst
[NASA-CASE-LAR-13540-1] N86-32541
Use of gas imaging as a means of locating leaks and tracking gas clouds
[DE86-010786] N86-32546
Remote sensing of gases by laser techniques: Development of a spaceworthy, line tunable, CO2-laser
[BMFT-FB-W-85-027] N86-32549
Considerations and calculations for application of an optical amplifier as an end and preamplifier
[DFVLR-FB-86-11] N86-32734
Development of applied optical techniques using lasers
[DE86-701692] N86-33153
CARBON DIOXIDE REMOVAL
Elementary design guidelines for CO2 scrubbing with LiOH, technical manual
[AD-A168850] N86-33022
CARBON FIBER REINFORCED PLASTICS
Study of damage in a perforated carbon-epoxy composite plate under biaxial cyclic forces
[ONERA-RT-8/3542-RY-022-R] N86-32536
Deployable antenna reflector
[SNIAS-861-422-117] N86-32537
Description of an ultrasonic system for in situ fault detection
[ONERA-RT-10/3542/RY-042-R] N86-32768
CARBON FIBERS
Fiber coatings for the fabrication of graphite-reinforced magnesium composites
[AD-A168805] N86-32535
CARBON ISOTOPES
Isotope abundance measurements of carbon, nitrogen and hydrogen in meteorites N86-33224
The C12/C13 isotopic effect in carbonaceous chondrites: Size and importance of the magnetic isotope effect N86-33226
Isotopic anomalies in meteorites and nucleosynthesis (1): A review of the nonradiogenic cases between carbon and silicon N86-33244
CARBON STARS
On the source of the violet depression in carbon stars (a study of the Balmer decrement in carbon L. P. V.s) N86-33252
CARBON 12
Isotopic ratios in comets N86-33233
Isotopic ratios in giant planets N86-33234
Gravitational settling in the Jovian atmosphere — helium, carbon ratio N86-33235
Meteorites and comets: A study in relation to C12/C13 ratios N86-33239
Cross sections for production of the 15.10 MeV and other astrophysically significant gamma-ray lines through excitation and spallation of sup 12 C and sup 16 O with protons
[NASA-TM-87767] N86-33260

CARBON 13
Isotopic ratios in comets N86-33233
Isotopic ratios in giant planets N86-33234
Gravitational settling in the Jovian atmosphere -- helium, carbon ratio N86-33235
Meteorites and comets: A study in relation to C12/C13 ratios N86-33239
CARBON 14
Radioactivities in returned lunar materials and in meteorites
[NASA-CR-179743] N86-33259
CARBON-CARBON COMPOSITES
Finite element micromechanics and minimechanics modeling of a three-dimensional carbon-carbon composite material
[AD-A168050] N86-32532
CARBONACEOUS CHONDRITES
The C12/C13 isotopic effect in carbonaceous chondrites: Size and importance of the magnetic isotope effect N86-33226
On the xenon in acid-resistant residues of the Efremovka CV and Allende CV chondrites N86-33230
Meteorites and comets: A study in relation to C12/C13 ratios N86-33239
CARBURIZING
Improved fracture toughness corrosion-resistant bearing material
[NASA-CR-174990] N86-32743
CARRIER FREQUENCIES
Low noise multiple crystal-controlled oscillator
[AD-D012282] N86-32634
CASCADE FLOW
Studies on transonic Double Circular Arc (DCA) profiles of axial flow compressor calculations of profile design
[AD-A168638] N86-32679
CASES (CONTAINERS)
Automatic loading of composite tape using cassettes
[AD-D012338] N86-32707
CASSEGRAIN OPTICS
Calculations of the SNR of a laser Doppler anemometer with a Cassegrain lens
[DFVLR-FB-86-12] N86-33157
CATALYSTS
Isotope exchange in oxide-containing catalyst
[NASA-CASE-LAR-13542] N86-32540
Pretreatment and reactivation of an oxide-containing catalyst
[NASA-CASE-LAR-13540-1] N86-32541
CATALYTIC ACTIVITY
Pretreatment and reactivation of an oxide-containing catalyst
[NASA-CASE-LAR-13540-1] N86-32541
ECUT (Energy Conversion and Utilization Technologies Program). Biocatalysis Project
[NASA-CR-179754] N86-32877
CATHODIC COATINGS
New technique for improving voltage regulation in Li/FeS thermal batteries
[DE86-010962] N86-32882
CAVITY RESONATORS
Optimization of a lasertron double output cavity
[DE86-009176] N86-32649
Optically pumped CW (Continuous Wave) semiconductor ring laser
[AD-D012326] N86-32724
CEILINGS (METEOROLOGY)
Seoul AB, South Korea limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167658] N86-32928
CELESTIAL MECHANICS
The Comet Halley ephemeris development effort N86-32466
CENSORED DATA (MATHEMATICS)
Nonparametric estimation of quantiles and of density functions under censoring, discrete failure models and multiple comparisons
[AD-A167584] N86-32765
CENTER OF GRAVITY
Centrifugally operated moving-mass roll control system
[AD-D012272] N86-32441
CENTRIFUGAL PUMPS
Small centrifugal pumps for low-thrust rocket engines
[NASA-CR-174913] N86-32741
CENTROIDS
Scintillation effects on centroid anisoplanatism
[AD-A168551] N86-33152
CERAMICS
Concept for the quality assurance of components of the ceramic gas turbine by nondestructive testing
[DE86-011474] N86-32435
Method for preparing Pb-beta"-alumina ceramic
[AD-D012352] N86-32575
A continuum theory of crack shielding in ceramics
[AD-A168599] N86-32576
Ceramic tribology: Assessment of needs in measurement methods and standards
[DE86-008948] N86-32578
Initial results of a high-power microwave sintering experiment at ORNL
[DE86-010041] N86-32579
Migration of grain boundaries in ceramic materials with particular reference to the sintering process
[DE86-011710] N86-32580
Film chip capacitor
[AD-D012300] N86-32636
A method for developing design diagrams for ceramic and glass materials using fatigue data
[NASA-RP-1174] N86-32763
Defect Solid State '84, programme and abstract booklet
[DE86-780445] N86-33182
Advanced Gas Turbine (AGT) Technology Development Project annual report
[NASA-CR-179485] N86-33211
CEREBRAL CORTEX
Peripheral nerve injury in developing rats reorganizes motor cortex
[AD-A168019] N86-32952
Analytical comparison of transient and steady state visual evoked cortical potentials N86-32978
CEREBRUM
Peripheral nerve injury in developing rats reorganizes motor cortex
[AD-A168019] N86-32952
Effects of high altitude on neurological and pulmonary function: The effect of high altitude on visual evoked potentials in humans on Mt. Everest
[AD-A166335] N86-32959
CERTIFICATION
Dynamic identification procedure and lift certification of light aircraft and gliders
[ONERA-RT-12/1677-RY-090-R] N86-32429
CESIUM
Theoretical studies of Resonance Enhanced Stimulated Raman Scattering (RESRS) of frequency doubled Alexandrite laser wavelengths in cesium vapor
[NASA-CR-179768] N86-32717
CESSNA 172 AIRCRAFT
Six degree of freedom simulation software
[NAL-PD-SE-8614] N86-33042
CHALLENGER (ORBITER)
The Astro-1 mission — Halley's Comet N86-32460
The Spartan mission — Halley's Comet; Challenger payload N86-32463
CHANNELS (DATA TRANSMISSION)
Interactive full channel teletext system for cable television nets
[ETN-86-97541] N86-32620
CHAOS
Order and chaos in fluid flows
[NAL-TM-DU-8602] N86-32663
CHARACTER RECOGNITION
Automatic character recognition system
[AD-D012328] N86-33145
CHARGE COUPLED DEVICES
Bi-directional current differencer for complementary charge coupled device (CCD) outputs
[AD-D012262] N86-32632
CCD gate definition process
[AD-D012298] N86-32635
Investigation of characteristics and application of new CCD (Charge Coupled Devices) signal processing devices
[AD-A167929] N86-32638
Solid state research
[AD-A168053] N86-33179
CHARGE EFFICIENCY
Effect of depth of discharge on lead-acid battery overcharge requirements
[DE86-008945] N86-32648
Overview of Sandia's storage battery program
[DE86-010956] N86-32881
CHARGE TRANSFER
Bibliography of electron transfer in ion-atom collisions
[IPPJ-AM-45] N86-33169
CHARGED PARTICLES
The joint NASA/Goddard-University of Maryland research program in charged particle and high energy photon detector technology
[NASA-CR-177062] N86-33129
Unlimited acceleration of a charged particle by an electromagnetic wave: Relativistic theory
[IPPJ-781] N86-33166
Bibliography of electron transfer in ion-atom collisions
[IPPJ-AM-45] N86-33169
CHEBYSHEV APPROXIMATION
Introduction to spectral methods with application to fluid mechanics N86-32668
Stability of collocation-Chebyshev schemes with application to the Navier-Stokes equations N86-32669
CHELATION
Metal-binding proteins for strategic metal recovery and metal detoxification
[DE86-010778] N86-32565
CHEMICAL ANALYSIS
Relation between constituents and performance in composite materials. Part 2: Matrix systems Narmco 5208 and Narmco 5245
[ONERA-RT-2/3636-M] N86-32539
Behavior of lubricant greases at high temperatures: Thin film and liquid chromatography techniques
[ETN-86-97810] N86-32583
Origin of neon-E N86-33232
CHEMICAL COMPOSITION
Influence of arsenic on corrosion resistance of low-carbon, low-alloy steels
[BLL-M-TRANS-36857-(5828.4)] N86-32553
The isotopic composition of neon emitted in solar flares and trapped in lunar soil minerals N86-33229
CHEMICAL ELEMENTS
Element and isotope fractionation in preplanetary nebula N86-33245
CHEMICAL ENGINEERING
ECUT (Energy Conversion and Utilization Technologies Program). Biocatalysis Project
[NASA-CR-179754] N86-32877
CHEMICAL LASERS
Gain anisotropy in low pressure chemical lasers
[AD-A168125] N86-32726
Development of applied optical techniques using lasers
[DE86-701692] N86-33153
CHEMICAL PROPERTIES
Proposal for a new tomographic device providing information on the chemical properties of a body section
[DE86-010547] N86-32964
CHEMICAL REACTIONS
Dynamical studies of molecular systems
[DE86-010340] N86-32547
CHEMICAL REACTORS
Remotely controllable mixing system
[NASA-CASE-MFS-28153-1] N86-32589
CHINA
The development of space science and technology in China
[AD-A168368] N86-32486
CHIPS (ELECTRONICS)
Film chip capacitor
[AD-D012300] N86-32636
Testing methods for integrated circuit chips
[AD-A167932] N86-32639
CHIRP SIGNALS
Ionospheric sounding by means of linear frequency modulation
[ENST-84E022] N86-32918
CHONDRITES
On the production rate of Ne-21 in ordinary chondrites N86-33219
Extreme magnesium isotope fractionation in the Leoville meteorite N86-33221
Implications of Ti isotopic anomalies in meteorites N86-33222
CHOROID MEMBRANES
Implementation of models for the transient division system of spatio-temporal visual perception
[ETN-86-97533] N86-32965
A model of the transient part of the spatio-temporal perception, containing a two-dimensional long fiber
[ETN-86-97540] N86-32966
CHROMIUM
Study of the thermal evolution of chrome-tungsten deposits on silicon monocrystals
[ENST-86E004] N86-32567
CHROMIUM ALLOYS
Complementary AES and AEM of grain boundary regions in irradiated gamma-strengthened alloys
[DE86-010397] N86-32561
CHROMIUM STEELS
Improved fracture toughness corrosion-resistant bearing material
[NASA-CR-174990] N86-32743
CHRONOLOGY
Exposure ages of iron meteorites: Complex histories and the constancy of galactic cosmic rays N86-33217
Noble gas anomalies in meteoritic and lunar samples and their chronological interpretation N86-33227
Q-nucleosynthesis: Implications for stellar evolution N86-33250
CIRCUIT BOARDS
The qualification and procurement of two-sided printed circuit boards (fused tin-lead or gold plated finish) --- European Space Agency
[ESA-PSS-01-710-ISSUE-1] N86-32660

CIRCUIT DIAGRAMS
An extractor for hierarchial symbolic layouts — VLSI circuits
[THE-RC-59994] N86-32659
CIRCUITS
Investigation of characteristics and application of new CCD (Charge Coupled Devices) signal processing devices
[AD-A167929] N86-32638
Analysis of equivalent capacitances between mutually coupled windings
[DE86-006019] N86-32652
CIVIL AVIATION
Schreiner 1945 - 1985 — civil airline
[ETN-86-97773] N86-32415
CLASSIFICATIONS
Evaluation of spatial, radiometric and spectral thematic mapper performance for coastal studies
[NASA-CR-177149] N86-32829
Optimization of agricultural crop identification in SLAR images: Hierarchic classification and texture analysis N86-32835
Texture analysis of SLAR images as an aid in automated classification of forested areas N86-32841
CLEANING
Density effects on sawtooth oscillations for high-theta 120 kA discharges in ZT-40M
[DE86-008585] N86-33174
CLIMATE
Possible climatic consequences of a major nuclear war
[WCP-113] N86-32924
Meteorological data inventory, southern California, coastal zone, Ragged Point (San Luis Obispo County) to Mexican border
[AD-A167645] N86-32927
Modeling as a means of studying the climate system
[DE86-009702] N86-32933
Lake ice occurrence as an early detector of climate perturbations: The potential for monitoring
[DE86-010583] N86-32935
Review of climate data management in Africa
[WCP-109] N86-32942
CLIMATOLOGY
Seoul AB, South Korea limited surface observations climatic summary (LISOCS), parts A, c-f
[AD-A167658] N86-32928
Monthly and seasonal climatology of the northern winter over the global tropics and subtropics for the period 1974 to 1983. Volume 3: Surface winds
[AD-A168852] N86-32931
Modeling as a means of studying the climate system
[DE86-009702] N86-32933
Activities report in meteorology
[WMO-656] N86-32939
CLOSED CYCLES
Elementary design guidelines for CO2 scrubbing with LiOH, technical manual
[AD-A168850] N86-33022
CLOSED ECOLOGICAL SYSTEMS
The handling and preservation of biosamples in microgravity conditions
[ESA-CR(P)-2193] N86-32487
CLUTTER
Medium PRF pulse Doppler radar processor for dense target environments
[AD-D012344] N86-32613
COALESCING
Magnetic reconnection in a non-Maxwellian neutral sheet
[AD-A188858] N86-32916
COASTAL CURRENTS
The importance of measuring current, waves and other environmental parameters in order to improve the current forecast service N86-32810
COASTS
Optical remote sensing for coastal zone management N86-32861
COATING
Textured carbon surfaces on copper by sputtering
[NASA-CASE-LEW-14130-1] N86-32587
COATINGS
Fiber coatings for the fabrication of graphite-reinforced magnesium composites
[AD-A168805] N86-32536
Variations in the microstructure of nickel-based alloy coatings with the metalloids boron and silicon as a function of deposition parameters in a dual beam ion system
[DE86-009283] N86-32558
COAXIAL CABLES
Connecting coaxial cables to shielded electronic device
[AD-D012267] N86-32633
COCKPIT SIMULATORS
Investigation of pilot behavior within the scope of a training program for handling qualities rating in a ground simulator
[DFVLR-MITT-86-01] N86-32975
COCKPITS
Night vision compatible illumination for vehicle crewmember workspace
[AD-D012339] N86-33018
CODING
Notes on implementation of sparsely distributed memory
[NASA-TM-89254] N86-33031
Survey of key management for data encipherment
[NPL-DITC-70/86] N86-33064
COGNITION
Levels of Information Processing in a Fitts law task (LIPFitts) N86-32980
Evaluation of 2 cognitive abilities tests in a dual-task environment N86-32986
Will machines ever think
[NASA-TM-89244] N86-33071
Memory and processing limits in decision-making
[AD-A168559] N86-33197
COHERENT LIGHT
Holographic optical elements formed in light of reduced coherence
[AD-A168496] N86-33151
COHERENT RADIATION
Gain physics of RF-linac-driven XUV free-electron lasers
[DE86-010201] N86-32731
Coherent infrared detection, volume C — laser data links
[ESA-CR(P)-2184] N86-33158
COHERENT SCATTERING
Single-shot H(2) CARS spectroscopy of propellant ignition and combustion under pressure
[AD-A168054] N86-32542
COLLIMATORS
Fixed aperture, rotating feed, beam scanning antenna system
[AD-D012312] N86-32611
COLLISION AVOIDANCE
Air safety: Federal Aviation Administration's role in developing mid-air collision avoidance back-up systems
[PB86-197506] N86-32418
COLLISIONS
Development system for flexible assembly system
[AD-A168498] N86-33075
Initial data for black hole collisions N86-33247
COLLOCATION
Stability of collocation-Chebyshev schemes with application to the Navier-Stokes equations N86-32669
COLOR
The development and evaluation of color systems for airborne applications: Fundamental visual, perceptual and display systems considerations
[AD-A168563] N86-33020
COLOR PHOTOGRAPHY
The Giotto Halley multicolor camera N86-32483
COLOR-MAGNITUDE DIAGRAM
Near-infrared observations of IRAS minisurvey galaxies
[NASA-CR-179707] N86-33196
COMBAT
Survivability considerations during aircraft conceptual design
[AD-A168555] N86-32428
COMBINATORIAL ANALYSIS
Experiments with parallel algorithms for combinatorial problems
[CWI-OS-R8512] N86-33070
COMBINED STRESS
Continental tectonics: A quantitative view of the thermal and mechanical properties of the continental lithosphere in compressional and extensional stress regimes N86-32797
COMBUSTION
Near- and super-critical droplet combustion
[DE86-009215] N86-32543
Exhaust gas analysis of a diesel engine using alcohol as a fuel
[DE86-751654] N86-32754
COMBUSTION CONTROL
Solid fuel burn enhancer
[AD-D012331] N86-32524
COMBUSTION PHYSICS
O-nucleosynthesis: Implications for stellar evolution N86-33250
COMBUSTION PRODUCTS
Inhalation toxicology. Part 6: Evaluation of the relative toxicity of thermal decomposition products from 9 aircraft panel materials
[AD-A168250] N86-32956
COMET NUCLEI
The Giotto neutral mass spectrometer N86-32481
COMETARY ATMOSPHERES
The Giotto optical probe experiment N86-32486
COMETS
Isotopic ratios in comets N86-33230
Meteorites and comets: A study in relation to C12/C13 ratios N86-33239
COMMAND AND CONTROL
Memory and processing limits in decision-making
[AD-A168559] N86-33197
COMMERCIAL AIRCRAFT
Aircraft accident reports: Brief format, US civil and foreign aviation, issue number 1 of 1985 accidents
[PB86-918915] N86-32417
COMMUNICATION CABLES
Connecting coaxial cables to shielded electronic device
[AD-D012267] N86-32633
COMMUNICATION EQUIPMENT
PSK modulation by temporarily increasing frequency to achieve phase change
[AD-D012254] N86-32631
COMMUNICATION NETWORKS
Survivable local area network
[AD-D012258] N86-32633
Spread spectrum mobile radio communications
[AD-A168484] N86-32616
Interactive full channel teletext system for cable television nets
[ETN-86-97541] N86-32620
Approach to the Navy's Shipboard Nontactical ADP Program (SNAP) data communications needs
[DE86-011340] N86-33068
COMMUNICATION SATELLITES
Satellite mounted system for transferring information using modulated sunlight
[AD-D012345] N86-32614
Offset unfurlable antenna, phase 1 — communication satellites
[MBB-RX11] N86-32622
COMMUNICATION THEORY
Readies and failures in the algebra of communicating processes
[CWI-CS-R8523] N86-33099
An alternative implementation of communication primitives
[CS-8504] N86-33107
COMPENSATORS
Compensation for primary reflector wavefront error
[NASA-CASE-NPO-16869] N86-33138
COMPENSATORY TRACKING
Progression-regression effects in tracking repeated patterns N86-32996
Comparison of the STI NIPIP tracking dynamics identification with the on-line Fourier analyzer DFA results including a time varying case N86-33010
Maximum normalized acceleration as a flying qualities parameter N86-33012
COMPILERS
Ada (trade name) compiler validation summary report: DDC Ada compiler system version 3.1 for DEC VAX-11/785
[AD-A166817] N86-33033
A guide to SID for users of the Flex computer
[RSRE-MEMO-3768] N86-33041
COMPOSITE MATERIALS
Impact damage characterization in laminated composites N86-32527
Acousto-ultrasonic verification of the strength of filament wound composite material
[NASA-TM-88827] N86-32764
A simple condition for composite system properties
[LUT-MR-192] N86-33064
COMPOSITION (PROPERTY)
Relation between constituents and performance in composite materials. Part 2: Matrix systems Narmco 5208 and Narmco 5245
[ONERA-RT-2/3636-M] N86-32539
COMPRESSIBLE FLOW
Finite-difference and finite-volume methods for the computation of compressible viscous flows N86-32667
New finite element methods for the compressible Euler and Navier-Stokes equations N86-32673
Supercomputer implementation of finite element algorithms for high speed compressible flows
[NASA-CR-177065] N86-33043
COMPRESSIBLE FLUIDS
Harmonic and transient problems related to submerged structures
[ETN-86-97874] N86-32782
COMPRESSION LOADS
Deployable M-braced truss structure
[NASA-CASE-LAR-13081-1] N86-32737

Series-form solution of problem of compression of rigid-plastic layer by rough plates
[BLL-M-TRANS-38820-(5828.4)] N86-32769
Continental tectonics: A quantitative view of the thermal and mechanical properties of the continental lithosphere in compressional and extensional stress regimes
N86-32797

COMPRESSOR BLADES
Investigation of a Mach 1.4 compressor cascade with variable back pressure using flow visualization
[AD-A168647] N86-32409

COMPRESSOR ROTORS
TURBISTAN: A standard load sequence for aircraft engine disks
[NLR-MP-85033-U] N86-32436
Cost reductions from introduction of new life philosophies for aircraft engine discs
[NLR-MP-85076-U] N86-32438

COMPUTATION
Documentation of programs to compute spectra from profiler radiometric observations
[PB86-199023] N86-32946
Data collection via a quasi-experimental simulation technology. Part 1: Multiple measurement of performance excellence in complex and uncertain managerial tasks
[AD-A167949] N86-32969
A linear time implementation of Frontal Increase Minimization (FIM) strategy algorithms for the profile reduction of sparse matrices
[SNIAS-861-440-107] N86-33062

COMPUTATIONAL FLUID DYNAMICS
Transonic Navier-Stokes wing solutions using a zonal approach. Part 2: High angle-of-attack simulation
[NASA-TM-88248-PT-2] N86-32392
A computational method for the determination of the flow field around vehicles N86-32401
Theoretical and experimental methods in ground vehicle aerodynamics N86-32402
Fundamental research on computational methods for supersonic and hypersonic flow
[ONERA-RSF-23/1285-AY] N86-32414
Computational Fluid Dynamics, volume 1 — conference
[VKI-LS-1986-04-VOL-1] N86-32666
Finite-difference and finite-volume methods for the computation of compressible viscous flows N86-32667
Introduction to spectral methods with application to fluid mechanics N86-32668
Stability of collocation-Chebyshev schemes with application to the Navier-Stokes equations N86-32669
A pseudo-spectral solution of binary mixture flows — vapor crystal growth N86-32670
A pseudo-spectral solution of vorticity-stream function equations using the influence matrix technique
N86-32671
Finite element analysis of the incompressible Navier-Stokes equations: A synopsis of the streamline-upwind/Petrov-Galerkin formulation
N86-32672
New finite element methods for the compressible Euler and Navier-Stokes equations N86-32673
Patched-grid calculations with the Euler and Navier-Stokes equations: Theory and application
N86-32674
Studies on transonic Double Circular Arc (DCA) profiles of axial flow compressor calculations of profile design
[AD-A168638] N86-32679
Method of operator splitting or fractional steps and its applications to fluid dynamic modelling. Revision 1
[DE86-011035] N86-32684
Numerical mathematical methods for unsteady problems
[ONERA-RTS-5/3448-EY] N86-32692
First 3 years of operation of RIACS (Research Institute for Advanced Computer Science) (1983-1985)
[NASA-CR-179699] N86-33032

COMPUTATIONAL GRIDS
Patched-grid calculations with the Euler and Navier-Stokes equations: Theory and application
N86-32674
First 3 years of operation of RIACS (Research Institute for Advanced Computer Science) (1983-1985)
[NASA-CR-179699] N86-33032

COMPUTER AIDED DESIGN
Optimizing header strength utilizing finite element analyses
[DE86-010478] N86-32592
Parameterization of system descriptions for a hierarchical circuit simulator
[ETN-86-97535] N86-32656
Coordinated research in robotics and integrated manufacturing
[AD-A168524] N86-32752
A linear algorithm for non-linear interpolation for computer aided designs
[AD-D012271] N86-33044
Simulation and optimization techniques in computer aided design
[NLR-MP-85022-U] N86-33053
An infrastructure for information processing for computer aided design
[NLR-MP-85038-U] N86-33054
User manual for the simulation package THE/ES
[ETN-86-97696] N86-33055
Comments on achievable eigenvectors
[DE86-003228] N86-33076

COMPUTER AIDED MANUFACTURING
A comparison of a manual and computer-integrated production process in terms of process control decision-making
[AD-A168037] N86-32750
Coordinated research in robotics and integrated manufacturing
[AD-A168524] N86-32752

COMPUTER AIDED MAPPING
Texture analysis of SLAR images as an aid in automated classification of forested areas N86-32841

COMPUTER INFORMATION SECURITY
Survey of key management for data encipherment
[NPL-DITC-70/86] N86-33064

COMPUTER NETWORKS
ETHERNET data-acquisition and control system
[DE86-006018] N86-33036
Computer science research. Computation and Information Services Directorate
[DE86-010492] N86-33049
Survey of key management for data encipherment
[NPL-DITC-70/86] N86-33064
Approach to the Navy's Shipboard Nontactical ADP Program (SNAP) data communications needs
[DE86-011340] N86-33068
Prototype material properties data network
[NASA-TM-89243] N86-33208

COMPUTER PROGRAM INTEGRITY
Analyzing the security of an existing computer system
[NASA-TM-89205] N86-33029
Software reliability models on trial: Selection, improved estimation and practical results
[NLR-MP-83059-U] N86-33051
Term rewriting systems with priorities
[FVI-86-03] N86-33058

COMPUTER PROGRAMMING
KRASH 85 user's guide: Input/output format, revision
[AD-A168646] N86-32416
Analysis of the multistep method for longterm orbit prediction
[CNES-84/CT/DTI/MS/MN/011] N86-32503
KBGIS-2: A knowledge-based geographic information system N86-32865
Reusable software
[RSRE-MEMO-3884] N86-33026
Learning to program methodically. Part 3: Renovation of the elementary programming instruction 1984-1986
[FVI-86-04-PT-3] N86-33038
A guide to SID for users of the Flex computer
[RSRE-MEMO-3768] N86-33041
User systems guidelines for software projects
[DE86-010490] N86-33048
Nondeterminism in data types, a mathematical approach
[CS-8506] N86-33057
Term rewriting systems with priorities
[FVI-86-03] N86-33058
Analysis of a data compression for spacecraft observation
[CNES-CT/DTI/MS/MN/088] N86-33061

COMPUTER PROGRAMS
Aspect ratio effects on wings at low Reynolds numbers N86-32390
Heat transfer modelling of thrust vector control systems
[AD-A167933] N86-32523
Correction for probe-position errors in planar, near-field scanning
[AD-A167072] N86-32605
Documentation of programs to compute spectra from profiler radiometric observations
[PB86-199023] N86-32946
Convective Parameters and Holograph Program: CONVECT
[PB86-197225] N86-32947
Six degree of freedom simulation software
[NAL-PD-SE-8614] N86-33042
Modular, automated software testing environment
[DE86-008743] N86-33047
An architecture for sensor fusion in a mobile robot
[AD-A168075] N86-33073
Centroid tracking with area array detectors
[NASA-CR-179750] N86-33140

COMPUTER STORAGE DEVICES
Monolithic area array for laser ranging application
[AD-D012296] N86-32719

COMPUTER SYSTEMS DESIGN
Hardware proofs using LCF-LSM and ELLA — high level languages
[RSRE-MEMO-3832] N86-33027
Analyzing the security of an existing computer system
[NASA-TM-89205] N86-33029
A language capable of describing computer architecture
[AD-A168553] N86-33035
Study of the architecture of a parallel computer adapted to ray casting 3-d dimensional image synthesis
[ENST-86E003] N86-33037

COMPUTER SYSTEMS PERFORMANCE
Estimation and control of sparse dynamic systems
[DE86-006135] N86-33046
Experiments with parallel algorithms for combinatorial problems
[CWI-OS-R8512] N86-33070

COMPUTER SYSTEMS PROGRAMS
ESABASE extension to spacecraft charging
[MATRA-CMT-TS101/RT/16.85] N86-32517
Description of the Norwegian Doppler positioning program N86-32822
A computer program to process Vaisala RS 21-12 C radiosonde data
[KNMI-TR-77] N86-32940
A survey of restrictions in Pascal implementations
[NPL-DITC-72/86] N86-33039
Modular, automated software testing environment
[DE86-008743] N86-33047
User systems guidelines for software projects
[DE86-010490] N86-33048
Software reliability models on trial: Selection, improved estimation and practical results
[NLR-MP-83059-U] N86-33051

COMPUTER SYSTEMS SIMULATION
The replay technique: The concept, initial experience and proposed developments — air traffic control simulation
[RSRE-MEMO-3827] N86-32420
Hardware proofs using LCF-LSM and ELLA — high level languages
[RSRE-MEMO-3832] N86-33027

COMPUTER TECHNIQUES
A survey of computer-aided dimensional metrology
[NPL-MOM-76] N86-32588
Correction for probe-position errors in planar, near-field scanning
[AD-A167072] N86-32605
Human and automatic interpretation of radar images of land cover N86-32844
A linear algorithm for non-linear interpolation for computer aided designs
[AD-D012271] N86-33044
Development system for flexible assembly system
[AD-A168499] N86-33075
Overview of the non-programmatic cost projection prototype
[DE86-010965] N86-33199
Air Force Office of Scientific Research, Air Force Systems Command technical report summaries, first quarter 1956
[AD-A168619] N86-33213

COMPUTER VISION
Biological visual systems structures for machine vision applied to robotics
[AD-A168521] N86-32751
Perspective projection invariants
[AD-A167783] N86-32968
Development system for flexible assembly system
[AD-A168499] N86-33075

COMPUTERIZED SIMULATION
Three-dimensional numerical model of a schematized primary zone
[ONERA-RTS-24/3256-EY] N86-32413
KRASH 85 user's guide: Input/output format, revision
[AD-A168646] N86-32416
ESABASE extension to spacecraft charging
[MATRA-CMT-TS101/RT/16.85] N86-32517
Statistical mechanics of polymer systems
[DE86-010292] N86-32581
Fundamental studies of elastomers
[DE86-010438] N86-32582
Influence of the edge effects on the initial velocity of fragments from a warhead
[SNIAS-861-320-104] N86-32593
Optimization of a klystron double output cavity
[DE86-009176] N86-32649
Transmission of a modulated microwave across a diode
[DE86-010262] N86-32654
A simulation study of the effects of sleep deprivation, time of watch and length of time on watch on watchstanding effectiveness
[AD-A167729] N86-32956

Radiographic determination of mass of inertial tensors of anatomical segments
[AD-A168581] N86-32961
Data collection via a quasi-experimental simulation technology. Part 1: Multiple measurement of performance excellence in complex and uncertain managerial tasks
[AD-A167949] N86-32969
Simulation and optimization techniques in computer aided design
[NLR-MP-85022-U] N86-33053
Formal verification of properties of digital systems using an automated reasoning system
[DE86-006552] N86-33067
Centroid tracking with area array detectors
[NASA-CR-179750] N86-33140
Analysis, modeling, and design of short-wavelength laser-plasma experiments
[DE86-006033] N86-33173

CONCURRENT PROCESSING
Analytical models for parallel processing systems
[AD-A168678] N86-33065
ROSES: An efficient scheduler for precedence - constrained tasks on concurrent multiprocessors
[DE86-011083] N86-33089

CONDENSATION
Thermopervaporation system
[DE86-011152] N86-32683

CONDUCTIVE HEAT TRANSFER
Energy sources and the thermal history of the Earth
N86-32789

CONFERENCES
Vehicle Aerodynamics — conference
[VKI-LS-1986-05] N86-32397
Proceedings of an ESA Workshop on Reentry of Space Debris
[ESA-SP-246] N86-32490
Picosecond electronics and optoelectronics held at Incline Village, Nevada on 13-15 March 1985
[AD-A.55585] N86-32646
Computational Fluid Dynamics, volume 1 — conference
[VKI-LS-1986-04-VOL-1] N86-32686
International Geophysics and Space — conference
[ISBN-2-85428-132-2] N86-32786
The 10th ARGOS Users Conference
[ETN-86-97267] N86-32805
Microwave Remote Sensing Applied to Vegetation — conferences
[ESA-SP-227] N86-32830
Remote Sensing Applications in Civil Engineering — conferences
[ESA-SP-216] N86-32845
Proceedings of the Third Annual Symposium on Mathematical Pattern Recognition and Image Analysis
[NASA-CR-171925] N86-33087
Irradiation effects on plasma diagnostic equipment
[IPPJ-779] N86-33167
Isotopic Ratios in the Solar System — conference
[ISBN-2-85428-133-0] N86-33216

CONFIDENCE LIMITS
Methods for risk determination and evaluation
[NLR-MP-84019-U] N86-33115

CONFORMAL MAPPING
Biological visual systems structures for machine vision applied to robotics
[AD-A168521] N86-32751

CONICAL FLOW
Theoretical and experimental investigation of the shock reflection in three-dimensional steady, conical supersonic flows
[DFVLR-FB-86-07] N86-32412

CONJUGATE GRADIENT METHOD
Computational methods in Nearfield Acoustic Holography (NAH), appendix
[AD-A168064] N86-32710

CONNECTORS
Torque limiting collar
[AD-D012275] N86-32745
Fiber optic cable connector
[AD-D012270] N86-33141

CONSISTENCY
Science and technology analyst's assistant, revision
[AD-A168552] N86-32617

CONSTRAINTS
Torque limiting collar
[AD-D012275] N86-32745

CONSTRUCTION
Remote sensing for highway engineers N86-32855
Inhalation toxicology. Part 6: Evaluation of the relative toxicity of thermal decomposition products from 9 aircraft panel materials
[AD-A166250] N86-32958

CONSTRUCTION INDUSTRY
Remote Sensing Applications in Civil Engineering — conferences
[ESA-SP-216] N86-32845

CONTAINERLESS MELTS
Apparatus for production of ultrapure amorphous metals utilizing acoustic cooling
[NASA-CASE-NPO-15658-1] N86-32551

CONTINENTAL DRIFT
Continental tectonics: A quantitative view of the thermal and mechanical properties of the continental lithosphere in compressional and extensional stress regimes
N86-32797

CONTINENTS
Deformation mechanisms in the continents
N86-32798

CONTINUOUS WAVE LASERS
Optically pumped CW (Continuous Wave) semiconductor ring laser
[AD-D012326] N86-32724
Gain anisotropy in low pressure chemical lasers
[AD-A168125] N86-32726

CONTINUUM MECHANICS
A continuum theory of crack shielding in ceramics
[AD-A168599] N86-32576

CONTINUUM MODELING
Microscopic calculation of critical layer thickness for coherently strained silicon-like structures
[DE86-009853] N86-33185

CONTRACT MANAGEMENT
Cost and schedule control systems criteria for contract performance measurement. Data analysis guide
[DE86-010796] N86-33198

CONTRACTORS
Cost and schedule control systems criteria for contract performance measurement. Data analysis guide
[DE86-010796] N86-33198

CONTRACTS
Cost and schedule control systems criteria for contract performance measurement. Data analysis guide
[DE86-010796] N86-33198

CONTRAST
Variable contrast direct read-out vision tester
[AD-D012273] N86-32955

CONTROL EQUIPMENT
Constant rise AGC (Automatic Gain Control) device
[AD-D012327] N86-32541
A design guide for visual displays and manual tasks in vibration environments. Part 2: Manual tasks
[ISVR-TR-134] N86-33015

CONTROL RODS
Experimental investigation of secondary flow vortices in a rod cluster
[ECN-174] N86-32693

CONTROL SIMULATION
An approach to integrated aeroservoelastic tailoring for stability N86-32439

CONTROL STABILITY
Servo-actuator for sampled-data feedback disturbance rejection — helicopters
[DFVLR-FB-86-08] N86-32446
Partial disturbance decoupling with constant state feedback: Application to the regulator problem
[DFVLR-FB-86-09] N86-33080

CONTROL STICKS
Flight test of a displacement sidearm controller
N86-32992
Active controllers and the time duration to learn a task
N86-32994

CONTROL SURFACES
Investigation of an asymptotic expansion technique to analyze limit cycle response of aerodynamic surfaces with structural nonlinearities
[AD-A168491] N86-32442

CONTROL SYSTEMS DESIGN
Preliminary control law and hardware designs for a ride quality augmentation system for commuter aircraft. Phase 2
[NASA-CR-4014] N86-32440
Reliability issues in active control of large flexible space structures
[NASA-CR-179758] N86-32512
Flight test of a displacement sidearm controller
N86-32992
Anthropometric considerations for a 4-axis side-arm flight controller N86-32993
Estimation and control of sparse dynamic systems
[DE86-008135] N86-33046
Comments on achievable eigenvectors
[DE86-003228] N86-33076

CONTROL THEORY
The application of adaptive filtering to the active control of sound and vibration
[ISVR-TR-136] N86-32628
Control loops with human operators in space operations. Part 2: Robotics operations and manual control experiment
[NLR-TR-84116-L-PT-2] N86-33024
Estimation and control of sparse dynamic systems
[DE86-008135] N86-33046
On the necessity of identifying the true parameter in adaptive Linear Quadratic (LQ) control
[CWI-OS-R8602] N86-33079
Partial disturbance decoupling with constant state feedback: Application to the regulator problem
[DFVLR-FB-86-09] N86-33080

CONTROL UNITS (COMPUTERS)
An architecture for sensor fusion in a mobile robot
[AD-A168075] N86-33073

CONTROL VALVES
Remotely controllable mixing system
[NASA-CASE-MFS-28153-1] N86-32589
Monogroove cold plate — heat-pipe exchanger for space applications
[NASA-CASE-MSC-20946-1] N86-32661

CONTROLLABILITY
Investigation of pilot behavior within the scope of a training program for handling qualities rating in a ground simulator
[DFVLR-MITT-86-01] N86-32975

CONTROLLERS
The application of adaptive filtering to the active control of sound and vibration
[ISVR-TR-136] N86-32628
Capacitor charging FET switcher with controller to adjust pulse width
[AD-D012347] N86-32644
Performance of electronic ballasts and other new lighting equipment
[DE86-009589] N86-32653
Control of a free-flying robot manipulator system
[NASA-CR-179717] N86-33016

CONVECTION CLOUDS
Infrared issues for the nuclear winter phenomenon
[AD-A168717] N86-32915
Multiparameter radar measurements in Colorado convective storms
[PB86-199528] N86-32944

CONVECTION CURRENTS
The relationship of storm severity to directionally resolved radio emissions
[NASA-CR-178916] N86-32601
Analysis of results from energy balance and radiative-convective models, appendix A
[DE86-010554] N86-32934
Convective Parameters and Holograph Program: CONVECT
[PB86-197225] N86-32947

CONVECTIVE HEAT TRANSFER
Near- and super-critical droplet combustion
[DE86-009215] N86-32543
Blockage of natural convection boundary layer flow in a multizone enclosure
[DE86-004430] N86-32686
Mantle convection and the Earth's gravity field
N86-32790

CONVERGENCE
Solution of non-linear Fredholme integral equations by a variational approach
[LUT-MR-186] N86-33083

CONVEXITY
On distribution spaces based on Jacobi polynomials
[EUT-84-WSK-01] N86-33117

COOLING SYSTEMS
Monogroove cold plate — heat-pipe exchanger for space applications
[NASA-CASE-MSC-20946-1] N86-32661

COORDINATE TRANSFORMATIONS
Comment on gravitational anomalies
[DE86-701720] N86-33191

COORDINATES
Implicit multigrid algorithms for the three-dimensional flux split Euler equations
[NASA-CR-179742] N86-33086

COORDINATION
Aircrew coordination and decisionmaking: Peer ratings of video tapes made during a full mission simulation
N86-32999

COPOLYMERS
Polyarylene ethers with improved properties
[NASA-CASE-LAR-13555-1] N86-32526

COPPER
Film chip capacitor
[AD-D012300] N86-32638

COPPER OXIDES
Textured carbon surfaces on copper by sputtering
[NASA-CASE-LEW-14130-1] N86-32587

CORNER FLOW
Theoretical and experimental investigation of the shock reflection in three-dimensional steady, conical supersonic flows
[DFVLR-FB-86-07] N86-32412

CORROSION PREVENTION
Method of coating a substrate with a rapidly solidified metal
[NASA-CASE-12880-1] N86-32550

Wind energy conversion systems: Evaluation of reliability, availability, and maintainability at various locations
[AD-A168272] N86-32878

CORROSION RESISTANCE
Influence of arsenic on corrosion resistance of low-carbon, low-alloy steels
[BLL-M-TRANS-36857-(5828.4)] N86-32553
Assimilation of production of welded corrosion-resistant nickel-free steel tubes
[BLL-M-TRANS-36809-(5828.4)] N86-32554
Weldability, microstructure and properties of precipitation strengthened martensitic stainless steels
[DE86-010955] N86-32562
Improved fracture toughness corrosion-resistant bearing material
[NASA-CR-174990] N86-32743

COSMIC RAYS
Handbook of geophysics and the space environment, 4th edition
[AD-A167000] N86-32914

COSMOCHEMISTRY
Long-lived isotopes as indicators of the nature of the Cretaceous-Tertiary event: Experimental results on the uranium isotopic composition N86-33220
Implications of Tl isotopic anomalies in meteorites N86-33222
Short-lived nuclides in the early solar system and general isotopic anomalies in meteorites N86-33223

COSMOLOGY
The joint NASA/Goddard-University of Maryland research program in charged particle and high energy photon detector technology
[NASA-CR-177082] N86-33129
Long-lived isotopes as indicators of the nature of the Cretaceous-Tertiary event: Experimental results on the uranium isotopic composition N86-33220
Solar isotopic ratios, chemical evolution of galaxies and cosmology N86-33240
Multiple images of our galaxy in closed, multiply connected cosmologies
[DE86-701777] N86-33253
On a quantized scalar field in the combined de Sitter-Narlai universe
[DE86-701778] N86-33254
Weyl (integrable) spacetimes as a model for our cosmos
[DE86-701953] N86-33255

COSMOS SATELLITES
Cosmos 1402 reentry predictions: A retrospective analysis N86-32497
Organization of the orbit and reentry prediction computations at CNES for Skylab and Cosmos 1402 N86-32500

COSMOS 954 SATELLITE
Detection of the malfunction of Cosmos 954 and Cosmos 1402 and the subsequent predictions of their reentries N86-32494

COSPAS
COSPAS-SARSAT satellite orbit predictor, volume 7
[NASA-TM-85015-VOL-7] N86-32502

COST ANALYSIS
Overview of the non-programmatic cost projection prototype
[DE86-010965] N86-33199

COST EFFECTIVENESS
IEA solar: Working toward greater cost-effectiveness, report of the International Energy Agency Solar Heating and Cooling Programme
[DE86-011521] N86-32883
Attempt to evaluate the tip vane concept with a lifting-line model
[NLR-MP-85071-U] N86-32888

COST ESTIMATES
Overview of the non-programmatic cost projection prototype
[DE86-010965] N86-33199

COST REDUCTION
A language capable of describing computer architecture
[AD-A168553] N86-33035

COUETTE FLOW
Linear stability of plane Couette flow of an upper convected Maxwell fluid
[AD-A167927] N86-32878

COUNTING
Recursive parameter estimation for counting processes with linear intensity
[CWI-OS-R8513] N86-33103

COUNTING CIRCUITS
Capacitor charging FET switcher with controller to adjust pulse width
[AD-D012347] N86-32644

COUPLERS
Systematic parameter study of optical directional coupler analog modulators designed to operate at 810 nm: Characterization techniques and preliminary results
[DE86-006729] N86-33154

COUPLING COEFFICIENTS
Method of wavelength multiplexing in fused single-mode fiber couplers
[AD-D012329] N86-33148

COUPLINGS
Torque limiting collar
[AD-D012275] N86-32745

COVARIANCE
Modeling multivariate covariance nonstationary time series and their dependency structure
[DE86-010052] N86-33095

CRACK INITIATION
Influence of constant amplitude and variable amplitude loading on crack initiation and microcrack propagation in Al 2024-T3
[ESA-TT-900] N86-32780

CRACK PROPAGATION
Finite element micromechanics and minimechanics modeling of a three-dimensional carbon-carbon composite material
[AD-A168050] N86-32532
Fracture analysis of radial scientific instrument module registration fittings of the space telescope
[NASA-CR-178932] N86-32773
Influence of constant amplitude and variable amplitude loading on crack initiation and microcrack propagation in Al 2024-T3
[ESA-TT-900] N86-32780
Contributions to the ONERA life prediction model (fatigue cracking under real loading) — crack propagation, variable loads
[ONERA-RT-25/7169-RY-048-R] N86-32783
Computation of the stress intensity factor in stiffened panels (built in or adhesive bonded stiffeners)
[SNIAS-436.021/85] N86-32784

CRACKING (FRACTURING)
Fracture mechanics of matrix cracking and delamination in glass/epoxy laminates
[NASA-TM-89007] N86-32529

CRACKS
Method of repairing hidden leaks in tubes
[NASA-CASE-MFS-19796-1] N86-32736

CRASH INJURIES
Vertical drop test of a transport fuselage section located aft of the wing
[NASA-TM-89025] N86-32771

CRASHES
KRASH 85 user's guide: Input/output format, revision
[AD-A168646] N86-32416

CRASHWORTHINESS
Vertical drop test of a transport fuselage section located aft of the wing
[NASA-TM-89025] N86-32771

CREEP PROPERTIES
Creep properties of PWC-11 base metal and weldments as affected by heat treatment
[NASA-TM-88842] N86-32557

CREEP TESTS
Creep properties of PWC-11 base metal and weldments as affected by heat treatment
[NASA-TM-88842] N86-32557

CREW PROCEDURES (INFLIGHT)
Aircrew coordination and decisionmaking: Peer ratings of video tapes made during a full mission simulation N86-32999
An experimental paradigm for team decision processes N86-33000

CREW STATIONS
The development and evaluation of color systems for airborne applications: Fundamental visual, perceptual and display systems considerations
[AD-A168563] N86-33020

CROP GROWTH
Variation of the radar backscatter of vegetation through the growing season N86-32837
SAR image segmentation using digitised field boundaries for crop mapping and monitoring applications N86-32840
Microwave remote sensing of agricultural crops in Canada N86-32842

CROP IDENTIFICATION
Optimization of agricultural crop identification in SLAR images: Hierarchic classification and texture analysis N86-32835
SAR image segmentation using digitised field boundaries for crop mapping and monitoring applications N86-32840
Semi-operational identification of agricultural crops from airborne SLAR data
[NLR-MP-85030-U] N86-32870

CRUSTAL FRACTURES
Viscoelastic deformation near active plate boundaries
[NASA-CR-179726] N86-32909

CRYOGENICS
Measurement of performance limits in cryogenic heat pipes
[DE86-010208] N86-32689
Non-ending helium story
[DE86-010192] N86-32869

CRYPTOGRAPHY
Survey of key management for data encipherment
[NPL-DITC-70/86] N86-33064

CRYSTAL DEFECTS
Evaluation of extrinsic gettering techniques
[DE86-003583] N86-32647
Defect Solid State '84, programme and abstract booklet
[DE86-780445] N86-33182

CRYSTAL LATTICES
Statistical mechanics of polymer systems
[DE86-010292] N86-32581
Optical properties and interfaces of GaAs/GaAlAs quantic sinks
[ENST-85E012] N86-33189

CRYSTAL STRUCTURE
Synthesis and crystal structure of tris(dimethylarsino)gallane, a monomeric tricoordinate gallium-arsenic compound
[AD-A168020] N86-33178
Some experimental artifacts in LEED studies of phase transitions
[AD-A168646] N86-33181
Defect Solid State '84, programme and abstract booklet
[DE86-780445] N86-33182

CULTURAL RESOURCES
Study of information dissemination by satellite, rider 2: Cultural satellite consortium: Widening the scope
[ESA-CR(P)-2171-VOL-2] N86-32515

CUMULATIVE DAMAGE
Cost reductions from introduction of new life philosophies for aircraft engine discs
[NLR-MP-85076-U] N86-32438
Study of damage in a perforated carbon-epoxy composite plate under biaxial cyclic forces
[ONERA-RT-8/3542-RY-022-R] N86-32536

CURING
Thermal analysis of various epoxy mixtures
[AD-A167609] N86-32530
Effect of time-temperature path of cure on the water absorption of high T sub g epoxy resins
[AD-A168106] N86-32533
Cellular thermosetting fluoropolymers and process for making them
[NASA-CASE-GSC-13008-1] N86-32570

CURRENT REGULATORS
Performance of electronic ballasts and other new lighting equipment
[DE86-009589] N86-32653

CYCLIC LOADS
Fatigue testing a plurality of test specimens and method
[NASA-CASE-MFS-28118-1] N86-32770
Influence of constant amplitude and variable amplitude loading on crack initiation and microcrack propagation in Al 2024-T3
[ESA-TT-900] N86-32780

CYCLOGENESIS
Energetics of cyclonic development in the Asian winter monsoon system N86-32921
Influence of surface heat and moisture fluxes on explosive marine cyclogenesis
[PB86-199346] N86-32945

CYCLONES
Tropical cyclones, 1985: Central North Pacific
[PB86-202215] N86-32923
Forecast verification and reconnaissance data for Southern Hemisphere tropical cyclones
[AD-A168274] N86-32929
Influence of surface heat and moisture fluxes on explosive marine cyclogenesis
[PB86-199346] N86-32945

CYCLOTRONS
Stabilized pulse-width modulation power supplies
[DE86-702042] N86-32651

CYGNUS CONSTELLATION
Can a light gluino solve the Cyg X3 puzzle — underground muons
[PREPRINT-486] N86-33262

CYLINDRICAL BODIES
Axisymmetric turbulent boundary layer on the cylindrical portion of an afterbody test model
[NAL-TM-FM-8505] N86-32395
Ignition and combustion of fuel droplets and the ignition of premixed fuels by hot cylindrical surfaces
[DE86-009262] N86-32545

Rapid electron beam accelerator (REBA-TRON)
[AD-D012303] N86-33130

CZOCHRALSKI METHOD
Investigation of single crystal silicates for blue tunable lasers
[AD-A167613] N86-32720

D

DAMAGE ASSESSMENT
Description of an ultrasonic system for in situ fault detection
[ONERA-RT-10/3542/RY-042-R] N86-32768

DAMPING
Improvement and optimization of internal damping in fiber reinforced composite materials
[AD-A168576] N86-32534
Investigation for disturbances of the index profile in joints of arc welded glass fibers
[ETN-86-97536] N86-32761

DATA ACQUISITION
Dynamic polymer pressure transducer with temperature compensation
[AD-D012285] N86-32705
Sphericity measurements of full spheres using subaperture optical testing techniques
[DE86-011255] N86-32714
The 400 Hz welding transformer gun assembly evaluation
[DE86-009973] N86-32760
Seismological data acquisition by satellite N86-32803
Utilization of ARGOS for ozone measurement stations N86-32824
Data reception — remote sensing N86-32848
Hydrogen species N86-32894
Data collection via a quasi-experimental simulation technology. Part 1: Multiple measurement of performance excellence in complex and uncertain managerial tasks
[AD-A167949] N86-32969
ETHERNET data-acquisition and control system
[DE86-008018] N86-33036

DATA BASE MANAGEMENT SYSTEMS
KBGIS-2: A knowledge-based geographic information system N86-32865
Modular, automated software testing environment
[DE86-008743] N86-33047
An infrastructure for information processing for computer aided design
[NLR-MP-85038-U] N86-33064

DATA BASES
Correction for probe-position errors in planar, near-field scanning
[AD-A167072] N86-32605
Spectroscopic database N86-32903
Guidelines on the structure, management, and operation of climate data centers
[WCP-99] N86-32938
Bibliography of electron transfer in ion-atom collisions
[IPPJ-AM-45] N86-33169
Users guide to the JPL Doppler gravity database
[NASA-CR-179740] N86-33209

DATA COMPRESSION
Analysis of a data compression for spacecraft observation
[CNES-CT/DTI/MS/MN/086] N86-33061

DATA CORRELATION
Medium PRF pulse Doppler radar processor for dense target environments
[AD-D012344] N86-32613

DATA FLOW ANALYSIS
A language capable of describing computer architecture
[AD-A168553] N86-33035

DATA LINKS
Satellite mounted system for transferring information using modulated sunlight
[AD-D012345] N86-32614
Seismological data acquisition by satellite N86-32803
Data reception — remote sensing N86-32848
Method of wavelength multiplexing in fused single-mode fiber couplers
[AD-D012329] N86-33146
Coherent infrared detection, volume C — laser data links
[ESA-CR(P)-2184] N86-33158

DATA MANAGEMENT
Command and data management for a highly integrated payload on the Interface Program System (IPS) (GIRL)
[BMFT-FB-W-85-016] N86-32514
Pilot land data system N86-32866
Review of climate data management in Africa
[WCP-109] N86-32942

DATA PROCESSING
A fuelwood plantation site selection procedure using geographic information system technology: A case study in support of the NASA Global Habitability Program
[NASA-CR-179704] N86-32828
Research undertaken and proposed directions for the coming year of the Information System Research Group N86-32967
A computer program to process Vaisala RS 21-12 C radiosonde data
[KNMI-TR-77] N86-32940
Levels of Information Processing in a Fitts law task (LIPFitts) N86-32980
Nondeterminism in data types, a mathematical approach
[CS-8506] N86-33057
Approach to the Navy's Shipboard Nontactical ADP Program (SNAP) data communications needs
[DE86-011340] N86-33066
Cost and schedule control systems criteria for contract performance measurement. Data analysis guide
[DE86-010796] N86-33198
Organizations as information processing systems: Environmental characteristics, company performance and chief executive scanning, an empirical study
[AD-A168035] N86-33201

DATA SAMPLING
Servo-actuator for sampled-data feedback disturbance rejection — helicopters
[DFVLR-FB-86-08] N86-32446

DATA SIMULATION
A language capable of describing computer architecture
[AD-A168553] N86-33035

DATA SMOOTHING
An error detection and smoothing algorithm for infrared data
[AD-A168629] N86-33093

DATA SYSTEMS
Automated anthropometric data measurement system
[AD-D012299] N86-33017

DATA TRANSFER (COMPUTERS)
Approach to the Navy's Shipboard Nontactical ADP Program (SNAP) data communications needs
[DE86-011340] N86-33066

DATA TRANSMISSION
COSPAS-SARSAT satellite orbit predictor, volume 7
[NASA-TM-85015-VOL-7] N86-32502
Measured noise performance of a post-detection limiter circuit in the receiver of a binary data transmission system
[AD-A168554] N86-32618
Technical experience with the ARGOS system for transmission of oceanographical data N86-32809
A new wave direction buoy allows presentation of wave direction data in near real time N86-32812
Utilization of ARGOS for ozone measurement stations N86-32824
Automated anthropometric data measurement system
[AD-D012299] N86-33017
Approach to the Navy's Shipboard Nontactical ADP Program (SNAP) data communications needs
[DE86-011340] N86-33066

DAYGLOW
Spectroscopy of the far and extreme ultraviolet dayglow N86-32891

DEAD RECKONING
An architecture for sensor fusion in a mobile robot
[AD-A168075] N86-33073

DECISION MAKING
Science and technology analyst's assistant, revision
[AD-A168552] N86-32617
A comparison of a manual and computer-integrated production process in terms of process control decision-making
[AD-A168037] N86-32750
Data collection via a quasi-experimental simulation technology. Part 1: Multiple measurement of performance excellence in complex and uncertain managerial tasks
[AD-A167949] N86-32969
Twenty-First Annual Conference on Manual Control
[NASA-CP-2428] N86-32976
Aircrew coordination and decisionmaking: Peer ratings of video tapes made during a full mission simulation N86-32999
An experimental paradigm for team decision processes N86-33000
Investigation of crew performance in a multi-vehicle supervisory control task N86-33001
A view of Kanerva's sparse distributed memory
[NASA-TM-89206] N86-33030
Will machines ever think
[NASA-TM-89244] N86-33071
Development system for flexible assembly system
[AD-A168499] N86-33075
Memory and processing limits in decision-making
[AD-A168559] N86-33197

DECISION THEORY
Measured noise performance of a post-detection limiter circuit in the receiver of a binary data transmission system
[AD-A168554] N86-32618
Methods for risk determination and evaluation
[NLR-MP-84019-U] N86-33115

DECOUPLING
Partial disturbance decoupling with constant state feedback: Application to the regulator problem
[DFVLR-FB-86-04] N86-33080

DEFORMATION
Microstructural effects on the fatigue behavior of Fe-C-X alloys
[DE86-010918] N86-32583
Correlation of acoustic emission to microstructural sources
[DE86-010558] N86-32777

DEGASSING
Evaluation of extrinsic gettering techniques
[DE86-003583] N86-33647

DELAMINATING
Fracture mechanics of matrix cracking and delamination in glass/epoxy laminates
[NASA-TM-89007] N86-32529

DELAY LINES
Three dimensional, orthogonal delay line bootlace lens antenna
[AD-D012315] N86-32612

DEMOGRAPHY
Automated anthropometric data measurement system
[AD-D012299] N86-33017
A collation of United States Air Force anthropometry
[AD-A168495] N86-33019

DEPOSITION
Method of coating a substrate with a rapidly solidified metal
[NASA-CASE-12880-1] N86-32550
Variations in the microstructure of nickel-based alloy coatings with the metalloids boron and silicon as a function of deposition parameters in a dual beam ion system
[DE86-009283] N86-32558

DEPTH MEASUREMENT
Ultrasonic depth gauge for liquids under high pressure
[NASA-CASE-LAR-13300-CU] N86-32700

DESALINIZATION
Thermopervaporation system
[DE86-011152] N86-32663

DESIGN ANALYSIS
The generation of equal probability design load conditions, using Power Spectral Density (PSD) techniques — aircraft design
[NLR-TR-85014-U] N86-32430
The design of a prototype moving-coil high-frequency loudspeaker drive unit
[BBC-RD-1986/3] N86-32596
Testing methods for integrated circuit chips
[AD-A167932] N86-32639
A method for developing design diagrams for ceramic and glass materials using fatigue data
[NASA-RP-1174] N86-32763
Design of an intermediate-sized, autonomous photovoltaic-diesel power plant
[DE86-010629] N86-32985
Rocket and laboratory studies in aeronomy and astrophysics
[NASA-CR-179709] N86-32901
Ionospheric sounding by means of linear frequency modulation
[ENST-84E022] N86-32918
Hardware proofs using LCF-LSM and ELLA — high level languages
[RSRE-MEMO-3832] N86-33027

DESTRUCTION
Thermal nuclear destruction of lithium, beryllium and boron inside a 1 solar mass star N86-33243

DETECTION
Development system for flexible assembly system
[AD-A168499] N86-33075
Centroid tracking with area array detectors
[NASA-CR-179750] N86-33140

DETONATORS
Percussion primer/DDT detonator
[DE86-011998] N86-32586

DEUTERIUM
Isotopic ratios in comets N86-33233
Isotopic ratios in giant planets N86-33234
The D/H ratio in Saturn's atmosphere from Voyager IRIS spectra N86-33236

DIAGRAMS
A method for developing design diagrams for ceramic and glass materials using fatigue data
[NASA-RP-1174] N86-32763

DIELECTRICS
Methods to characterize charging effects — insulating materials
[TR-KYES-84-178] N86-33625
DIESEL ENGINES
Exhaust gas analysis of a diesel engine using alcohol as a fuel
[DE86-751654] N86-32754
Practical properties of ethanol used as a fuel in diesel engine supercharged in different ways
[DE86-751656] N86-32755
Design of an intermediate-sized, autonomous photovoltaic-diesel power plant
[DE86-010629] N86-32885
DIESEL FUELS
Practical properties of ethanol used as a fuel in diesel engine supercharged in different ways
[DE86-751656] N86-32755
DIFFERENTIAL EQUATIONS
Magnetic reconnection in a non-Maxwellian neutral sheet
[AD-A168658] N86-32916
DIFFERENTIATORS
Comparison of two voltage dividers for the measurement of transient voltages in closed switch gear
[EH-84-A-82] N86-32665
DIFFRACTION PATTERNS
Diffraction moire of dynamic events
[DE86-007835] N86-32774
DIFFUSION
Boron diffusion: A feasibility study for the diffusion of boron from boron tribromide
[AERE-M-3536] N86-32572
Transport and relaxation processes in supercritical fluids
[DE86-007930] N86-32581
Evaluation of Diffusion Densification Healing (DDH) and weld repaired F100 turbine vanes under simulated service conditions
[NLR-MP-85065-U] N86-32762
DIFFUSION WELDING
Low mass diffusion bonding tools
[AD-D012295] N86-32746
DIGITAL COMMAND SYSTEMS
Fiber optic data distribution for phased array antenna
[AD-D012322] N86-33144
DIGITAL COMPUTERS
Flexible (multi-mode) waveform generator
[AD-D012297] N86-32608
DIGITAL SPACECRAFT TELEVISION
Design and realization of a C-MAC/Packet (CMP) Data Demodulator (DD)
[ETN-86-97539] N86-32657
DIGITAL SYSTEMS
Flexible (multi-mode) waveform generator
[AD-D012297] N86-32608
DIGITAL TECHNIQUES
Digital image processing — remote sensing N86-32851
DIGITAL TO ANALOG CONVERTERS
Flexible (multi-mode) waveform generator
[AD-D012297] N86-32608
DIGITAL TO VOICE TRANSLATORS
Packetized voice transmission
[DFVLR-MITT-86-05] N86-32623
DILUTION
Perspectives on dilution jet mixing
[NASA-TM-87294] N86-32432
DIMENSIONAL MEASUREMENT
A survey of computer-aided dimensional metrology
[NPL-MOM-76] N86-32588
DIODES
A dc switching regulated power supply for driving an inductive load
[AD-D012349] N86-32645
Marx generator: KrF laser
[ETN-86-97375] N86-32733
Numerical calculations for the electrode design of a relativistic electron beam diode
[IPPJ-780] N86-33165
DIRECT CURRENT
A dc switching regulated power supply for driving an inductive load
[AD-D012349] N86-32645
DIRECTION FINDING
The relationship of storm severity to directionally resolved radio emissions
[NASA-CR-178916] N86-32601
Improved flux-gate magnetometer
[NASA-CASE-13560-1] N86-32701
DIRECTIONAL ANTENNAS
Directional antenna system having sidelobe suppression
[AD-D012268] N86-32604
Fixed aperture, rotating feed, beam scanning antenna system
[AD-D012312] N86-32611
DIRECTIONAL CONTROL
Heat transfer modelling of thrust vector control systems
[AD-A167933] N86-32523
DISCHARGE COEFFICIENT
Approximations useful for the prediction of electrostatic discharges for simple electrode geometries
[NASA-CR-179748] N86-33121
DISPERSIONS
Ascent trajectory dispersion analysis for WTR heads-up space shuttle trajectory
[NASA-CR-178864] N86-32509
DISPLAY DEVICES
Simulator scene display evaluation device
[NASA-CASE-ARC-11504-1] N86-32447
An improved optical viewing system for a flight simulator
[MS-6025] N86-32448
Missile control system test apparatus having video signal adapter
[AD-D012323] N86-32508
Pocket size antenna match indicator for VSWR (Voltage Standing Wave Ratio) measurement
[AD-D012341] N86-32708
Variable contrast direct read-out vision tester
[AD-D012273] N86-32955
Force/torque display for space teleoperation control experiments and evaluation N86-33002
Model analysis of remotely controlled rendezvous and docking with display prediction N86-33003
Optimal cooperative control synthesis of active displays N86-33006
The development and evaluation of color systems for airborne applications: Fundamental visual, perceptual and display systems considerations
[AD-A168563] N86-33020
Automatic character recognition system
[AD-D012328] N86-33145
DISSOCIATION
Theoretical dissociation energies for ionic molecules
[NASA-TM-88776] N86-33128
DISTRIBUTED PROCESSING
A derivation of a distributed implementation of Warshall's algorithm
[CS-8505] N86-33056
DISTRIBUTION FUNCTIONS
Algebras of extendable unbounded operators
[EUT-84-WSK-04] N86-33097
On distribution spaces based on Jacobi polynomials
[EUT-84-WSK-01] N86-33117
DIVIDERS
A guided-wave optical power divider
[AD-D012336] N86-33149
DIVING (UNDERWATER)
Elementary design guidelines for CO2 scrubbing with LiOH, technical manual
[AD-A168850] N86-33022
DO-28 AIRCRAFT
Identification of gust input and gust response characteristics from Do 28 TNT flight test data
[ESA-TT-919] N86-32445
DOCUMENTS
Text standard generalized markup language. Automated Technical Order System (ATOS)
[AD-A168137] N86-33202
DOPED CRYSTALS
A guided-wave optical power divider
[AD-D012336] N86-33149
DOPES
Lithium counterdoped silicon solar cell
[NASA-CASE-LEW-14177-1] N86-32875
DOPPLER EFFECT
Users guide to the JPL Doppler gravity database
[NASA-CR-179749] N86-33209
DOPPLER RADAR
Range Doppler coupling magnifier
[AD-D012318] N86-32722
Bulk acoustic resonator tracking filter
[AD-D012280] N86-33122
DOSIMETERS
Fabricate, calibrate and test a dosimeter for integration into the CRRES (Combined Release and Radiation Effects Satellite) satellite
[AD-A168566] N86-33131
DOWNLINKING
Data reception — remote sensing N86-32848
DRIFT (INSTRUMENTATION)
Measurements of laser gyro errors as a function of beam path geometry
[ESA-TT-922] N86-32716
DROP TESTS
Vertical drop test of a transport fuselage section located aft of the wing
[NASA-TM-89025] N86-32771
DROPS (LIQUIDS)
Near- and super-critical droplet combustion
[DE86-009215] N86-32543
Ignition and combustion of fuel droplets and the ignition of premixed fuels by hot cylindrical surfaces
[DE86-009262] N86-32545
DRUGS
Effects of high altitude on neurological and pulmonary function: The effect of high altitude on visual evoked potentials in humans on Mt. Everest
[AD-A168335] N86-32959
Effect of dexamethasone on symptoms of acute mountain sickness at Pikes Peak, Colorado (4300m)
[AD-A168662] N86-32963
DUCTILITY
Assimilation of production of welded corrosion-resistant nickel-free steel tubes
[BLL-M-TRANS-36809-(5829.4)] N86-32554
DUMMIES
A comparison of the specific absorption rate in a homogeneous man model and a man model containing realistic model bones
[AD-A168547] N86-32960
DYNAMIC CHARACTERISTICS
Dynamical studies of molecular systems
[DE86-010340] N86-32547
DYNAMIC CONTROL
Influence of structural parameter uncertainties on flexible space structural control performance
[SNIAS-861-440-104] N86-32516
DYNAMIC LOADS
Diffraction moire of dynamic events
[DE86-007835] N86-32774
DYNA3D user's manual (nonlinear dynamic analysis of structures in three dimensions), revision 2
[DE86-010256] N86-32776
DYNAMIC MODELS
Longterm analytical orbit decay and reentry prediction N86-32498
Analytical models for parallel processing systems
[AD-A168678] N86-33065
DYNAMIC PRESSURE
Dynamic polymer pressure transducer with temperature compensation
[AD-D012295] N86-32705
DYNAMIC PROGRAMMING
Analytic spaces and dynamic programming: A measure-theoretic approach, revision
[CWI-TRACT-14] N86-33040
DYNAMIC RESPONSE
Dynamic identification procedure and lift certification of light aircraft and gliders
[ONERA-RT-12/1677-RY-090-R] N86-32429
Investigation of an asymptotic expansion technique to analyze limit cycle response of aerodynamic surfaces with structural nonlinearities
[AD-A168491] N86-32442
Harmonic and transient problems related to submerged structures
[ETN-86-97874] N86-32782
Investigation of limb-sidestick dynamic interaction with roll control N86-32991
DYNAMIC STRUCTURAL ANALYSIS
Structural dynamic measurement practices for turbomachinery at the NASA Lewis Research Center
[NASA-TM-88867] N86-32433
Analytical investigation of the dynamics of tethered constellations in Earth orbit, phase 2
[NASA-CR-178901] N86-32513
Modal Test Structure Project
[DE86-010100] N86-32775
DYNA3D user's manual (nonlinear dynamic analysis of structures in three dimensions), revision 2
[DE86-010256] N86-32776
Harmonic and transient problems related to submerged structures
[ETN-86-97874] N86-32782
DYNAMICAL SYSTEMS
Order and chaos in fluid flows
[NAL-TM-DU-8602] N86-32663
Energetics of cyclonic development in the Asian winter monsoon system N86-32921
Estimation and control of sparse dynamic systems
[DE86-006135] N86-33046
DYNAMICS
A comparison of experimental and theoretical results for leakage, pressure gradients, and rotordynamic coefficients for tapered annular gas seal
[NASA-CR-179709] N86-32742

E

EARTH (PLANET)
Energy sources and the thermal history of the Earth N86-32789
Pilot land data system N86-32866
Long-lived isotopes as indicators of the nature of the Cretaceous-Tertiary event: Experimental results on the uranium isotopic composition N86-33220
Analysis of topography and implications for the tectonic evolution of the moon and Venus. Part 1: Lunar substructure, mare ridges and the tectonic evolution of mare basins. Part 2: A comparison of the regional slope characteristics of Venus and Earth N86-33256
EARTH ATMOSPHERE
Comparisons of meteorological and structure parameters in complex terrain
[DE86-006713] N86-32932
EARTH CRUST
Viscoelastic deformation near active plate boundaries
[NASA-CR-179726] N86-32909
EARTH MANTLE
Mantle convection and the Earth's gravity field N86-32790
Structure and evolution of the Earth mantle studied using paired isotopic tracers: Pb-Sr-Nd N86-32792
Density and elastic parameters of the upper mantle from regional multimode data N86-32796
EARTH OBSERVATIONS (FROM SPACE)
Assembly and evaluation of a low orbit Earth sensor unit
[REPT-390-DT-14] N86-32519
International Geophysics and Space — conference
[ISBN-2-85428-132-2] N86-32786
Data reception — remote sensing N86-32848
ESA and its Earth observation programs N86-32849
The UK National Remote Sensing Centre N86-32850
Remote Sensing Information Sciences Research Group, Santa Barbara Information Sciences Research Group, year 3
[NASA-CR-179789] N86-32863
EARTH ORBITS
Optimal, impulsive, direct ascent, time-fixed orbital interception N86-32488
EARTH PLANETARY STRUCTURE
Disturbance vector in space from surface gravity anomalies using complementary models
[AD-A166730] N86-32913
EARTH RESOURCES
Proposal for NLR activities in the Tropical Earth Resources Satellite (TERS) system definition
[NLR-MEMO-RS-84-019-L] N86-32510
EARTH SURFACE
Disturbance vector in space from surface gravity anomalies using complementary models
[AD-A166730] N86-32913
EARTHQUAKES
Viscoelastic deformation near active plate boundaries
[NASA-CR-179726] N86-32909
ECCENTRICITY
Anomalous perigee shift and eccentricity variation due to air drag in the reentry phase N86-32498
ECHO SOUNDING
Ultrasonic depth gauge for liquids under high pressure
[NASA-CASE-LAR-13300-CU] N86-32700
ECONOMIC ANALYSIS
Design of an intermediate-sized, autonomous photovoltaic-diesel power plant
[DE86-010629] N86-32985
EDDY CURRENTS
Apparatus and method for inspecting a bearing ball
[NASA-CASE-MFS-25833-1] N86-32696
EDEMA
Effects of high altitude on neurological and pulmonary function: The effect of high altitude on visual evoked potentials in humans on Mt. Everest
[AD-A168335] N86-32959
EDUCATION
The startle reflex as a learning task: Apparatus and test parameters
[AD-A167958] N86-32970
Learning to program methodically. Part 3: Renovation of the elementary programming instruction 1984-1986
[FVI-86-04-PT-3] N86-33036
University funding: Federal funding mechanisms in support of university research
[AD-A168023] N86-33212
EFFERENT NERVOUS SYSTEMS
Peripheral nerve injury in developing rats reorganizes motor cortex
[AD-A168019] N86-32952
EFFICIENCY
Evaluation of full-scale hovercraft lift systems
[AD-A167939] N86-33427
Operating efficiencies of a Lysholm helical expander for Brayton-cycle heat engines
[DE86-007178] N86-32753
Practical properties of ethanol used as a fuel in diesel engine supercharged in different ways
[DE86-751658] N86-32755
EIGENVECTORS
New non-linear FM pulse-compression technique for radar applications
[AD-A167110] N86-32606
Comments on achievable eigenvectors
[DE86-003228] N86-33078
ELASTIC DEFORMATION
Analysis of elastic-plastic resistance material response for stress gage design
[DE86-010777] N86-32711
Deformation mechanisms in the continents N86-32796
ELASTIC SCATTERING
Potential scattering — particle scattering
[PREPRINT-504] N86-33133
ELASTOMERS
Fundamental studies of elastomers
[DE86-010438] N86-32582
ELECTRIC BRIDGES
Capacitor charging FET switcher with controller to adjust pulse width
[AD-D012347] N86-32644
ELECTRIC CHARGE
Methods to characterize charging effects — insulating materials
[TR-KYES-84-178] N86-32625
ELECTRIC COILS
Analysis of equivalent capacitances between mutually coupled windings
[DE86-006019] N86-32952
ELECTRIC CONNECTORS
Connecting coaxial cables to shielded electronic device
[AD-D012267] N86-32633
ELECTRIC CONTROL
Electrically controlled integrated optical switch
[AD-D012337] N86-33150
ELECTRIC DISCHARGES
Effect of depth of discharge on lead-acid battery overcharge requirements
[DE86-008945] N86-32648
Model of the X-ray induction of a high pressure argon discharge — laser discharge
[LP-217] N86-32735
Density effects on sawtooth oscillations for high-theta 120 kA discharges in ZT-40M
[DE86-006585] N86-33174
ELECTRIC ENERGY STORAGE
Overview of Sandia's storage battery program
[DE86-010956] N86-32881
ELECTRIC FIELD STRENGTH
Comparisons of 76 Hz vertical electric and horizontal magnetic field strengths received in Connecticut
[AD-A167606] N86-32610
ELECTRIC FIELDS
Growth and development of rhesus monkeys exposed to ELF (Extremely Low Frequency) electric and magnetic fields during the first 54 months of life
[AD-A168733] N86-32953
ELECTRIC GENERATORS
Constant speed drive with compensation using differential gears
[AD-D012256] N86-32744
ELECTRIC HYBRID VEHICLES
Electric and Hybrid Vehicles Program: Report to the Congress
[DE86-009607] N86-33214
ELECTRIC MOTORS
Development of a self-tuning algorithm for a discrete adaptive rpm control
[ETN-86-97534] N86-33078
ELECTRIC POWER SUPPLIES
Arc lamp power supply
[NASA-CASE-LAR-13202-1] N86-32626
Stabilized pulse-width modulation power supplies
[DE86-702042] N86-32651
ELECTRIC WELDING
The 400 Hz welding transformer gun assembly evaluation
[DE86-010211] N86-32759
ELECTRICAL ENGINEERING
Total-dose radiation effects data for semiconductor devices, 1985 supplement. Volume 2, part A
[NASA-CR-179746] N86-33177
ELECTRICAL INSULATION
Methods to characterize charging effects — insulating materials
[TR-KYES-84-178] N86-32625
ELECTRICAL MEASUREMENT
Comparison of two voltage dividers for the measurement of transient voltages in closed switch gear
[EH-54-A-82] N86-32955
ELECTRICAL PROPERTIES
Active matching transmit/receive module
[AD-D012287] N86-32607
Research on separators for alkaline zinc batteries
[DE86-009281] N86-32660
ELECTRICAL RESISTIVITY
The milling of pristine and brominated P-100 graphite fibers
[NASA-TM-88828] N86-32573
Large reflector antenna study
[NASA-CR-178852] N86-32597
Location and measurement time phenomena in two dimensional metallic (Nb and Mo) films
[ENST-85E014] N86-33188
ELECTRO-OPTICS
Picosecond electronics and optoelectronics held at Incline Village, Nevada on 13-15 March 1985
[AD-A168585] N86-32546
Considerations and calculations for application of an optical amplifier as an end and preamplifier
[DFVLR-FB-86-11] N86-32734
Solid state research
[AD-A168053] N86-33179
ELECTRODES
Improved adhesion of thin conformal films to metal surfaces
[AD-A168616] N86-32577
Secondary-electron-emission losses in multistage depressed collectors and traveling-wave-tube efficiency improvements with carbon collector electrode surfaces
[NASA-TP-2622] N86-32629
Approximations useful for the prediction of electrostatic discharges for simple electrode geometries
[NASA-CR-179746] N86-33121
ELECTROENCEPHALOGRAPHY
Effects of high altitude on neurological and pulmonary function: The effect of high altitude on visual evoked potentials in humans on Mt. Everest
[AD-A168335] N86-32959
Modeling multivariate covariance nonstationary time series and their dependancy structure
[DE86-010052] N86-33095
ELECTROLUMINESCENCE
Variable contrast direct read-out vision tester
[AD-D012273] N86-32955
ELECTROMAGNETIC COMPATIBILITY
Method of wavelength multiplexing in fused single-mode fiber couplers
[AD-D012329] N86-33148
ELECTROMAGNETIC FIELDS
Lethality test system
[DE86-008733] N86-32506
Interacting collective modes in a laser cavity
[DE86-701945] N86-32729
ELECTROMAGNETIC PULSES
LASERCOM Mitigation Program
[AD-A168111] N86-32615
ELECTROMAGNETIC RADIATION
The physical basis of remote sensing N86-32947
Spectroscopic database N86-32903
ELECTROMAGNETIC SHIELDING
Connecting coaxial cables to shielded electronic device
[AD-D012267] N86-32633
ELECTROMAGNETIC WAVE TRANSMISSION
Large reflector antenna study
[NASA-CR-178852] N86-32597
ELECTROMAGNETISM
Fixed aperture, rotating feed, beam scanning antenna system
[AD-D012312] N86-32611
ELECTROMYOGRAPHY
Operator alertness/workload assessment using stochastic model-based analysis of myoelectric signals
[AD-A168567] N86-32973
Operator alertness/workload assessment using stochastic model-based analysis of myoelectric signals
[AD-A168568] N86-32974
ELECTRON ACCELERATORS
Rapid electron beam accelerator (REBA-TRON)
[AD-D012303] N86-33130
ELECTRON BEAM WELDING
Creep properties of PWC-11 base metal and weldments as affected by heat treatment
[NASA-TM-88842] N86-32557
ELECTRON BEAMS
Rapid electron beam accelerator (REBA-TRON)
[AD-D012303] N86-33130
Numerical calculations for the electrode design of a relativistic electron beam diode
[IPPJ-780] N86-33165

ELECTRON DENSITY (CONCENTRATION)
Numerical BGK-solutions of large scale electrostatic potential in auroral plasmas
[IPPJ-782] N86-33162
ELECTRON DIFFRACTION
Specific heat anomaly of AU(110)(1 x 2) studied by low-energy electron diffraction
[AD-A168626] N86-33180
Some experimental artifacts in LEED studies of phase transitions
[AD-A168646] N86-33181
ELECTRON EMISSION
Textured carbon surfaces on copper by sputtering
[NASA-CASE-LEW-14130-1] N86-32587
Secondary-electron-emission losses in multistage depressed collectors and traveling-wave-tube efficiency improvements with carbon collector electrode surfaces
[NASA-TP-2622] N86-32629
Ultra-fast field emitter array vacuum integrated circuit switching device
[AD-D012317] N86-32640
ELECTRON FLUX DENSITY
The thermal plasma experiment in the Upper-Air Sounding Rocket Program HEATING, Project HERO
[BMFT-FB-W-85-019] N86-32917
ELECTRON MICROSCOPY
Complementary AES and AEM of grain boundary regions in irradiated gamma-strengthened alloys
[DE86-010397] N86-32561
ELECTRON SOURCES
Ultra-fast field emitter array vacuum integrated circuit switching device
[AD-D012317] N86-32640
ELECTRON SPECTROSCOPY
Complementary AES and AEM of grain boundary regions in irradiated gamma-strengthened alloys
[DE86-010397] N86-32561
ELECTRON TRANSFER
Bibliography of electron transfer in ion-atom collisions
[IPPJ-AM-45] N86-33169
ELECTRONIC EQUIPMENT
Science and technology analyst's assistant, revision
[AD-A168552] N86-32617
Picosecond electronics and optoelectronics held at Incline Village, Nevada on 13-15 March 1985
[AD-A168685] N86-32646
Monolithic area array for laser ranging application
[AD-D012296] N86-32719
Fiber optic data distribution for phased array antenna
[AD-D012322] N86-33144
Solid state research
[AD-A168053] N86-33179
ELECTRONIC MAIL
Interactive full channel teletext system for cable television nets
[ETN-86-97541] N86-32620
ELECTRONIC MODULES
Active matching transmit/receive module
[AD-D012287] N86-32607
ELECTRONIC PACKAGING
Some considerations on the application of hybrid circuits at the NLR
[NLR-MP-85046-U] N86-32658
ELECTRONIC WARFARE
Theoretical and computational aspects of adaptively controlled Navstar antennas
[NLR-TR-84004-U] N86-32424
ELECTROPHYSIOLOGY
Peripheral nerve injury in developing rats reorganizes motor cortex
[AD-A168019] N86-32952
ELECTROSTATIC CHARGE
Directional antenna system having sidelobe suppression
[AD-D012268] N86-32604
Approximations useful for the prediction of electrostatic discharges for simple electrode geometries
[NASA-CR-179748] N86-33121
ELECTROSTATICS
Numerical BGK-solutions of large scale electrostatic potential in auroral plasmas
[IPPJ-782] N86-33162
Measurement of localized electrostatic oscillations excited by low-power microwaves in a plasma waveguide
[IPPJ-778] N86-33164
ELEMENTARY PARTICLE INTERACTIONS
On the QCD effective action for pions and vector mesons
[NIKHEF-H/85-13] N86-33132
Location and measurement time phenomena in two dimensional metallic (Nb and Mo) films
[ENST-85E014] N86-33188
ELLIPSOIDS
Main types of free separation in model ellipsoids
[ONERA-NT-1985-7] N86-32691
Disturbance vector in space from surface gravity anomalies using complementary models
[AD-A168730] N86-32913
EMERGENCY LOCATOR TRANSMITTERS
COSPAS-SARSAT satellite orbit predictor, volume 7
[NASA-TM-85015-VOL-7] N86-32502
EMISSION SPECTRA
Studies of the ultraviolet spectra of astronomical sources
[NASA-CR-176865] N86-32472
On the source of the violet depression in carbon stars (a study of the Balmer decrement in carbon L. P. V.a)
N86-33252
EMISSIVITY
Infrared issues for the nuclear winter phenomenon
[AD-A168717] N86-32915
EMITTERS
Ultra-fast field emitter array vacuum integrated circuit switching device
[AD-D012317] N86-32640
ENERGETIC PARTICLES
The Giotto energetic particle experiment N86-32478
Observations of plasma distributions during the CDAW substorms of 31 March - 1 April 1979
[AD-A168580] N86-33172
ENERGY ABSORPTION
A comparison of the specific absorption rate in a homogeneous man model and a man model containing realistic model bones
[AD-A168547] N86-32960
ENERGY BUDGETS
Energetics of cyclonic development in the Asian winter monsoon system N86-32921
ENERGY CONSUMPTION
Initial results of a high-power microwave sintering experiment at ORNL
[DE86-010041] N86-32579
ENERGY CONVERSION
ECUT (Energy Conversion and Utilization Technologies Program). Biocatalysis Project
[NASA-CR-179754] N86-32877
Wind energy conversion systems: Evaluation of reliability, availability, and maintainability at various locations
[AD-A168272] N86-32878
ENERGY CONVERSION EFFICIENCY
Potential high efficiency solar cells: Applications from space photovoltaic research
[NASA-TM-88832] N86-32627
Photovoltaic conversion of laser power to electrical power
[NASA-TM-89041] N86-32876
ENERGY DISSIPATION
Fabricate, calibrate and test a dosimeter for integration into the CRRES (Combined Release and Radiation Effects Satellite) satellite
[AD-A168566] N86-33131
Bibliography of electron transfer in ion-atom collisions
[IPPJ-AM-45] N86-33169
ENERGY DISTRIBUTION
The use of spatial techniques for a better current surface knowledge, with application to the Southern Ocean
N86-32614
ENERGY LEVELS
Theoretical studies of Resonance Enhanced Stimulated Raman Scattering (RESRS) of frequency doubled Alexandrite laser wavelengths in cesium vapor
[NASA-CR-179768] N86-32717
Theoretical dissociation energies for ionic molecules
[NASA-TM-86776] N86-33126
ENERGY POLICY
Evaluation of the national wind energy development program NOW-2, phase 1
[REPT-1-4098-39-05] N86-32886
The national wind energy development program 1981-1984. Inventory of executed projects and results — Netherlands
[ETN-86-97775] N86-32887
ENERGY TECHNOLOGY
Effects of energy technology on global CO2 emissions
[DE86-010257] N86-32936
Activities report in energy technology
[ETN-86-97384] N86-33215
ENERGY TRANSFER
Torque limiting collar
[AD-D012275] N86-32745
ENGINE PARTS
Thermal stress minimized, two component, turbine shroud seal
[NASA-CASE-LEW-14212-1] N86-32740
Short cracks in aerospace structures
[NLR-MP-85054-U] N86-32781
ENGINE TESTS
Operating efficiencies of a Lysholm helical expander for Brayton-cycle heat engines
[DE86-007178] N86-32753
ENTHALPY
Enthalpy method for the solidification of a supercooled liquid
[DE86-010073] N86-33192
ENVIRONMENT EFFECTS
Report of the International Conference on the Assessment of the Role of Carbon Dioxide and of other Greenhouse Gases in Climate Variations and Associated Impacts
[WMO-661] N86-32530
Possible climatic consequences of a major nuclear war
[WCP-113] N86-32924
ENVIRONMENT MANAGEMENT
Optical remote sensing for coastal zone management
N86-32861
ENVIRONMENT POLLUTION
Water: A strategic resource?
[AD-A168470] N86-32889
ENVIRONMENT PROTECTION
Activities report in energy technology
[ETN-86-97384] N86-33215
ENVIRONMENTAL MONITORING
Application potential of remote sensing: A case for natural resources management system N86-32860
Optical remote sensing for coastal zone management
N86-32861
ENVIRONMENTAL TESTS
Effects of external environments on the short beam shear strength of filament wound graphite/epoxy
[NASA-TM-86553] N86-32528
ENVIRONMENTS
A design guide for visual displays and manual tasks in vibration environments. Part 2: Manual tasks
[ISVR-TR-134] N86-33015
Elementary design guidelines for CO2 scrubbing with LiOH, technical manual
[AD-A168850] N86-33022
EPHEMERIDES
The Comet Halley ephemeris development effort
N86-32466
Altimeter measurements for the determination of the Earth's gravity field
[NASA-CR-176893] N86-32912
EPHEMERIS TIME
The Comet Halley ephemeris development effort
N86-32466
EPOXY COMPOUNDS
Fracture mechanics of matrix cracking and delamination in glass/epoxy laminates
[NASA-TM-89007] N86-32529
EPOXY MATRIX COMPOSITES
Relation between constituents and performance in composite materials. Part 2: Matrix systems Narmco 5208 and Narmco 5245
[ONERA-RT-2/3636-M] N86-32539
EPOXY RESINS
Thermal analysis of various epoxy mixtures
[AD-A167609] N86-32530
Effect of time-temperature path of cure on the water absorption of high T sub g epoxy resins
[AD-A168106] N86-32533
Relation between constituents and performance in composite materials. Part 2: Matrix systems Narmco 5208 and Narmco 5245
[ONERA-RT-2/3636-M] N86-32539
EQUATIONS OF MOTION
DYNA3D user's manual (nonlinear dynamic analysis of structures in three dimensions), revision 2
[DE86-010256] N86-32776
Driving mechanisms of plates — tectonics
N86-32802
EQUATORIAL REGIONS
Investigation of low energy space plasma
[NASA-CR-179745] N86-33170
EQUIPMENT SPECIFICATIONS
An introduction of the power engineering research at Nanjing Aeronautical Institute
[AD-A168639] N86-32434
Lethality test system
[DE86-008733] N86-32506
PSK modulation by temporarily increasing frequency to achieve phase change
[AD-D012254] N86-32631
Effect of depth of discharge on lead-acid battery overcharge requirements
[DE86-008945] N86-32648
Investigation of dry-contact ultrasonic gaging
[DE86-009185] N86-33123
The joint NASA/Goddard-University of Maryland research program in charged particle and high energy photon detector technology
[NASA-CR-177062] N86-33129

ERROR ANALYSIS
Estimation and improvement of error in difference schemes with algebraic transformation
[NAL-TM-FM-8601] N86-33082
ERROR DETECTION CODES
An error detection and smoothing algorithm for infrared data
[AD-A168628] N86-33063
ERRORS
Reliability issues in active control of large flexible space structures
[NASA-CR-179758] N86-32512
Progression-regression effects in tracking repeated patterns N86-32996
A design guide for visual displays and manual tasks in vibration environments. Part 1: Visual displays
[ISVR-TR-133-PT-1] N86-33014
Ada (trade name) compiler validation summary report: DDC Ada compiler system version 3.1 for DEC VAX-11/785
[AD-A168617] N86-33033
A note on adapting for heteroscedasticity when the variances depend on the mean
[AD-A168481] N86-33113
Thorough approach to measurement uncertainty analysis applied to immersed heat exchanger testing
[DE86-004445] N86-33114
Compensation for primary reflector wavefront error
[NASA-CASE-NPO-16869] N86-33138
ERS-1 (ESA SATELLITE)
On board spectral sea-state: The spear F buoy inputs to ERS-1 calibration and validation phase — altimeter and scatterometer calibration N86-32813
ESA SPACECRAFT
Decay of ESA space objects N86-32501
ESTIMATES
Improved algorithms for estimation, prediction and control
[AD-A167601] N86-33090
ESTIMATING
Nonparametric estimation of quantiles and of density functions under censoring, discrete failure models and multiple comparisons
[AD-A167584] N86-32765
Methods for risk determination and evaluation
[NLR-MP-84019-U] N86-33115
ESTUARIES
Gradients of change in the estuarine environments of the Tay N86-32857
ETCHING
On the xenon in acid-resistant residues of the Efremovka CV and Allende CV chondrites N86-33230
ETHERS
Polyarylene ethers with improved properties
[NASA-CASE-LAR-13555-1] N86-32526
ETHYL ALCOHOL
Practical properties of ethanol used as a fuel in diesel engine supercharged in different ways
[DE86-751656] N86-32755
EULER EQUATIONS OF MOTION
Computational Fluid Dynamics, volume 1 — conference
[VKI-LS-1986-04-VOL-1] N86-32666
New finite element methods for the compressible Euler and Navier-Stokes equations N86-32673
Patched-grid calculations with the Euler and Navier-Stokes equations: Theory and application N86-32674
Implicit multigrid algorithms for the three-dimensional flux split Euler equations
[NASA-CR-179742] N86-33086
EUROPE
Contribution to the phenology of Europe 5 long phenological series of Europe and their relations to temperature
[BDW-169] N86-32919
EUROPEAN SPACE AGENCY
Comparison of the ESRO 4 thermosphere model with ESRO 4 data during magnetically quiet conditions N86-32492
The qualification and procurement of two-sided printed circuit boards (fused tin-lead or gold plated finish) — European Space Agency
[ESA-PSS-01-710-ISSUE-1] N86-32660
ESA and its Earth observation programs N86-32849
EUROPEAN SPACE PROGRAMS
Space missions to Halley's Comet
[ESA-SP-1066] N86-32452
The Giotto mission: Its scientific investigations
[ESA-SP-1077] N86-32473
The Giotto project N86-32474
Study of information dissemination by satellite, rider 2: Cultural satellite consortium: Widening the scope
[ESA-CR(P)-2171-VOL-2] N86-32515
Deployable antenna reflector
[SNIAS-861-422-117] N86-32537
ESA and its Earth observation programs N86-32849
EVALUATION
Methods for risk determination and evaluation
[NLR-MP-84019-U] N86-33115
EVAPORATION
Thermopervaporation system
[DE86-011152] N86-32683
EVAPORATORS
Design study of plastic film heat exchanger
[DE86-011040] N86-32682
EVOKED RESPONSE (PSYCHOPHYSIOLOGY)
Effects of high altitude on neurological and pulmonary function: The effect of high altitude on visual evoked potentials in humans on Mt. Everest
[AD-A168335] N86-32959
Descriptive Linear modeling of steady-state visual evoked response N86-32977
Analytical comparison of transient and steady state visual evoked cortical potentials N86-32978
EVOLUTION (DEVELOPMENT)
Metal enrichment of stars in the Orion complex and its relation with the formation of the solar system: Preliminary results N86-33242
Analysis of topography and implications for the tectonic evolution of the moon and Venus. Part 1: Lunar substructure, mare ridges and the tectonic evolution of mare basins. Part 2: A comparison of the regional slope characteristics of Venus and Earth N86-33256
EXCIMER LASERS
Resonance fluorescence in atmospheric gases
[NASA-CR-179767] N86-32911
EXCIMERS
Equipment for subpicosecond extreme ultraviolet facility
[AD-A168263] N86-32727
EXHAUST EMISSION
Effects of energy technology on global CO2 emissions
[DE86-010257] N86-32936
EXHAUST GASES
Exhaust gas analysis of a diesel engine using alcohol as a fuel
[DE86-751654] N86-32754
EXISTENCE THEOREMS
Fixed point equations with parameters in the projective model
[CWI-CS-R8606] N86-33100
EXOBIOLOGY
The handling and preservation of biosamples in microgravity conditions
[ESA-CR(P)-2193] N86-32437
EXPANSION
Continental tectonics: A quantitative view of the thermal and mechanical properties of the continental lithosphere in compressional and extensional stress regimes N86-32797
EXPERIMENT DESIGN
The handling and preservation of biosamples in microgravity conditions
[ESA-CR(P)-2193] N86-32487
A drifting buoy experiment as part of COST-43 N86-32816
Rocket and laboratory studies in aeronomy and astrophysics
[NASA-CR-179708] N86-32906
Analysis, modeling, and design of short-wavelength laser-plasma experiments
[DE86-006033] N86-33173
QCD and experiment
[PREPRINT-477] N86-33193
EXPERIMENTATION
Thorough approach to measurement uncertainty analysis applied to immersed heat exchanger testing
[DE86-004445] N86-33114
EXPERT SYSTEMS
Science and technology analyst's assistant, revision
[AD-A168552] N86-32617
Minimum-cost control of robotic manipulators with geometric path constraints N86-32739
First 3 years of operation of RIACS (Research Institute for Advanced Computer Science) (1983-1985)
[NASA-CR-179699] N86-33032
Will machines ever think
[NASA TM-89244] N86-33071
EXPLOSIVE WELDING
Laser driven micro-explosive bonding
[DE86-010837] N86-32756
EXTINCTION
Extinction of near infrared solar radiation as a means for remote determination of atmospheric water vapor N86-32922
EXTREME ULTRAVIOLET RADIATION
Gain physics of RF-linac-driven XUV free-electron lasers
[DE86-010201] N86-32731
Rocket and laboratory studies in aeronomy and astrophysics
[NASA-CR-179708] N86-32906
EXTREMELY LOW FREQUENCIES
Comparisons of 76 Hz vertical electric and horizontal magnetic field strengths received in Connecticut
[AD-A167606] N86-32810
Growth and development of rhesus monkeys exposed to ELF (Extremely Low Frequency) electric and magnetic fields during the first 54 months of life
[AD-A168733] N86-32953
EXTREMUM VALUES
An extreme-value resistant procedure for singular classical variance analysis — robustness
[THE-RC-62627] N86-33096
EXTRUDING
Strain analysis for extrusion of powder metals
[DE86-007167] N86-32580
EYE (ANATOMY)
Biological visual systems structures for machine vision applied to robotics
[AD-A168521] N86-32751

F

F-27 AIRCRAFT
Flight test instrumentation used in the Fokker F27 and F28 development and certification flight program
[NLR-MP-84023-U] N86-32431
F-28 TRANSPORT AIRCRAFT
Flight test instrumentation used in the Fokker F27 and F28 development and certification flight program
[NLR-MP-84023-U] N86-32431
FABRICATION
Fiber coatings for the fabrication of graphite-reinforced magnesium composites
[AD-A168805] N86-32535
Co-sputtered thermionic cathodes and fabrication thereof
[AD-D012304] N86-32637
Low mass diffusion bonding tools
[AD-D012295] N86-32746
FAILURE ANALYSIS
Reliability issues in active control of large flexible space structures
[NASA-CR-179758] N86-32512
Nonparametric estimation of quantiles and of density functions under censoring, discrete failure models and multiple comparisons
[AD-A167584] N86-32765
Survey of Soviet work in reliability
[AD-A167607] N86-32766
Software reliability models on trial: Selection, improved estimation and practical results
[NLR-MP-83059-U] N86-33051
Failure semantics with fair abstraction
[CWI-CS-R8609] N86-33060
FAILURE MODES
Reliability issues in active control of large flexible space structures
[NASA-CR-179758] N86-32512
FAR FIELDS
Wind induced interior and far field radiated exterior noise from automobiles N86-32404
A comparison of the specific absorption rate in a homogeneous man model and a man model containing realistic model bones
[AD-A168547] N86-32960
FAR ULTRAVIOLET RADIATION
Equipment for subpicosecond extreme ultraviolet facility
[AD-A168263] N86-32727
FARM CROPS
Semi-operational identification of agricultural crops from airborne SLAR data
[NLR-MP-85030-U] N86-32870
FATIGUE (MATERIALS)
Investigation of a Mach 1.4 compressor cascade with variable back pressure using flow visualization
[AD-A168647] N86-32409
Investigation of an asymptotic expansion technique to analyze limit cycle response of aerodynamic surfaces with structural nonlinearities
[AD-A168491] N86-32442
Tensile and fatigue behavior of alumina fiber reinforced magnesium composites
[AD-A167725] N86-32531
Improved fracture toughness corrosion-resistant bearing material
[NASA-CR-174990] N86-32743
Short cracks in aerospace structures
[NLR-MP-85054-U] N86-32781

Contributions to the ONERA life prediction model (fatigue cracking under real loading) — crack propagation, variable loads
[ONERA-RT-25/7169-RY-048-R] N86-32783

FATIGUE LIFE
Fatigue resistance of high quality steels under multiaxial load
[ETN-86-97878] N86-32785

FATIGUE TESTING MACHINES
Fatigue testing a plurality of test specimens and method
[NASA-CASE-MFS-29118-1] N86-32770
Fatigue resistance of high quality steels under multiaxial load
[ETN-86-97878] N86-32785

FATIGUE TESTS
A method for developing design diagrams for ceramic and glass materials using fatigue data
[NASA-RP-1174] N86-32763
Review of aeronautical fatigue investigations in the Netherlands during the period March 1983 - February 1985
[NLR-MP-85025-U] N86-32779

FAULT TOLERANCE
Reliability issues in active control of large flexible space structures
[NASA-CR-179758] N86-32512
Formal verification of properties of digital systems using an automated reasoning system
[DE86-005552] N86-33067

FEED SYSTEMS
Fixed aperture, rotating feed, beam scanning antenna system
[AD-D012312] N86-32611

FEEDBACK CONTROL
Preliminary control law and hardware designs for a ride quality augmentation system for commuter aircraft. Phase 2
[NASA-CR-4014] N86-32440
Servo-actuator for sampled-data feedback disturbance rejection — helicopters
[DFVLR-FB-86-08] N86-32446
Modified superposition: A simple time series approach to closed-loop manual controller identification N86-33009
A flight test method for pilot/aircraft analysis N86-33011
Closed-loop, pilot/vehicle analysis of the approach and landing task N86-33013
ETHERNET data-acquisition and control system
[DE86-006018] N86-33036
Comments on achievable eigenvectors
[DE86-003228] N86-33076
Partial disturbance decoupling with constant state feedback: Application to the regulator problem
[DFVLR-FB-86-09] N86-33080
A simple condition for composite system properness
[LUT-MR-192] N86-33084

FERMIONS
Superworlds/hyperworlds
[DE86-009780] N86-33116

FERROMAGNETIC FILMS
Domain configuration in thin magnetic films, measurements and calculations
[ETN-86-97376] N86-33187

FEYNMAN DIAGRAMS
Comment on gravitational anomalies
[DE86-701720] N86-33191

FIBER OPTICS
Fiber optic cable connector
[AD-D012270] N86-33141
Fiber optic data distribution for phased array antenna
[AD-D012322] N86-33144
Method of wavelength multiplexing in fused single-mode fiber couplers
[AD-D012329] N86-33146
Systematic parameter study of optical directional coupler analog modulators designed to operate at 810 nm: Characterization techniques and preliminary results
[DE86-006729] N86-33154
Fiber optics applications in hostile environments
[DE86-010190] N86-33155
On 3(OMEGA)0 fiber optic dispersion and transmission measurements
[DE86-010640] N86-33156

FIBER REINFORCED COMPOSITES
Tensile and fatigue behavior of alumina fiber reinforced magnesium composites
[AD-A167725] N86-32531
Improvement and optimization of internal damping in fiber reinforced composite materials
[AD-A168576] N86-32534
Fiber reinforced plastics: Possibilities, expectations, technology and application
[ETN-86-97777] N86-32538

FIBERS
The milling of pristine and brominated P-100 graphite fibers
[NASA-TM-86828] N86-32573

FIELD EFFECT TRANSISTORS
Capacitor charging FET switcher with controller to adjust pulse width
[AD-D012347] N86-32644

FIELD EMISSION
Ultra-fast field emitter array vacuum integrated circuit switching device
[AD-D012317] N86-32540

FIELD THEORY (ALGEBRA)
Sigma models on quaternionic manifolds and anomalies
[NIKHEF-H/85-11] N86-33118

FIELD THEORY (PHYSICS)
Superworlds/hyperworlds
[DE86-009780] N86-33116
Renormalization of fluctuation effects in the A+A yields A reaction — field theory
[PREPRINT-490] N86-33195

FIGHTER AIRCRAFT
Transonic Navier-Stokes wing solutions using a zonal approach. Part 2: High angle-of-attack simulation
[NASA-TM-88248-PT-2] N86-32392
Aerodynamics of aircraft afterbody: Report of the working group on aerodynamics of aircraft afterbody
[AGARD-AR-226] N86-32408
Survivability considerations during aircraft conceptual design
[AD-A168555] N86-32422
TURBISTAN: A standard load sequence for aircraft engine disks
[NLR-MP-85033-U] N86-32436

FILAMENT WINDING
Effects of external environments on the short beam shear strength of filament wound graphite/epoxy
[NASA-TM-86553] N86-32528
Acousto-ultrasonic verification of the strength of filament wound composite material
[NASA-TM-88827] N86-32764

FILTER WHEEL INFRARED SPECTROMETERS
A portable spectrometer for use from 5 to 15 micrometers
[NASA-CR-179751] N86-32910

FINANCIAL MANAGEMENT
Cost and schedule control systems criteria for contract performance measurement. Data analysis guide
[DE86-010796] N86-33193
Overview of the non-programmatic cost projection prototype
[DE86-010965] N86-33199

FINITE DIFFERENCE THEORY
Finite-difference and finite-volume methods for the computation of compressible viscous flows N86-32667
Estimation and improvement of error in difference schemes with algebraic transformation
[NAL-TM-FM-8601] N86-33082
An example of data-problem arising in a finite difference context: Direct and inverse problem for the discrete analog of the equation Psi + upsilon Psi = sigma Psi sub gamma
[PREPRINT-488] N86-33110

FINITE ELEMENT METHOD
Finite element micromechanics and minimechanics modeling of a three-dimensional carbon-carbon composite material
[AD-A168050] N86-32532
Optimizing header strength utilizing finite element analyses
[DE86-010476] N86-32592
Computational Fluid Dynamics, volume 1 — conference
[VKI-LS-1986-04-VOL-1] N86-32666
Finite element analysis of the incompressible Navier-Stokes equations: A synopsis of the streamline-upwind/Petrov-Galerkin formulation N86-32672
New finite element methods for the compressible Euler and Navier-Stokes equations N86-32673
Computational methods in Nearfield Acoustic Holography (NAH), appendix
[AD-A168064] N86-32710
Modal Test Structure Project
[DE86-010100] N86-32775
DYNA3D user's manual (nonlinear dynamic analysis of structures in three dimensions), revision 2
[DE86-010256] N86-32776
Field-consistency: Toward a science of constrained multi-strain-field finite element formulations
[NAL-TM-ST-8602] N86-33081
The polynomials in the linear span of integer translates of a compactly supported function
[AD-A167530] N86-33089

A comparison between acoustic mode measurements and acoustic finite element analysis performed for SAAB SF 340 — propeller-driven aircraft
[FFA-TN-1986-22] N86-33125

FINITE VOLUME METHOD
Computational Fluid Dynamics, volume 1 — conference
[VKI-LS-1986-04-VOL-1] N86-32666
Finite-difference and finite-volume methods for the computation of compressible viscous flows N86-32667

FIRE PREVENTION
Fire resistant polyamide based on 1-(diorganooxyphosphonyl)methyl-2,4- and -2,6diamino benzene
[NASA-CASE-ARC-11512-2] N86-32568

FIRMWARE
Peroflex firmware
[RSRE-85015] N86-33026

FISHERIES
ARGOS and fishing N86-32826

FITTINGS
Fracture analysis of radial scientific instrument module registration fittings of the space telescope
[NASA-CR-178932] N86-32773

FIXED POINTS (MATHEMATICS)
Fixed point equations with parameters in the projective model
[CWI-CS-R8606] N86-33100

FLAME RETARDANTS
Polymer of phosphonylmethyl-2,4- and -2,6-diamino benzene and polyfunctional monomer
[NASA-CASE-ARC-11506] N86-32525

FLAME TEMPERATURE
Single-shot H(2) CARS spectroscopy of propellant ignition and combustion under pressure
[AD-A168054] N86-32542

FLAMES
Effect of thermal expansion on the stability of two-reactant flames
[NASA-CR-178168] N86-33025

FLAMMABLE GASES
Inhalation toxicology. Part 6: Evaluation of the relative toxicity of thermal decomposition products from 9 aircraft panel materials
[AD-A168250] N86-32958

FLAT PLATES
Computation of plane jet impingement on a plate
[NAL-TM-FM-8602] N86-32344
Flow visualization and velocity measurements in the separated region of an appendage-flat plate junction
[AD-A167611] N86-32677

FLAVOR (PARTICLE PHYSICS)
Constraints on composite models from leptonic flavor changing decays
[PREPRINT-479] N86-33135

FLEXIBLE SPACECRAFT
Influence of structural parameter uncertainties on flexible space structural control performances
[SNIAS-861-440-104] N86-32516

FLEXING
Continental tectonics: A quantitative view of the thermal and mechanical properties of the continental lithosphere in compressional and extensional stress regimes N86-32797

FLIGHT CHARACTERISTICS
Maximum normalized acceleration as a flying qualities parameter N86-33012

FLIGHT CONTROL
Missile control system test apparatus having video signal adapter
[AD-D012323] N86-32508
Flight test of a displacement sidearm controller N86-32992
Anthropometric considerations for a 4-axis side-arm flight controller N86-32993
A flight test method for pilot/aircraft analysis N86-33011
The development and evaluation of color systems for airborne applications: Fundamental visual, perceptual and display systems considerations
[AD-A168563] N86-33020
Six degree of freedom simulation software
[NAL-PD-SE-8614] N86-33042

FLIGHT CREWS
Human factors research in aircrew performance and training
[AD-A167740] N86-32967
An experimental paradigm for team decision processes N86-33000
Investigation of crew performance in a multi-vehicle supervisory control task N86-33001

FLIGHT SIMULATION
Transonic Navier-Stokes wing solutions using a zonal approach. Part 2: High angle-of-attack simulation
[NASA-TM-88248-PT-2] N86-32392

Construction of a job-oriented test for the selection of air traffic controllers
[ESA-TT-921] N86-32423
A mathematical model of the Sea King Mk.50 helicopter aerodynamics and kinematics
[ARL-AERO-TM-379] N86-32425
Review of aeronautical fatigue investigations in the Netherlands during the period March 1983 - February 1985
[NLR-MP-85025-U] N86-32779
Six degree of freedom simulation software
[NAL-PD-SE-8614] N86-33042

FLIGHT SIMULATORS
Simulator scene display evaluation device
[NASA-CASE-ARC-11504-1] N86-32447
An improved optical viewing system for a flight simulator
[MS-8025] N86-32448

FLIGHT STABILITY TESTS
Identification of gust input and gust response characteristics from Do 28 TNT flight test data
[ESA-TT-919] N86-32445

FLIGHT TEST INSTRUMENTS
Flight test instrumentation used in the Fokker F27 and F28 development and certification flight program
[NLR-MP-84023-U] N86-33431

FLIGHT TESTS
Flight test instrumentation used in the Fokker F27 and F28 development and certification flight program
[NLR-MP-84023-U] N86-32431
Human factors research in aircrew performance and training
[AD-A167740] N86-32967
Flight test of a displacement sidearm controller N86-32992
A flight test method for pilot/aircraft analysis N86-33011

FLIGHT TRAINING
Human factors research in aircrew performance and training
[AD-A167740] N86-32967
Multitask performance: Predicting success in Naval Aviation primary flight training
[AD-A168246] N86-32972

FLOW DIRECTION INDICATORS
Pocket size antenna match indicator for VSWR (Voltage Standing Wave Ratio) measurement
[AD-D012341] N86-32708

FLOW DISTRIBUTION
A computational method for the determination of the flow field around vehicles N86-32401
Theoretical and experimental optimization of the road-vehicle internal flow — radiators N86-32405
A numerical study of separation on a spheroid at incidence
[NASA-CR-178167] N86-32675
Research program: The investigation of heat transfer and fluid flow at low pressure
[DE86-009379] N86-32688
Scanning system for mapping gas flow uniformity in a laser
[AD-D012324] N86-32723

FLOW EQUATIONS
Viscous-inviscid interaction with higher-order viscous-flow equations
[IIHR-304] N86-32676

FLOW GEOMETRY
A numerical study of separation on a spheroid at incidence
[NASA-CR-178167] N86-32675

FLOW MEASUREMENT
Experimental investigation of secondary flow vortices in a rod cluster
[ECN-174] N86-32693
Instationary flow effects in the rotor of a turbine
[DFVLR-FB-85-66] N86-32694
Spinning disk calibration method and apparatus for laser Doppler velocimeter
[NASA-CASE-ARC-11510-1] N86-32697

FLOW VELOCITY
Single-shot H(2) CARS spectroscopy of propellant ignition and combustion under pressure
[AD-A168054] N86-32542

FLOW VISUALIZATION
Investigation of a Mach 1.4 compressor cascade with variable back pressure using flow visualization
[AD-A168647] N86-32409
Flow visualization and velocity measurements in the separated region of an appendage-flat plate junction
[AD-A167611] N86-32677
Main types of free separation in model ellipsoids
[ONERA-NT-1985-7] N86-32691

FLUID DYNAMICS
A numerical study of separation on a spheroid at incidence
[NASA-CR-178167] N86-32675
Research program: The investigation of heat transfer and fluid flow at low pressure
[DE86-009379] N86-32688

FLUID FLOW
Ignition and combustion of fuel droplets and the ignition of premixed fuels by hot cylindrical surfaces
[DE86-009262] N86-32545
Order and chaos in fluid flows
[NAL-TM-DU-8602] N86-32963
Method of operator splitting or fractional steps and its applications to fluid dynamic modelling. Revision 1
[DE86-011035] N86-32684
Two-axis, self-nulling skin friction balance
[NASA-CASE-LAR-13294-1] N86-32698

FLUID MECHANICS
Order and chaos in fluid flows
[NAL-TM-DU-8602] N86-32963

FLUID-SOLID INTERACTIONS
Viscous-inviscid interaction with higher-order viscous-flow equations
[IIHR-304] N86-32676

FLUIDICS
Fluidic angular velocity sensor
[NASA-CASE-NPO-16479-ICU] N86-32695
Pulsatile fluidic pump demonstration and predictive model application
[DE86-010079] N86-32758

FLUORINE
Cellular thermosetting fluoropolymers and process for making them
[NASA-CASE-GSC-13008-1] N86-32570

FLUOROPOLYMERS
Cellular thermosetting fluoropolymers and process for making them
[NASA-CASE-GSC-13008-1] N86-32570
Dynamic polymer pressure transducer with temperature compensation
[AD-D012285] N86-32705

FLUX DENSITY
Inhalation toxicology. Part 6: Evaluation of the relative toxicity of thermal decomposition products from 9 aircraft panel materials
[AD-A168250] N86-32958
Implicit multigrid algorithms for the three-dimensional flux split Euler equations
[NASA-CR-179742] N86-33086

FLY BY WIRE CONTROL
Pilot interface with fly by wire control systems N86-32990

FLYBY MISSIONS
Space missions to Halley's Comet
[ESA-SP-1068] N86-32452
The Vega missions — Halley flyby N86-32456
The Suisei/Sakigake (Planet-A/MS-T5) missions — Halley flyby N86-32457
Impact-induced spacecraft charging and related effects during the Halley encounters N86-32458
The International Cometary Explorer (ICE) mission to Comets Giacobini-Zinner and Halley N86-32459
The Inter-Agency Consultative Group (IACG) and its associated working groups — Halley's Comet N86-32467
The Halley dust and gas environment (IACG WG-1) N86-32468
Coordinated multispacecraft plasma science in the solar wind and comet-plasma environments (IACG WG-2) — Halley's Comet N86-32469

FOAMS
Cellular thermosetting fluoropolymers and process for making them
[NASA-CASE-GSC-13008-1] N86-32570

FOKKER AIRCRAFT
On the way to extended noise reductions in propeller aircraft
[B6573697] N86-33126

FOLDING STRUCTURES
Deployable M braced truss structure
[NASA-CASE-LAR-13081-1] N86-32737

FORCE DISTRIBUTION
A collection of data on the normal-stress integral term occurring in the momentum equation of turbulent boundary layers
[RAE-TR-85097] N86-32662

FORCED VIBRATION
Quasi-periodic Hopf-bifurcations in forced oscillators
[ZW-8507] N86-33120

FORECASTING
The importance of measuring current, waves and other environmental parameters in order to improve the current forecast service N86-32810
Analysis of wind speeds at the space shuttle launch site, Vandenberg Air Force Base
[AD-A168565] N86-32930

FOREST MANAGEMENT
A fuelwood plantation site selection procedure using geographic information system technology: A case study in support of the NASA Global Habitability Program
[NASA-CR-179704] N86-32838
A review of radar analysis of woodland N86-32839

FORESTS
A fuelwood plantation site selection procedure using geographic information system technology: A case study in support of the NASA Global Habitability Program
[NASA-CR-179704] N86-32838
Texture analysis of SLAR images as an aid in automated classification of forested areas N86-32841

FORMAT
KRASH 85 user's guide: Input/output format, revision
[AD-A168646] N86-32416

FORTRAN
Documentation of programs to compute spectra from profiler radiometric observations
[PB86-199023] N86-32948
Set of FORTRAN routines for multitask timing analysis on shared memory machines
[DE86-010310] N86-33088
Algorithms for Bayesian variable selection in regression
[DE86-008884] N86-33094

FOURIER ANALYSIS
Introduction to spectral methods with application to fluid mechanics N86-32698

FOURIER TRANSFORMATION
Computational methods in Fresnel Acoustic Holography (NAH), appendix
[AD-A168064] N86-32710
Analytical comparison of transient and steady state visual evoked cortical potentials N86-32978
Comparison of the STI NIPIP tracking dynamics identification with the on-line Fourier analyzer DFA results including a time varying case N86-33010

FRACTIONATION
Extreme magnesium isotope fractionation in the Leoville meteorite N86-33221
Element and isotope fractionation in preplanetary nebula N86-33245

FRACTURE MECHANICS
Investigation of a Mach 1.4 compressor cascade with variable back pressure using flow visualization
[AD-A168647] N86-32409
Fracture mechanics of matrix cracking and delamination in glass/epoxy laminates
[NASA-TM-89007] N86-32529
A continuum theory of crack shielding in ceramics
[AD-A168599] N86-32576
Fracture analysis of radial scientific instrument module registration fittings of the space telescope
[NASA-CR-178932] N86-32773

FRACTURE STRENGTH
Improved fracture toughness corrosion-resistant bearing material
[NASA-CR-174990] N86-32743
Acousto-ultrasonic verification of the strength of filament wound composite material
[NASA-TM-88827] N86-32764

FRACTURES (MATERIALS)
Impact damage characterization in laminated composites N86-32527
Mechanical behavior of superalloys
[DE86-010353] N86-32564
Correlation of acoustic emission to microstructural sources
[DE86-010558] N86-32777

FRAGMENTATION
Influence of the edge effects on the initial velocity of fragments from a warhead
[SNIAS-351-320-104] N86-32588

FREDHOLM EQUATIONS
Solution of non-linear Fredholm integral equations by a variational approach
[LUT-MR-186] N86-33080

FREE CONVECTION
Blockage of natural convection boundary layer flow in a multizone enclosure
[DE86-004430] N86-32688

FREE ELECTRON LASERS
Gain physics of RF-linac-driven XUV free-electron lasers
[DE86-010201] N86-32731

FREE FLOW
A low speed tunnel semi-free dynamic flying study of the high angle of attack pitch derivatives of HF-24 using MLE procedure
[NAL-TRM-SE-8603] N86-32380
Monte Carlo simulation of free jet flow from a slit
[DE86-006705] N86-32587

FREEZING
Lake ice occurrence as an early detector of climate perturbations: The potential for monitoring
[DE86-010583] N86-32935
Enthalpy method for the solidification of a supercooled liquid
[DE86-010073] N86-33192
FREQUENCIES
Test target for adaptive optics
[AD-D012321] N86-33143
FREQUENCY DISCRIMINATORS
Phase lock acquisition system having PLL for coarse tuning and PLL for fine tuning
[AD-D012340] N86-32543
FREQUENCY MODULATION
New non-linear FM pulse-compression technique for radar applications
[AD-A157110] N86-32906
Design and realization of a C-MAC/Packet (CMP) Data Demodulator (DD)
[ETN-86-97539] N86-32957
Range Doppler coupling magnifier
[AD-D012318] N86-32722
Ionospheric sounding by means of linear frequency modulation
[ENST-84E022] N86-32918
FREQUENCY SHIFT
PSK modulation by temporarily increasing frequency to achieve phase change
[AD-D012254] N86-32631
FREQUENCY STABILITY
Low noise multiple crystal-controlled oscillator
[AD-D012262] N86-33634
FREQUENCY STANDARDS
Design and realization of a C-MAC/Packet (CMP) Data Demodulator (DD)
[ETN-86-97539] N86-32957
FRESNEL DIFFRACTION
Special features of image formation in the scanning optical microscope
[RAE-TRANS-2126] N86-33139
FRICTION MEASUREMENT
Two-axis, self-nulling skin friction balance
[NASA-CASE-LAR-13294-1] N86-32696
FUEL COMBUSTION
Ignition and combustion of fuel droplets and the ignition of premixed fuels by hot cylindrical surfaces
[DE86-009262] N86-32545
FUEL INJECTION
Fuel injection system for shock tube studies of the ignition of preheated fuels
[DE86-009216] N86-32544
FUEL PUMPS
Small centrifugal pumps for low-thrust rocket engines
[NASA-CR-174913] N86-32741
FUELS
A fuelwood plantation site selection procedure using geographic information system technology: A case study in support of the NASA Global Habitability Program
[NASA-CR-179704] N86-32828
FUNCTIONAL ANALYSIS
On Gelfand triples originating from algebras of unbounded operators
[EUT-84-WSK-02] N86-33096
The matrices of the differential d/dx and x(d/dx) with respect to orthonormal bases of Jacobi polynomials
[MEMO-84-05] N86-33105
Symmetrically positive maps
[MEMO-84-14] N86-33106
FURLABLE ANTENNAS
Offset unfurlable antenna, phase 1 — communication satellites
[MSB-RX11] N86-33822

G

GALACTIC CLUSTERS
Probing the large-scale structure of the universe: An analysis of 55 bright southern clusters of galaxies N86-33251
GALACTIC COSMIC RAYS
Exposure ages of iron meteorites: Complex histories and the constancy of galactic cosmic rays N86-33217
Isotopes produced by galactic cosmic rays in iron meteorites N86-33218
GALACTIC EVOLUTION
Solar isotopic ratios, chemical evolution of galaxies and cosmology N86-33240
GALACTIC NUCLEI
Initial data for black hole collisions N86-33247
GALAXIES
Near-infrared observations of IRAS minisurvey galaxies
[NASA-CP-179707] N86-33196
GALERKIN METHOD
Finite element analysis of the incompressible Navier-Stokes equations: A synopsis of the streamline-upwind/Petrov-Galerkin formulation N86-32672
GALLIUM ALLOYS
Critical field measurements on very thin films of V-Ga superconductors
[DE86-010772] N86-33184
GALLIUM ARSENIDES
Synthesis and crystal structure of tris(dimesitylarsino)gallane, a monomeric tricoordinate gallium-arsenic compound
[AD-A168020] N86-33178
Optical properties and interfaces of GaAs/GaAlAs quantic sinks
[ENST-85E012] N86-33189
GAMMA RAYS
Cross sections for production of the 15.10 MeV and other astrophysically significant gamma-ray lines through excitation and spallation of sup 12 C and sup 16 O with protons
[NASA-TM-87787] N86-33260
GARNETS
Integrated optical signal processor using diffraction of light by magnetostatic waves
[AD-D012319] N86-33142
GAS ANALYSIS
Use of gas imaging as a means of locating leaks and tracking gas clouds
[DE86-010786] N86-32546
Sampling manifold for gas analysis
[DE86-010775] N86-32548
Remote sensing of gases by laser techniques: Development of a spaceworthy, line tunable, CO2-laser
[BMFT-FB-W-85-027] N86-32549
Exhaust gas analysis of a diesel engine using alcohol as a fuel
[DE86-751654] N86-32754
GAS DISCHARGE TUBES
Performance of electronic ballasts and other new lighting equipment
[DE86-009589] N86-32653
GAS DISCHARGES
Microwave discharge apparatus and method with dual function priming resonator
[AD-D012252] N86-32630
GAS FLOW
A pseudo-spectral solution of binary mixture flows — vapor crystal growth N86-32670
Scanning system for mapping gas flow uniformity in a laser
[AD-D012324] N86-32723
GAS GIANT PLANETS
Isotopic ratios in giant planets N86-33234
GAS MIXTURES
A pseudo-spectral solution of binary mixture flows — vapor crystal growth N86-32670
GAS SPECTROSCOPY
Trapped neon in ureilites: A new component N86-33226
GAS TEMPERATURE
Research instrumentation for hot section components of turbine engines
[NASA-TM-88851] N86-32702
GAS TURBINE ENGINES
Perspectives on dilution jet mixing
[NASA-TM-87294] N86-32432
Thermal stress minimized, two component, turbine shroud seal
[NASA-CASE-LEW-14212-1] N86-32740
Operating efficiencies of a Lysholm helical expander for Brayton-cycle heat engines
[DE86-007178] N86-32753
Advanced Gas Turbine (AGT) Technology Development Project annual report
[NASA-CR-179485] N86-33211
GAS TURBINES
Concept for the quality assurance of components of the ceramic gas turbine by nondestructive testing
[DE86-011474] N86-32435
GASES
Studies of the ultraviolet spectra of astronomical sources
[NASA-CR-176865] N86-32472
GASIFICATION
Ignition and combustion of fuel droplets and the ignition of premixed fuels by hot cylindrical surfaces
[DE86-009262] N86-32545
GATES (CIRCUITS)
OCD gate definition process
[AD-D012298] N86-32635
Ultra-fast field emitter array vacuum integrated circuit switching device
[AD-D012317] N86-32640
GAUGE THEORY
Superworlds/hyperworlds
[DE86-009780] N86-33116
QCD and experiment
[PREPRINT-477] N86-33193
GEARS
Constant speed drive with compensation using differential gears
[AD-D012256] N86-32744
GELS
Cellular thermosetting fluoropolymers and process for making them
[NASA-CASE-GSC-13006-1] N86-32570
GEOCHEMISTRY
Structure and evolution of the Earth mantle studied using paired isotopic tracers: Pb-Sr-Nd N86-32762
GEODESY
Viscoelastic deformation near active plate boundaries
[NASA-CR-179726] N86-32909
Handbook of geophysics and the space environment, 4th edition
[AD-A167000] N86-32914
GEODETIC COORDINATES
Astronomical geodetic estimates of azimuth in the West German main triangulation network
[SER-B-274-MITT-171] N86-32873
GEOGRAPHIC INFORMATION SYSTEMS
A fuelwood plantation site selection procedure using geographic information system technology: A case study in support of the NASA Global Habitability Program
[NASA-CR-179704] N86-32828
KBGIS-2: A knowledge-based geographic information system N86-32865
GEOIDS
Mantle convection and the Earth's gravity field N86-32790
Gravity, geoid and the oceanic lithosphere N86-32793
GEOLOGICAL SURVEYS
Remote sensing of natural geological hazards in the siting of engineering facilities N86-32856
GEOLOGY
State of the art of geoscience libraries and information services
[DE86-011188] N86-33207
GEOMAGNETISM
The geomagnetic field: Description and analysis N86-32787
The internal magnetic field and its origin N86-32788
Magnetospheres N86-32799
Brorfelde Geomagnetic Observatory magnetic results, 1984, including a description of the observatory
[ISBN-87-7478-266-1] N86-32907
Brorfelde: Magnetic results, 1983
[ISBN-87-7478-267-3] N86-32908
Handbook of geophysics and the space environment, 4th edition
[AD-A167000] N86-32914
Anomalous diffusion across the magnetic field plasma boundary: The PORCUPINE artificial plasma jet
[MPE-PREPRINT-47] N86-33160
Investigation of low energy space plasma
[NASA-CR-179745] N86-33170
GEOMETRIC ACCURACY
Virtual space and 2-dimensional effects in perspective displays N86-33005
GEOMETRICAL ACOUSTICS
A high frequency analysis of electromagnetic plane wave scattering by perfectly-conducting semi-infinite parallel plate and rectangular waveguides with absorber coated inner walls
[NASA-CR-179759] N86-32600
GEOMETRICAL THEORY OF DIFFRACTION
A high frequency analysis of electromagnetic plane wave scattering by perfectly-conducting semi-infinite parallel plate and rectangular waveguides with absorber coated inner walls
[NASA-CR-179759] N86-32600
GEOMETRY
Preliminary wind tunnel tests on the influence of ground board length on the aerodynamic drag of simple commercial vehicle models
[CAR-8619] N86-32407
Finite element micromechanics and minimechanics modeling of a three-dimensional carbon-carbon composite material
[AD-A168050] N86-32532
Approximations useful for the prediction of electrostatic discharges for simple electrode geometries
[NASA-CR-179748] N86-33121
GEOPHYSICAL OBSERVATORIES
Brorfelde Geomagnetic Observatory magnetic results, 1984, including a description of the observatory
[ISBN-87-7478-266-1] N86-32907
Brorfelde: Magnetic results, 1983
[ISBN-87-7478-267-3] N86-32908

GEOPHYSICS
International Geophysics and Space — conference [ISBN-2-85428-132-2] N86-32786
The internal magnetic field and its origin N86-32788
Satellite tracking: Its first contributions to the knowledge of the Earth's gravitational field and to geophysics N86-32791
Utilization of space techniques for accurate positioning in geophysics N86-32804
Handbook of geophysics and the space environment, 4th edition [AD-A167000] N86-32914
State of the art of geoscience libraries and information services [DE86-011188] N86-33207
GEOPOTENTIAL
Potential models — geopotential N86-32800
GEOS 2 SATELLITE
Standard calibration procedure for IR sensors on spinning satellites. Volume 3: OTS and GEOS-2 in flight data analysis [REPT-209-DT-58-VOL-3] N86-32518
GEOSTROPHIC WIND
On the relationship between long-term drifter trajectories and mean seasonal distributions of geostrophic wind and baroclinic ocean current in the Eastern North Atlantic N86-32806
GEOTHERMAL RESOURCES
Energy sources and the thermal history of the Earth N86-32769
GETTERS
Evaluation of extrinsic gettering techniques [DE86-003583] N86-32647
GIACOBINI-ZINNER COMET
The International Cometary Explorer (ICE) mission to Comets Giacobini-Zinner and Halley N86-32459
GIOTTO MISSION
Halley's Comet as an outstanding target N86-32453
The Giotto project N86-32455
The pathfinder concept — Halley flyby N86-32470
The Giotto mission: Its scientific investigations [ESA-SP-1077] N86-32473
The Giotto project N86-32474
The Giotto magnetic-field investigation N86-32475
The Giotto three-dimensional positive ion analyser N86-32476
The Giotto RPA-Copernic plasma experiment N86-32477
The Giotto energetic particle experiment N86-32478
The Giotto particulate impact analyzer N86-32479
The Giotto dust impact detection system N86-32480
The Giotto neutral mass spectrometer N86-32481
The Giotto ion mass spectrometer N86-32482
The Giotto Halley multicolor camera N86-32483
The Giotto radio-science experiment N86-32484
The Giotto optical probe experiment N86-32485
GLARE
Glare susceptibility tester [AD-D012335] N86-33148
GLASS
A method for developing design diagrams for ceramic and glass materials using fatigue data [NASA-RP-1174] N86-32763
GLASS FIBER REINFORCED PLASTICS
Fracture mechanics of matrix cracking and delamination in glass/epoxy laminates [NASA-TM-89007] N86-32529
GLASS FIBERS
Investigation for disturbances of the index profile in joints of arc welded glass fibers [ETN-86-97536] N86-32761
GLIDERS
Dynamic identification procedure and lift certification of light aircraft and gliders [ONERA-RT-12/1677-RY-090-R] N86-32429
GLOBAL POSITIONING SYSTEM
Global Radio Navigation System (GRANAS) simulation [BMFT-FB-W-85-028] N86-32422
Theoretical and computational aspects of adaptively controlled Navstar antennas [NLR-TR-84004-U] N86-32424
GLOBULAR CLUSTERS
Q-nucleosynthesis: Implications for stellar evolution N86-33250
GLUCOSE
Altitude acclimatization attenuates plasma ammonia during submaximal exercise [AD-A168630] N86-32962
GLUONS
Can a light gluino solve the Cyg X3 puzzle — underground muons [PREPRINT-486] N86-33262
GOALS
Support for global science: Remote sensing's challenge N86-32864
GOLD
Improved adhesion of thin conformal films to metal surfaces [AD-A166015] N86-32577
Analysis, modeling, and design of short-wavelength laser-plasma experiments [DE86-008033] N86-33173
Specific heat anomaly of AU(110)(1 x 2) studied by low-energy electron diffraction [AD-A168626] N86-33180
Some experimental artifacts in LEED studies of phase transitions [AD-A168646] N86-33181
GOLD COATINGS
The qualification and procurement of two-sided printed circuit boards (fused tin-lead or gold plated finish) — European Space Agency [ESA-PSS-01-710-ISSUE-1] N86-32660
GOODNESS OF FIT
Nonparametric estimation of quantiles and of density functions under censoring, discrete failure models and multiple comparisons [AD-A167564] N86-32765
GRADIENT INDEX OPTICS
Investigation for disturbances of the index profile in joints of arc welded glass fibers [ETN-86-97536] N86-32761
GRAIN BOUNDARIES
Complementary AES and AEM of grain boundary regions in irradiated gamma-strengthened alloys [DE86-010397] N86-32561
Mechanical behavior of superalloys [DE86-010353] N86-32564
Migration of grain boundaries in ceramic materials with particular reference to the sintering process [DE86-011710] N86-32580
GRAMMARS
Integrating syntax, semantics and discourse DARPA natural language understanding program [AD-A168341] N86-33074
GRAND UNIFIED THEORY
Gravitational constants and the effective action in curved spaces N86-33190
GRANTS
University funding: Federal funding mechanisms in support of university research [AD-A168023] N86-33212
GRAPHITE
The milling of pristine and brominated P-100 graphite fibers [NASA-TM-88828] N86-32573
Secondary-electron-emission losses in multistage depressed collectors and traveling-wave-tube efficiency improvements with carbon collector electrode surfaces [NASA-TP-2622] N86-32629
The distribution and isotopic composition of graphite carbon in th early solar system N86-33225
GRAPHITE-EPOXY COMPOSITES
Effects of external environments on the short beam shear strength of filament wound graphite/epoxy [NASA-TM-88553] N86-32528
GRAPHITIZATION
Fiber coatings for the fabrication of graphite-reinforced magnesium composites [AD-A168805] N86-32535
GRATINGS (SPECTRA)
Phase-conjugate resonator with a double SBS (Stimulated Brillouin Scattering) mirror [AD-D012261] N86-32718
Diffraction moire of dynamic events [DE86-007635] N86-32774
GRAVIMETRY
Users guide to the JPL Doppler gravity database [NASA-CR-179749] N86-33209
GRAVIRECEPTORS
NASA Workshop on Animal Gravity-Sensing Systems [NASA-TM-88249] N86-32950
GRAVITATION
Measurement of performance limits in cryogenic heat pipes [DE86-010208] N86-32689
Handbook of geophysics and the space environment, 4th edition [AD-A167000] N86-32914
GRAVITATION THEORY
Gravitational constants and the effective action in curved spaces N86-33190
Weyl (integrable) spacetimes as a model for our cosmos [DE86-701953] N86-33255
GRAVITATIONAL CONSTANT
Gravitational constants and the effective action in curved spaces N86-33190
GRAVITATIONAL EFFECTS
Gravity, geoid and the oceanic lithosphere N86-32793
NASA Workshop on Animal Gravity-Sensing Systems [NASA-TM-88249] N86-32950
Gravitational settling in the Jovian atmosphere — helium, carbon ratio N86-33235
Initial data for black hole collisions N86-33247
GRAVITATIONAL FIELDS
Mantle convection and the Earth's gravity field N86-32790
Satellite tracking: Its first contributions to the knowledge of the Earth's gravitational field and to geophysics N86-32791
Potential models — geopotential N86-32800
Altimeter measurements for the determination of the Earth's gravity field [NASA-CR-176893] N86-32912
GRAVITATIONAL WAVES
Initial data for black hole collisions N86-33247
GRAVITY ANOMALIES
Disturbance vector in space from surface gravity anomalies using complementary models [AD-A166730] N86-32913
Comment on gravitational anomalies [DE86-701720] N86-33191
GREASES
Behavior of lubricant greases at high temperatures: Thin film and liquid chromatography techniques [ETN-86-97810] N86-32583
GREEN'S FUNCTIONS
Computational methods in Nearfield Acoustic Holography (NAH), appendix [AD-A168064] N86-32710
An analysis of the tensor dielectric constant of sea ice at microwave frequencies [AD-A168015] N86-32948
GREENHOUSE EFFECT
Report of the International Conference on the Assessment of the Role of Carbon Dioxide and of other Greenhouse Gases in Climate Variations and Associated Impacts [WMO-661] N86-32890
Trace gas effects on climate N86-32901
Possible climatic consequences of a major nuclear war [WCP-113] N86-32924
Effects of energy technology on global CO2 emissions [DE86-010257] N86-32936
GREENLAND
Operational experiences with the ARGOS system in Greenland N86-32619
GROUND EFFECT (AERODYNAMICS)
Moving ground effect and speed (up to 50 m/sec) interaction on sedan and station wagon cars (23 configurations ranging between Cd=0.19 and 0.35) and on racing car (1 configuration Cd=0.39; Cl=2.15) N86-32403
GROUND EFFECT MACHINES
Evaluation of full-scale hovercraft lift systems [AD-A167939] N86-32427
GROUND SPEED
Moving ground effect and speed (up to 50 m/sec) interaction on sedan and station wagon cars (23 configurations ranging between Cd=0.19 and 0.35) and on racing car (1 configuration Cd=0.39; Cl=2.15) N86-32403
GROUND STATIONS
COSPAS-SARSAT satellite orbit predictor, volume 7 [NASA-TM-85015-VOL-7] N86-32502
GROUND WIND
Monthly and seasonal climatology of the northern winter over the global tropics and subtropics for the period 1974 to 1983. Volume 3: Surface winds [AD-A168652] N86-32991
GROUP DYNAMICS
An experimental paradigm for team decision processes N86-33000
GROWTH
System impacts of solar dynamic and growth power systems on space station [NASA-TM-87667] N86-32507
Growth and development of rhesus monkeys exposed to ELF (Extremely Low Frequency) electric and magnetic fields during the first 54 months of life [AD-A168733] N86-32953
GUIDANCE (MOTION)
Optimal aeroassisted orbital transfer involving elliptical orbits N86-32489
GUST LOADS
The generation of equal probability design load conditions, using Power Spectral Density (PSD) techniques — aircraft design [NLR-TR-85014-U] N86-32430
Identification of gust input and gust response characteristics from Do 28 TNT flight test data [ESA-TT-919] N86-32445

H

HABITABILITY
The quantitative modelling of human spatial habitability
[NASA-CR-179716] N86-33210
HALF LIFE
Short-lived nuclides in the early solar system and general isotopic anomalies in meteorites N86-33223
HALLEY'S COMET
Space missions to Halley's Comet
[ESA-SP-1086] N86-32452
Halley's Comet as an outstanding target N86-32453
Halley's Comet in history N86-32454
The Giotto project N86-32455
The Vega missions — Halley flyby N86-32456
The Suisei/Sakigake (Planet-A/MS-T5) missions — Halley flyby N86-32457
Impact-induced spacecraft charging and related effects during the Halley encounters N86-32458
The International Cometary Explorer (ICE) mission to Comets Giacobini-Zinner and Halley N86-32459
The Astro-1 mission — Halley's Comet N86-32460
International Ultraviolet Explorer (IUE) observation of Halley's Comet N86-32461
Observations of Halley's Comet by the Solar Maximum Mission (SMM) N86-32462
The Spartan mission — Halley's Comet; Challenger payload N86-32463
NASA-supported smaller programmes to observe Comet Halley N86-32464
The International Halley Watch (IHW) and its observing nets N86-32465
The Comet Halley ephemeris development effort N86-32466
The Inter-Agency Consultative Group (IACG) and its associated working groups — Halley's Comet N86-32467
The Halley dust and gas environment (IACG WG-1) N86-32468
Coordinated multispacecraft plasma science in the solar wind and comet-plasma environments (IACG WG-2) — Halley's Comet N86-32469
Studies of the ultraviolet spectra of astronomical sources
[NASA-CR-176865] N86-32472
The Giotto mission: Its scientific investigations
[ESA-SP-1077] N86-32473
The Giotto project N86-32474
The Giotto magnetic-field investigation N86-32475
The Giotto three-dimensional positive ion analyser N86-32476
The Giotto RPA-Copernic plasma experiment N86-32477
The Giotto energetic particle experiment N86-32478
The Giotto particulate impact analyzer N86-32479
The Giotto dust impact detection system N86-32480
The Giotto neutral mass spectrometer N86-32481
The Giotto ion mass spectrometer N86-32482
The Giotto Halley multicolor camera N86-32483
The Giotto radio-science experiment N86-32484
The Giotto optical probe experiment N86-32485
Rocket and laboratory studies in aeronomy and astrophysics
[NASA-CR-179706] N86-32906
HALOCARBONS
Halogentated species N86-32896
HALOGENS
Atmospheric Ozone 1985. Assessment of our understanding of the processes controlling its present distribution and change, volume 2
[NASA-TM-89236] N86-32892
Halogentated species N86-32896
HAMILTONIAN FUNCTIONS
On the existence of periodic solutions for a class of symmetric Hamiltonian systems
[AD-A167487] N86-33086
HARDWARE
Hardware proofs using LCF-LSM and ELLA — high level languages
[RSRE-MEMO-3832] N86-33027
HARMONIC ANALYSIS
Harmonic and transient problems related to submerged structures
[ETN-86-97874] N86-32782
Disturbance vector in space from surface gravity anomalies using complementary models
[AD-A166730] N86-32913
HARMONIC EXCITATION
Harmonic and transient problems related to submerged structures
[ETN-86-97874] N86-32782
HARMONICS
The application of adaptive filtering to the active control of sound and vibration
[ISVR-TR-136] N86-32628
HARTREE APPROXIMATION
Theoretical dissociation energies for ionic molecules
[NASA-TM-88776] N86-33128
HAZARDS
Monitoring iceberg production using Landsat data — offshore oilfields N85-32859
Analysis of wind speeds at the space shuttle launch site, Vandenberg Air Force Base
[AD-A166565] N86-32930
HEADACHE
Effects of high altitude on neurological and pulmonary function: The effect of high altitude on visual evoked potentials in humans on Mt. Everest
[AD-A166335] N86-32959
HEALTH
Activities report in energy technology
[ETN-86-97384] N86-33215
HEART RATE
Complex monitoring performance and the coronary-prone type A behavior pattern
[AD-A168240] N86-32971
HEAT EXCHANGERS
Monogroove cold plate — heat-pipe exchanger for space applications
[NASA-CASE-MSC-20946-1] N86-32661
Design study of plastic film heat exchanger
[DE86-011040] N86-32682
Shellside flow-induced tube vibration in typical heat exchanger configurations: Overview of a research program
[DE86-005549] N86-32685
Thorough approach to measurement uncertainty analysis applied to immersed heat exchanger testing
[DE86-004445] N86-33114
HEAT FLUX
Blockage of natural convection boundary layer flow in a multizone enclosure
[DE86-004430] N86-32686
Errors for calculations of strong shocks using an artificial viscosity and an artificial heat flux
[DE86-010230] N86-32690
Research instrumentation for hot section components of turbine engines
[NASA-TM-88851] N86-32702
HEAT MEASUREMENT
Research instrumentation for hot section components of turbine engines
[NASA-TM-88851] N86-32702
HEAT OF FORMATION
Thermal analysis of various epoxy mixtures
[AD-A167609] N86-32530
HEAT PIPES
Monogroove cold plate — heat-pipe exchanger for space applications
[NASA-CASE-MSC-20946-1] N86-32661
Measurement of performance limits in cryogenic heat pipes
[DE86-010208] N86-32689
HEAT PUMPS
Design study of plastic film heat exchanger
[DE86-011040] N86-32682
HEAT RADIATORS
Theoretical and experimental optimization of the road-vehicle internal flow — radiators N86-32405
HEAT RESISTANT ALLOYS
Mechanical behavior of superalloys
[DE86-010353] N86-32564
HEAT SOURCES
Bulk acoustic resonator tracking filter
[AD-D012260] N86-33122
HEAT TRANSFER
Hyperbolic Stefan problem with discontinuous temperature
[DE86-010069] N86-32680
Shellside flow-induced tube vibration in typical heat exchanger configurations: Overview of a research program
[DE86-005549] N86-32685
Measurement of performance limits in cryogenic heat pipes
[DE86-010208] N86-32689
HEAT TRANSFER COEFFICIENTS
Heat transfer modelling of thrust vector control systems
[AD-A167933] N86-32523
HEAT TREATMENT
Creep properties of PWC-11 base metal and weldments as affected by heat treatment
[NASA-TM-88842] N86-32557
Cellular thermosetting fluoropolymers and process for making them
[NASA-CASE-GSC-13008-1] N86-32570
HEATING
Near- and super-critical droplet combustion
[DE86-009215] N86-32543
HEATING EQUIPMENT
Fuel injection system for shock tube studies of the ignition of preheated fuels
[DE86-009219] N86-32544
HEAVY NUCLEI
Search for the tracks of heavy and superheavy cosmic ray nuclei in olivines from meteorites
[DE86-701120] N86-33261
HELICOPTER CONTROL
Servo-actuator for sampled-data feedback disturbance rejection — helicopters
[DFVLR-FB-86-08] N86-32446
Anthropometric considerations for a 4-axis side-arm flight controller N86-32993
HELICOPTER DESIGN
Active control of helicopter vibrations. Flight evaluation of a vibration reduction system on a Gazelle SA 349 helicopter
[SNIAS-861-210-108] N86-32444
HELICOPTERS
Human factors research in aircrew performance and training
[AD-A167740] N86-32967
HELIOSTATS
Solar thermal energy systems. Program summary, fiscal year 1985
[DE86-004441] N86-32880
HELIUM
Non-ending helium story
[DE86-010192] N86-32869
Gravitational settling in the Jovian atmosphere — helium, carbon ratio N86-33235
HELMET MOUNTED DISPLAYS
Direct view helmet mounted telescope
[AD-D012257] N86-32421
HEURISTIC METHODS
Coordinated research in robotics and integrated manufacturing
[AD-A168524] N86-32752
HIERARCHIES
Parameterization of system descriptions for a hierarchical circuit simulator
[ETN-86-97535] N86-32856
HIGH ENERGY ELECTRONS
Fabricate, calibrate and test a dosimeter for integration into the CRRES (Combined Release and Radiation Effects Satellite) satellite
[AD-A168566] N86-33131
HIGH ENERGY INTERACTIONS
The joint NASA/Goddard-University of Maryland research program in charged particle and high energy photon detector technology
[NASA-CR-177082] N86-33129
HIGH FREQUENCIES
The design of a prototype moving-coil high-frequency loudspeaker drive unit
[BBC-RD-1986/3] N86-32596
HIGH LEVEL LANGUAGES
Hardware proofs using LCF-LSM and ELLA — high level languages
[RSRE-MEMO-3832] N86-33027
HIGH POWER LASERS
Isotope exchange in oxide-containing catalyst
[NASA-CASE-LAR-13542] N86-32540
Pretreatment and reactivation of an oxide-containing catalyst
[NASA-CASE-LAR-13540-1] N86-32541
HIGH PRESSURE
High pressure studies on magnetic and nonmagnetic metallic glasses
[NAL-TM-MT-8609] N86-32571
Ultrasonic depth gauge for liquids under high pressure
[NASA-CASE-LAR-13300-CU] N86-32700
HIGH TEMPERATURE
Concept for the quality assurance of components of the ceramic gas turbine by nondestructive testing
[DE86-011474] N86-32435
HIGH TEMPERATURE LUBRICANTS
Behavior of lubricant greases at high temperatures: Thin film and liquid chromatography techniques
[ETN-86-97810] N86-32583
HIGH VOLTAGES
Comparison of two voltage dividers for the measurement of transient voltages in closed switch gear
[EH-84-A-82] N86-32855
HIGHWAYS
Remote sensing for highway engineers N86-32855
HISTORIES
Schreiner 1945 - 1985 — civil airline
[ETN-86-97773] N86-32415
Halley's Comet in history N86-32454

Historical data and analysis for the first five years of KSC STS payload processing
[NASA-TM-83105] N86-32471
Fiber reinforced plastics: Possibilities, expectations, technology and application
[ETN-86-97777] N86-32538
HODOGRAPHS
Convective Parameters and Holograph Program: CONVECT
[PB86-197225] N86-32947
HOLDERS
Apparatus and method for inspecting a bearing ball
[NASA-CASE-MFS-25833-1] N86-32698
Leak free floating packing shaft seal
[AD-D012311] N86-32748
HOLOGRAPHIC INTERFEROMETRY
Holographic optical elements formed in light of reduced coherence
[AD-A168498] N86-33151
HOLOGRAPHY
Computational methods in Nearfield Acoustic Holography (NAH), appendix
[AD-A168064] N86-32710
HOMODYNE RECEPTION
Coherent infrared detection, volume C — laser data links
[ESA-CR(P)-2184] N86-33158
HOT SURFACES
Ignition and combustion of fuel droplets and the ignition of premixed fuels by hot cylindrical surfaces
[DE86-009262] N86-32545
Research instrumentation for hot section components of turbine engines
[NASA-TM-88851] N86-32702
HUBBLE SPACE TELESCOPE
Fracture analysis of radial scientific instrument module registration fittings of the space telescope
[NASA-CR-178932] N86-32773
HUMAN BEHAVIOR
The startle reflex as a learning task: Apparatus and test parameters
[AD-A167958] N86-32970
The effects of stress on attentional resources N86-32986
HUMAN BEINGS
Biological visual systems structures for machine vision applied to robotics
[AD-A168521] N86-32751
Effects of high altitude on neurological and pulmonary function: The effect of high altitude on visual evoked potentials in humans on Mt. Everest
[AD-A168335] N86-32959
Altitude acclimatization attenuates plasma ammonia during submaximal exercise
[AD-A168630] N86-32962
The quantitative modelling of human spatial habitability
[NASA-CR-179716] N86-33210
HUMAN BODY
A comparison of the specific absorption rate in a homogeneous man model and a man model containing realistic model bones
[AD-A168547] N86-32960
Radiographic determination of mass of inertial tensors of anatomical segments
[AD-A168581] N86-32961
Proposal for a new tomographic device providing information on the chemical properties of a body section
[DE86-010547] N86-32964
HUMAN FACTORS ENGINEERING
The relationship between aerodynamics and style in the car industry N86-32406
The replay technique: The concept, initial experience and proposed developments — air traffic control simulation
[RSRE-MEMO-3827] N86-32420
Human factors research in aircrew performance and training
[AD-A167740] N86-32967
Twenty-First Annual Conference on Manual Control
[NASA-CP-2428] N86-32976
The development and evaluation of color systems for airborne applications: Fundamental visual, perceptual and display systems considerations
[AD-A168563] N86-33020
Human Factors Review Plan
[DE86-010561] N86-33023
Control loops with human operators in space operations. Part 2: Robotics operations and manual control experiment
[NLR-TR-84116-L-PT-2] N86-33024
HUMAN PERFORMANCE
Human and automatic interpretation of radar images of land cover N86-32844
A simulation study of the effects of sleep deprivation, time of watch and length of time on watch on watchstanding effectiveness
[AD-A167729] N86-32966
Human factors research in aircrew performance and training
[AD-A167740] N86-32967
Complex monitoring performance and the coronary-prone type A behavior pattern
[AD-A168240] N86-32971
Twenty-First Annual Conference on Manual Control
[NASA-CP-2428] N86-32976
Analytical comparison of transient and steady state visual evoked cortical potentials N86-32978
The effects of acceleration stress on human workload and manual control N86-32984
At least some errors are randomly generated (Freud was wrong) N86-32989
Hitts Law? A test of the relationship between information load and movement precision N86-32998
Some computational techniques for estimating human operator describing functions N86-33007
Manual control of unstable systems N86-33008
A design guide for visual displays and manual tasks in vibration environments. Part 1: Visual displays
[ISVR-TR-133-PT-1] N86-33014
A design guide for visual displays and manual tasks in vibration environments. Part 2: Manual tasks
[ISVR-TR-134] N86-33015
Memory and processing limits in decision-making
[AD-A168559] N86-33197
HUMAN REACTIONS
The effects of stimulus modality and task integrality: Predicting dual-task performance and workload from single-task levels N86-32981
HUMAN RESOURCES
University funding: Federal funding mechanisms in support of university research
[AD-A168023] N86-33212
HUMIDITY
Influence of surface heat and moisture fluxes on explosive marine cyclogenesis
[PB86-199346] N86-32945
HURRICANES
The relationship of storm severity to directionally resolved radio emissions
[NASA-CR-178916] N86-32801
Forecast verification and reconnaissance data for Southern Hemisphere tropical cyclones
[AD-A168274] N86-32929
HYBRID CIRCUITS
Some considerations on the application of hybrid circuits at the NLR
[NLR-MP-85046-U] N86-32658
Characterization of radio frequency HMC manufacturing processes
[DE86-010300] N86-32767
HYDRAULIC EQUIPMENT
Evaluation of full-scale hovercraft lift systems
[AD-A167939] N86-32427
Fatigue testing a plurality of test specimens and method
[NASA-CASE-MFS-28118-1] N86-32770
HYDRAULIC TEST TUNNELS
Main types of free separation in model ellipsoids
[ONERA-NT-1985-7] N86-32891
HYDROELECTRICITY
Snow and ice — remote sensing N86-32658
HYDROGEN
Atmospheric Ozone 1985. Assessment of our understanding of the processes controlling its present distribution and change, volume 2
[NASA-TM-89238] N86-32892
The D/H ratio in Saturn's atmosphere from Voyager IRIS spectra N86-33236
HYDROGEN ISOTOPES
Isotope abundance measurements of carbon, nitrogen and hydrogen in meteorites N86-33224
HYDROGEN OXYGEN ENGINES
Proven, long-life hydrogen/oxygen thrust chambers for space station propulsion
[NASA-TM-88822] N86-32522
HYDROGEN RECOMBINATIONS
Effects of hydrogen on the melting points of vanadium and zirconium
[BLL-M-TRANS-36834-(5828.4)] N86-32555
HYDROLOGY
Activities report in meteorology
[WMO-656] N86-32930
HYDROLOGY MODELS
Third Planning Meeting on World Climate Program: Water
[WCP-114] N86-32874
HYDROSTATIC PRESSURE
Leak free floating packing shaft seal
[AD-D012311] N86-32748
HYDROSTATICS
Satellite tracking: Its first contributions to the knowledge of the Earth's gravitational field and to geophysics N86-32791
HYDROXIDES
Elementary design guidelines for CO2 scrubbing with LiOH, technical manual
[AD-A168650] N86-33022
HYDROXYL RADICALS
Hydrogen species N86-32894
HYPERBOLIC FUNCTIONS
Algebraic properties of the three-state vector Potts model
[PREPRINT-487] N86-33109
HYPERCAPNIA
Predictors of periodic breathing at altitude
[AD-A167947] N86-32957
HYPERGEOMETRIC FUNCTIONS
The matrices of the differential d/dx and x(d/dx) with respect to orthonormal bases of Jacobi polynomials
[MEMO-84-05] N86-33105
Multiple images of our galaxy in closed, multiply connected cosmologies
[DE86-701777] N86-33253
HYPERSONIC FLOW
Fundamental research on computational methods for supersonic and hypersonic flow
[ONERA-RSF-23/1255-AY] N86-32414
The infinitely strong shock
[NAL-TM-DU-8604] N86-32864
HYPERVELOCITY IMPACT
Impact-induced spacecraft charging and related effects during the Halley encounters N86-32458
HYPERVELOCITY LAUNCHERS
Lethality test system
[DE86-008739] N86-32506
HYPERVENTILATION
Predictors of periodic breathing at altitude
[AD-A167947] N86-32957
Effect of oxygen flow on passenger face mask performance
[AD-A168832] N86-33021
HYPNOSIS
Zopiclone's residual effect upon actual driving performance versus those of nitrazepam and flunitrazepam
[VK-84-10] N86-32954
HYPOBARIC ATMOSPHERES
Tropical cyclones, 1985: Central North Pacific
[PB86-202215] N86-32923
HYPOXIA
Effect of oxygen flow on passenger face mask performance
[AD-A168832] N86-33021

I

ICE NUCLEI
Ice nucleus activity measurements of solid rocket motor exhaust particles
[NASA-TM-86555] N86-32925
ICE REPORTING
Report on ice buoys in the Arctic and the Antarctic N86-32817
Experience and results from use of ARGOS tracked buoys during MIZEX 83 and 84 — Marginal Ice Zone Experiment (MIZEX) N86-32818
Snow and ice — remote sensing N86-32658
Monitoring iceberg production using Landsat data — offshore oilfields N86-32859
ICEBERGS
Monitoring iceberg production using Landsat data — offshore oilfields N86-32859
ICL COMPUTERS
Perqflex firmware
[RSRE-85015] N86-33026
IDENTIFYING
Evaluation of spatial, radiometric and spectral thematic mapper performance for coastal studies
[NASA-CR-177149] N86-32829
IGNITION
Ignition and combustion of fuel droplets and the ignition of premixed fuels by hot cylindrical surfaces
[DE86-009262] N86-32545
IGNITION SYSTEMS
Practical properties of ethanol used as a fuel in diesel engine supercharged in different ways
[DE86-751656] N86-32755
IGNITION TEMPERATURE
Single-shot H(2) CARS spectroscopy of propellant ignition and combustion under pressure
[AD-A168054] N86-32542

ILLUMINATING
Night vision compatible illumination for vehicle crewmember workspace
[AD-D012339] N86-33018
IMAGE ANALYSIS
Some preliminary results on land use evaluations by texture analysis of SAR-580 data over the test site Freiburg (West Germany) N86-32839
Human and automatic interpretation of radar images of land cover N86-32844
IMAGE ENHANCEMENT
Fiber optic cable connector
[AD-D012270] N86-33141
IMAGE PROCESSING
Use of gas imaging as a means of locating leaks and tracking gas clouds
[DE86-010786] N86-32546
Multiple-input segmentation algorithm for SLAR-imagery N86-32834
SAR image segmentation using digitised field boundaries for crop mapping and monitoring applications N86-32840
Digital image processing — remote sensing N86-32851
Optical image processing — remote sensing N86-32852
Space cartography N86-32853
An experimental technique for producing moisture corrected imagery from 1 km Advanced Very High Resolution Radiometer (AVHRR) data
[NOAA-TM-NESDIS-15] N86-32862
Remote Sensing Information Sciences Research Group, Santa Barbara Information Sciences Research Group, year 3
[NASA-CR-179769] N86-32863
Research undertaken and proposed directions for the coming year of the Information System Research Group N86-32867
Proceedings of the Third Annual Symposium on Mathematical Pattern Recognition and Image Analysis
[NASA-CR-171925] N86-33087
Photodetector array with image plane processing
[NASA-CASE-LAR-13391-1] N86-33137
Special features of image formation in the scanning optical microscope
[RAE-TRANS-2126] N86-33139
Centroid tracking with area array detectors
[NASA-CR-178750] N86-33140
IMAGERY
MCT/INPE LANDSAT system: Report of activities from September 1, 1985 to March 31, 1986
[INPE-3927-PRE/960] N86-32868
IMAGES
Perspective projection invariants
[AD-A167783] N86-32968
IMAGING RADAR
A review of radar analysis of woodland N86-32833
IMAGING TECHNIQUES
Use of gas imaging as a means of locating leaks and tracking gas clouds
[DE86-010786] N86-32546
Computational methods in Nearfield Acoustic Holography (NAH), appendix
[AD-A168064] N86-32710
MCT/INPE LANDSAT system: Report of activities from September 1, 1985 to March 31, 1986
[INPE-3927-PRE/960] N86-32868
Study of the architecture of a parallel computer adapted to ray casting 3-d dimensional image synthesis
[ENST-86E003] N86-33037
Magic angle and Nuclear Magnetic Resonance (NMR) imaging in solids
[PREPRINT-478] N86-33134
Photodetector array with image plane processing
[NASA-CASE-LAR-13391-1] N86-33137
IMPACT DAMAGE
Impact damage characterization in laminated composites N86-32527
IMPACT LOADS
Vertical drop test of a transport fuselage section located aft of the wing
[NASA-TM-89025] N86-32771
IMPACT TESTING MACHINES
Performance predictions for Rockwell indenters
[NPL-MOM-73] N86-32699
IMPACT TESTS
Vertical drop test of a transport fuselage section located aft of the wing
[NASA-TM-89025] N86-32771
IMPEDANCE MATCHING
Active matching transmit/receive module
[AD-D012287] N86-32607
Pocket size antenna match indicator for VSWR (Voltage Standing Wave Ratio) measurement
[AD-D012341] N86-32708
IMPLOSIONS
Sandia X-ray Laser Program
[DE86-009262] N86-32728
IMPULSE GENERATORS
Portable radar simulator with adjustable side lobe generator
[AD-D012301] N86-32609
IMPULSES
The role of impulse parameters in force variability N86-32997
IMPURITIES
A guided-wave optical power divider
[AD-D012336] N86-33149
Analysis on impurity control effect of scrape-off layers generated by a pump limiter and an ergodic magnetic limiter
[IPPJ-783] N86-33161
Magnetic impurities in superconductors
[DE86-010263] N86-33183
INCIDENCE
A numerical study of separation on a spheroid at incidence
[NASA-CR-178167] N86-32675
INCOHERENT SCATTERING
Holographic optical elements formed in light of reduced coherence
[AD-A168498] N86-33151
INCOMPRESSIBLE FLOW
Finite element analysis of the incompressible Navier-Stokes equations: A synopsis of the streamline-upwind/Petrov-Galerkin formulation N86-32672
A numerical study of separation on a spheroid at incidence
[NASA-CR-178167] N86-32675
INDENTATION
Performance predictions for Rockwell indenters
[NPL-MOM-73] N86-32699
Development of an ultra-low-load microhardness indentation test machine
[DE86-011150] N86-32712
INDEXES (DOCUMENTATION)
KBGIS-2: A knowledge-based geographic information system N86-32865
INERTIAL CONFINEMENT FUSION
Numerical calculations for the electrode design of a relativistic electron beam diode
[IPPJ-780] N86-33165
INFINITY
The infinitely strong shock
[NAL-TM-DU-8604] N86-32664
INFLATING
Remotely controlled aircraft tire inflation/deflation valve
[AD-D012294] N86-32426
INFORMATION DISSEMINATION
Study of information dissemination by satellite, rider 2: Cultural satellite consortium: Widening the scope
[ESA-CR(P)-2171-VOL-2] N86-32515
Freedom of Information Act: Noncompliance with affirmative disclosure provisions
[AD-A168589] N86-33204
INFORMATION MANAGEMENT
Analysis of the use of Defense Technical Information Center resources by research and development centers and laboratories in the US Army
[AD-A168441] N86-33203
INFORMATION RETRIEVAL
Meteorological data inventory, southern California, coastal zone, Ragged Point (San Luis Obispo County) to Mexican border
[AD-A167645] N86-32927
Analysis of the use of Defense Technical Information Center resources by research and development centers and laboratories in the US Army
[AD-A168441] N86-33203
Freedom of Information Act: Noncompliance with affirmative disclosure provisions
[AD-A168589] N86-33204
INFORMATION SYSTEMS
Measured noise performance of a post-detection limiter circuit in the receiver of a binary data transmission system
[AD-A168554] N86-32618
Remote Sensing Information Sciences Research Group, Santa Barbara Information Sciences Research Group, year 3
[NASA-CR-179769] N86-32863
Pilot land data system N86-32866
Research undertaken and proposed directions for the coming year of the Information System Research Group N86-32867
Computer science research. Computation and Information Services Directorate
[DE86-010492] N86-33049
Organization as information processing systems: Toward a model of the research factors associated with significant research outcomes
[AD-A168018] N86-33200
Organizations as information processing systems: Environmental characteristics, company performance and chief executive scanning, an empirical study
[AD-A168035] N86-33201
Analysis of the use of Defense Technical Information Center resources by research and development centers and laboratories in the US Army
[AD-A168441] N86-33203
Information technology resources long-range plan, FY 1987-FY 1991
[DE86-010457] N86-33206
State of the art of geoscience libraries and information services
[DE86-011186] N86-33207
Prototype material properties data network
[NASA-TM-89243] N86-33208
Users guide to the JPL Doppler gravity database
[NASA-CR-179749] N86-33209
INFRARED ASTRONOMY
Handbook of geophysics and the space environment, 4th edition
[AD-A167000] N86-32914
INFRARED ASTRONOMY SATELLITE
Near-infrared observations of IRAS minisurvey galaxies
[NASA-CR-179707] N86-33196
INFRARED DETECTORS
Coherent infrared detection, volume C — laser data links
[ESA-CR(P)-2184] N86-33158
INFRARED IMAGERY
Optical and infrared multispectral imagery land use applications 2 N86-32854
An error detection and smoothing algorithm for infrared data
[AD-A168628] N86-33093
INFRARED INSTRUMENTS
Standard calibration procedure for IR sensors on spinning satellites. Volume 3: OTS and GEOS-2 in flight data analysis
[REPT-209-DT-58-VOL-3] N86-32518
INFRARED LASERS
Scanning system for mapping gas flow uniformity in a laser
[AD-D012324] N86-32723
INFRARED PHOTOMETRY
Near-infrared observations of IRAS minisurvey galaxies
[NASA-CR-179707] N86-33196
INFRARED RADIATION
Measurements of laser generated impulse
[DE86-007378] N86-32730
The physical basis of remote sensing N86-32846
Infrared issues for the nuclear winter phenomenon
[AD-A168717] N86-32915
Double photon excitation of high-Rydberg atoms as a long-lived submillimeter detector
[NASA-CASE-NPO-16372-1] N86-33127
INFRARED RADIOMETERS
An experimental technique for producing moisture corrected imagery from 1 km Advanced Very High Resolution Radiometer (AVHRR) data
[NOAA-TM-NESDIS-15] N86-32862
INFRARED SCANNERS
Assembly and evaluation of a low orbit Earth sensor unit
[REPT-390-DT-14] N86-32519
Scanning system for mapping gas flow uniformity in a laser
[AD-D012324] N86-32723
INFRARED SPECTROMETERS
The D/H ratio in Saturn's atmosphere from Voyager IRIS spectra N86-33236
INFRARED TELESCOPES
Standard calibration procedure for IR sensors on spinning satellites. Volume 3: OTS and GEOS-2 in flight data analysis
[REPT-209-DT-58-VOL-3] N86-32518
INJURIES
Peripheral nerve injury in developing rats reorganizes motor cortex
[AD-A168019] N86-32952
INPUT/OUTPUT ROUTINES
KRASH 85 user's guide: Input/output format, revision
[AD-A168846] N86-32416
INSERTS
Method of repairing hidden leaks in tubes
[NASA-CASE-MFS-19796-1] N86-32736

INSOMNIA
Zopiclone's residual effect upon actual driving performance versus those of nitrazepam and flunitrazepam
[VK-84-10] N86-32954
INSPECTION
Apparatus and method for inspecting a bearing ball
[NASA-CASE-MFS-25833-1] N86-32698
INSTRUMENT COMPENSATION
Compensation for primary reflector wavefront error
[NASA-CASE-NPO-16869] N86-33138
INSTRUMENT TRANSMITTERS
Pocket size antenna match indicator for VSWR (Voltage Standing Wave Ratio) measurement
[AD-D012341] N86-32708
INSULATION
The measurement of large values of airborne sound insulation
[BBC-RD-1986/8] N86-32594
INSULIN
Altitude acclimatization attenuates plasma ammonia during submaximal exercise
[AD-A168630] N86-32962
INTEGERS
The polynomials in the linear span of integer translates of a compactly supported function
[AD-A167530] N86-33089
INTEGRAL ROCKET RAMJETS
Solid fuel burn enhancer
[AD-D012331] N86-32524
INTEGRALS
A collection of data on the normal-stress integral term occurring in the momentum equation of turbulent boundary layers
[RAE-TR-85097] N86-32662
Evaluated Rayleigh integrals for pulsed planar expanding ring sources
[DE86-006701] N86-33124
INTEGRATED CIRCUITS
Testing methods for integrated circuit chips
[AD-A167932] N86-32639
Ultra-fast field emitter array vacuum integrated circuit switching device
[AD-D012317] N86-32640
Picosecond electronics and optoelectronics held at Incline Village, Nevada on 13-15 March 1985
[AD-A168685] N86-32646
Parameterization of system descriptions for a hierarchical circuit simulator
[ETN-86-97535] N86-32656
User manual for the simulation package THE/ES
[ETN-86-97696] N86-33055
Total-dose radiation effects data for semiconductor devices. 1985 supplement. Volume 2, part A
[NASA-CR-179746] N86-33177
INTEGRATED OPTICS
Optically controlled integrated optical switch
[AD-D012334] N86-33147
Electrically controlled integrated optical switch
[AD-D012337] N86-33150
INTEGRATORS
Comparison of two voltage dividers for the measurement of transient voltages in closed switch gear
[EH-84-A-82] N86-32655
INTERACTIONS
A queueing model of finite and infinite source interaction
[CWI-OS-R8511] N86-33102
INTERCALATION
The milling of pristine and brominated P-100 graphite fibers
[NASA-TM-88828] N86-32573
INTERFACES
Command and data management for a highly integrated payload on the Interface Program System (IPS) (GIRL)
[BMFT-FB-W-85-018] N86-32514
INTERFACIAL TENSION
Compound semiconductor strained-layer superlattices
[DE86-007145] N86-33186
INTERFERENCE DRAG
Wall interference studies in 3-D flows
[NAL-TM-AE-8506] N86-32396
INTERFEROMETERS
The relationship of storm severity to directionally resolved radio emissions
[NASA-CR-178916] N86-32601
INTERFEROMETRY
Sphericity measurements of full spheres using subaperture optical testing techniques
[DE86-011255] N86-32714
Comment on the significance of individual aberrations in wavefront fitting by aberration polynomials — lens design
[NPL-MOM-71] N86-33136
INTERNATIONAL COOPERATION
The International Halley Watch (IHW) and its observing nets N86-32465
The Inter-Agency Consultative Group (IACG) and its associated working groups — Halley's Comet N86-32467
The pathfinder concept — Halley flyby N86-32470
A drifting buoy experiment as part of COST-43 N86-32616
Support for global science: Remote sensing's challenge N86-32664
INTERNATIONAL SUN EARTH EXPLORER 3
The International Cometary Explorer (ICE) mission to Comets Giacobini-Zinner and Halley N86-32459
INTERPLANETARY DUST
The Halley dust and gas environment (IACG WG-1) N86-32468
The Giotto particulate impact analyzer N86-32479
The Giotto dust impact detection system N86-32480
INTERPLANETARY GAS
The Halley dust and gas environment (IACG WG-1) N86-32468
INTERPOLATION
A linear algorithm for non-linear interpolation for computer aided designs
[AD-D012271] N86-33044
INTERPROCESSOR COMMUNICATION
Survivable local area network
[AD-D012258] N86-32603
INTERSTELLAR CHEMISTRY
The interstellar lithium abundance and the Li6/Li ratio N86-33241
INTERSTELLAR GAS
The interstellar lithium abundance and the Li6/Li ratio N86-33241
INTERSTELLAR MATTER
Long-lived isotopes as indicators of the nature of the Cretaceous-Tertiary event: Experimental results on the uranium isotopic composition N86-33220
INVENTIONS
Portable radar simulator with adjustable side lobe generator
[AD-D012301] N86-32609
INVENTORIES
The national wind energy development program 1981-1984. Inventory of executed projects and results — Netherlands
[ETN-86-97775] N86-32667
INVERSE SCATTERING
An example of delta-problem arising in a finite difference context: Direct and inverse problem for the discrete analog of the equation Psi + upsilon Psi = sigma Psi sub gamma
[PREPRINT-468] N86-33110
Nonlinear integral evolution equations associated with a Riemann-Hilbert scattering problem. Aspects of the initial value problem for the sine-Hilbert class
[PREPRINT-491] N86-33111
INVISCID FLOW
Viscous-inviscid interaction with higher-order viscous-flow equations
[IIHR-304] N86-32676
Supercomputer implementation of finite element algorithms for high speed compressible flows
[NASA-CR-177065] N86-33043
ION BEAMS
Ion-beam nitriding of steels
[NASA-CASE-LEW-14104-2] N86-32556
Variations in the microstructure of nickel-based alloy coatings with the metalloids boron and silicon as a function of deposition parameters in a dual beam ion system
[DE86-009283] N86-32558
Solute segregation and microstructural evolution in ion-irradiated vanadium-base alloys
[DE86-007513] N86-32559
ION CYCLOTRON RADIATION
Fast wave heating in a magnetic mirror
[IPPJ-777] N86-33163
ION EXCHANGING
Method for preparing Pb-beta''-alumina ceramic
[AD-D012352] N86-32575
ION INJECTION
Anomalous diffusion across the magnetic field plasma boundary: The PORCUPINE artificial plasma jet
[MPE-PREPRINT-47] N86-33160
ION IRRADIATION
Ion-beam nitriding of steels
[NASA-CASE-LEW-14104-2] N86-32556
Solute segregation and microstructural evolution in ion-irradiated vanadium-base alloys
[DE86-007513] N86-32559
ION PROBES
The Giotto three-dimensional positive ion analyser N86-32476
The Giotto ion mass spectrometer N86-32482
IONIZATION
Tokamak plasma modelling and atomic processes
[IPPJ-AM-44] N86-33166
IONIZING RADIATION
Radiation measuring system using transistor flux sensors
[AD-D012256] N86-32704
IONOSPHERE
Anomalous diffusion across the magnetic field plasma boundary: The PORCUPINE artificial plasma jet
[MPE-PREPRINT-47] N86-33160
IONOSPHERIC PROPAGATION
Handbook of geophysics and the space environment, 4th edition
[AD-A167000] N86-32914
IONOSPHERIC SOUNDING
Ionospheric sounding by means of linear frequency modulation
[ENST-84E022] N86-32918
IONOSPHERIC TEMPERATURE
The thermal plasma experiment in the Upper-Air Sounding Rocket Program HEATING, Project HERO
[BMFT-FB-W-85-019] N86-32917
IONS
Ion composition in the solar wind in relation to solar abundances N86-33238
IRON ALLOYS
Complementary AES and AEM of grain boundary regions in irradiated gamma-strengthened alloys
[DE86-010397] N86-32561
IRON METEORITES
Exposure ages of iron meteorites: Complex histories and the constancy of galactic cosmic rays N86-33217
Isotopes produced by galactic cosmic rays in iron meteorites N86-33218
IRRADIATION
A comparison of the specific absorption rate in a homogeneous man model and a man model containing realistic model bones
[AD-A168547] N86-32980
Irradiation effects on plasma diagnostic equipment
[IPPJ-779] N86-33167
Magnetic reconnection in laser-plasma interactions in a background magnetic field
[AD-A168024] N86-33171
IRREVERSIBLE PROCESSES
Renormalization of fluctuation effects in the A+A yields A reaction — field theory
[PREPRINT-490] N86-33195
ISOPARAMETRIC FINITE ELEMENTS
What are the true boundary conditions on the edge of a thin plate: Poisson's or Kirchhoff's
[NAL-TM-ST-8603] N86-32665
ISOSTASY
Gravity, geoid and the oceanic lithosphere N86-32750
ISOTOPES
Isotopic Ratios in the Solar System — conference
[ISBN-2-85428-133-0] N86-33216
Isotopes produced by galactic cosmic rays in iron meteorites N86-33218
Solar isotopic ratios, chemical evolution of galaxies and cosmology N86-33240
Element and isotope fractionation in preplanetary nebula N86-33245
ITERATIVE SOLUTION
Method of operator splitting or fractional steps and its applications to fluid dynamic modelling. Revision 1
[DE86-011035] N86-32684
IUE
International Ultraviolet Explorer (IUE) observation of Halley's Comet N86-32461
Studies of the ultraviolet spectra of astronomical sources
[NASA-CR-176865] N86-32472

J

JAMMING
Theoretical and computational aspects of adaptively controlled Navstar antennas
[NLR-TR-84004-U] N86-32424
Parallel processor configuration for adaptive antenna arrays
[AD-D012253] N86-32602
JAPANESE SPACE PROGRAM
Space missions to Halley's Comet
[ESA-SP-1066] N86-32452
JAPANESE SPACECRAFT
The Suisei/Sakigake (Planet-A/MS-T5) missions — Halley flyby N86-32457
JET AIRCRAFT
Survivability considerations during aircraft conceptual design
[AD-A168555] N86-32428

JET CONTROL
Analysis of the effects of firing Orbiter primary reaction control system jets with an attached truss structure
[NASA-TM-89031] N86-32511
JET ENGINES
An introduction of the power engineering research at Nanjing Aeronautical Institute
[AD-A166639] N86-32434
JET FLOW
Computation of plane jet impingement on a plate
[NAL-TM-FM-8602] N86-32394
Monte Carlo simulation of free jet flow from a slit
[DE86-006705] N86-32687
JET IMPINGEMENT
Computation of plane jet impingement on a plate
[NAL-TM-FM-8602] N86-32394
JET MIXING FLOW
Perspectives on dilution jet mixing
[NASA-TM-87294] N86-32432
JOINTS (JUNCTIONS)
Tape joint stiffness
[DE86-010626] N86-32778
JUPITER ATMOSPHERE
Gravitational settling in the Jovian atmosphere — helium, carbon ratio N86-33235
The N14/N15 ratio in the atmosphere of Jupiter N86-33237

K

KALMAN FILTERS
Global Radio Navigation System (GRANAS) simulation
[BMFT-FB-W-85-029] N86-32422
KINESTHESIA
The quantitative modelling of human spatial habitability
[NASA-CR-179716] N86-33210
KINETIC ENERGY
The use of spatial techniques for a better current surface knowledge, with application to the Southern Ocean N86-32814
Energetics of cyclonic development in the Asian winter monsoon system N86-32921
KLYSTRONS
Optimization of a lasertron double output cavity
[DE86-009176] N86-32649
KNUDSEN FLOW
Monte Carlo simulation of free jet flow from a slit
[DE86-006705] N86-32687
KRYPTON
Marx generator: KrF laser
[ETN-86-97375] N86-32733

L

LACTATES
Altitude acclimatization attenuates plasma ammonia during submaximal exercise
[AD-A166630] N86-32962
LAGRANGE MULTIPLIERS
Some theoretical properties of an augmented lagrangian merit function
[DE86-011330] N86-33050
LAKE ICE
Lake ice occurrence as an early detector of climate perturbations: The potential for monitoring
[DE86-010583] N86-32935
LAKES
Remote sensing and water quality in the IJsselmeer (Netherlands) area
[MDLK-R-8537] N86-32871
LAMINAR FLOW
Computation of plane jet impingement on a plate
[NAL-TM-FM-8602] N86-32394
A numerical study of separation on a spheroid at incidence
[NASA-CR-178167] N86-32675
LAMINAR HEAT TRANSFER
Heat transfer modelling of thrust vector control systems
[AD-A167933] N86-32523
Research program: The investigation of heat transfer and fluid flow at low pressure
[DE86-009379] N86-32688
LAMINATES
Impact damage characterization in laminated composites N86-32527
High thermal capacitance multilayer thermal insulation
[AD-D012343] N86-32591
LAND
Pilot land data system N86-32666
LAND USE
Active microwave mapping of vegetation N86-32832
Some preliminary results on land use evaluations by texture analysis of SAR-580 data over the test site Freiburg (West Germany) N86-32830
Human and automatic interpretation of radar images of land cover N86-32844
Optical and infrared multispectral imagery land use applications 2 N86-32854
LANDING GEAR
Six degree of freedom simulation software
[NAL-PD-SE-8614] N86-33042
LANDSAT SATELLITES
A fuelwood plantation site selection procedure using geographic information system technology: A case study in support of the NASA Global Habitability Program
[NASA-CR-179704] N86-32828
Monitoring iceberg production using Landsat data — offshore oilfields N86-32859
MCT/INPE LANDSAT system: Report of activities from September 1, 1985 to March 31, 1986
[INPE-3327-PRE/960] N86-32868
LARGE SPACE STRUCTURES
Influence of structural parameter uncertainties on flexible space structural control performance
[SNIAS-861-440-104] N86-32516
Deployable antenna reflector
[SNIAS-861-422-117] N86-32537
LASER ANEMOMETERS
Calculations of the SNR of a laser Doppler anemometer with a Cassegrain lens
[DFVLR-FB-86-12] N86-33157
LASER APPLICATIONS
Single-shot H(2) CARS spectroscopy of propellant ignition and combustion under pressure
[AD-A168054] N86-32542
Laser driven micro-explosive bonding
[DE86-010637] N86-32756
Resonance fluorescence in atmospheric gases
[NASA-CR-179767] N86-32911
Development of applied optical techniques using lasers
[DE86-701692] N86-33153
LASER CAVITIES
Phase-conjugate resonator with a double SBS (Stimulated Brillouin Scattering) mirror
[AD-D012261] N86-32718
Interacting collective modes in a laser cavity
[DE86-701945] N86-32729
LASER DAMAGE
Statistical model for laser safety analysis
[AD-A167937] N86-32721
LASER DOPPLER VELOCIMETERS
Spinning disk calibration method and apparatus for laser Doppler velocimeter
[NASA-CASE-ARC-11510-1] N86-32697
Calculations of the SNR of a laser Doppler anemometer with a Cassegrain lens
[DFVLR-FB-86-12] N86-33157
LASER GYROSCOPES
Measurements of laser gyro errors as a function of beam path geometry
[ESA-TT-922] N86-32716
LASER MATERIALS
Isotope exchange in oxide-containing catalyst
[NASA-CASE-LAR-13542] N86-32540
Phase-conjugate resonator with a double SBS (Stimulated Brillouin Scattering) mirror
[AD-D012261] N86-32718
Investigation of single crystal silicates for blue tunable lasers
[AD-A167613] N86-32720
LASER MODE LOCKING
Picosecond electronics and optoelectronics held at Incline Village, Nevada on 13-15 March 1985
[AD-A168685] N86-32646
LASER MODES
Interacting collective modes in a laser cavity
[DE86-701945] N86-32729
LASER OUTPUTS
LASERCOM Mitigation Program
[AD-A168111] N86-32615
Optimization of a lasertron double output cavity
[DE86-009176] N86-32649
Investigation of single crystal silicates for blue tunable lasers
[AD-A167613] N86-32720
Statistical model for laser safety analysis
[AD-A167937] N86-32721
Optically pumped CW (Continuous Wave) semiconductor ring laser
[AD-D012326] N86-32724
Photovoltaic conversion of laser power to electrical power
[NASA-TM-89041] N86-32876
Scintillation effects on centroid anisoplanatism
[AD-A168551] N86-33152
Magnetic reconnection in laser-plasma interactions in a background magnetic field
[AD-A168024] N86-33171
LASER PLASMA INTERACTIONS
Measurement of localized electrostatic oscillations excited by low-power microwaves in a plasma waveguide
[IPPJ-778] N86-33164
Analysis, modeling, and design of short-wavelength laser-plasma experiments
[DE86-008033] N86-33173
LASER RANGE FINDERS
Monolithic area array for laser ranging application
[AD-D012296] N86-32719
LASER TARGET INTERACTIONS
Magnetic reconnection in laser-plasma interactions in a background magnetic field
[AD-A168024] N86-33171
LASERS
Theoretical studies of Resonance Enhanced Stimulated Raman Scattering (RESRS) of frequency doubled Alexandrite laser wavelengths in cesium vapor
[NASA-CR-179788] N86-32717
Laser driven micro-explosive bonding
[DE86-010637] N86-32756
LATERAL CONTROL
Preliminary control law and hardware designs for a ride quality augmentation system for commuter aircraft. Phase 2
[NASA-CR-4014] N86-32440
Centrifugally operated moving-mass roll control system
[AD-D012272] N86-32441
Investigation of limb-sidestick dynamic interaction with roll control N86-32991
LATTICE PARAMETERS
Lattice parameter modeling of stochastic signals: Some fundamental concepts
[DE86-010552] N86-32619
LATTICE VIBRATIONS
Some experimental artifacts in LEED studies of phase transitions
[AD-A168646] N86-33181
LAUNCHING SITES
Analysis of wind speeds at the space shuttle launch site, Vandenberg Air Force Base
[AD-A168565] N86-32930
LAYOUTS
An extractor for hierarchial symbolic layouts — VLSI circuits
[THE-RC-59994] N86-32659
LEAD ACID BATTERIES
Effect of depth of discharge on lead-acid battery overcharge requirements
[DE86-008945] N86-32648
LEAD COMPOUNDS
The qualification and procurement of two-sided printed circuit boards (fused tin-lead or gold plated finish) — European Space Agency
[ESA-PSS-01-710-ISSUE-1] N86-32660
LEAD ISOTOPES
Structure and evolution of the Earth mantle studied using paired isotopic tracers: Pb-Sr-Nd N86-32792
LEADING EDGES
The structure of separated flow regions occurring near the leading edge of airfoils including transition
[NASA-CR-176857] N86-32391
LEAKAGE
Use of gas imaging as a means of locating leaks and tracking gas clouds
[DE86-010786] N86-32546
Method of repairing hidden leaks in tubes
[NASA-CASE-MFS-19796-1] N86-32736
A comparison of experimental and theoretical results for leakage, pressure gradients, and rotordynamic coefficients for tapered annular gas seal
[NASA-CR-179709] N86-32742
Leak free floating packing shaft seal
[AD-D012311] N86-32748
LEARNING
Active controllers and the time duration to learn a task N86-32994
Progression-regression effects in tracking repeated patterns N86-32996
LEARNING CURVES
The startle reflex as a learning task: Apparatus and test parameters
[AD-A167958] N86-32970
LEAST SQUARES METHOD
Least squares solutions in signal processing using the singular value decomposition
[RSRE-MEMO-3864] N86-32599
Comparison of the STI NIPIP tracking dynamics identification with the on-line Fourier analyzer DFA results including a time varying case N86-33010

Estimating weights in heteroscedastic regression models by applying least squares to squared or absolute residuals
[AD-A168487] N86-33091
A note on adapting for heteroscedasticity when the variances depend on the mean
[AD-A168481] N86-33113

LEBESGUE THEOREM
Measure and category
[ZW-8506] N86-33119

LENS ANTENNAS
Three dimensional, orthogonal delay line bootlace lens antenna
[AD-D012315] N86-32812
Feed displacement correction in a space fed lens antenna
[AD-D012286] N86-32706

LENS DESIGN
An improved optical viewing system for a flight simulator
[MS-8025] N86-32448
Comment on the significance of individual aberrations in wavefront fitting by aberration polynomials — lens design
[NPL-MOM-71] N86-33136

LENSES
Fiber optic cable connector
[AD-D012270] N86-33141

LEPTONS
Constraints on composite models from leptonic flavor changing decays
[PREPRINT-479] N86-33135

LIBRARIES
State of the art of geoscience libraries and information services
[DE86-011188] N86-33207

LIFE (DURABILITY)
Contributions to the ONERA life prediction model (fatigue cracking under real loading) — crack propagation, variable loads
[ONERA-RT-25/7169-RY-048-R] N86-32783
